## EDITORIAL NOTE

*The notes which preface each of the dialogues were written by Miss Edith Hamilton.*

*The translations comprising this edition have been subject to only slight editing. The following general revisions may be noted. All commentaries, summaries, and footnotes of the original texts have been omitted. (In Theaetetus and Sophist, the translator's summaries have been replaced by the text of Jowett's translation, third edition.) Spelling and, to some degree, punctuation and capitalization have been standardized, in accordance with American preferences. For measurements, money, etc., the Greek terms have been substituted for modern equivalents (such as furlong and shilling). Occasionally, where clarity would be served, Greek words and phrases have been inserted in brackets. Quotation marks are not used to set off speeches, but the use or nonuse of speakers' names has been left as it was. In addition, footnotes have usually been added to identify quotations.*

*The index is based on the Abbott-Knight index to the third edition of Jowett's translation, though it has been entirely remade to answer the requirements of the present edition. An attempt has been made, by means of cross-references, to assist the reader with the philosophical vocabulary of the different translators. The index is the work of Edward J. Foye. The chief work of preparing the contents of this volume for the press has been done by Mrs. Donna Bishop under the supervision of the editors of Bollingen Series. The editors also are indebted to Mrs. Mabel A. Barry for special editorial assistance and other help.*

*Acknowledgment is gratefully made to the following publishers and persons for the use of the contents of this volume:*

*R. Hackforth's translations of Philebus (1945) and Phaedrus (1952), by permission of the Cambridge University Press, Cambridge and New York, publishers.*

*Benjamin Jowett's translations of Charmides, Laches, Timaeus, and Greater Hippias, in the fourth edition, revised by order of the Jowett Copyright Trustees (1953), by permission of the Clarendon Press, Oxford. Jowett's translations of Menexenus, Lesser Hippias, and Cratylus, and excerpts of his translations of Theaetetus and*

## INTRODUCTION

THESE DIALOGUES were written twenty-three hundred years ago, and the thought of the ancient world, the Middle Ages, the Renaissance, and that of contemporary times, have all come under their influence. They have been praised as the substance of Western thought, as the corrective for the excesses to which the human mind is subject, and as setting forth the chief lines of the Western view of the world as they have never been delineated before or since in philosophy, politics, logic, and psychology. It has been held that a return to the insights of the dialogues is a return to our roots. But the dialogues have also had their enemies. They have been attacked as politically aristocratic and as philosophically mystical. However, few serious and fair students of the dialogues have ever denied their suggestiveness and the extent to which they stimulate thought. Many strands are interwoven in the dialogues but always at the center as their meaning is the Greek insight that Reason, the *logos*, is nature steering all things from within. In this approach nature is neither supernatural nor material; it is an organic whole, and man is not outside nature but within it. By concentration on this point of view and its implications Greek thought and art achieved a clarity never equaled elsewhere and Plato became its supreme spokesman.

Plato has been presented to us as a man of the study, a weaver of idealistic dreams; he has also been held up as a man with great experience of the world. There is no denying that he was learned, fully aware of the intellectual currents of his day. The variety of the quotations and allusions which appear in the dialogues show that he had read the extant literature. His life covered the period from the Peloponnesian War and the death of Pericles to Philip's capture of Olynthus. He was born about 428 B.C. and died at the age of eighty or eighty-one about 348 B.C. His family was an ancient one with political connections in high places and it is reasonable to assume that he saw military service in his youth. He had a wide acquaintance with the prominent men of his time, traveled extensively abroad, and at the age of forty founded the Academy and directed its affairs until his death. Thereafter the Academy had a continuous life of nine hundred years, a longer life span than that of any other educational institution in the West. This is scarcely the portrait of an armchair philosopher spinning theories in a study lined with books from floor to ceiling. It still leaves open, however, the question of the extent of

Plato's actual grasp of worldly affairs. Not infrequently scholars with experiences in life comparable to those of Plato confess themselves helpless in the planning of concrete undertakings, although plainly Plato himself would not have made that admission. Plato's abilities must here be judged by the merits of the specific proposals he outlines in the dialogues. It is not necessary to read them closely to be impressed with his intense interest in the correction of social and political abuses. That many of his suggestions had intrinsic value is adequately attested by their subsequent adoption in educational and political practice and the persistence of their influence even to the present.

Plato nowhere offers an explanation of why he cast his writings in the dialogue form rather than in that of the reasoned treatise. In the *Phaedrus* he argues that writing is like painting; it has the appearance of life but if you ask it a question it preserves a solemn silence. The written word cannot explain itself if it is misunderstood. Writing, he concludes, is a pastime, a game, but a noble one in which a man may discourse seriously and merrily about justice and the like. He wrote mimes in his youth, and with the example before him of the Socratic method of leading men to knowledge by question and answer it was perhaps natural that he should adopt the form he did. At any rate it gave his poetic powers great latitude. He was a stylist of the first order and as a poet he was able to present philosophy dramatically. He believed as a philosopher that the world is pervaded by Reason, and that its beauty is an outward manifestation of its ultimate nature. The dialogue form permitted him to lead men to this insight, it permitted the playfulness and the bitterness, the irony and the fairness, for which the dialogues are also famous. It allowed him almost the freedom of the contemporary novelist. As a form it imposed no limitations on his poetic imagery, and it allowed him also the utmost philosophical seriousness. But notwithstanding his unrivaled mastery of the dialogue he never subordinated meaning to form. Contentless art, he held, is not art.

All this is not separate from but intertwined with his task as a philosopher. In the physical sciences hypotheses are tested by experimental means, but the philosopher's resource is thought in the form of a conversation with himself or others. The dialogue form therefore is not arbitrarily chosen, not a report of how Greeks conversed on street corners, in the bath and the gymnasium, and certainly not an inquiry of the kind conducted in the assembly where many minds are assumed, somehow, to be the source of wisdom. On the contrary Plato held that inquiry, when not directed by one who knows, is futile. The dialogue therefore is the dialectic, a skillfully directed technique of questioning. For this reason he described the dialectician as the midwife tending us in the act, in the "labor," of knowing. To change the metaphor, the dialectician is like the gardener who aids

his plants but is unable to do for them what they must do themselves.

This is the content, and the instrument which leads us to knowledge is the form. For Plato it is the one certain way to knowledge. Its effectiveness lies in the effort it demands on the part of the participants, and its achievement, as in the case of the plant, is fulfillment. In fact, the essence of Platonism may be said to be the realization that we can and must know, not by trial and error, which teaches too late, if indeed it teaches much at all, but by coming to see what is possible, and what is not possible, in the world in which we live. In Aristotle's view Plato's form was halfway between poetry and prose.

Plato was a philosopher and poet, but not a mystic. He was a poet in the sense that he wrote formal verse and is the author of one of the most notable of the Greek epigrams. Beyond that, as the author of the dialogues, he was a philosopher-poet exercising consummate artistry in his presentation of ideas. In this respect he differs from Lucretius, Dante, Pope, and others who have attempted to set forth in verse systems of thought not their own. If we put aside the requirement that poetry must be written in meter Plato is one of the supreme poets of the world as well as of Greece; he has a place with Homer, Aeschylus, and Dante, although no one of these men is also a philosopher. But his poetic insight has often been confused with mysticism, even with mysticism's most obscurantist manifestations. His discussion of the one and the many, the doctrine of love and eternal beauty, the Demiurgos, and similar matters, have all been mistakenly used, by mystics and occultists, as grounds for their own doctrines. He has been a source of inspiration to many types of mysticism but his writings have been repeatedly misread. This misunderstanding has been greatly promoted and popularized by the writings of Philo and Plotinus. Philo claimed that Plato's Ideas and the Biblical angels are one and the same, and Plotinus' mysticism is actually called Neoplatonism. But Plato saw the world to be intelligible, that is, he held that system pervades all things. In order to indicate the nature of that reality he resorted to story, metaphor, and playfulness which have given comfort from time to time to esoteric writers. But the difference between Plato and the mysticism that has attached itself to his philosophy is essential. Plato's aim is to take the reader by steps, with as severe a logic as the conversational method permits, to an insight into the ultimate necessity of Reason. And he never hesitates to submit his own ideas to the harshest critical scrutiny; he carried this procedure so far in the *Parmenides* that some commentators have held that his own doubts in this dialogue prevail over his affirmations. But the beliefs of mystics are not products of critical examination and logical clarification; they are, on the contrary, a series of apprehensions, flashes, based on feeling, denying the rational order. The mystic's reports of his experiences are beyond

discussion inasmuch as they are subjective and emotional; they must be accepted, by one who wishes to believe them, as a matter of faith, not knowledge. Plato's view of the world is that of an intelligible system that man can know by disciplined intellect alone. He was, in fact, the founder of logic, a logician and a poet, but he was not a mystic, he never exalted feeling above reason.

In several senses Plato was an aristocrat, but not in the opprobrious sense of some of his critics. His family on both his father's and his mother's side was a distinguished one and had produced men sufficiently able to assume the obligations of leadership. Plato accepted the responsibility of his inherited position. His dominant aim was to prevent the further disintegration of Greece. Two courses were open to him, either the assumption of public office or the re-establishment of the clarity of the Greek intellect which had become corrupted by many influences. The fate of Socrates perhaps suggested to him that his special strength lay in the restoration of the Greek view of life. His position in the *Republic* is that good government can be conserved only by statesmen with knowledge in proportion to their task. In the *Laws* he attempted a more direct approach through the formulation of a specific legislative program. He was also aristocratic in the lifelong discipline with which he held himself to this task. His view that the final stage of the statesman's education should not be undertaken before the age of fifty would have little support today in conjunction with our desperate efforts at mass education. In Plato's hands aristocracy meant the rule of the best, from whatever class they came. The able were to receive special training for the responsibilities requiring great ability; the less able were to perform the tasks suitable to their ability. Plato's political theory is an implication of the system of nature, and to call this philosophy aristocratic is meaningful only in the sense that nature is itself aristocratic. But to call any philosophy aristocratic in the sense of class interest is meaningless; preoccupation with the interests of one class to the detriment of others is not philosophy. Philosophy is disinterested or it is not philosophy. When ideas are manipulated for personal ends, for class or group interests, the name for this in Plato's day was sophistry. It was against this that his dialogues were directed. To accuse Plato of being in league with the sophistic forces that undermined the classical world is an instance of the more subtle misrepresentation of his position. Plato's disinterested pursuit of knowledge has not only made the word *Platonism* synonymous with the word *philosophy*, it has marked him as the aristocrat of aristocrats, the paragon of excellence emulated by high-minded men for over two thousand years.

In the dialogues Plato appears to address himself to particular topics and in no one place in the conventional sense does he set forth a complete system of philosophy. This circumstance has prompted the view, especially during the nineteenth century, that the

dialogues display an evolutionary development, that Plato gradually felt or thought his way to a final position which is displayed in the later writings. It has also led to the belief that as a philosopher he must have put forth a formal system and that it is now lost to us. We know that he lectured at the Academy and we have the authority of Aristotle that these lectures constituted "the philosophy of Plato." It is therefore argued that Platonism as a formal system was expounded in the lecture room very much in the manner of Aristotle. It may be so, but the notion is conjectural. The evolutionary view of the dialogues is also difficult to maintain. In them the same thoughts appear again and again, expressed in different words, in different contexts, and with varying emphasis. Plato was the culmination of several centuries of Greek speculation and he took full advantage of the insight which his predecessors had developed. But speculation assumes intelligibility. The insight that the world is system, is organic, therefore both orderly and alive, is the Greek view as far back as we have records. Because of this previous work in philosophy he was able relatively early in life to see the world as an entirety and to grapple with its implications. The Greek organic view stressed a living entirety made up of members. Plato's dialogues dealt with increasingly difficult problems but there is no shift in his convictions. His method throughout is one of exploration, of clarification, but the same insight dominates and the same principles recur. The world view they display is clear when the dialogues are seen as a whole. It is not stated all at once, or in any one place; it is unfolded gradually and its implications are explored. The important point is that the dialogues as a whole are alone a statement of his position. Plato was fully aware of the value of system in the search for knowledge, of the desirability of stating as clearly as possible the principles on which the inquiry turns. He chose a method quite distinct both from that of the positivist science of the present day which purports to start with the "facts," and from that of the deductive method of the system builders of the seventeenth century. But his approach on that account is no less rigorous and valid. His system unfolds as a flower unfolds, and halfway in its development we see its center, the *Republic*, holding the many petals firmly. Later, when the system has fully flowered, its periphery may well be said to be the *Laws*. He does not treat the various topics of his discourse, such as ethics, psychology, epistemology, as meaningful in themselves, but as organic, interrelated subjects meaningful only as variations upon a single theme. In this respect he differs from scientists who see the different departments of inquiry as having their own special components.

At the heart of Plato's philosophy is the doctrine of Ideas. It is the great discovery in the history of philosophy, and although it is the subject of extensive discussion in accounts of Plato's thought, the

actual amount of space devoted to it by this name in the dialogues is scanty. Nevertheless it is the basic assumption behind everything he wrote. Thus Plato's technique combined example with exposition; to grasp fully what he intended to say about the theory of Ideas the dialogues must be understood as acts of knowing, examples of how knowledge is acquired. Expositions of Plato's position in treatise form can therefore be misleading. According to Aristotle, Plato accepted Heraclitus' doctrine that things, as we are aware of them through our organs of touch, taste, sight, and hearing, are all in constant flux and therefore our sense organs cannot give us knowledge. If the dominant color of a painting is one thing under the northern light of the sky and a different thing under artificial illumination it is apparent that the information we derive from our senses varies with conditions. Aristotle says that Plato was thus led to the view that if we are to have knowledge it must be of permanent entities distinct from those we know through the senses. Plato generally called these entities *Forms* or *Ideas*, terms which are misleading in English but which are now standard usage in Platonic studies. Today the word "idea" carries a subjective connotation, and the word "form" may be taken to mean form itself whereas Plato was talking about the principle of form. There has been a vast discussion of the nature of these entities, and Plato himself, as one dialogue followed another, touched on the question from many points of view. At one time they have been regarded by his critics as reified concepts and at another as ideas in the mind of God. Actually, however, they appear to be the ordering principle of which the world is constituted, the order in nature that all investigation seeks whether in physical science or in speculative philosophy. They are the meaning of the world of flux. The main point of Plato's argument is that the realm of Ideas is the reality of the objects which are ordered. What our senses report about objects is not wholly responsible and must be corrected by intelligence. All the sciences attempt to discover the laws which are the order of the phenomena in their particular fields. In physics, for example, the order is expressed by the laws of the conservation of energy, mass, momentum, gravitation, electric charge, and others, and in physiology by the laws of the general metabolism of the organism. In Platonism order is not the sum of the laws that science discovers but the principle of all laws, the *logos* or Intelligence itself. Plato approached this problem on the assumption that when we classify things under a general name we do so because permanence and order are there. Thus in the *Euthyphro*, *Charmides*, *Laches*, and the *Greater Hippias* the inquiry concerns the class, the Idea. The questions asked are, What is piety? What is temperance? What is courage? What is beauty? In the *Euthyphro* Socrates observes that there are many instances of piety but that he is searching for the Idea, the permanent, that which makes pious acts pious. From this

elementary beginning in an exploration of the meaning of class names Plato passed on in the later dialogues to more sophisticated statements of his doctrine and its applicability to all aspects of the world. He saw it as the refutation of the view that all is flux and that man is the measure of things. These latter notions have recurred calling themselves naturalism, pragmatism, positivism, analysis, and existentialism. Plato's theory of Ideas is difficult to grasp in its full implications and while it can be stated its meaning is not obvious and will be understood only upon reflection. He has no doubt that the Ideas exist outside the human mind, and shows that by turning our attention to ultimate problems we attain knowledge, for our intelligence, like the eye, beholds that toward which it is turned; if we do not look we do not see.

Plato's artistry and philosophical power are nowhere shown to better advantage than in his discussion of friendship and love. Here he was venturing into a domain which poets have thought to be their special province but he took the subject further than it had been taken by any predecessor. More, he placed it on a basis from which the poetry of the West has derived sustenance to the present. In the *Lysis* Socrates and his companions endeavor to determine whether friendship or love is the attraction of likes or opposites, a theme of the novelist from *Daphnis and Chloë* to Proust and Joyce. Plato leaves the question unresolved in the *Lysis* but argues that friendship must have a purpose, and he identifies this purpose with the highest purpose—individual wholeness—the good. In the *Phaedrus* he discusses the madness of the lover, his struggle with appetite, and his desire to mold his beloved into the image of the Idea. At the end of this dialogue, when the discussion is over, Socrates addresses Pan praying for the beauty toward which the discussion has led.

Beloved Pan, and all ye other gods who haunt this place, give me beauty in the inward soul; and may the outward and the inward man be at one. May I reckon the wise to be the wealthy, and may I have such a quantity of gold as a temperate man and he only can bear and carry.

In the *Symposium* Plato carries the phenomenon of love from physical desire through the artistic impulse manifested in the way we do things (this includes the organization of States), to the love of the beautiful or Good which is the Idea that molds the world. It is this aspect of Plato's thought which received great attention in the sixteenth and seventeenth centuries and which passed into romantic literature as the vulgar notion of "Platonic love." The utilitarianism of today is more occupied with the proposals in the *Republic* and the *Laws* for the regulation of marriage and the enforcement of monogamy, but in the classical tradition Plato's doctrine of Eros or Love is seen for what it is, namely, as an integral part of his philosophy binding all things, making each a distinct whole.

Plato's doctrine of the soul, which has been associated with the Pythagoreans and the Orphic Mysteries in one direction, and was extended by Neoplatonism and Christianity in another, remains one of the perplexing puzzles in his philosophy. In his cosmology he allots to the soul forms of existence, sameness, and difference intermediate between the real being of the Ideas and physical objects. Since the soul is akin to the Ideas it is immortal; it is the chief author of change in physical bodies. Plato thus clearly believed in the imperishability of the soul (*psyche*) as the activating principle of change. Physical objects come and go but the activating power of Being is constant. In one of the greatest of all the dialogues, the *Phaedo*, Plato discussed the question of the immortality of the human soul in the sense of the survival of human consciousness after death. There are also references and arguments with respect to the same issue in other dialogues. None of the arguments is conclusive as Plato himself must have been aware, and as numerous commentators since his day have pointed out. It cannot be shown that Plato believed in immortality in this sense, and the precise meaning of his doctrine of the soul has been endlessly debated from ancient times to the present both on the basis of the text and from the implications of his philosophy as a whole. The problem has never been resolved and it appears unlikely that it ever will be. At the heart, however, of the doctrine was the insistence upon the supreme duty of "tending the soul" and making it as perfect as possible. By this Plato meant that it is man's obligation to know, to grasp the meaning of the world rationally, and to manage his conduct in accordance with that insight. In the myths he assumes the immortality of the individual soul but this may be understood, not as the affirmation of a truth, but as a necessary regulative principle in the State. At the end of the *Laws* he touches on the problem for the final time. The great lesson about death, he says, is that the soul is superior to the body, and that it is the soul which makes us what we are. In death man departs to render his account to the gods. Not much help can be given him now. While he was alive he should have been aided to live the good life by all connected with him so that after death he would have nothing to fear.

But the problem of individual immortality is only one aspect of Plato's treatment of the soul. To begin with, the word "soul," with its accretions of meanings during the centuries, is an unfortunate translation of the Greek word *psyche*. It is more properly translated, according to the various contexts, as Reason, Mind, Intelligence, Life, the vital principle in things as well as in man; it is the constant that causes change but itself does not change. In fact, Plato's use of many different words for the rational order has caused much confusion. One explanation of his use of different words suggests that he hoped to make us realize that meaning lies not in words but only in that for

which words stand. Another likely explanation is that no one word is adequate to account for the ideational nature of reality. In any event, the soul, because it is Intelligence, is tripartite; it is one and also many and the proportion that fuses them.

Plato therefore associated his theory of the State with the tripartite nature of the soul. He remarks that the State does not spring from oaks or rocks but from the characters of its citizens. Nevertheless the connections that exist between the elements that comprise human nature and those that make up the structure of the State are, he warns us, to be taken only analogically; it is not a proof but a method that will be helpful in disclosing the essential nature of the State. Plato's theory of human nature is a complicated one and his tripartite division of it into human intelligence, courage, and appetite is not an instance of a primitive psychology. The division was made for the purpose in hand and was not intended to be exhaustive. Plato works out in considerable detail the connections between the appetitive aspect of human nature, its desires and wants on the one side, and the economic class on the other. Similarly he associates the courageous element with the military class. This division of human nature is represented by the fighting instinct in man, his competitiveness, and his sense of injustice. Finally, the rational or philosophical element is connected with the governing class. In a famous image Plato compares man's intelligence to a charioteer driving two horses, one spirited and one sluggish, but the three forming a unit. The just man, Plato therefore says, is governed by intelligence even as the just State is governed by its most intelligent members.

Plato's theory of art, like everything he wrote, is an implication of the doctrine of Ideas. To him the world was a living system of Ideas and, true to this view, he never treats aspects of knowledge in isolation. We, as part of this system, know potentially; he therefore tries to lead us to see for ourselves. This has prompted some scholars to imagine that he leaves, not only philosophy itself but the theory of art, unanchored and unsystematic. But each dialogue, although exploring a different aspect of knowledge, has within it, by implication, the whole of knowledge as he envisaged it. In the *Timaeus*—Plato's poetic account of the universe—God is the Demiurgos, the craftsman, and the world is his product. He is the artist working toward fully understood ends, he is Intelligence forming all things from within. Thus when man understands the world he too can be an artist in all that he does. This is man's distinctive function, and the essential artist is the Statesman. Art is imitation, not of things, but of the nature of things, and man is an imitator, not a creator. Dante carried on this tradition when he wrote, "Art is the grandchild of God."

Much has been made of Plato's criticism of the poets, particu-

larly of Homer, Hesiod, and the tragic drama. He criticized them for what he considered their excesses. Zeus should not have been pictured as subject to love potions administered by the scheming Hera, and Achilles' grief over the death of Patroclus Plato thought excessive; in tragic drama too he found excesses of emotion. Excess, he held, violates proportion and makes bad art and bad ethics. He concluded that the arts, so effective for good or evil, should be guided by the more intelligent members of the State, the philosophers, whose concern, training, and innate ability best equip them for that function. He was not hostile to art or poetry as such but only to unintelligent art, for he would not admit that imagination had a claim to the allegiance of men superior to the claim of intellect. "Let our artists," he wrote, "rather be those who are gifted to discern the true nature of the beautiful and graceful; then will our youth dwell in a land of health, amid fair sights and sounds, and receive the good in everything; and beauty, the effluence of fair works, shall flow into the eye and ear, like a health-giving breeze from a purer region, and insensibly draw the soul from earliest years into likeness and sympathy with the beauty of reason." No one has seen more deeply than Plato the beneficent effects of great art, but he argues that unfettered imagination and formless intuitionism lead to error. Emotion like all things is beneficial when in balance, but art out of balance is not art. The great poet is one who does not misrepresent the world, but who discloses its real nature.

When Plato turned his attention to moral and political problems he did so from the point of view of his theory of Ideas. His purpose is to show that ethics and politics can be studied rationally if approached from the vantage ground which his philosophy gives us. In his view ethics and politics are indivisible implications of the natural order. He was not interested in describing existing states inasmuch as he thought they were all bad. He wanted to discover the real nature of the State, what it necessarily is if its full purpose is realized. This has always been the practice of even the most advanced sciences which proceed on the basis of ideal entities such as frictionless engines, perfect levers, perfectly rigid bodies, and similar constructions. Plato believed that a state, like all other things, possesses certain characteristics or it does not function properly and it was his intention to examine them. His standard, the rational order, conditions the structure and practices of the State. Evidence for this lies in the need men have for the different abilities of different individuals. The State is therefore a system of reciprocal services. This implies Plato's second great principle, the division of labor or specialization of function. Each man will perform the task for which he is best suited and the surplus of his product will be exchanged for the surplus of other specialists. In this way political life conserves its natural unity. Too often, political groups lose their

unity by becoming divided into camps, rich and poor; but if each man cultivates his own abilities, such as they are, he will be happy and healthy, and the State will be healthy and whole. It is important to recognize that the political standard is the opposite of uniformity since different capacities are needed and each member has the greatest possible latitude to develop his own different abilities.

Owing to the necessity of difference Plato recognized three classes of men: the workers, merchants, traders, and businessmen who make up the bulk of the population, whose interest and therefore function is economic, supplying the material needs of the State; and the guardians, consisting of two classes, the statesmen who manage the public affairs and the soldiers and educators who protect the State against its internal and external enemies. The members of the three classes are born with differentiated interests which should be trained for their own individual fulfillment and happiness, and they will find their way to their proper occupation through their natural inclinations and abilities helped by educational facilities. Plato recognizes that this is a class, not a caste system, since the individual's position is not founded on heredity but on demonstrated qualities. At the peak of the system is the statesman, the man who has a grasp of the scheme of things. In the course of his argument Plato develops elaborate views on the conservation of this order by control of wealth, the regulation and equality of the sexes, education, and the place of art in political life. His analysis of the political order has found proponents and antagonists in succeeding ages, and it is clear that the problems he discussed are the problems that do not change. In the *Republic*, which he wrote in middle age, he found that with intelligent leadership and with the educational advantages of a healthy political life there would be little need for positive law. But in the *Laws* written at the end of his life, he is concerned with the alternative to intelligent leadership—the need for a few necessary laws clearly stated and firmly enforced.

His argument reaches one of its peaks in his defense of the natural order as justice. He means no more than what he has already said. Justice is realized in political life when the members of the State discharge their proper functions excellently and do not assume tasks beyond their competence. Justice is the principle which makes the State a whole and maintains its parts in due proportion. Through the observance of this principle both the State and the individual can achieve a satisfactory life. This alone gives the State its meaning, its proportion, what, in its absence, would cause it to perish. The principle of justice is the principle of the State, for the State has no other end than the conservation of its natural order.

It is evident that Plato's explorations were conducted on the basis of a firm grasp of logical principles. Unlike Aristotle he did not put forward a systematic account of logical rules, and in that sense

he did not see logic as a discipline possessing a distinct subject matter. But the revival of interest in logical studies, which has been a feature of contemporary thought, has brought about a corresponding concern with its development in the hands of ancient Greek thinkers. There have been efforts to show that on important points, such as the logic of the syllogism, the concept, and judgments, Plato was the first to work out the general theory. When he touches on logical matters Plato's vocabulary, as in his mathematical discussions, can on occasion be technical in the extreme. It is the writing of a man who is a master of his subject matter.

It is also evident that Plato saw logic as more than an instrument. It was the essence of philosophy because it sought to discover the invariant laws of being, those necessities grounded in nature against which, as he says, not even the gods contend. Those logical truths, such as the relation of incompatibility or the principle of identity, are expressions of something that obtains in the external world; they are more objectively true than the circumstance that physical science affirms. They are the invariants that constitute the order of the world. They are not comparable, as is sometimes alleged, to the rules of chess where we do not ask if a particular game is "true," but rather "was the game played in accordance with the rules?" In Plato's logic we do ask if it is true that a relation of incompatibility exists. We put that question because the absence of incompatibility in nature is evidence of its intelligibility. For this reason Plato's logic implies that logical truth is itself a principle of the order of nature.

After the "logical" dialogues Plato gave an account in the *Timaeus* of his views on cosmology. It is a myth and, as Plato says, no more than a "likely story." It is presented as a continuation of the *Republic*, and in ancient times, and even today, it is held to embody Plato's last thoughts on the ultimate nature of things. In part it is a reflection of the science and mathematics of his time, but it too is dominated by the idea that the universe is the product of Reason seeking to realize itself. In a key sentence Plato says that the world is a composite result generated by Reason and Necessity. Reason overruled Necessity by persuading her to conduct to the best end the greater part of things. By this he seems to mean that the intelligibility of the world is due to the imposition on certain necessities of nature, its "errant causes," of a directing or teleological principle. This distinction between Reason and Necessity is one of the peculiarities of the *Timaeus* which perhaps caused Hegel to deny that it could have been written by Plato; it was, he argued, an old Pythagorean manuscript. Plato's own philosophy rests on the doctrine that at the heart of things there is Intelligence at work endeavoring everywhere to fulfill itself. The *Timaeus* must be read as a poem, more profound in its insight than the *De rerum natura* of Lucretius

since it allowed for all that Lucretius described and made it plain that the materialist view is insufficient to account for the world.

Although the *Timaeus* takes the form of a myth, a vision of the physical world, it should not be supposed that it is less profound than the other dialogues. In the *Timaeus* Plato's aim is to reveal order in terms of the world of things. But notwithstanding its mythical form, or perhaps because of it, the *Timaeus* has been one of Plato's most influential dialogues. However, it is a dangerous undertaking to make the *Timaeus* or other writings of Plato say more than Plato intended or to interpret his remarks as anticipations of later developments. The Christian Fathers and the Middle Ages found in the first sentence of the *Timaeus* a foreknowledge of the Trinity. We are told in our own sophisticated age by a responsible historian of science that Plato himself formulated the idea of negative numbers and that he advanced the germ of the Newtonian-Leibnizian calculus. We are also told that the theory of Ideas is a counterpart of contemporary mathematical logic. Today the Copenhagen quantum physicists argue that the views of Plato in the *Timaeus* more closely approximate the fundamental law of nature than those of his opponents in the classical world. The *Timaeus* is a poem on the inauguration of the world, penetrating, compact, and great in conception. Whatever anticipations of contemporary knowledge it may disclose neither add to nor subtract from its importance as Plato's effort at a comprehensive vision of nature. His own insight is elaborated in other dialogues and it is by the truth or falsity of that insight that he must stand or fall.

Plato's philosophy is unique in the history of thought since what he said has been stated only once. His great commentators from Aristotle to Hegel have all attempted to improve upon him. He was poet, thinker, scientist all in one and there has been no such combination of powers displayed by anyone before or since. To understand Plato is to be educated; it is to see the nature of the world in which we live. The vitality of what he has to say is due to one factor. He took his point of departure from what is and not from what man wants. One by one he took up the great problems and if he did not solve them he left them at least in a framework in which subsequent ages could see them in their essential nature. He has been misunderstood, and adapted to points of view completely antithetical to his own; but these aberrations have always run their course, and it is by a return to Plato's insights that the thought of the West has continually renewed itself.

THE COLLECTED DIALOGUES  
OF PLATO

# SOCRATES' DEFENSE

## (APOLOGY)

*The first three dialogues given here are an account of the last days and the death of Socrates. In what order Plato wrote the dialogues we do not know, but in reading them there is a good reason for beginning with those that center in the death of the chief personage. Only in them is Socrates himself the subject. In the others, although almost always the main speaker, he rarely speaks of himself. Indeed, in two of the three latest dialogues he is only a listener, and in the last he does not even appear. But in these first three he talks at length about his life and his beliefs.*

*In his Defense, Socrates explains himself to his fellow citizens when he is brought before an Athenian court on a most serious charge. "Socrates is guilty of corrupting the minds of the young, and of believing in deities of his own invention instead of the gods recognized by the state." In the Apology, as it is generally known, he gives a detailed account of the way he has lived and the convictions he has reached.*

*At the end, when he is condemned to death, the few words in which he accepts the sentence are in themselves a vivid picture of the man he was, unlike any other there has ever been. Great spiritual leaders and great saints adorn the pages of history, but Socrates is not like any of them. He is, indeed, the servant of the divine power, living in complete obedience to God; yet he always views the world of men with a bit of humor, a touch of irony. He spends his life in the effort to kindle into a flame the spark of good in every man, but when he fails, when he comes up against blind obstinacy or stupid conceit or the indifference of egotism, or when he draws down on himself bitter enmity, then along with his regret—because he cares for everyone—is mingled a little amusement, a feeling, as it were, of rueful sympathy, as if he said to himself, "What silly children we are." Socrates never condemned.*

*This significant clue to what he was is given most clearly in Socrates' Defense.*

17 I do not know what effect my accusers have had upon you, gentlemen, but for my own part I was almost carried away by them—their arguments were so convincing. On the other hand, scarcely a word of what they said was true. I was especially astonished at one of their many misrepresentations; I mean when they told you that you must be careful not to let me deceive you—the implication being that I am a skillful speaker. I thought that it was peculiarly brazen of them to tell you this without a blush, since they must know that they will soon be effectively confuted, when it becomes obvious that I have not the slightest skill as a speaker—unless, of course, by a skillful speaker they mean one who speaks the truth. If that is what they mean, I would agree that I am an orator, though not after their pattern.

My accusers, then, as I maintain, have said little or nothing that is true, but from me you shall hear the whole truth—not, I can assure you, gentlemen, in flowery language like theirs, decked out with fine words and phrases. No, what you will hear will be a straightforward speech in the first words that occur to me, confident as I am in the justice of my cause, and I do not want any of you to expect anything different. It would hardly be suitable, gentlemen, for a man of my age to address you in the artificial language of a schoolboy orator. One thing, however, I do most earnestly beg and entreat of you. If you hear me defending myself in the same language which it has been my habit to use, both in the open spaces of this city—where many of you have heard me—and elsewhere, do not be surprised, and do not interrupt. Let me remind you of my position. This is my first appearance in a court of law, at the age of seventy, and so I am a complete stranger to the language of this place. Now if I were really from another country, you would naturally excuse me if I spoke in the manner and dialect in which I had been brought up, and so in the present case I make this request of you, which I think is only reasonable, to disregard the manner of my speech—it may be better or it may be worse—and to consider and concentrate your attention upon this one question, whether my claims are fair or not. That is the first duty of the jurymen, just as it is the pleader's duty to speak the truth.

The proper course for me, gentlemen of the jury, is to deal first with the earliest charges that have been falsely brought against me, and with my earliest accusers, and then with the later ones. I make this distinction because I have already been accused in your hearing by a great many people for a great many years, though without a word of truth, and I am more afraid of those people than I am of Anytus and his colleagues, although they are formidable enough. But the others are still more formidable. I mean the people who took hold of so many of you when you were children and tried to fill your minds with

From *The Last Days of Socrates*, translated and with an introduction by Hugh Tredennick (Penguin Classics, Harmondsworth, Middlesex, 1954).

untrue accusations against me, saying, There is a wise man called Socrates who has theories about the heavens and has investigated everything below the earth, and can make the weaker argument defeat the stronger.

It is these people, gentlemen, the disseminators of these rumors, c who are my dangerous accusers, because those who hear them suppose that anyone who inquires into such matters must be an atheist. Besides, there are a great many of these accusers, and they have been accusing me now for a great many years. And what is more, they approached you at the most impressionable age, when some of you were children or adolescents, and they literally won their case by default, because there was no one to defend me. And the most fantastic thing of all is that it is impossible for me even to know and tell you their names, unless one of them happens to be a playwright. All these d people, who have tried to set you against me out of envy and love of slander—and some too merely passing on what they have been told by others—all these are very difficult to deal with. It is impossible to bring them here for cross-examination; one simply has to conduct one's defense and argue one's case against an invisible opponent, because there is no one to answer. So I ask you to accept my statement that my critics fall into two classes, on the one hand my immediate accusers, and on the other those earlier ones whom I have mentioned, e and you must suppose that I have first to defend myself against the latter. After all, you heard them abusing me longer ago and much more violently than these more recent accusers.

Very well, then, I must begin my defense, gentlemen, and I must try, in the short time that I have, to rid your minds of a false impression which is the work of many years. I should like this to be the result, gentlemen, assuming it to be for your advantage and my own; and I should like to be successful in my defense, but I think that it will be difficult, and I am quite aware of the nature of my task. However, let that turn out as God wills. I must obey the law and make my defense.

Let us go back to the beginning and consider what the charge is that has made me so unpopular, and has encouraged Meletus to draw b up this indictment. Very well, what did my critics say in attacking my character? I must read out their affidavit, so to speak, as though they were my legal accusers: Socrates is guilty of criminal meddling, in that he inquires into things below the earth and in the sky, and makes the weaker argument defeat the stronger, and teaches others to follow his example. It runs something like that. You have seen it c for yourselves in the play by Aristophanes, where Socrates goes whirling round, proclaiming that he is walking on air, and uttering a great deal of other nonsense about things of which I know nothing whatsoever. I mean no disrespect for such knowledge, if anyone really is versed in it—I do not want any more lawsuits brought against me by

Meletus—but the fact is, gentlemen, that I take no interest in it.  
 d What is more, I call upon the greater part of you as witnesses to my statement, and I appeal to all of you who have ever listened to me talking—and there are a great many to whom this applies—to clear your neighbors' minds on this point. Tell one another whether any one of you has ever heard me discuss such questions briefly or at length, and then you will realize that the other popular reports about me are equally unreliable.

The fact is that there is nothing in any of these charges, and if you have heard anyone say that I try to educate people and charge a  
 e fee, there is no truth in that either. I wish that there were, because I think that it is a fine thing if a man is qualified to teach, as in the case of Gorgias of Leontini and Prodicus of Ceos and Hippias of Elis. Each one of these is perfectly capable of going into any city and actually persuading the young men to leave the company of their fel-  
 20 low citizens, with any of whom they can associate for nothing, and attach themselves to him, and pay money for the privilege, and be grateful into the bargain.

There is another expert too from Paros who I discovered was here on a visit; I happened to meet a man who has paid more in Sophists' fees than all the rest put together—I mean Callias, the son of Hipponicus. So I asked him—he has two sons, you see—Callias, I said, if your sons had been colts or calves, we should have had no difficulty  
 b in finding and engaging a trainer to perfect their natural qualities, and this trainer would have been some sort of horse dealer or agriculturalist. But seeing that they are human beings, whom do you intend to get as their instructor? Who is the expert in perfecting the human and social qualities? I assume from the fact of your having sons that you must have considered the question. Is there such a person or not?

Certainly, said he.

Who is he, and where does he come from? said I. And what does he charge?

Evenus of Paros, Socrates, said he, and his fee is five minas.

c I felt that Evenus was to be congratulated if he really was a master of this art and taught it at such a moderate fee. I should certainly plume myself and give myself airs if I understood these things, but in fact, gentlemen, I do not.

Here perhaps one of you might interrupt me and say, But what is it that you do, Socrates? How is it that you have been misrepresented like this? Surely all this talk and gossip about you would never have arisen if you had confined yourself to ordinary activities, but only if your behavior was abnormal. Tell us the explanation, if  
 d you do not want us to invent it for ourselves.

This seems to me to be a reasonable request, and I will try to explain to you what it is that has given me this false notoriety. So

please, give me your attention. Perhaps some of you will think that I am not being serious, but I assure you that I am going to tell you the whole truth.

I have gained this reputation, gentlemen, from nothing more or less than a kind of wisdom. What kind of wisdom do I mean? Human wisdom, I suppose. It seems that I really am wise in this limited sense. Presumably the geniuses whom I mentioned just now are wise in a wisdom that is more than human. I do not know how else to account for it. I certainly have no knowledge of such wisdom, and anyone who says that I have is a liar and willful slanderer. Now, gentlemen, please do not interrupt me if I seem to make an extravagant claim, for what I am going to tell you is not my own opinion. I am going to refer you to an unimpeachable authority. I shall call as witness to my wisdom, such as it is, the god at Delphi.

(You know Chaerephon, of course. He was a friend of mine from 21 boyhood, and a good democrat who played his part with the rest of you in the recent expulsion and restoration. And you know what he was like, how enthusiastic he was over anything that he had once undertaken. Well, one day he actually went to Delphi and asked this question of the god—as I said before, gentlemen, please do not interrupt—he asked whether there was anyone wiser than myself. The priestess replied that there was no one.) As Chaerephon is dead, the evidence for my statement will be supplied by his brother, who is here in court.

Please consider my object in telling you this. I want to explain to b you how the attack upon my reputation first started. When I heard about the oracle's answer, I said to myself, What does the god mean? Why does he not use plain language? I am only too conscious that I have no claim to wisdom, great or small. So what can he mean by asserting that I am the wisest man in the world? He cannot be telling a lie; that would not be right for him.

After puzzling about it for some time, I set myself at last with considerable reluctance to check the truth of it in the following way. I went to interview a man with a high reputation for wisdom, because I felt that here if anywhere I should succeed in disproving the c oracle and pointing out to my divine authority, You said that I was the wisest of men, but here is a man who is wiser than I am.

Well, I gave a thorough examination to this person—I need not mention his name, but it was one of our politicians that I was studying when I had this experience—and in conversation with him I formed the impression that although in many people's opinion, and especially in his own, he appeared to be wise, in fact he was not. Then when I began to try to show him that he only thought he was wise and was not really so, my efforts were resented both by him and by d many of the other people present. However, I reflected as I walked away, Well, I am certainly wiser than this man. It is only too likely

that neither of us has any knowledge to boast of, but he thinks that he knows something which he does not know, whereas I am quite conscious of my ignorance. At any rate it seems that I am wiser than he is to this small extent, that I do not think that I know what I do not know.

After this I went on to interview a man with an even greater  
e reputation for wisdom, and I formed the same impression again, and here too I incurred the resentment of the man himself and a number of others.

From that time on I interviewed one person after another. I realized with distress and alarm that I was making myself unpopular, but I felt compelled to put my religious duty first. Since I was trying to find out the meaning of the oracle, I was bound to interview everyone who had a reputation for knowledge. And by dog, gentlemen, for I  
22 must be frank with you, my honest impression was this. It seemed to me, as I pursued my investigation at the god's command, that the people with the greatest reputations were almost entirely deficient, while others who were supposed to be their inferiors were much better qualified in practical intelligence.

I want you to think of my adventures as a sort of pilgrimage undertaken to establish the truth of the oracle once for all. After I had finished with the politicians I turned to the poets, dramatic, lyric, and  
b all the rest, in the belief that here I should expose myself as a comparative ignoramus. I used to pick up what I thought were some of their most perfect works and question them closely about the meaning of what they had written, in the hope of incidentally enlarging my own knowledge. Well, gentlemen, I hesitate to tell you the truth, but it must be told. It is hardly an exaggeration to say that any of the bystanders could have explained those poems better than their actual authors. So I soon made up my mind about the poets too. I decided  
c that it was not wisdom that enabled them to write their poetry, but a kind of instinct or inspiration, such as you find in seers and prophets who deliver all their sublime messages without knowing in the least what they mean. It seemed clear to me that the poets were in much the same case, and I also observed that the very fact that they were poets made them think that they had a perfect understanding of all other subjects, of which they were totally ignorant. So I left that line of inquiry too with the same sense of advantage that I had felt in the case of the politicians.

Last of all I turned to the skilled craftsmen. I knew quite well  
d that I had practically no technical qualifications myself, and I was sure that I should find them full of impressive knowledge. In this I was not disappointed. They understood things which I did not, and to that extent they were wiser than I was. But, gentlemen, these professional experts seemed to share the same failing which I had noticed in the poets. I mean that on the strength of their technical proficiency

they claimed a perfect understanding of every other subject, however important, and I felt that this error more than outweighed their positive wisdom. So I made myself spokesman for the oracle, and asked myself whether I would rather be as I was—neither wise with their wisdom nor stupid with their stupidity—or possess both qualities as they did. I replied through myself to the oracle that it was best for me to be as I was.

The effect of these investigations of mine, gentlemen, has been to arouse against me a great deal of hostility, and hostility of a particularly bitter and persistent kind, which has resulted in various malicious suggestions, including the description of me as a professor of wisdom. [This is due to the fact that whenever I succeed in disproving another person's claim to wisdom in a given subject, the bystanders assume that I know everything about that subject myself. But the truth of the matter, gentlemen, is pretty certainly this, that real wisdom is the property of God, and this oracle is his way of telling us that human wisdom has little or no value.] It seems to me that he is not referring literally to Socrates, but has merely taken my name as an example, as if he would say to us, The wisest of you men is he who has realized, like Socrates, that in respect of wisdom he is really worthless.

That is why I still go about seeking and searching in obedience to the divine command, if I think that anyone is wise, whether citizen or stranger, and when I think that any person is not wise, I try to help the cause of God by proving that he is not. This occupation has kept me too busy to do much either in politics or in my own affairs. In fact, my service to God has reduced me to extreme poverty.

There is another reason for my being unpopular. A number of young men with wealthy fathers and plenty of leisure have deliberately attached themselves to me because they enjoy hearing other people cross-questioned. [These often take me as their model, and go on to try to question other persons. Whereupon, I suppose, they find an unlimited number of people who think that they know something, but really know little or nothing. Consequently their victims become annoyed, not with themselves but with me, and they complain that there is a pestilential busybody called Socrates who fills young people's heads with wrong ideas. If you ask them what he does, and what he teaches that has this effect, they have no answer, not knowing what to say. But as they do not want to admit their confusion, they fall back on the stock charges against any philosopher, that he teaches his pupils about things in the heavens and below the earth, and to disbelieve in gods, and to make the weaker argument defeat the stronger.] They would be very loath, I fancy, to admit the truth—which is that they are being convicted of pretending to knowledge when they are entirely ignorant. So, jealous, I suppose, for their own reputation, and also energetic and numerically strong, and provided with a plausible

and carefully worked-out case against me, these people have been dinning into your ears for a long time past their violent denunciations of myself.

There you have the causes which led to the attack upon me by Meletus and Anytus and Lycon, Meletus being aggrieved on behalf of the poets, Anytus on behalf of the professional men and politicians,  
 24 and Lycon on behalf of the orators. So, as I said at the beginning, I should be surprised if I were able, in the short time that I have, to rid your minds of a misconception so deeply implanted.

There, gentlemen, you have the true facts, which I present to you without any concealment or suppression, great or small. I am fairly certain that this plain speaking of mine is the cause of my unpopularity, and this really goes to prove that my statements are true, and that I have described correctly the nature and the grounds of the calumny which has been brought against me. Whether you inquire into them now or later, you will find the facts as I have just described them.  
 b

So much for my defense against the charges brought by the first group of my accusers. I shall now try to defend myself against Meletus—high-principled and patriotic as he claims to be—and after that against the rest.

Let us first consider their deposition again, as though it represented a fresh prosecution. It runs something like this: Socrates is guilty of corrupting the minds of the young, and of believing in deities of his own invention instead of the gods recognized by the state.  
 c Such is the charge. Let us examine its points one by one.

(First it says that I am guilty of corrupting the young. But I say, gentlemen, that Meletus is guilty of treating a serious matter with levity, since he summons people to stand their trial on frivolous grounds, and professes concern and keen anxiety in matters about which he has never had the slightest interest. I will try to prove this to your satisfaction.)

d Come now, Meletus, tell me this. You regard it as supremely important, do you not, that our young people should be exposed to the best possible influence?

I do.

Very well, then, tell these gentlemen who it is that influences the young for the better. Obviously you must know, if you are so much interested. You have discovered the vicious influence, as you say, in myself, and you are now prosecuting me before these gentlemen. Speak up and inform them who it is that has a good influence upon the young. . . . You see, Meletus, that you are tongue-tied and cannot answer. Do you not feel that this is discreditable, and a sufficient proof in itself of what I said, that you have no interest in the subject? Tell me, my friend, who is it that makes the young good?

The laws.

That is not what I mean, my dear sir. I am asking you to name *e* the *person* whose first business it is to know the laws.

These gentlemen here, Socrates, the members of the jury.

Do you mean, Meletus, that they have the ability to educate the young, and to make them better?

Certainly.

Does this apply to all jurymen, or only to some?

To all of them.

Excellent! A generous supply of benefactors. Well, then, do these spectators who are present in court have an improving influence, or not?

Yes, they do.

25

And what about the members of the Council?

Yes, the councilors too.

But surely, Meletus, the members of the Assembly do not corrupt the young? Or do all of them too exert an improving influence?

Yes, they do.

Then it would seem that the whole population of Athens has a refining effect upon the young, except myself, and I alone demoralize them. Is that your meaning?

Most emphatically, yes.

This is certainly a most unfortunate quality that you have detected in me. Well, let me put another question to you. Take the case of horses. Do you believe that those who improve them make up the whole of mankind, and that there is only one person who has a bad *b* effect on them? Or is the truth just the opposite, that the ability to improve them belongs to one person or to very few persons, who are horse trainers, whereas most people, if they have to do with horses and make use of them, do them harm? Is not this the case, Meletus, both with horses and with all other animals? Of course it is, whether you and Anytus deny it or not. It would be a singular dispensation of fortune for our young people if there is only one person who corrupts them, while all the rest have a beneficial effect. But I need say no more. There is ample proof, Meletus, that you have never bothered *c* your head about the young, and you make it perfectly clear that you have never taken the slightest interest in the cause for the sake of which you are now indicting me.

Here is another point. Tell me seriously, Meletus, is it better to live in a good or in a bad community? Answer my question, like a good fellow; there is nothing difficult about it. Is it not true that wicked people have a bad effect upon those with whom they are in the closest contact, and that good people have a good effect?

Quite true.

Is there anyone who prefers to be harmed rather than benefited *d* by his associates? Answer me, my good man; the law commands you to answer. Is there anyone who prefers to be harmed?

Of course not.

Well, then, when you summon me before this court for corrupting the young and making their characters worse, do you mean that I do so intentionally or unintentionally?

I mean intentionally.

Why, Meletus, are you at your age so much wiser than I at mine? You have discovered that bad people always have a bad effect, and good people a good effect, upon their nearest neighbors. Am I so hopelessly ignorant as not even to realize that by spoiling the character of one of my companions I shall run the risk of getting some harm from him? Because nothing else would make me commit this grave offense intentionally. No, I do not believe it, Meletus, and I do not suppose that anyone else does. Either I have not a bad influence, or it is unintentional, so that in either case your accusation is false. And if I unintentionally have a bad influence, the correct procedure in cases of such involuntary misdemeanors is not to summon the culprit before this court, but to take him aside privately for instruction and reproof, because obviously if my eyes are opened, I shall stop doing what I do not intend to do. But you deliberately avoided my company in the past and refused to enlighten me, and now you bring me before this court, which is the place appointed for those who need punishment, not for those who need enlightenment.

It is quite clear by now, gentlemen, that Meletus, as I said before, has never shown any degree of interest in this subject. However, I invite you to tell us, Meletus, in what sense you make out that I corrupt the minds of the young. Surely the terms of your indictment make it clear that you accuse me of teaching them to believe in new deities instead of the gods recognized by the state. Is not that the teaching of mine which you say has this demoralizing effect?

That is precisely what I maintain.

Then I appeal to you, Meletus, in the name of these same gods about whom we are speaking, to explain yourself a little more clearly to myself and to the jury, because I cannot make out what your point is. Is it that I teach people to believe in some gods—which implies that I myself believe in gods, and am not a complete atheist, so that I am not guilty on that score—but in different gods from those recognized by the state, so that your accusation rests upon the fact that they are different? Or do you assert that I believe in no gods at all, and teach others to do the same?

Yes, I say that you disbelieve in gods altogether.

You surprise me, Meletus. What is your object in saying that? Do you suggest that I do not believe that the sun and moon are gods, as is the general belief of all mankind?

He certainly does not, gentlemen of the jury, since he says that the sun is a stone and the moon a mass of earth.

Do you imagine that you are prosecuting Anaxagoras, my dear

Meletus? Have you so poor an opinion of these gentlemen, and do you assume them to be so illiterate as not to know that the writings of Anaxagoras of Clazomenae are full of theories like these? And do you seriously suggest that it is from me that the young get these ideas, when they can buy them on occasion in the market place for a drachma at most, and so have the laugh on Socrates if he claims e them for his own, to say nothing of their being so silly? Tell me honestly, Meletus, is that your opinion of me? Do I believe in no god?

No, none at all, not in the slightest degree.

You are not at all convincing, Meletus—not even to yourself, I suspect. In my opinion, gentlemen, this man is a thoroughly selfish bully, and has brought this action against me out of sheer wanton aggressiveness and self-assertion. He seems to be devising a sort of intelligence test for me, saying to himself, Will the infallible Socrates realize that I am contradicting myself for my own amusement, or shall I succeed in deceiving him and the rest of my audience? 27

It certainly seems to me that he is contradicting himself in this indictment, which might just as well run: Socrates is guilty of not believing in the gods, but believing in the gods. And this is pure flippancy.

I ask you to examine with me, gentlemen, the line of reasoning which leads me to this conclusion. You, Meletus, will oblige us by answering my questions. Will you all kindly remember, as I requested b at the beginning, not to interrupt if I conduct the discussion in my customary way?

Is there anyone in the world, Meletus, who believes in human activities, and not in human beings? Make him answer, gentlemen, and don't let him keep on making these continual objections. Is there anyone who does not believe in horses, but believes in horses' activities? Or who does not believe in musicians, but believes in musical activities? No, there is not, my worthy friend. If you do not want to answer, I will supply it for you and for these gentlemen too. But the next question you must answer. Is there anyone who believes in c supernatural activities and not in supernatural beings?

No.

How good of you to give a bare answer under compulsion by the court! Well, do you assert that I believe and teach others to believe in supernatural activities? It does not matter whether they are new or old. The fact remains that I believe in them according to your statement; indeed you solemnly swore as much in your affidavit. But if I believe in supernatural activities, it follows inevitably that I also believe in supernatural beings. Is not that so? It is. I assume your assent, since you do not answer. Do we not hold that supernatural beings are either gods or the children of gods? Do you agree or not? d

Certainly.

Then if I believe in supernatural beings, as you assert, if these supernatural beings are gods in any sense, we shall reach the conclusion which I mentioned just now when I said that you were testing my intelligence for your own amusement, by stating first that I do not believe in gods, and then again that I do, since I believe in supernatural beings. If on the other hand these supernatural beings are bastard children of the gods by nymphs or other mothers, as they are reputed to be, who in the world would believe in the children of gods and not in the gods themselves? It would be as ridiculous as to believe in the  
 e young of horses or donkeys and not in horses and donkeys themselves. No, Meletus, there is no avoiding the conclusion that you brought this charge against me as a test of my wisdom, or else in despair of finding a genuine offense of which to accuse me. As for your prospect of convincing any living person with even a smattering of intelligence that belief in supernatural and divine activities does not imply belief in supernatural and divine beings, and vice versa, it is outside all the  
 28 bounds of possibility.

As a matter of fact, gentlemen, I do not feel that it requires much defense to clear myself of Meletus' accusation. What I have said already is enough. But you know very well the truth of what I said in an earlier part of my speech, that I have incurred a great deal of bitter hostility, and this is what will bring about my destruction, if anything does—not Meletus nor Anytus, but the slander and jealousy of a very large section of the people. They have been fatal to a great many  
 b other innocent men, and I suppose will continue to be so; there is no likelihood that they will stop at me. But perhaps someone will say, Do you feel no compunction, Socrates, at having followed a line of action which puts you in danger of the death penalty?

I might fairly reply to him, You are mistaken, my friend, if you think that a man who is worth anything ought to spend his time weighing up the prospects of life and death. He has only one thing to consider in performing any action—that is, whether he is acting rightly or wrongly, like a good man or a bad one. On your view the  
 c heroes who died at Troy would be poor creatures, especially the son of Thetis. He, if you remember, made light of danger in comparison with incurring dishonor when his goddess mother warned him, eager as he was to kill Hector, in some such words as these, I fancy: My son, if you avenge your comrade Patroclus' death and kill Hector, you will die yourself—'Next after Hector is thy fate prepared.' When he heard this warning, he made light of his death and danger, being much more  
 d afraid of an ignoble life and of failing to avenge his friends. 'Let me die forthwith,' said he, 'when I have requited the villain, rather than remain here by the beaked ships to be mocked, a burden on the ground.'<sup>1</sup> Do you suppose that he gave a thought to death and danger?

<sup>1</sup> *Iliad* 18.96 sq.

[The truth of the matter is this, gentlemen. Where a man has once taken up his stand, either because it seems best to him or in obedience to his orders, there I believe he is bound to remain and face the danger, taking no account of death or anything else before dishonor.]

This being so, it would be shocking inconsistency on my part, gentlemen, if, when the officers whom you chose to command me assigned me my position at Potidaea and Amphipolis and Delium, I remained at my post like anyone else and faced death, and yet afterward, when God appointed me, as I supposed and believed, to the duty of leading the philosophical life, examining myself and others, I were then through fear of death or of any other danger to desert my post. That would indeed be shocking, and then I might really with justice be summoned into court for not believing in the gods, and disobeying the oracle, and being afraid of death, and thinking that I am wise when I am not. [For let me tell you, gentlemen, that to be afraid of death is only another form of thinking that one is wise when one is not; it is to think that one knows what one does not know. No one knows with regard to death whether it is not really the greatest blessing that can happen to a man, but people dread it as though they were certain that it is the greatest evil, and this ignorance, which thinks that it knows what it does not, must surely be ignorance most culpable.] This, I take it, gentlemen, is the degree, and this the nature of my advantage over the rest of mankind, and if I were to claim to be wiser than my neighbor in any respect, it would be in this—that not possessing any real knowledge of what comes after death, I am also conscious that I do not possess it. But I do know that to do wrong and to disobey my superior, whether God or man, is wicked and dishonorable, and so I shall never feel more fear or aversion for something which, for all I know, may really be a blessing, than for those evils which I know to be evils.

[Suppose, then, that you acquit me, and pay no attention to Anytus, who has said that either I should not have appeared before this court at all, or, since I have appeared here, I must be put to death, because if I once escaped your sons would all immediately become utterly demoralized by putting the teaching of Socrates into practice. Suppose that, in view of this, you said to me, Socrates, on this occasion we shall disregard Anytus and acquit you, but only on one condition, that you give up spending your time on this quest and stop philosophizing. If we catch you going on in the same way, you shall be put to death.]

Well, supposing, as I said, that you should offer to acquit me on these terms, I should reply, Gentlemen, I am your very grateful and devoted servant, but I owe a greater obedience to God than to you, and so long as I draw breath and have my faculties, I shall never stop practicing philosophy and exhorting you and elucidating the truth for everyone that I meet. I shall go on saying, in my usual way, My very

good friend, you are an Athenian and belong to a city which is the greatest and most famous in the world for its wisdom and strength. Are you not ashamed that you give your attention to acquiring as much money as possible, and similarly with reputation and honor, and give no attention or thought to truth and understanding and the perfection of your soul?

And if any of you disputes this and professes to care about these things, I shall not at once let him go or leave him. No, I shall question him and examine him and test him; and if it appears that in spite of his profession he has made no real progress toward goodness, I shall reprove him for neglecting what is of supreme importance, and giving his attention to trivialities. I shall do this to everyone that I meet, young or old, foreigner or fellow citizen, but especially to you, my fellow citizens, inasmuch as you are closer to me in kinship. This, I do assure you, is what my God commands, and it is my belief that no greater good has ever befallen you in this city than my service to my God. For I spend all my time going about trying to persuade you, young and old, to make your first and chief concern not for your bodies nor for your possessions, but for the highest welfare of your souls, proclaiming as I go, Wealth does not bring goodness, but goodness brings wealth and every other blessing, both to the individual and to the state.

Now if I corrupt the young by this message, the message would seem to be harmful, but if anyone says that my message is different from this, he is talking nonsense. And so, gentlemen, I would say, You can please yourselves whether you listen to Anytus or not, and whether you acquit me or not. You know that I am not going to alter my conduct, not even if I have to die a hundred deaths.

Order, please, gentlemen! Remember my request to give me a hearing without interruption. Besides, I believe that it will be to your advantage to listen. I am going to tell you something else, which may provoke a storm of protest, but please restrain yourselves. I assure you that if I am what I claim to be, and you put me to death, you will harm yourselves more than me. Neither Meletus nor Anytus can do me any harm at all; they would not have the power, because I do not believe that the law of God permits a better man to be harmed by a worse. No doubt my accuser might put me to death or have me banished or deprived of civic rights, but even if he thinks—as he probably does, and others too, I dare say—that these are great calamities, I do not think so. I believe that it is far worse to do what he is doing now, trying to put an innocent man to death. For this reason, gentlemen, so far from pleading on my own behalf, as might be supposed, I am really pleading on yours, to save you from misusing the gift of God by condemning me. If you put me to death, you will not easily find anyone to take my place. It is literally true, even if it sounds rather comical, that God has specially appointed me to this city, as though it were a large thorough-

bred horse which because of its great size is inclined to be lazy and needs the stimulation of some stinging fly. It seems to me that God has attached me to this city to perform the office of such a fly, and all day long I never cease to settle here, there, and everywhere, rousing, persuading, reproving every one of you. You will not easily find another like me, gentlemen, and if you take my advice you will spare my life. I suspect, however, that before long you will awake from your drowsing, and in your annoyance you will take Anytus' advice and finish me off with a single slap, and then you will go on sleeping till the end of your days, unless God in his care for you sends someone to take my place.

If you doubt whether I am really the sort of person who would have been sent to this city as a gift from God, you can convince yourselves by looking at it in this way. Does it seem natural that I should have neglected my own affairs and endured the humiliation of allowing my family to be neglected for all these years, while I busied myself all the time on your behalf, going like a father or an elder brother to see each one of you privately, and urging you to set your thoughts on goodness? If I had got any enjoyment from it, or if I had been paid for my good advice, there would have been some explanation for my conduct, but as it is you can see for yourselves that although my accusers unblushingly charge me with all sorts of other crimes, there is one thing that they have not had the impudence to pretend on any testimony, and that is that I have ever exacted or asked a fee from anyone. The witness that I can offer to prove the truth of my statement is, I think, a convincing one—my poverty.

It may seem curious that I should go round giving advice like this and busying myself in people's private affairs, and yet never venture publicly to address you as a whole and advise on matters of state. The reason for this is what you have often heard me say before on many other occasions—that I am subject to a divine or supernatural experience, which Meletus saw fit to travesty in his indictment. It began in my early childhood—a sort of voice which comes to me, and when it comes it always dissuades me from what I am proposing to do, and never urges me on. It is this that debars me from entering public life, and a very good thing too, in my opinion, because you may be quite sure, gentlemen, that if I had tried long ago to engage in politics, I should long ago have lost my life, without doing any good either to you or to myself. Please do not be offended if I tell you the truth. No man on earth who conscientiously opposes either you or any other organized democracy, and flatly prevents a great many wrongs and illegalities from taking place in the state to which he belongs, can possibly escape with his life. The true champion of justice, if he intends to survive even for a short time, must necessarily confine himself to private life and leave politics alone.

I will offer you substantial proofs of what I have said—not

theories, but what you can appreciate better, facts. Listen while I describe my actual experiences, so that you may know that I would never submit wrongly to any authority through fear of death, but would refuse even at the cost of my life. It will be a commonplace story, such as you often hear in the courts, but it is true.

- b The only office which I have ever held in our city, gentlemen, was when I was elected to the Council. It so happened that our group was acting as the executive when you decided that the ten commanders who had failed to rescue the men who were lost in the naval engagement should be tried en bloc, which was illegal, as you all recognized later. On this occasion I was the only member of the executive who insisted that you should not act unconstitutionally, and voted against the proposal; and although your leaders were all ready to denounce and arrest me, and you were all urging them on at the top of your  
c voices, I thought that it was my duty to face it out on the side of law and justice rather than support you, through fear of prison or death, in your wrong decision.

- This happened while we were still under a democracy. When the oligarchy came into power, the Thirty Commissioners in their turn summoned me and four others to the Round Chamber and instructed us to go and fetch Leon of Salamis from his home for execution. This was of course only one of many instances in which they issued such instructions, their object being to implicate as many people as possible in their wickedness. On this occasion, however, I again made it clear  
d not by my words but by my actions that death did not matter to me at all—if that is not too strong an expression—but that it mattered all the world to me that I should do nothing wrong or wicked. Powerful as it was, that government did not terrify me into doing a wrong action. When we came out of the Round Chamber, the other four went off to Salamis and arrested Leon, and I went home. I should probably have been put to death for this, if the government had not fallen soon  
e afterward. There are plenty of people who will testify to these statements.

- Do you suppose that I should have lived as long as I have if I had moved in the sphere of public life, and conducting myself in that sphere like an honorable man, had always upheld the cause of right, and conscientiously set this end above all other things? Not by a very  
33 long way, gentlemen; neither would any other man. You will find that throughout my life I have been consistent in any public duties that I have performed, and the same also in my personal dealings. I have never countenanced any action that was incompatible with justice on the part of any person, including those whom some people maliciously call my pupils. I have never set up as any man's teacher, but if anyone, young or old, is eager to hear me conversing and carrying out my private mission, I never grudge him the opportunity; nor do I charge a  
b fee for talking to him, and refuse to talk without one I am ready to

answer questions for rich and poor alike, and I am equally ready if anyone prefers to listen to me and answer my questions. If any given one of these people becomes a good citizen or a bad one, I cannot fairly be held responsible, since I have never promised or imparted any teaching to anybody, and if anyone asserts that he has ever learned or heard from me privately anything which was not open to everyone else, you may be quite sure that he is not telling the truth.

But how is it that some people enjoy spending a great deal of time in my company? You have heard the reason, gentlemen; I told you quite frankly. It is because they enjoy hearing me examine those who think that they are wise when they are not—an experience which has its amusing side. This duty I have accepted, as I said, in obedience to God's commands given in oracles and dreams and in every other way that any other divine dispensation has ever impressed a duty upon man. This is a true statement, gentlemen, and easy to verify. If it is a fact that I am in process of corrupting some of the young, and have succeeded already in corrupting others, and if it were a fact that some of the latter, being now grown up, had discovered that I had ever given them bad advice when they were young, surely they ought now to be coming forward to denounce and punish me. And if they did not like to do it themselves, you would expect some of their families—their fathers and brothers and other near relations—to remember it now, if their own flesh and blood had suffered any harm from me. Certainly a great many of them have found their way into this court, as I can see for myself—first Crito over there, my contemporary and near neighbor, the father of this young man Critobulus, and then Lysanias of Sphettus, the father of Aeschines here, and next Antiphon of Cephisus, over there, the father of Epigenes. Then besides there are all those whose brothers have been members of our circle—Nicostratus, the son of Theozotides, the brother of Theodotus, but Theodotus is dead, so he cannot appeal to his brother, and Paralus here, the son of Demodocus, whose brother was Theages. And here is Adimantus, the son of Ariston, whose brother Plato is over there, and Aeantodorus, whose brother Apollodorus is here on this side. I can name many more besides, some of whom Meletus most certainly ought to have produced as witnesses in the course of his speech. If he forgot to do so then, let him do it now—I am willing to make way for him. Let him state whether he has any such evidence to offer. On the contrary, gentlemen, you will find that they are all prepared to help me—the corrupter and evil genius of their nearest and dearest relatives, as Meletus and Anytus say. The actual victims of my corrupting influence might perhaps be excused for helping me; but as for the uncorrupted, their relations of mature age, what other reason can they have for helping me except the right and proper one, that they know Meletus is lying and I am telling the truth?

There, gentlemen, that, and perhaps a little more to the same

effect, is the substance of what I can say in my defense. It may be that  
 c some one of you, remembering his own case, will be annoyed that  
 whereas he, in standing his trial upon a less serious charge than this,  
 made pitiful appeals to the jury with floods of tears, and had his infant  
 children produced in court to excite the maximum of sympathy,  
 and many of his relatives and friends as well, I on the contrary intend  
 to do nothing of the sort, and that, although I am facing, as it  
 might appear, the utmost danger. It may be that one of you, reflecting  
 on these facts, will be prejudiced against me, and being irritated by his  
 reflections, will give his vote in anger. If one of you is so disposed—I  
 d do not expect it, but there is the possibility—I think that I should be  
 quite justified in saying to him, My dear sir, of course I have some relatives.  
 To quote the very words of Homer, even I am not sprung 'from  
 an oak or from a rock,'<sup>2</sup> but from human parents, and consequently I  
 have relatives—yes, and sons too, gentlemen, three of them, one almost  
 grown up and the other two only children—but all the same I  
 am not going to produce them here and beseech you to acquit me.

Why do I not intend to do anything of this kind? Not out of per-  
 e versity, gentlemen, nor out of contempt for you; whether I am brave  
 or not in the face of death has nothing to do with it. The point is that  
 for my own credit and yours and for the credit of the state as a whole,  
 I do not think that it is right for me to use any of these methods at my  
 age and with my reputation—which may be true or it may be false,  
 35 but at any rate the view is held that Socrates is different from the  
 common run of mankind. Now if those of you who are supposed to be  
 distinguished for wisdom or courage or any other virtue are to behave  
 in this way, it would be a disgrace. I have often noticed that some people  
 of this type, for all their high standing, go to extraordinary lengths  
 when they come up for trial, which shows that they think it will be a  
 dreadful thing to lose their lives—as though they would be immortal  
 if you did not put them to death! In my opinion these people bring disgrace  
 upon our city. Any of our visitors might be excused for thinking  
 b that the finest specimens of Athenian manhood, whom their fellow  
 citizens select on their merits to rule over them and hold other high  
 positions, are no better than women. If you have even the smallest  
 reputation, gentlemen, you ought not to descend to these methods;  
 and if we do so, you must not give us license. On the contrary, you  
 must make it clear that anyone who stages these pathetic scenes and  
 so brings ridicule upon our city is far more likely to be condemned  
 than if he kept perfectly quiet.

But apart from all question of appearances, gentlemen, I do not  
 c think that it is right for a man to appeal to the jury or to get himself  
 acquitted by doing so; he ought to inform them of the facts and convince  
 them by argument. The jury does not sit to dispense justice as

<sup>2</sup> *Odyssey* 19.163.

a favor, but to decide where justice lies, and the oath which they have sworn is not to show favor at their own discretion, but to return a just and lawful verdict. It follows that we must not develop in you, nor you allow to grow in yourselves, the habit of perjury; that would be sinful for us both. Therefore you must not expect me, gentlemen, to behave toward you in a way which I consider neither reputable nor moral nor consistent with my religious duty, and above all you must not expect it when I stand charged with impiety by Meletus here. Surely it is obvious that if I tried to persuade you and prevail upon you by my entreaties to go against your solemn oath, I should be teaching you contempt for religion, and by my very defense I should be accusing myself of having no religious belief. But that is very far from the truth. I have a more sincere belief, gentlemen, than any of my accusers, and I leave it to you and to God to judge me as it shall be best for me and for yourselves.

There are a great many reasons, gentlemen, why I am not distressed by this result—I mean your condemnation of me—but the chief reason is that the result was not unexpected. What does surprise me is the number of votes cast on the two sides. I should never have believed that it would be such a close thing, but now it seems that if a mere thirty votes had gone the other way, I should have been acquitted. Even as it is, I feel that so far as Meletus' part is concerned I have been acquitted, and not only that, but anyone can see that if Anytus and Lycon had not come forward to accuse me, Meletus would actually have forfeited his one thousand drachmas for not having obtained one fifth of the votes.

However, we must face the fact that he demands the death penalty. Very good. What alternative penalty shall I propose to you, gentlemen? Obviously it must be adequate. Well, what penalty do I deserve to pay or suffer, in view of what I have done?

[I have never lived an ordinary quiet life. I did not care for the things that most people care about—making money, having a comfortable home, high military or civil rank, and all the other activities, political appointments, secret societies, party organizations, which go on in our city. I thought that I was really too strict in my principles to survive if I went in for this sort of thing. So instead of taking a course which would have done no good either to you or to me, I set myself to do you individually in private what I hold to be the greatest possible service. I tried to persuade each one of you not to think more of practical advantages than of his mental and moral well-being, or in general to think more of advantage than of well-being in the case of the state or of anything else.] What do I deserve for behaving in this way? Some reward, gentlemen, if I am bound to suggest what I really deserve, and what is more, a reward which would be appropriate for myself. Well, what is appropriate for a poor man who is a

public benefactor and who requires leisure for giving you moral encouragement? Nothing could be more appropriate for such a person than free maintenance at the state's expense. He deserves it much more than any victor in the races at Olympia, whether he wins with a single horse or a pair or a team of four. These people give you the  
 e semblance of success, but I give you the reality; they do not need maintenance, but I do. So if I am to suggest an appropriate penalty  
 37 which is strictly in accordance with justice, I suggest free maintenance by the state.

Perhaps when I say this I may give you the impression, as I did in my remarks about exciting sympathy and making passionate appeals, that I am showing a deliberate perversity. That is not so, gentlemen. The real position is this. I am convinced that I never wrong anyone intentionally, but I cannot convince you of this, because we have had so little time for discussion. If it was your practice, as it is with other  
 b nations, to give not one day but several to the hearing of capital trials, I believe that you might have been convinced, but under present conditions it is not easy to dispose of grave allegations in a short space of time. So, being convinced that I do no wrong to anybody, I can hardly be expected to wrong myself by asserting that I deserve something bad, or by proposing a corresponding penalty. Why should I? For fear of suffering this penalty proposed by Meletus, when, as I said, I do not know whether it is a good thing or a bad? Do you expect  
 c me to choose something which I know very well is bad by making my counterproposal? Imprisonment? Why should I spend my days in prison, in subjection to the periodically appointed officers of the law? A fine, with imprisonment until it is paid? In my case the effect would be just the same, because I have no money to pay a fine. Or shall I suggest banishment? You would very likely accept the suggestion.

I should have to be desperately in love with life to do that, gentlemen. I am not so blind that I cannot see that you, my fellow citizens,  
 d have come to the end of your patience with my discussions and conversations. You have found them too irksome and irritating, and now you are trying to get rid of them. Will any other people find them easy to put up with? That is most unlikely, gentlemen. A fine life I should have if I left this country at my age and spent the rest of my days trying one city after another and being turned out every time! I know very well that wherever I go the young people will listen to my conversation just as they do here, and if I try to keep them off, they will make their elders drive me out, while if I do not, the fathers and  
 e other relatives will drive me out of their own accord for the sake of the young.

Perhaps someone may say, But surely, Socrates, after you have left us you can spend the rest of your life in quietly minding your own business.

This is the hardest thing of all to make some of you understand.

If I say that this would be disobedience to God, and that is why I cannot 'mind my own business,' you will not believe that I am serious. If on the other hand I tell you that to let no day pass without discussing 38 goodness and all the other subjects about which you hear me talking and examining both myself and others is really the very best thing that a man can do, and that life without this sort of examination is not worth living) you will be even less inclined to believe me. Nevertheless that is how it is, gentlemen, as I maintain, though it is not easy to convince you of it. Besides, I am not accustomed to think of myself as deserving punishment. If I had money, I would have suggested a fine that I could afford, because that would not have done me any b harm. As it is, I cannot, because I have none, unless of course you like to fix the penalty at what I could pay. I suppose I could probably afford a mina. I suggest a fine of that amount.

One moment, gentlemen. Plato here, and Crito and Critobulus and Apollodorus, want me to propose thirty minas, on their security. Very well, I agree to this sum, and you can rely upon these gentlemen for its payment. c

Well, gentlemen, for the sake of a very small gain in time you are going to earn the reputation—and the blame from those who wish to disparage our city—of having put Socrates to death, 'that wise man'—because they will say I am wise even if I am not, these people who want to find fault with you. If you had waited just a little while, you would have had your way in the course of nature. You can see that I am well on in life and near to death. I am saying this not to all of you but to those who voted for my execution, and I have something else to d say to them as well.

No doubt you think, gentlemen, that I have been condemned for lack of the arguments which I could have used if I had thought it right to leave nothing unsaid or undone to secure my acquittal. But that is very far from the truth. It is not a lack of arguments that has caused my condemnation, but a lack of effrontery and impudence, and the fact that I have refused to address you in the way which would give you most pleasure. You would have liked to hear me weep and wail, doing and saying all sorts of things which I regard as unworthy of e myself, but which you are used to hearing from other people. But I did not think then that I ought to stoop to servility because I was in danger, and I do not regret now the way in which I pleaded my case. I would much rather die as the result of this defense than live as the result of the other sort. In a court of law, just as in warfare, neither I nor 39 any other ought to use his wits to escape death by any means. In battle it is often obvious that you could escape being killed by giving up your arms and throwing yourself upon the mercy of your pursuers, and in every kind of danger there are plenty of devices for avoiding death if you are unscrupulous enough to stick at nothing. But I

suggest, gentlemen, ~~that~~ the difficulty is not so much to escape death; the real difficulty is to escape from doing wrong, which is far more  
 b fleet of foot. In this present instance I, the slow old man, have been overtaken by the slower of the two, but my accusers, who are clever and quick, have been overtaken by the faster—by iniquity. When I leave this court I shall go away condemned by you to death, but they will go away convicted by truth herself of depravity and wickedness. And they accept their sentence even as I accept mine. No doubt it was bound to be so, and I think that the result is fair enough.

c Having said so much, I feel moved to prophesy to you who have given your vote against me, for I am now at that point where the gift of prophecy comes most readily to men—at the point of death. I tell you, my executioners, that as soon as I am dead, vengeance shall fall upon you with a punishment far more painful than your killing of me. You have brought about my death in the belief that through it you will be delivered from submitting your conduct to criticism, but I say  
 d that the result will be just the opposite. You will have more critics, whom up till now I have restrained without your knowing it, and being younger they will be harsher to you and will cause you more annoyance. If you expect to stop denunciation of your wrong way of life by putting people to death, there is something amiss with your reasoning. This way of escape is neither possible nor creditable. The best and easiest way is not to stop the mouths of others, but to make yourselves as good men as you can. This is my last message to you who  
 e voted for my condemnation.

As for you who voted for my acquittal, I should very much like to say a few words to reconcile you to the result, while the officials are busy and I am not yet on my way to the place where I must die. I ask you, gentlemen, to spare me these few moments. There is no reason why we should not exchange fancies while the law permits. I look  
 40 upon you as my friends, and I want you to understand the right way of regarding my present position.

Gentlemen of the jury—for *you* deserve to be so called—I have had a remarkable experience. In the past the prophetic voice to which I have become accustomed has always been my constant companion, opposing me even in quite trivial things if I was going to take the wrong course. Now something has happened to me, as you can see, which might be thought and is commonly considered to be a supreme  
 b calamity; yet neither when I left home this morning, nor when I was taking my place here in the court, nor at any point in any part of my speech did the divine sign oppose me. In other discussions it has often checked me in the middle of a sentence, but this time it has never opposed me in any part of this business in anything that I have said or done. What do I suppose to be the explanation? I will tell you. I suspect that this thing that has happened to me is a blessing, and we  
 c are quite mistaken in supposing death to be an evil. I have good

grounds for thinking this, because my accustomed sign could not have failed to oppose me if what I was doing had not been sure to bring some good result.

We should reflect that there is much reason to hope for a good result on other grounds as well. Death is one of two things. Either it is annihilation, and the dead have no consciousness of anything, or, as we are told, it is really a change—a migration of the soul from this place to another. Now if there is no consciousness but only a dreamless sleep, death must be a marvelous gain. I suppose that if anyone were told to pick out the night on which he slept so soundly as not even to dream, and then to compare it with all the other nights and days of his life, and then were told to say, after due consideration, how many better and happier days and nights than this he had spent in the course of his life—well, I think that the Great King himself, to say nothing of any private person, would find these days and nights easy to count in comparison with the rest. If death is like this, then, I call it gain, because the whole of time, if you look at it in this way, can be regarded as no more than one single night. If on the other hand death is a removal from here to some other place, and if what we are told is true, that all the dead are there, what greater blessing could there be than this, gentlemen? If on arrival in the other world, beyond the reach of our so-called justice, one will find there the true judges who are said to preside in those courts, Minos and Rhadamanthus and Aeacus and Triptolemus and all those other half-divinities who were upright in their earthly life, would that be an unrewarding journey? Put it in this way. How much would one of you give to meet Orpheus and Musaeus, Hesiod and Homer? I am willing to die ten times over if this account is true. It would be a specially interesting experience for me to join them there, to meet Palamedes and Ajax, the son of Telamon, and any other heroes of the old days who met their death through an unfair trial, and to compare my fortunes with theirs—it would be rather amusing, I think. And above all I should like to spend my time there, as here, in examining and searching people's minds, to find out who is really wise among them, and who only thinks that he is. What would one not give, gentlemen, to be able to question the leader of that great host against Troy, or Odysseus, or Sisyphus, or the thousands of other men and women whom one could mention, to talk and mix and argue with whom would be unimaginable happiness? At any rate I presume that they do not put one to death there for such conduct, because apart from the other happiness in which their world surpasses ours, they are now immortal for the rest of time, if what we are told is true.

You too, gentlemen of the jury, must look forward to death with confidence, and fix your minds on this one belief, which is certain—that nothing can harm a good man either in life or after death, and his fortunes are not a matter of indifference to the gods. This present

experience of mine has not come about mechanically. I am quite clear that the time had come when it was better for me to die and be released from my distractions. That is why my sign never turned me back. For my own part I bear no grudge at all against those who condemned me and accused me, although it was not with this kind intention that they did so, but because they thought that they were hurting  
e me; and that is culpable of them. However, I ask them to grant me one favor. When my sons grow up, gentlemen, if you think that they are putting money or anything else before goodness, take your revenge by plaguing them as I plagued you; and if they fancy themselves for no reason, you must scold them just as I scolded you, for neglecting the important things and thinking that they are good for something  
42 when they are good for nothing. If you do this, I shall have had justice at your hands, both I myself and my children.

Now it is time that we were going, I to die and you to live, but which of us has the happier prospect is unknown to anyone but God.

# CRITO

---

*Nearly a month elapsed between Socrates' condemnation and execution, a delay not at all in accordance with Athenian custom. The day before the trial, however, a state galley had been sent on a sacred annual mission and until it returned no one could be put to death. For various reasons the mission took much longer than usual, and Socrates' friends used the time to make a plan for getting him out of prison and away from Athens.*

*The evening before the Crito opens the galley had been sighted, and very early on the following morning Socrates' old and devoted friend, Crito, comes to the prison to lay the plan before him and beseech him to let his friends save him. It will be easy to bribe his jailers. He himself has far more money than will be needed, and there are many others who are eager to contribute. Athens is not the only place where Socrates can live happily. He will find friends wherever he goes.*

*To this Socrates answers by asking him if it can ever be right to defend oneself against evil by doing evil. Granted that it was unjust to condemn him to death, can it be right for him to escape by breaking the law? What will happen to a state if individual men are able to set aside the laws? A man must always do what his country orders him unless he can change her view of what the law should be.*

*"If you leave the city, Socrates," the laws argue, "you shall return wrong for wrong and evil for evil, breaking your agreements and covenants with us, and injuring those whom you least ought to injure—yourself, your friends, your country, and us."*

*"That, my dear friend Crito, I do assure you, is what I seem to hear them saying . . . and the sound of their arguments rings so loudly in my head that I cannot hear the other side. However, if you think that you will do any good by it, say what you like."*

*"Socrates, I have nothing to say."*

*"Then, Crito, let us follow this course, since God points out the way."*

- 43      **SOCRATES**: Here already, Crito? Surely it is still early?  
          **CRITO**: Indeed it is.  
          **SOCRATES**: About what time?  
          **CRITO**: Just before dawn.  
          **SOCRATES**: I wonder that the warder paid any attention to you.  
          **CRITO**: He is used to me now, Socrates, because I come here so often. Besides, he is under some small obligation to me.  
          **SOCRATES**: Have you only just come, or have you been here for long?  
          **CRITO**: Fairly long.
- b      **SOCRATES**: Then why didn't you wake me at once, instead of sitting by my bed so quietly?  
          **CRITO**: I wouldn't dream of such a thing, Socrates. I only wish I were not so sleepless and depressed myself. I have been wondering at you, because I saw how comfortably you were sleeping, and I deliberately didn't wake you because I wanted you to go on being as comfortable as you could. I have often felt before in the course of my life how fortunate you are in your disposition, but I feel it more than ever now in your present misfortune when I see how easily and placidly you put up with it.
- c      **SOCRATES**: (Well, really, Crito, it would be hardly suitable for a man of my age to resent having to die.)  
          **CRITO**: Other people just as old as you are get involved in these misfortunes, Socrates, but their age doesn't keep them from resenting it when they find themselves in your position.
- SOCRATES**: Quite true. But tell me, why have you come so early?  
          **CRITO**: Because I bring bad news, Socrates—not so bad from your point of view, I suppose, but it will be very hard to bear for me and your other friends, and I think that I shall find it hardest of all.
- d      **SOCRATES**: Why, what is this news? Has the boat come in from Delos—the boat which ends my reprieve when it arrives?  
          **CRITO**: It hasn't actually come in yet, but I expect that it will be here today, judging from the report of some people who have just arrived from Sunium and left it there. It's quite clear from their account that it will be here today, and so by tomorrow, Socrates, you will have to . . . to end your life.
- 44      **SOCRATES**: Well, Crito, I hope that it may be for the best. If the gods will it so, so be it. All the same, I don't think it will arrive today.  
          **CRITO**: What makes you think that?  
          **SOCRATES**: I will try to explain. I think I am right in saying that I have to die on the day after the boat arrives?

---

From *The Last Days of Socrates*, translated and with an introduction by Hugh Tredennick (Penguin Classics, Harmondsworth, Middlesex, 1954).

CRITO: That's what the authorities say, at any rate.

SOCRATES: Then I don't think it will arrive on this day that is just beginning, but on the day after. I am going by a dream that I had in the night, only a little while ago. It looks as though you were right not to wake me up.

CRITO: Why, what was the dream about?

SOCRATES: I thought I saw a gloriously beautiful woman dressed in white robes, who came up to me and addressed me in these words: Socrates, 'To the pleasant land of Phthia on the third day thou shalt come.'<sup>1</sup>

CRITO: Your dream makes no sense, Socrates.

SOCRATES: To my mind, Crito, it is perfectly clear.

CRITO: Too clear, apparently. But look here, Socrates, it is still not too late to take my advice and escape. Your death means a double calamity for me. I shall not only lose a friend whom I can never possibly replace, but besides a great many people who don't know you and me very well will be sure to think that I let you down, because I could have saved you if I had been willing to spend the money. And what could be more contemptible than to get a name for thinking more of money than of your friends? Most people will never believe that it was you who refused to leave this place although we tried our hardest to persuade you.

SOCRATES: But my dear Crito, why should we pay so much attention to what 'most people' think? The really reasonable people, who have more claim to be considered, will believe that the facts are exactly as they are.

CRITO: You can see for yourself, Socrates, that one has to think of popular opinion as well. Your present position is quite enough to show that the capacity of ordinary people for causing trouble is not confined to petty annoyances, but has hardly any limits if you once get a bad name with them.

SOCRATES: I only wish that ordinary people *had* an unlimited capacity for doing harm; then they might have an unlimited power for doing good, which would be a splendid thing, if it were so. Actually they have neither. They cannot make a man wise or stupid; they simply act at random.

CRITO: Have it that way if you like, but tell me this, Socrates. I hope that you aren't worrying about the possible effects on me and the rest of your friends, and thinking that if you escape we shall have trouble with informers for having helped you to get away, and have to forfeit all our property or pay an enormous fine, or even incur some further punishment? If any idea like that is troubling you, you can dismiss it altogether. We are quite entitled to run that risk in saving you, and even worse, if necessary. Take my advice, and be reasonable.

<sup>1</sup> *Iliad* 9.363.

SOCRATES: All that you say is very much in my mind, Crito, and a great deal more besides.

CRITO: Very well, then, don't let it distress you. I know some people who are willing to rescue you from here and get you out of the country for quite a moderate sum. And then surely you realize how cheap these informers are to buy off; we shan't need much money to  
 b settle them, and I think you've got enough of my money for yourself already. And then even supposing that in your anxiety for my safety you feel that you oughtn't to spend my money, there are these foreign gentlemen staying in Athens who are quite willing to spend theirs. One of them, Simmias of Thebes, has actually brought the money with him for this very purpose, and Cebes and a number of others are quite ready to do the same. So, as I say, you mustn't let any fears on these grounds make you slacken your efforts to escape, and you mustn't feel any misgivings about what you said at your trial—that you wouldn't know what to do with yourself if you left this country. Wherever you go, there are plenty of places where you will find a wel-  
 c come, and if you choose to go to Thessaly, I have friends there who will make much of you and give you complete protection, so that no one in Thessaly can interfere with you.

Besides, Socrates, I don't even feel that it is right for you to try to do what you are doing, throwing away your life when you might save it. You are doing your best to treat yourself in exactly the same way as your enemies would, or rather did, when they wanted to ruin you. What is more, it seems to me that you are letting your sons down too. You have it in your power to finish their bringing-up and education,  
 d and instead of that you are proposing to go off and desert them, and so far as you are concerned they will have to take their chance. And what sort of chance are they likely to get? The sort of thing that usually happens to orphans when they lose their parents. Either one ought not to have children at all, or one ought to see their upbringing and education through to the end. It strikes me that you are taking the line of least resistance, whereas you ought to make the choice of a good man and a brave one, considering that you profess to have made goodness your object all through life. Really, I am ashamed, both on  
 e your account and on ours, your friends'. It will look as though we had played something like a coward's part all through this affair of yours. First there was the way you came into court when it was quite unnecessary—that was the first act. Then there was the conduct of the defense—that was the second. And finally, to complete the farce, we get this situation, which makes it appear that we have let you slip out of our hands through some lack of courage and enterprise on our  
 46 part, because we didn't save you, and you didn't save yourself, when it would have been quite possible and practicable, if we had been any use at all.

There, Socrates, if you aren't careful, besides the suffering there

will be all this disgrace for you and us to bear. Come, make up your mind. Really it's too late for that now; you ought to have it made up already. There is no alternative; the whole thing must be carried through during this coming night. If we lose any more time, it can't be done; it will be too late. I appeal to you, Socrates, on every ground; take my advice and please don't be unreasonable!

SOCRATES: My dear Crito, I appreciate your warm feelings b very much—that is, assuming that they have some justification. If not, the stronger they are, the harder they will be to deal with. Very well, then, we must consider whether we ought to follow your advice or not. You know that this is not a new idea of mine; it has always been my nature never to accept advice from any of my friends unless reflection shows that it is the best course that reason offers. I cannot abandon the principles which I used to hold in the past simply because this accident has happened to me; they seem to me to be much as they were, and I respect and regard the same principles now as before. c So unless we can find better principles on this occasion, you can be quite sure that I shall not agree with you—not even if the power of the people conjures up fresh hordes of bogies to terrify our childish minds, by subjecting us to chains and executions and confiscations of our property.

Well, then, how can we consider the question most reasonably? Suppose that we begin by reverting to this view which you hold about people's opinions. Was it always right to argue that some opinions should be taken seriously but not others? Or was it always wrong? d Perhaps it was right before the question of my death arose, but now we can see clearly that it was a mistaken persistence in a point of view which was really irresponsible nonsense. I should like very much to inquire into this problem, Crito, with your help, and to see whether the argument will appear in any different light to me now that I am in this position, or whether it will remain the same, and whether we shall dismiss it or accept it.

Serious thinkers, I believe, have always held some such view as the one which I mentioned just now, that some of the opinions which people entertain should be respected, and others should not. e Now I ask you, Crito, don't you think that this is a sound principle? You are safe from the prospect of dying tomorrow, in all human probability, and you are not likely to have your judgment upset by this impending calamity. Consider, then, don't you think that this is a sound enough principle, that one should not regard all the opinions that people hold, but only some and not others? What do you say? 47 Isn't that a fair statement?

CRITO: Yes, it is.

SOCRATES: In other words, one should regard the good ones and not the bad?

CRITO: Yes.

SOCRATES: The opinions of the wise being good, and the opinions of the foolish bad?

CRITO: Naturally.

- b SOCRATES: To pass on, then, what do you think of the sort of illustration that I used to employ? When a man is in training, and taking it seriously, does he pay attention to all praise and criticism and opinion indiscriminately, or only when it comes from the one qualified person, the actual doctor or trainer?

CRITO: Only when it comes from the one qualified person.

SOCRATES: Then he should be afraid of the criticism and welcome the praise of the one qualified person, but not those of the general public.

CRITO: Obviously.

SOCRATES: So he ought to regulate his actions and exercises and eating and drinking by the judgment of his instructor, who has expert knowledge, rather than by the opinions of the rest of the public.

CRITO: Yes, that is so.

- c SOCRATES: Very well. Now if he disobeys the one man and disregards his opinion and commendations, and pays attention to the advice of the many who have no expert knowledge, surely he will suffer some bad effect?

CRITO: Certainly.

SOCRATES: And what is this bad effect? Where is it produced? I mean, in what part of the disobedient person?

CRITO: His body, obviously; that is what suffers.

- d SOCRATES: Very good. Well now, tell me, Crito—we don't want to go through all the examples one by one—does this apply as a general rule, and above all to the sort of actions which we are trying to decide about, just and unjust, honorable and dishonorable, good and bad? Ought we to be guided and intimidated by the opinion of the many or by that of the one—assuming that there is someone with expert knowledge? Is it true that we ought to respect and fear this person more than all the rest put together, and that if we do not follow his guidance we shall spoil and mutilate that part of us which, as we used to say, is improved by right conduct and destroyed by wrong? Or is this all nonsense?

CRITO: No, I think it is true, Socrates.

- e SOCRATES: Then consider the next step. There is a part of us which is improved by healthy actions and ruined by unhealthy ones. If we spoil it by taking the advice of nonexperts, will life be worth living when this part is once ruined? The part I mean is the body. Do you accept this?

CRITO: Yes.

SOCRATES: Well, is life worth living with a body which is worn out and ruined in health?

CRITO: Certainly not.

SOCRATES: What about the part of us which is mutilated by wrong actions and benefited by right ones? Is life worth living with this part ruined? Or do we believe that this part of us, whatever it may be, in which right and wrong operate, is of less importance than 48 the body?

CRITO: Certainly not.

SOCRATES: It is really more precious?

CRITO: Much more.

SOCRATES: In that case, my dear fellow, what we ought to consider is not so much what people in general will say about us but how we stand with the expert in right and wrong, the one authority, who represents the actual truth. So in the first place your proposition is not correct when you say that we should consider popular opinion in questions of what is right and honorable and good, or the opposite. Of course one might object, All the same, the people have the power to put us to death.

CRITO: No doubt about that! Quite true, Socrates. It is a possible objection.

SOCRATES: But so far as I can see, my dear fellow, the argument which we have just been through is quite unaffected by it. At the same time I should like you to consider whether we are still satisfied on this point, that the really important thing is not to live, but to live well.)

CRITO: Why, yes.

SOCRATES: And that to live well means the same thing as to live honorably or rightly?

CRITO: Yes.

SOCRATES: Then in the light of this agreement we must consider whether or not it is right for me to try to get away without an official discharge. If it turns out to be right, we must make the attempt; c if not, we must let it drop. As for the considerations you raise about expense and reputation and bringing up children, I am afraid, Crito, that they represent the reflections of the ordinary public, who put people to death, and would bring them back to life if they could, with equal indifference to reason. Our real duty, I fancy, since the argument leads that way, is to consider one question only, the one which we raised just now. Shall we be acting rightly in paying money and showing gratitude to these people who are going to rescue me, and in escaping or arranging the escape ourselves, or shall we really be acting wrongly in doing all this? If it becomes clear that such conduct is wrong, I cannot help thinking that the question whether we are sure to die, or to suffer any other ill effect for that matter, if we stand our ground and take no action, ought not to weigh with us at all in comparison with the risk of doing what is wrong.

CRITO: I agree with what you say, Socrates, but I wish you would consider what we ought to do.

SOCRATES: Let us look at it together, my dear fellow; and if

e you can challenge any of my arguments, do so and I will listen to you; but if you can't, be a good fellow and stop telling me over and over again that I ought to leave this place without official permission. I am very anxious to obtain your approval before I adopt the course which I have in mind. I don't want to act against your convictions. Now give your attention to the starting point of this inquiry—I hope that you will be satisfied with my way of stating it—and try to answer my  
49 questions to the best of your judgment.

CRITO: Well, I will try.

SOCRATES: Do we say that one must never willingly do wrong, or does it depend upon circumstances? Is it true, as we have often agreed before, that there is no sense in which wrongdoing is good or honorable? Or have we jettisoned all our former convictions in these last few days? Can you and I at our age, Crito, have spent all these years in serious discussions without realizing that we were no  
b better than a pair of children? Surely the truth is just what we have always said. Whatever the popular view is, and whether the alternative is pleasanter than the present one or even harder to bear, the fact remains that to do wrong is in every sense bad and dishonorable for the person who does it. Is that our view, or not?

CRITO: Yes, it is.

SOCRATES: Then in no circumstances must one do wrong.

CRITO: No.

SOCRATES: In that case one must not even do wrong when one is wronged, which most people regard as the natural course.

c CRITO: Apparently not.

SOCRATES: Tell me another thing, Crito. Ought one to do injuries or not?

CRITO: Surely not, Socrates.

SOCRATES: And tell me, is it right to do an injury in retaliation, as most people believe, or not?

CRITO: No, never.

SOCRATES: Because, I suppose, there is no difference between injuring people and wronging them.

CRITO: Exactly.

SOCRATES: So one ought not to return a wrong or an injury to  
d any person, whatever the provocation is. Now be careful, Crito, that in making these single admissions you do not end by admitting something contrary to your real beliefs. I know that there are and always will be few people who think like this, and consequently between those who do think so and those who do not there can be no agreement on principle; they must always feel contempt when they observe one another's decisions. I want even you to consider very carefully whether you share my views and agree with me, and whether we can proceed with our discussion from the established hypothesis that it is never right to do a wrong or return a wrong or defend oneself against

injury by retaliation, or whether you dissociate yourself from any share in this view as a basis for discussion. I have held it for a long time, and still hold it, but if you have formed any other opinion, say so and tell me what it is. If, on the other hand, you stand by what we have said, listen to my next point.

CRITO: Yes, I stand by it and agree with you. Go on.

SOCRATES: Well, here is my next point, or rather question. Ought one to fulfill all one's agreements, provided that they are right, or break them?

CRITO: One ought to fulfill them.

SOCRATES: Then consider the logical consequence. If we leave this place without first persuading the state to let us go, are we or are we not doing an injury, and doing it in a quarter where it is least justifiable? Are we or are we not abiding by our just agreements?

CRITO: I can't answer your question, Socrates. I am not clear in my mind.

SOCRATES: Look at it in this way. Suppose that while we were preparing to run away from here—or however one should describe it—the laws and constitution of Athens were to come and confront us and ask this question, Now, Socrates, what are you proposing to do? Can you deny that by this act which you are contemplating you intend, so far as you have the power, to destroy us, the laws, and the whole state as well? Do you imagine that a city can continue to exist and not be turned upside down, if the legal judgments which are pronounced in it have no force but are nullified and destroyed by private persons?

How shall we answer this question, Crito, and others of the same kind? There is much that could be said, especially by a professional advocate, to protest against the invalidation of this law which enacts that judgments once pronounced shall be binding. Shall we say, Yes, I do intend to destroy the laws, because the state wronged me by passing a faulty judgment at my trial? Is this to be our answer, or what?

CRITO: What you have just said, by all means, Socrates.

SOCRATES: Then what supposing the laws say, Was there provision for this in the agreement between you and us, Socrates? Or did you undertake to abide by whatever judgments the state pronounced?

If we expressed surprise at such language, they would probably say, Never mind our language, Socrates, but answer our questions; after all, you are accustomed to the method of question and answer. Come now, what charge do you bring against us and the state, that you are trying to destroy us? Did we not give you life in the first place? Was it not through us that your father married your mother and begot you? Tell us, have you any complaint against those of us laws that deal with marriage?

No, none, I should say.

Well, have you any against the laws which deal with children's upbringing and education, such as you had yourself? Are you not grateful to those of us laws which were instituted for this end, for requiring your father to give you a cultural and physical education?

e Yes, I should say.

Very good. Then since you have been born and brought up and educated, can you deny, in the first place, that you were our child and servant, both you and your ancestors? And if this is so, do you imagine that what is right for us is equally right for you, and that whatever we try to do to you, you are justified in retaliating? You did not have equality of rights with your father, or your employer—supposing that you had had one—to enable you to retaliate. You were not allowed  
51 to answer back when you were scolded or to hit back when you were beaten, or to do a great many other things of the same kind. Do you expect to have such license against your country and its laws that if we try to put you to death in the belief that it is right to do so, you on your part will try your hardest to destroy your country and us its laws in return? And will you, the true devotee of goodness, claim that you are justified in doing so? Are you so wise as to have forgotten that compared with your mother and father and all the rest of your ancestors  
b your country is something far more precious, more venerable, more sacred, and held in greater honor both among gods and among all reasonable men? Do you not realize that you are even more bound to respect and placate the anger of your country than your father's anger? That if you cannot persuade your country you must do whatever it orders, and patiently submit to any punishment that it imposes, whether it be flogging or imprisonment? And if it leads you out to war, to be wounded or killed, you must comply, and it is right that you should do so. You must not give way or retreat or abandon your position. Both in war and in the law courts and everywhere else you  
c must do whatever your city and your country command, or else persuade them in accordance with universal justice, but violence is a sin even against your parents, and it is a far greater sin against your country.

What shall we say to this, Crito—that what the laws say is true, or not?

CRITO: Yes, I think so.

SOCRATES: Consider, then, Socrates, the laws would probably continue, whether it is also true for us to say that what you are now trying to do to us is not right. Although we have brought you into the world and reared you and educated you, and given you and all your  
d fellow citizens a share in all the good things at our disposal, nevertheless by the very fact of granting our permission we openly proclaim this principle, that any Athenian, on attaining to manhood and seeing for himself the political organization of the state and us its laws, is permitted, if he is not satisfied with us, to take his property and go

away wherever he likes. If any of you chooses to go to one of our colonies, supposing that he should not be satisfied with us and the state, or to emigrate to any other country, not one of us laws hinders or prevents him from going away wherever he likes, without any loss of property. On the other hand, if any one of you stands his ground when he can see how we administer justice and the rest of our public organization, we hold that by so doing he has in fact undertaken to do anything that we tell him. And we maintain that anyone who disobeys is guilty of doing wrong on three separate counts: first because we are his parents, and secondly because we are his guardians, and thirdly because, after promising obedience, he is neither obeying us nor persuading us to change our decision if we are at fault in any way. And although all our orders are in the form of proposals, not of savage commands, and we give him the choice of either persuading us or doing what we say, he is actually doing neither. These are the charges, Socrates, to which we say that you will be liable if you do what you are contemplating, and you will not be the least culpable of your fellow countrymen, but one of the most guilty.

If I asked why, they would no doubt pounce upon me with perfect justice and point out that there are very few people in Athens who have entered into this agreement with them as explicitly as I have. They would say, Socrates, we have substantial evidence that you are satisfied with us and with the state. You would not have been so exceptionally reluctant to cross the borders of your country if you had not been exceptionally attached to it. You have never left the city to attend a festival or for any other purpose, except on some military expedition. You have never traveled abroad as other people do, and you have never felt the impulse to acquaint yourself with another country or constitution. You have been content with us and with our city. You have definitely chosen us, and undertaken to observe us in all your activities as a citizen, and as the crowning proof that you are satisfied with our city, you have begotten children in it. Furthermore, even at the time of your trial you could have proposed the penalty of banishment, if you had chosen to do so—that is, you could have done then with the sanction of the state what you are now trying to do without it. But whereas at that time you made a noble show of indifference if you had to die, and in fact preferred death, as you said, to banishment, now you show no respect for your earlier professions, and no regard for us, the laws, whom you are trying to destroy. You are behaving like the lowest type of menial, trying to run away in spite of the contracts and undertakings by which you agreed to live as a member of our state. Now first answer this question. Are we or are we not speaking the truth when we say that you have undertaken, in deed if not in word, to live your life as a citizen in obedience to us?

What are we to say to that, Crito? Are we not bound to admit it?

C R I T O : We cannot help it, Socrates.

SOCRATES: It is a fact, then, they would say, that you are  
 e breaking covenants and undertakings made with us, although you  
 made them under no compulsion or misunderstanding, and were not  
 compelled to decide in a limited time. You had seventy years in which  
 you could have left the country, if you were not satisfied with us or  
 felt that the agreements were unfair. You did not choose Sparta or  
 Crete—your favorite models of good government—or any other Greek  
 53 or foreign state. You could not have absented yourself from the city  
 less if you had been lame or blind or decrepit in some other way. It is  
 quite obvious that you stand by yourself above all other Athenians in  
 your affection for this city and for us its laws. Who would care for a  
 city without laws? And now, after all this, are you not going to stand  
 by your agreement? Yes, you are, Socrates, if you will take our advice,  
 and then you will at least escape being laughed at for leaving the  
 city.

We invite you to consider what good you will do to yourself or  
 your friends if you commit this breach of faith and stain your con-  
 science. It is fairly obvious that the risk of being banished and either  
 b losing their citizenship or having their property confiscated will ex-  
 tend to your friends as well. As for yourself, if you go to one of the  
 neighboring states, such as Thebes or Megara, which are both well gov-  
 erned, you will enter them as an enemy to their constitution, and all  
 good patriots will eye you with suspicion as a destroyer of law and or-  
 der. Incidentally you will confirm the opinion of the jurors who tried  
 c you that they gave a correct verdict; a destroyer of laws might very  
 well be supposed to have a destructive influence upon young and fool-  
 ish human beings. Do you intend, then, to avoid well-governed states  
 and the higher forms of human society? And if you do, will life be  
 worth living? Or will you approach these people and have the impu-  
 dence to converse with them? What arguments will you use, Socrates?  
 The same which you used here, that goodness and integrity, institu-  
 tions and laws, are the most precious possessions of mankind? Do you  
 not think that Socrates and everything about him will appear in a dis-  
 d reputable light? You certainly ought to think so.

But perhaps you will retire from this part of the world and go to  
 Crito's friends in Thessaly? That is the home of indiscipline and lax-  
 ity, and no doubt they would enjoy hearing the amusing story of how  
 you managed to run away from prison by arraying yourself in some  
 costume or putting on a shepherd's smock or some other conventional  
 runaway's disguise, and altering your personal appearance. And will  
 no one comment on the fact that an old man of your age, probably  
 with only a short time left to live, should dare to cling so greedily to  
 e life, at the price of violating the most stringent laws? Perhaps not, if  
 you avoid irritating anyone. Otherwise, Socrates, you will hear a good  
 many humiliating comments. So you will live as the toady and slave  
 of all the populace, literally 'roistering in Thessaly,' as though you had

left this country for Thessaly to attend a banquet there. And where will your discussions about goodness and uprightness be then, we should like to know? But of course you want to live for your children's sake, so that you may be able to bring them up and educate them. Indeed! By first taking them off to Thessaly and making foreigners of them, so that they may have that additional enjoyment? Or if that is not your intention, supposing that they are brought up here with you still alive, will they be better cared for and educated without you, because of course your friends will look after them? Will they look after your children if you go away to Thessaly, and not if you go away to the next world? Surely if those who profess to be your friends are worth anything, you must believe that they would care for them. 54

No, Socrates, be advised by us your guardians, and do not think more of your children or of your life or of anything else than you think of what is right, so that when you enter the next world you may have all this to plead in your defense before the authorities there. It seems clear that if you do this thing, neither you nor any of your friends will be the better for it or be more upright or have a cleaner conscience here in this world, nor will it be better for you when you reach the next. As it is, you will leave this place, when you do, as the victim of a wrong done not by us, the laws, but by your fellow men. But if you leave in that dishonorable way, returning wrong for wrong and evil for evil, breaking your agreements and covenants with us, and injuring those whom you least ought to injure—yourself, your friends, your country, and us—then you will have to face our anger in your lifetime, and in that place beyond when the laws of the other world know that you have tried, so far as you could, to destroy even us their brothers, they will not receive you with a kindly welcome. Do not take Crito's advice, but follow ours. c

That, my dear friend Crito, I do assure you, is what I seem to hear them saying, just as a mystic seems to hear the strains of music, and the sound of their arguments rings so loudly in my head that I cannot hear the other side. I warn you that, as my opinion stands at present, it will be useless to urge a different view. However, if you think that you will do any good by it, say what you like. d

C R I T O : No, Socrates, I have nothing to say.

S O C R A T E S : Then give it up, Crito, and let us follow this course, e since God points out the way.

# PHAEDO

*Some time after Socrates' death Phaedo, a devoted pupil who had been with him to the end, gives an account of his last hours to a number of his friends.*

*It was not until evening, he tells them, that Socrates drank the poison. The day had been passed in conversation, as was his way in prison or out, and the talk had turned on the immortality of the soul. Various so-called proofs were discussed, the chief one being that "our birth is but a sleep and a forgetting," that to learn is in part to remember knowledge which must have been gained in another life. In the end, however, this argument is discarded with all the others. Then Socrates brings up a new idea. The soul is immortal because it can perceive, have a share in, truth, goodness, beauty, which are eternal. Man can know God because he has in him something akin to the eternal which cannot die. This is accepted by all present, and Socrates goes on to declare that only in another life can God's justice be shown and to give a lively picture of heaven and hell. But most characteristically he bids his hearers not to accept this description as the truth, and yet "something of the kind must be true."*

*So the long talk ends. The poison is drunk—one that caused no pain—and does its work. The last words Socrates speaks show better than all the arguments what he believed. As he felt the poison creeping up to his heart he said, "Crito, we ought to offer a cock to Asclepius." It was the Greek custom after recovery from an illness to make an offering to the divine healer, Asclepius. To himself Socrates was recovering, not dying. He was entering not into death, but into life, "life more abundantly."*

ECHECRATES: Were you there with Socrates yourself, Phaedo, 57  
when he was executed, or did you hear about it from somebody else?

PHAEDO: No, I was there myself, Echecrates.

ECHECRATES: Then what did the master say before he died,  
and how did he meet his end? I should very much like to know. None  
of the people in Phlius go to Athens much in these days, and it is a  
long time since we had any visitor from there who could give us any  
definite information, except that he was executed by drinking hem-  
lock. Nobody could tell us anything more than that.

PHAEDO: Then haven't you even heard how his trial went? 58

ECHECRATES: Yes, someone told us about that, and we were  
surprised because there was obviously a long interval between it and  
the execution. How was that, Phaedo?

PHAEDO: A fortunate coincidence, Echecrates. It so happened  
that on the day before the trial they had just finished garlanding the  
stern of the ship which Athens sends to Delos.

ECHECRATES: What ship is that?

PHAEDO: The Athenians say that it is the one in which Theseus  
sailed away to Crete with the seven youths and seven maidens, and  
saved their lives and his own as well. The story says that the Atheni-  
ans made a vow to Apollo that if these young people's lives were  
saved they would send a solemn mission to Delos every year, and ever  
since then they have kept their vow to the god, right down to the pres-  
ent day. They have a law that as soon as this mission begins the city  
must be kept pure, and no public executions may take place until the  
ship has reached Delos and returned again, which sometimes takes a  
long time, if the winds happen to hold it back. The mission is con-  
sidered to begin as soon as the priest of Apollo has garlanded the stern  
of the ship, and this happened, as I say, on the day before the trial.  
That is why Socrates spent such a long time in prison between his trial  
and execution.

ECHECRATES: But what about the actual circumstances of his  
death, Phaedo? What was said and done, and which of the master's  
companions were with him? Or did the authorities refuse them ad-  
mission, so that he passed away without a friend at his side?

PHAEDO: Oh no, some of them were there—quite a number, d  
in fact.

ECHECRATES: I wish you would be kind enough to give us a  
really detailed account—unless you are pressed for time.

PHAEDO: No, not at all. I will try to describe it for you. Nothing  
gives me more pleasure than recalling the memory of Socrates,  
either by talking myself or by listening to someone else.

ECHECRATES: Well, Phaedo, you will find that your audience

---

From *The Last Days of Socrates*, translated and with an introduction by  
Hugh Tredennick (Penguin Classics, Harmondsworth, Middlesex, 1954).

feels just the same about it. Now try to describe every detail as carefully as you can.

- e PHAEDO: In the first place, my own feelings at the time were quite extraordinary. It never occurred to me to feel sorry for him, as you might have expected me to feel at the deathbed of a very dear friend. The master seemed quite happy, Echecrates, both in his manner and in what he said; he met his death so fearlessly and nobly. I could not help feeling that even on his way to the other world he would be under the providence of God, and that when he arrived there  
59 all would be well with him, if it ever has been so with anybody. So I felt no sorrow at all, as you might have expected on such a solemn occasion, and at the same time I felt no pleasure at being occupied in our usual philosophical discussions—that was the form that our conversation took. I felt an absolutely incomprehensible emotion, a sort of curious blend of pleasure and pain combined, as my mind took it in that in a little while my friend was going to die. All of us who were there were affected in much the same way, between laughing and crying; one of us in particular, Apollodorus—you know what  
b he is like, don't you?

ECHECRATES: Of course I do.

PHAEDO: Well, he quite lost control of himself, and I and the others were very much upset.

ECHECRATES: Who were actually there, Phaedo?

PHAEDO: Why, of the local people there were this man Apollodorus, and Critobulus and his father, and then there were Hermogenes and Epigenes and Aeschines and Antisthenes. Oh yes, and Ctesippus of Paiania, and Menexenus, and some other local people. I believe that Plato was ill.

ECHECRATES: Were there any visitors from outside?

- c PHAEDO: Yes, Simmias of Thebes, with Cebes and Phaedondas, and Euclides and Terpsion from Megara.

ECHECRATES: Why, weren't Aristippus and Cleombrotus there?

PHAEDO: No, they were in Aegina, apparently.

ECHECRATES: Was there anybody else?

PHAEDO: I think that's about all.

ECHECRATES: Well, what form did the discussion take?

- d PHAEDO: I will try to tell you all about it from the very beginning. We had all made it our regular practice, even in the period before, to visit Socrates every day. We used to meet at daybreak by the courthouse where the trial was held, because it was close to the prison. We always spent some time in conversation while we waited for the door to open, which was never very early, and when it did open, we used to go in to see Socrates, and generally spent the day with him. On this particular day we met earlier than usual, because  
e when we left the prison on the evening before, we heard that the boat had just arrived back from Delos; so we urged one another to meet at

the same place as early as possible. When we arrived, the porter, instead of letting us in as usual, told us to wait and not to come in until he gave us the word. The commissioners are taking off Socrates' chains, he said, and warning him that he is to die today.

After a short interval he came back and told us to go in. When we went inside we found Socrates just released from his chains, and Xanthippe—you know her!—sitting by him with the little boy on her knee. As soon as Xanthippe saw us she broke out into the sort of remark you would expect from a woman, Oh, Socrates, this is the last time that you and your friends will be able to talk together!

Socrates looked at Crito. Crito, he said, someone had better take her home.

Some of Crito's servants led her away crying hysterically. Socrates sat up on the bed and drew up his leg and massaged it, saying as he did so, What a queer thing it is, my friends, this sensation which is popularly called pleasure! It is remarkable how closely it is connected with its conventional opposite, pain. They will never come to a man both at once, but if you pursue one of them and catch it, you are nearly always compelled to have the other as well; they are like two bodies attached to the same head. I am sure that if Aesop had thought of it he would have made up a fable about them, something like this—God wanted to stop their continual quarreling, and when he found that it was impossible, he fastened their heads together; so wherever one of them appears, the other is sure to follow after. That is exactly what seems to be happening to me. I had a pain in my leg from the fetter, and now I feel the pleasure coming that follows it.

Here Cebes broke in and said, Oh yes, Socrates, I am glad you reminded me. Evenus asked me a day or two ago, as others have done before, about the lyrics which you have been composing lately by adapting Aesop's fables and 'The Prelude' to Apollo. He wanted to know what induced you to write them now after you had gone to prison, when you had never done anything of the kind before. If you would like me to be able to answer Evenus when he asks me again—as I am sure he will—tell me what I am to say.

Tell him the truth, said Socrates, that I did not compose them to rival either him or his poetry—which I knew would not be easy. I did it in the attempt to discover the meaning of certain dreams, and to clear my conscience, in case this was the art which I had been told to practice. It is like this, you see. In the course of my life I have often had the same dream, appearing in different forms at different times, but always saying the same thing, 'Socrates, practice and cultivate the arts.' In the past I used to think that it was impelling and exhorting me to do what I was actually doing; I mean that the dream, like a spectator encouraging a runner in a race, was urging me on to do what I was doing already, that is, practicing the arts, because philosophy is the greatest of the arts, and I was practicing it. But ever

since my trial, while the festival of the god has been delaying my execution, I have felt that perhaps it might be this popular form of art that the dream intended me to practice, in which case I ought to practice it and not disobey. I thought it would be safer not to take my departure before I had cleared my conscience by writing poetry and so obeying the dream. I began with some verses in honor of the god whose festival it was. When I had finished my hymn, I reflected that a poet, if he is to be worthy of the name, ought to work on imaginative themes, not descriptive ones, and I was not good at inventing stories. So I availed myself of some of Aesop's fables which were ready to hand and familiar to me, and I versified the first of them that suggested themselves. You can tell Evenus this, Cebes, and bid him farewell from me, and tell him, if he is wise, to follow me as quickly as he can. I shall be going today, it seems; those are my country's orders.

What a piece of advice for Evenus, Socrates! said Simmias. I have had a good deal to do with him before now, and from what I know of him he will not be at all ready to obey you.

Why? he asked. Isn't Evenus a philosopher?

So I believe, said Simmias.

Well then, he will be quite willing, just like anyone else who is properly grounded in philosophy. However, he will hardly do himself violence, because they say that it is not legitimate.

As he spoke he lowered his feet to the ground, and sat like this for the rest of the discussion.

Cebes now asked him, Socrates, what do you mean by saying that it is not legitimate to do oneself violence, although a philosopher will be willing to follow a friend who dies?

Why, Cebes, have you and Simmias never heard about these things while you have been with Philolaus?

Nothing definite, Socrates.

Well, even my information is only based on hearsay, but I don't mind at all telling you what I have heard. I suppose that for one who is soon to leave this world there is no more suitable occupation than inquiring into our views about the future life, and trying to imagine what it is like. What else can one do in the time before sunset?

Tell me then, Socrates, what are the grounds for saying that suicide is not legitimate? I have heard it described as wrong before now, as you suggested, both by Philolaus, when he was staying with us, and by others as well, but I have never yet heard any definite explanation for it.

Well, you must not lose heart, he said. Perhaps you will hear one someday. However, no doubt you will feel it strange that this should be the one question that has an unqualified answer—I mean, if it never happens in the case of life and death, as it does in all other connections, that sometimes and for some people death is better than life. And it probably seems strange to you that it should not be right for

those to whom death would be an advantage to benefit themselves, but that they should have to await the services of someone else.

Cebes laughed gently and, dropping into his own dialect, said, Aye, that it does.

Yes, went on Socrates, put in that way it certainly might seem b unreasonable, though perhaps it has some justification. The allegory which the mystics tell us—that we men are put in a sort of guard post, from which one must not release oneself or run away—seems to me to be a high doctrine with difficult implications. All the same, Cebes, I believe that this much is true, that the gods are our keepers, and we men are one of their possessions. Don't you think so?

Yes, I do, said Cebes.

Then take your own case. If one of your possessions were to de- c stroy itself without intimation from you that you wanted it to die, wouldn't you be angry with it and punish it, if you had any means of doing so?

Certainly.

So if you look at it in this way I suppose it is not unreasonable to say that we must not put an end to ourselves until God sends some compulsion like the one which we are facing now.

That seems likely, I admit, said Cebes. But what you were saying just now, that philosophers would be readily willing to die—that seems illogical, Socrates, assuming that we were right in saying a moment ago that God is our keeper and we are his possessions. If this service is directed by the gods, who are the very best of masters, it is inexplicable that the very wisest of men should not be grieved at quitting it, because he surely cannot expect to provide for himself any better when he is free. On the other hand a stupid person might get the idea that it would be to his advantage to escape from his master. He might not reason it out that one should not escape from a good e master, but remain with him as long as possible, and so he might run away unreflectingly. A sensible man would wish to remain always with his superior. If you look at it in this way, Socrates, the probable thing is just the opposite of what we said just now. It is natural for the wise to be grieved when they die, and for fools to be happy.

When Socrates had listened to this he seemed to me to be amused 63 at Cebes' persistence, and looking round at us he said, You know, Cebes is always investigating arguments, and he is not at all willing to accept every statement at its face value.

Simmias said, Well, but, Socrates, I think that this time there is something in what he says. Why should a really wise man want to desert masters who are better than himself, and to get rid of them so lightly? I think Cebes is aiming his criticism at you, because you are making so light of leaving us, and the gods too, who as you admit are good masters.

What you and Cebes say is perfectly fair, said Socrates. You b

mean, I suppose, that I must make a formal defense against this charge.

Exactly, said Simmias.

Very well then, let me try to make a more convincing defense to you than I made at my trial. If I did not expect to enter the company, first, of other wise and good gods, and secondly of men now dead who are better than those who are in this world now, it is true that I should be wrong in not grieving at death. As it is, you can be assured that I c expect to find myself among good men. I would not insist particularly on this point, but on the other I assure you that I shall insist most strongly—that I shall find there divine masters who are supremely good. That is why I am not so much distressed as I might be, and why I have a firm hope that there is something in store for those who have died, and, as we have been told for many years, something much better for the good than for the wicked.

Well, what is your idea, Socrates? asked Simmias. Do you mean to keep this knowledge to yourself now that you are leaving us, or will you communicate it to us too? I think that we ought to have a share in d this comfort; besides, it will serve as your defense, if we are satisfied with what you say.

Very well, I will try, he replied. But before I begin, Crito here seems to have been wanting to say something for some time. Let us find out what it is.

Only this, Socrates, said Crito, that the man who is to give you the poison has been asking me for a long time to tell you to talk as little as possible. He says that talking makes you heated, and that you ought not to do anything to affect the action of the poison. Otherwise c it is sometimes necessary to take a second dose, or even a third.

That is his affair, said Socrates. Let him make his own preparations for administering it twice or three times if necessary.

I was pretty sure you would say that, said Crito, but he's been bothering me for a long time.

Never mind him, said Socrates. Now for you, my jury. I want to explain to you how it seems to me natural that a man who has really devoted his life to philosophy should be cheerful in the face of death, 64 and confident of finding the greatest blessing in the next world when his life is finished. I will try to make clear to you, Simmias and Cebes, how this can be so.

Ordinary people seem not to realize that those who really apply themselves in the right way to philosophy are directly and of their own accord preparing themselves for dying and death. If this is true, and they have actually been looking forward to death all their lives, it would of course be absurd to be troubled when the thing comes for which they have so long been preparing and looking forward.

Simmias laughed and said, Upon my word, Socrates, you have b made me laugh, though I was not at all in the mood for it. I am

sure that if they heard what you said, most people would think—and our fellow countrymen would heartily agree—that it was a very good hit at the philosophers to say that they are half dead already, and that they, the normal people, are quite aware that death would serve the philosophers right.

And they would be quite correct, Simmias—except in thinking that they are ‘quite aware.’ They are not at all aware in what sense true philosophers are half dead, or in what sense they deserve death, or what sort of death they deserve. But let us dismiss them and talk among ourselves. Do we believe that there is such a thing as death?

Most certainly, said Simmias, taking up the role of answering.

Is it simply the release of the soul from the body? Is death nothing more or less than this, the separate condition of the body by itself when it is released from the soul, and the separate condition by itself of the soul when released from the body? Is death anything else than this?

No, just that.

Well then, my boy, see whether you agree with me. I fancy that this will help us to find out the answer to our problem. Do you think that it is right for a philosopher to concern himself with the so-called pleasures connected with food and drink?

Certainly not, Socrates, said Simmias.

What about sexual pleasures?

No, not at all.

And what about the other attentions that we pay to our bodies? Do you think that a philosopher attaches any importance to them? I mean things like providing himself with smart clothes and shoes and other bodily ornaments; do you think that he values them or despises them—in so far as there is no real necessity for him to go in for that sort of thing?

I think the true philosopher despises them, he said.

Then it is your opinion in general that a man of this kind is not concerned with the body, but keeps his attention directed as much as he can away from it and toward the soul?

Yes, it is.

So it is clear first of all in the case of physical pleasures that the philosopher frees his soul from association with the body, so far as is possible, to a greater extent than other men?

It seems so.

And most people think, do they not, Simmias, that a man who finds no pleasure and takes no part in these things does not deserve to live, and that anyone who thinks nothing of physical pleasures has one foot in the grave?

That is perfectly true.

Now take the acquisition of knowledge. Is the body a hindrance or not, if one takes it into partnership to share an investigation?

b What I mean is this. Is there any certainty in human sight and hearing, or is it true, as the poets are always dinning into our ears, that we neither hear nor see anything accurately? Yet if these senses are not clear and accurate, the rest can hardly be so, because they are all inferior to the first two. Don't you agree?

Certainly.

Then when is it that the soul attains to truth? When it tries to investigate anything with the help of the body, it is obviously led astray.

c Quite so.

Is it not in the course of reflection, if at all, that the soul gets a clear view of facts?

Yes.

Surely the soul can best reflect when it is free of all distractions such as hearing or sight or pain or pleasure of any kind—that is, when it ignores the body and becomes as far as possible independent, avoiding all physical contacts and associations as much as it can, in its search for reality.

That is so.

d Then here too—in despising the body and avoiding it, and endeavoring to become independent—the philosopher's soul is ahead of all the rest.

It seems so.

Here are some more questions, Simmias. Do we recognize such a thing as absolute uprightness?

Indeed we do.

And absolute beauty and goodness too?

Of course.

Have you ever seen any of these things with your eyes?

Certainly not, said he.

e Well, have you ever apprehended them with any other bodily sense? By 'them' I mean not only absolute tallness or health or strength, but the real nature of any given thing—what it actually is. Is it through the body that we get the truest perception of them? Isn't it true that in any inquiry you are likely to attain more nearly to knowledge of your object in proportion to the care and accuracy with which you have prepared yourself to understand that object in itself?

Certainly.

66 Don't you think that the person who is likely to succeed in this attempt most perfectly is the one who approaches each object, as far as possible, with the unaided intellect, without taking account of any sense of sight in his thinking, or dragging any other sense into his reckoning—the man who pursues the truth by applying his pure and unadulterated thought to the pure and unadulterated object, cutting himself off as much as possible from his eyes and ears and virtually all the rest of his body, as an impediment which by its presence prevents

the soul from attaining to truth and clear thinking? Is not this the person, Simmias, who will reach the goal of reality, if anybody can?

What you say is absolutely true, Socrates, said Simmias.

All these considerations, said Socrates, must surely prompt b serious philosophers to review the position in some such way as this. It looks as though this were a bypath leading to the right track. So long as we keep to the body and our soul is contaminated with this imperfection, there is no chance of our ever attaining satisfactorily to our object, which we assert to be truth. In the first place, the body provides us with innumerable distractions in the pursuit of our necessary sustenance, and any diseases which attack us hinder our quest c for reality. Besides, the body fills us with loves and desires and fears and all sorts of fancies and a great deal of nonsense, with the result that we literally never get an opportunity to think at all about anything. Wars and revolutions and battles are due simply and solely to the body and its desires. All wars are undertaken for the acquisition of wealth, and the reason why we have to acquire wealth is the body, because we are slaves in its service. That is why, on all these ac- d counts, we have so little time for philosophy. Worst of all, if we do obtain any leisure from the body's claims and turn to some line of inquiry, the body intrudes once more into our investigations, interrupting, disturbing, distracting, and preventing us from getting a glimpse of the truth. We are in fact convinced that if we are ever to have pure knowledge of anything, we must get rid of the body and contemplate things by themselves with the soul by itself. It seems, to e judge from the argument, that the wisdom which we desire and upon which we profess to have set our hearts will be attainable only when we are dead, and not in our lifetime. If no pure knowledge is possible in the company of the body, then either it is totally impossible to acquire knowledge, or it is only possible after death, because it is only then that the soul will be separate and independent of 67 the body. It seems that so long as we are alive, we shall continue closest to knowledge if we avoid as much as we can all contact and association with the body, except when they are absolutely necessary, and instead of allowing ourselves to become infected with its nature, purify ourselves from it until God himself gives us deliverance. In this way, by keeping ourselves uncontaminated by the follies of the body, we shall probably reach the company of others like ourselves and gain direct knowledge of all that is pure and uncontaminated b —that is, presumably, of truth. For one who is not pure himself to attain to the realm of purity would no doubt be a breach of universal justice.

Something to this effect, Simmias, is what I imagine all real lovers of learning must think themselves and say to one another. Don't you agree with me?

Most emphatically, Socrates.

Very well, then, said Socrates, if this is true, there is good reason for anyone who reaches the end of this journey which lies before me to hope that there, if anywhere, he will attain the object to which all our efforts have been directed during my past life. So this journey  
 c which is now ordained for me carries a happy prospect for any other man also who believes that his mind has been prepared by purification.

It does indeed, said Simmias.

And purification, as we saw some time ago in our discussion, consists in separating the soul as much as possible from the body, and accustoming it to withdraw from all contact with the body and concentrate itself by itself, and to have its dwelling, so far as it can, both  
 d now and in the future, alone by itself, freed from the shackles of the body. Does not that follow?

Yes, it does, said Simmias.

Is not what we call death a freeing and separation of soul from body?

Certainly, he said.

And the desire to free the soul is found chiefly, or rather only, in the true philosopher. In fact the philosopher's occupation consists precisely in the freeing and separation of soul from body. Isn't that so?

Apparently.

Well then, as I said at the beginning, if a man has trained himself throughout his life to live in a state as close as possible to death,  
 e would it not be ridiculous for him to be distressed when death comes to him?

It would, of course.

Then it is a fact, Simmias, that true philosophers make dying their profession, and that to them of all men death is least alarming. Look at it in this way. If they are thoroughly dissatisfied with the body, and long to have their souls independent of it, when this happens would it not be entirely unreasonable to be frightened and distressed? Would they not naturally be glad to set out for the place where there is a prospect of attaining the object of their lifelong desire  
 68 —which is wisdom—and of escaping from an unwelcome association? Surely there are many who have chosen of their own free will to follow dead lovers and wives and sons to the next world, in the hope of seeing and meeting there the persons whom they loved. If this is so, will a true lover of wisdom who has firmly grasped this same conviction—that he will never attain to wisdom worthy of the name else-  
 b where than in the next world—will he be grieved at dying? Will he not be glad to make that journey? We must suppose so, my dear boy, that is, if he is a real philosopher, because then he will be of the firm belief that he will never find wisdom in all its purity in any other place. If this is so, would it not be quite unreasonable, as I said just now, for such a man to be afraid of death?

It would, indeed.

So if you see anyone distressed at the prospect of dying, said Socrates, it will be proof enough that he is a lover not of wisdom but of the body. As a matter of fact, I suppose he is also a lover of wealth <sup>c</sup> and reputation—one or the other, or both.

Yes, you are quite right.

Doesn't it follow, Simmias, he went on, that the virtue which we call courage belongs primarily to the philosophical disposition?

Yes, no doubt it does, he said.

Self-control, too, as it is understood even in the popular sense—not being carried away by the desires, but preserving a decent indifference toward them—is not this appropriate only to those who regard the body with the greatest indifference and spend their lives in philosophy?

Certainly, he said. d

If you care to consider courage and self-control as practiced by other people, said Socrates, you will find them illogical.

How so, Socrates?

You know, don't you, that everyone except the philosopher regards death as a great evil?

Yes, indeed.

Isn't it true that when a brave man faces death he does so through fear of something worse?

Yes, it is true.

So in everyone except the philosopher courage is due to fear and dread, although it is illogical that fear and cowardice should make a man brave.

Quite so. e

What about temperate people? Is it not, in just the same way, a sort of self-indulgence that makes them self-controlled? We may say that this is impossible, but all the same those who practice this simple form of self-control are in much the same case as that which I have just described. They are afraid of losing other pleasures which they desire, so they refrain from one kind because they cannot resist the other. Although they define self-indulgence as the condition of being ruled by pleasure, it is really because they cannot resist some <sup>69</sup> pleasures that they succeed in resisting others, which amounts to what I said just now—that they control themselves, in a sense, by self-indulgence.

Yes, that seems to be true.

I congratulate you on your perception, Simmias. No, I am afraid that, from the moral standpoint, it is not the right method to exchange one degree of pleasure or pain or fear for another, like coins of different values. There is only one currency for which all these tokens of ours should be exchanged, and that is wisdom. In fact, it is wisdom that makes possible courage and self-control and integrity or, <sup>b</sup>

in a word, true goodness, and the presence or absence of pleasures and fears and other such feelings makes no difference at all, whereas a system of morality which is based on relative emotional values is a mere illusion, a thoroughly vulgar conception which has nothing sound in it and nothing true. The true moral ideal, whether self-control or integrity or courage, is really a kind of purgation from all these  
 c emotions, and wisdom itself is a sort of purification. Perhaps these people who direct the religious initiations are not so far from the mark, and all the time there has been an allegorical meaning beneath their doctrine that he who enters the next world uninitiated and unenlightened shall lie in the mire, but he who arrives there purified and enlightened shall dwell among the gods. You know how the initi-  
 d ation practitioners say, 'Many bear the emblems, but the devotees are few'? Well, in my opinion these devotees are simply those who have lived the philosophical life in the right way—a company which, all through my life, I have done my best in every way to join, leaving nothing undone which I could do to attain this end. Whether I was right in this ambition, and whether we have achieved anything, we shall know for certain, if God wills, when we reach the other world, and that, I imagine, will be fairly soon.

This is the defense which I offer you, Simmias and Cebes, to show that it is natural for me to leave you and my earthly rulers  
 e without any feeling of grief or bitterness, since I believe that I shall find there, no less than here, good rulers and good friends. If I am any more convincing in my defense to you than I was to my Athenian jury, I shall be satisfied.

When Socrates had finished, Cebes made his reply. The rest of  
 70 your statement, Socrates, he said, seems excellent to me, but what you said about the soul leaves the average person with grave misgivings that when it is released from the body it may no longer exist anywhere, but may be dispersed and destroyed on the very day that the man himself dies, as soon as it is freed from the body, that as it emerges it may be dissipated like breath or smoke, and vanish away, so that nothing is left of it anywhere. Of course if it still existed as an independent unity, released from all the evils which you have just described, there would be a strong and glorious hope, Socrates, that  
 b what you say is true. But I fancy that it requires no little faith and assurance to believe that the soul exists after death and retains some active force and intelligence.

Quite true, Cebes, said Socrates. But what are we to do about it? Is it your wish that we should go on speculating about the subject, to see whether this view is likely to be true or not?

For my part, said Cebes, I should be very glad to hear what you think about it.

At any rate, said Socrates, I hardly think that anyone who heard  
 c us now—even a comic poet—would say that I am wasting time and

discoursing on subjects which do not concern me. So if that is how you feel, we had better continue our inquiry. Let us approach it from this point of view. Do the souls of the departed exist in another world or not?

There is an old legend, which we still remember, to the effect that they *do* exist there, after leaving here, and that they return again to this world and come into being from the dead. If this is so—that the living come into being again from the dead—does it not follow that our souls exist in the other world? They could not come into being again if they did not exist, and it will be sufficient proof that my contention is true if it really becomes apparent that the living come from the dead, and from nowhere else. But if this is not so, we shall need some other argument.

Quite so, said Cebes.

If you want to understand the question more readily, said Socrates, consider it with reference not only to human beings but to all animals and plants. Let us see whether in general everything that admits of generation is generated in this way and no other—opposites from opposites, wherever there is an opposite—as for instance beauty is opposite to ugliness and right to wrong, and there are countless other examples. Let us consider whether it is a necessary law that everything which has an opposite is generated from that opposite and from no other source. For example, when a thing becomes bigger, it must, I suppose, have been smaller first before it became bigger?

Yes.

And similarly if it becomes smaller, it must be bigger first, and become smaller afterward?

71

That is so, said Cebes.

And the weaker comes from the stronger, and the faster from the slower?

Certainly.

One more instance. If a thing becomes worse, is it not from being better? And if more just, from being more unjust?

Of course.

Are we satisfied, then, said Socrates, that everything is generated in this way—opposites from opposites?

Perfectly.

Here is another question. Do not these examples present another feature, that between each pair of opposites there are two processes of generation, one from the first to the second, and another from the second to the first? Between a larger and a smaller object are there not the processes of increase and decrease, and do we not describe them in this way as increasing and decreasing?

Yes, said Cebes.

Is it not the same with separating and combining, cooling and heating, and all the rest of them? Even if we sometimes do not use

the actual terms, must it not in fact hold good universally that they come one from the other, and that there is a process of generation from each to the other?

Certainly, said Cebes.

c Well then, said Socrates, is there an opposite to living, as sleeping is opposite to waking?

Certainly.

What?

Being dead.

So if they are opposites, they come from one another, and have their two processes of generation between the two of them?

Of course.

Very well, then, said Socrates, I will state one pair of opposites which I mentioned just now—the opposites themselves and the processes between them—and you shall state the other. My opposites are sleeping and waking, and I say that waking comes from sleeping and  
d sleeping from waking, and that the processes between them are going to sleep and waking up. Does that satisfy you, he asked, or not?

Perfectly.

Now you tell me in the same way, he went on, about life and death. Do you not admit that death is the opposite of life?

I do.

And that they come from one another?

Yes.

Then what comes from the living?

The dead.

And what, asked Socrates, comes from the dead?

I must admit, he said, that it is the living.

So it is from the dead, Cebes, that living things and people come?

e Evidently.

Then our souls do exist in the next world.

So it seems.

And one of the two processes in this case is really quite certain—dying is certain enough, isn't it?

Yes, it is, said Cebes.

What shall we do, then? Shall we omit the complementary process, and leave a defect here in the law of nature? Or must we supply an opposite process to that of dying?

Surely we must supply it, he said.

And what is it?

Coming to life again.

72 Then if there is such a thing as coming to life again, said Socrates, it must be a process from death to life?

Quite so.

So we agree upon this too—that the living have come from the dead no less than the dead from the living. But I think we decided

that if this was so, it was a sufficient proof that the souls of the dead must exist in some place from which they are reborn.

It seems to me, Socrates, he said, that this follows necessarily from our agreement.

I think there is another way too, Cebes, in which you can see that we were not wrong in our agreement. If there were not a constant correspondence in the process of generation between the two sets of opposites, going round in a sort of cycle, if generation were a straight path to the opposite extreme without any return to the starting point or any deflection, do you realize that in the end everything would have the same quality and reach the same state, and change would cease altogether?

What do you mean?

Nothing difficult to understand, replied Socrates. For example, if 'falling asleep' existed, and 'waking up' did not balance it by making something come out of sleep, you must realize that in the end everything would make Endymion look foolish. He would be nowhere, because the whole world would be in the same state—asleep. And if everything were combined and nothing separated, we should soon have Anaxagoras' 'all things together.' In just the same way, my dear Cebes, if everything that has some share of life were to die, and if after death the dead remained in that form and did not come to life again, would it not be quite inevitable that in the end everything should be dead and nothing alive? If living things came from other living things, and the living things died, what possible means could prevent their number from being exhausted by death?

None that I can see, Socrates, said Cebes. What you say seems to be perfectly true.

Yes, Cebes, he said, if anything is true, I believe that this is, and we were not mistaken in our agreement upon it. Coming to life again is a fact, and it is a fact that the living come from the dead, and a fact that the souls of the dead exist.

Besides, Socrates, rejoined Cebes, there is that theory which you have often described to us—that what we call learning is really just recollection. If that is true, then surely what we recollect now we must have learned at some time before, which is impossible unless our souls existed somewhere before they entered this human shape. So in that way too it seems likely that the soul is immortal.

How did the proofs of that theory go, Cebes? broke in Simmias. Remind me, because at the moment I can't quite remember.

One very good argument, said Cebes, is that when people are asked questions, if the question is put in the right way they can give a perfectly correct answer, which they could not possibly do unless they had some knowledge and a proper grasp of the subject. And then if you confront people with a diagram or anything like that, the way in which they react is an unmistakable proof that the theory is correct.

And if you don't find that convincing, Simmias, said Socrates, see whether this appeals to you. I suppose that you find it hard to understand how what we call learning can be recollection?

Not at all, said Simmias. All that I want is to be helped to do what we are talking about—to recollect. I can practically remember enough to satisfy me already, from Cebes' approach to the subject, but I should be nonetheless glad to hear how you meant to approach it.

- c I look at it in this way, said Socrates. We are agreed, I suppose, that if a person is to be reminded of anything, he must first know it at some time or other?

Quite so.

- Are we also agreed in calling it recollection when knowledge comes in a particular way? I will explain what I mean. Suppose that a person on seeing or hearing or otherwise noticing one thing not only becomes conscious of that thing but also thinks of a something else which is an object of a different sort of knowledge. Are we not justified  
d in saying that he was reminded of the object which he thought of?

What do you mean?

Let me give you an example. A human being and a musical instrument, I suppose you will agree, are different objects of knowledge.

Yes, certainly.

Well, you know what happens to lovers when they see a musical instrument or a piece of clothing or any other private property of the person whom they love. When they recognize the thing, their minds conjure up a picture of its owner. That is recollection. In the same way the sight of Simmias often reminds one of Cebes, and of course there are thousands of other examples.

Yes, of course there are, said Simmias.

- e So by recollection we mean the sort of experience which I have just described, especially when it happens with reference to things which we had not seen for such a long time that we had forgotten them.

Quite so.

Well, then, is it possible for a person who sees a picture of a horse or a musical instrument to be reminded of a person, or for someone who sees a picture of Simmias to be reminded of Cebes?

Perfectly.

And is it possible for someone who sees a portrait of Simmias to be reminded of Simmias himself?

- 74 Yes, it is.

Does it not follow from all this that recollection may be caused either by similar or by dissimilar objects?

Yes, it does.

When you are reminded by similarity, surely you must also be conscious whether the similarity is perfect or only partial.

Yes, you must.

Here is a further step, said Socrates. We admit, I suppose, that there is such a thing as equality—not the equality of stick to stick and stone to stone, and so on, but something beyond all that and distinct from it—absolute equality. Are we to admit this or not?

Yes indeed, said Simmias, most emphatically.

b

And do we know what it is?

Certainly.

Where did we get our knowledge? Was it not from the particular examples that we mentioned just now? Was it not from seeing equal sticks or stones or other equal objects that we got the notion of equality, although it is something quite distinct from them? Look at it in this way. Is it not true that equal stones and sticks sometimes, without changing in themselves, appear equal to one person and unequal to another?

Certainly.

Well, now, have you ever thought that things which were absolutely equal were unequal, or that equality was inequality?

No, never, Socrates.

Then these equal things are not the same as absolute equality.

Not in the least, as I see it, Socrates.

And yet it is these equal things that have suggested and conveyed to you your knowledge of absolute equality, although they are distinct from it?

Perfectly true.

Whether it is similar to them or dissimilar?

Certainly.

It makes no difference, said Socrates. So long as the sight of one thing suggests another to you, it must be a cause of recollection, whether the two things are alike or not.

Quite so.

Well, now, he said, what do we find in the case of the equal sticks and other things of which we were speaking just now? Do they seem to us to be equal in the sense of absolute equality, or do they fall short of it in so far as they only approximate to equality? Or don't they fall short at all?

They do, said Simmias, a long way.

Suppose that when you see something you say to yourself, This thing which I can see has a tendency to be like something else, but it falls short and cannot be really like it, only a poor imitation. Don't you agree with me that anyone who receives that impression must in fact have previous knowledge of that thing which he says that the other resembles, but inadequately?

Certainly he must.

Very well, then, is that our position with regard to equal things and absolute equality?

Exactly.

Then we must have had some previous knowledge of equality before the time when we first saw equal things and realized that they were striving after equality, but fell short of it.

That is so.

And at the same time we are agreed also upon this point, that we have not and could not have acquired this notion of equality except by sight or touch or one of the other senses. I am treating them as being all the same.

They are the same, Socrates, for the purpose of our argument.

So it must be through the senses that we obtained the notion that all sensible equals are striving after absolute equality but falling short of it. Is that correct?

Yes, it is.

So before we began to see and hear and use our other senses we must somewhere have acquired the knowledge that there is such a thing as absolute equality. Otherwise we could never have realized, by using it as a standard for comparison, that all equal objects of sense are desirous of being like it, but are only imperfect copies.

That is the logical conclusion, Socrates.

Did we not begin to see and hear and possess our other senses from the moment of birth?

Certainly.

But we admitted that we must have obtained our knowledge of equality before we obtained them.

Yes.

So we must have obtained it before birth.

So it seems.

Then if we obtained it before our birth, and possessed it when we were born, we had knowledge, both before and at the moment of birth, not only of equality and relative magnitudes, but of all absolute standards. Our present argument applies no more to equality than it does to absolute beauty, goodness, uprightness, holiness, and, as I maintain, all those characteristics which we designate in our discussions by the term 'absolute.' So we must have obtained knowledge of all these characteristics before our birth.

That is so.

And unless we invariably forget it after obtaining it we must always be born *knowing* and continue to *know* all through our lives, because 'to know' means simply to retain the knowledge which one has acquired, and not to lose it. Is not what we call 'forgetting' simply the loss of knowledge, Simmias?

Most certainly, Socrates.

And if it is true that we acquired our knowledge before our birth, and lost it at the moment of birth, but afterward, by the exercise of our senses upon sensible objects, recover the knowledge which we had once before, I suppose that what we call learning will be the recovery of our own knowledge, and surely we should be right in calling this recollection.

Quite so.

Yes, because we saw that it is possible for the perception of an 76 object by sight or hearing or any of the other senses to suggest to the percipient, through association, whether there is any similarity or not, another object which he has forgotten. So, as I maintain, there are two alternatives. Either we are all born with knowledge of these standards, and retain it throughout our lives, or else, when we speak of people learning, they are simply recollecting what they knew before. In other words, learning is recollection.

Yes, that must be so, Socrates.

Which do you choose, then, Simmias? That we are born with knowledge, or that we recollect after we are born the things of which b we possessed knowledge before we were born?

I don't know which to choose on the spur of the moment, Socrates.

Well, here is another choice for you to make. What do you think about this? Can a person who knows a subject thoroughly explain what he knows?

Most certainly he can.

Do you think that everyone can explain these questions about which we have just been talking?

I should like to think so, said Simmias, but I am very much afraid that by this time tomorrow there will be no one on this earth who can do it properly.

So you don't think, Simmias, that everyone has knowledge about c them?

Far from it.

Then they just recollect what they once learned.

That must be the right answer.

When do our souls acquire this knowledge? It cannot be after the beginning of our mortal life.

No, of course not.

Then it must be before.

Yes.

Then our souls had a previous existence, Simmias, before they took on this human shape. They were independent of our bodies, and they were possessed of intelligence.

Unless perhaps it is at the moment of birth that we acquire knowledge of these things, Socrates. There is still that time available.

No doubt, my dear fellow, but just tell me, what other time is d

there to lose it in? We have just agreed that we do not possess it when we are born. Do we lose it at the same moment that we acquire it? Or can you suggest any other time?

No, of course not, Socrates. I didn't realize what nonsense I was talking.

Well, how do we stand now, Simmias? If all these absolute realities, such as beauty and goodness, which we are always talking about, really exist, if it is to them, as we rediscover our own former knowledge of them, that we refer, as copies to their patterns, all the objects of our physical perception—if these realities exist, does it not follow that our souls must exist too even before our birth, whereas if they do not exist, our discussion would seem to be a waste of time? Is this the position, that it is logically just as certain that our souls exist before our birth as it is that these realities exist, and that if the one is impossible, so is the other?

It is perfectly obvious to me, Socrates, said Simmias, that the same logical necessity applies to both. It suits me very well that your argument should rely upon the point that our soul's existence before our birth stands or falls with the existence of your grade of reality. I cannot imagine anything more self-evident than the fact that absolute beauty and goodness and all the rest that you mentioned just now exist in the fullest possible sense. In my opinion the proof is quite satisfactory.

What about Cebes? said Socrates. We must convince Cebes too.

To the best of my belief he is satisfied, replied Simmias. It is true that he is the most obstinate person in the world at resisting an argument, but I should think that he needs nothing more to convince him that our souls existed before our birth. As for their existing after we are dead as well, even I don't feel that that has been proved, Socrates. Cebes' objection still holds—the common fear that a man's soul may be disintegrated at the very moment of his death, and that this may be the end of its existence. Supposing that it is born and constituted from some source or other, and exists before it enters a human body. After it has entered one, is there any reason why, at the moment of release, it should not come to an end and be destroyed itself?

Quite right, Simmias, said Cebes. It seems that we have got the proof of one half of what we wanted—that the soul existed before birth—but now we need also to prove that it will exist after death no less than before birth, if our proof is to be complete.

As a matter of fact, my dear Simmias and Cebes, said Socrates, it is proved already, if you will combine this last argument with the one about which we agreed before, that every living thing comes from the dead. If the soul exists before birth, and if when it proceeds toward life and is born it must be born from death or the dead state, surely it must also exist after death, if it must be born again. So the

point which you mention has been proved already. But in spite of this I believe that you and Simmias would like to spin out the discussion still more. You are afraid, as children are, that when the soul emerges from the body the wind may really puff it away and scatter it, especially when a person does not die on a calm day but with a gale blowing.

Cebes laughed. Suppose that we are afraid, Socrates, he said, and try to convince us. Or rather don't suppose that it is we that are afraid. Probably even in us there is a little boy who has these childish terrors. Try to persuade him not to be afraid of death as though it were a bogey.

What you should do, said Socrates, is to say a magic spell over him every day until you have charmed his fears away.

But, Socrates, said Simmias, where shall we find a magician who understands these spells now that you . . . are leaving us? 78

Greece is a large country, Cebes, he replied, which must have good men in it, and there are many foreign races too. You must ransack all of them in your search for this magician, without sparing money or trouble, because you could not spend your money more opportunely on any other object. And you must search also by your own united efforts, because it is probable that you would not easily find anyone better fitted for the task.

We will see to that, said Cebes. But let us return to the point where we left off, if you have no objection. b

Of course not. Why should I?

Thank you, said Cebes.

We ought, I think, said Socrates, to ask ourselves this. What sort of thing is it that would naturally suffer the fate of being dispersed? For what sort of thing should we fear this fate, and for what should we not? When we have answered this, we should next consider to which class the soul belongs, and then we shall know whether to feel confidence or fear about the fate of our souls.

Quite true.

Would you not expect a composite object or a natural compound to be liable to break up where it was put together? And ought not anything which is really incomposite to be the one thing of all others which is not affected in this way? c

That seems to be the case, said Cebes.

Is it not extremely probable that what is always constant and invariable is incomposite, and what is inconstant and variable is composite?

That is how it seems to me.

Then let us return to the same examples which we were discussing before. Does that absolute reality which we define in our discussions remain always constant and invariable, or not? Does absolute equality or beauty or any other independent entity which really exists d

ever admit change of any kind? Or does each one of these uniform and independent entities remain always constant and invariable, never admitting any alteration in any respect or in any sense?

They must be constant and invariable, Socrates, said Cebes.

e Well, what about the concrete instances of beauty—such as men, horses, clothes, and so on—or of equality, or any other members of a class corresponding to an absolute entity? Are they constant, or are they, on the contrary, scarcely ever in the same relation in any sense either to themselves or to one another?

With them, Socrates, it is just the opposite; they are never free from variation.

79 And these concrete objects you can touch and see and perceive by your other senses, but those constant entities you cannot possibly apprehend except by thinking; they are invisible to our sight.

That is perfectly true, said Cebes.

So you think that we should assume two classes of things, one visible and the other invisible?

Yes, we should.

The invisible being invariable, and the visible never being the same?

Yes, we should assume that too.

b Well, now, said Socrates, are we not part body, part soul? Certainly.

Then to which class do we say that the body would have the closer resemblance and relation?

Quite obviously to the visible.

And the soul, is it visible or invisible?

Invisible to men, at any rate, Socrates, he said.

But surely we have been speaking of things visible or invisible to our human nature. Do you think that we had some other nature in view?

No, human nature.

What do we say about the soul, then? Is it visible or invisible?

Not visible.

Invisible, then?

Yes.

So soul is more like the invisible, and body more like the visible?

c That follows inevitably, Socrates.

Did we not say some time ago that when the soul uses the instrumentality of the body for any inquiry, whether through sight or hearing or any other sense—because using the body implies using the senses—it is drawn away by the body into the realm of the variable, and loses its way and becomes confused and dizzy, as though it were fuddled, through contact with things of a similar nature?

Certainly.

d But when it investigates by itself, it passes into the realm of the

pure and everlasting and immortal and changeless, and being of a kindred nature, when it is once independent and free from interference, consorts with it always and strays no longer, but remains, in that realm of the absolute, constant and invariable, through contact with beings of a similar nature. And this condition of the soul we call wisdom.

An excellent description, and perfectly true, Socrates.

Very well, then, in the light of all that we have said, both now and before, to which class do you think that the soul bears the closer resemblance and relation?

I think, Socrates, said Cebes, that even the dullest person would agree, from this line of reasoning, that the soul is in every possible way more like the invariable than the variable.

And the body?

To the other.

Look at it in this way too. When soul and body are both in the same place, nature teaches the one to serve and be subject, the other 80 to rule and govern. In this relation which do you think resembles the divine and which the mortal part? Don't you think that it is the nature of the divine to rule and direct, and that of the mortal to be subject and serve?

I do.

Then which does the soul resemble?

Obviously, Socrates, soul resembles the divine, and body the mortal.

Now, Cebes, he said, see whether this is our conclusion from all that we have said. The soul is most like that which is divine, im- mortal, intelligible, uniform, indissoluble, and ever self-consistent and invariable, whereas body is most like that which is human, mortal, multiform, unintelligible, dissoluble, and never self-consistent. Can we adduce any conflicting argument, my dear Cebes, to show that this is not so?

No, we cannot.

Very well, then, in that case is it not natural for body to disintegrate rapidly, but for soul to be quite or very nearly indissoluble?

Certainly.

Of course you know that when a person dies, although it is natural for the visible and physical part of him, which lies here in the visible world and which we call his corpse, to decay and fall to pieces and be dissipated, none of this happens to it immediately. It remains as it was for quite a long time, even if death takes place when the body is well nourished and in the warm season. Indeed, when the body is dried and embalmed, as in Egypt, it remains almost intact for an incredible time, and even if the rest of the body decays, some parts of it—the bones and sinews and anything else like them—are practically everlasting. That is so, is it not?

Yes.

But the soul, the invisible part, which goes away to a place that is, like itself, glorious, pure, and invisible—the true Hades or unseen world—into the presence of the good and wise God, where, if God so wills, my soul must shortly go—will it, if its very nature is such as I have described, be dispersed and destroyed at the moment of its release from the body, as is the popular view? Far from it, my dear Simmias and Cebes. The truth is much more like this. If at its release the soul is pure and carries with it no contamination of the body, because it has never willingly associated with it in life, but has shunned it and kept itself separate as its regular practice—in other words, if it has pursued philosophy in the right way and really practiced how to face death easily—this is what ‘practicing death’ means, isn’t it?

Most decidedly.

Very well, if this is its condition, then it departs to that place which is, like itself, invisible, divine, immortal, and wise, where, on its arrival, happiness awaits it, and release from uncertainty and folly, from fears and uncontrolled desires, and all other human evils, and where, as they say of the initiates in the Mysteries, it really spends the rest of time with God. Shall we adopt this view, Cebes, or some other?

This one, by all means, said Cebes.

But, I suppose, if at the time of its release the soul is tainted and impure, because it has always associated with the body and cared for it and loved it, and has been so beguiled by the body and its passions and pleasures that nothing seems real to it but those physical things which can be touched and seen and eaten and drunk and used for sexual enjoyment, and if it is accustomed to hate and fear and avoid what is invisible and hidden from our eyes, but intelligible and comprehensible by philosophy—if the soul is in this state, do you think that it will escape independent and uncontaminated?

That would be quite impossible, he said.

On the contrary, it will, I imagine, be permeated by the corporeal, which fellowship and intercourse with the body will have ingrained in its very nature through constant association and long practice.

Certainly.

And we must suppose, my dear fellow, that the corporeal is heavy, oppressive, earthly, and visible. So the soul which is tainted by its presence is weighed down and dragged back into the visible world, through fear, as they say, of Hades or the invisible, and hovers about tombs and graveyards. The shadowy apparitions which have actually been seen there are the ghosts of those souls which have not got clear away, but still retain some portion of the visible, which is why they can be seen.

That seems likely enough, Socrates.

Yes, it does, Cebes. Of course these are not the souls of the good,

but of the wicked, and they are compelled to wander about these places as a punishment for their bad conduct in the past. They continue wandering until at last, through craving for the corporeal, which unceasingly pursues them, they are imprisoned once more in a body. And as you might expect, they are attached to the same sort of character or nature which they have developed during life. e

What sort do you mean, Socrates?

Well, those who have cultivated gluttony or selfishness or drunkenness, instead of taking pains to avoid them, are likely to assume the form of donkeys and other perverse animals. Don't you think so?

82

Yes, that is very likely.

And those who have deliberately preferred a life of irresponsible lawlessness and violence become wolves and hawks and kites, unless we can suggest any other more likely animals.

No, the ones which you mention are exactly right.

So it is easy to imagine into what sort of animals all the other kinds of soul will go, in accordance with their conduct during life.

Yes, certainly.

I suppose that the happiest people, and those who reach the best destination, are the ones who have cultivated the goodness of an ordinary citizen—what is called self-control and integrity—which is acquired by habit and practice, without the help of philosophy and b reason.

How are these the happiest?

Because they will probably pass into some other kind of social and disciplined creature like bees, wasps, and ants, or even back into the human race again, becoming decent citizens.

Very likely.

But no soul which has not practiced philosophy, and is not absolutely pure when it leaves the body, may attain to the divine nature; c that is only for the lover of wisdom. This is the reason, my dear Simmias and Cebes, why true philosophers abstain from all bodily desires and withstand them and do not yield to them. It is not because they are afraid of financial loss or poverty, like the average man who thinks of money first, nor because they shrink from dishonor and a bad reputation, like those who are ambitious for distinction and authority.

No, those would be unworthy motives, Socrates, said Cebes.

They would indeed, he agreed. And so, Cebes, those who care d about their souls and do not subordinate them to the body dissociate themselves firmly from these others and refuse to accompany them on their haphazard journey, and, believing that it is wrong to oppose philosophy with her offer of liberation and purification, they turn and follow her wherever she leads.

What do you mean, Socrates?

I will explain, he said. Every seeker after wisdom knows that up  
 e to the time when philosophy takes it over his soul is a helpless  
 prisoner, chained hand and foot in the body, compelled to view  
 reality not directly but only through its prison bars, and wallowing  
 in utter ignorance. And philosophy can see that the imprisonment is  
 83 ingeniously effected by the prisoner's own active desire, which makes  
 him first accessory to his own confinement. Well, philosophy takes  
 over the soul in this condition and by gentle persuasion tries to set it  
 free. She points out that observation by means of the eyes and ears  
 and all the other senses is entirely deceptive, and she urges the soul to  
 refrain from using them unless it is necessary to do so, and en-  
 courages it to collect and concentrate itself by itself, trusting noth-  
 b ing but its own independent judgment upon objects considered in  
 themselves, and attributing no truth to anything which it views  
 indirectly as being subject to variation, because such objects are sen-  
 sible and visible but what the soul itself sees is intelligible and in-  
 visible. Now the soul of the true philosopher feels that it must not reject  
 this opportunity for release, and so it abstains as far as possible from  
 pleasures and desires and griefs, because it reflects that the result  
 of giving way to pleasure or fear or desire is not as might be supposed  
 the trivial misfortune of becoming ill or wasting money through  
 c self-indulgence, but the last and worst calamity of all, which the  
 sufferer does not recognize.

What is that, Socrates? asked Cebes.

When anyone's soul feels a keen pleasure or pain it cannot help  
 supposing that whatever causes the most violent emotion is the plain-  
 est and truest reality, which it is not. It is chiefly visible things that  
 have this effect, isn't it?

Quite so.

d Is it not on this sort of occasion that soul passes most com-  
 pletely into the bondage of body?

How do you make that out?

Because every pleasure or pain has a sort of rivet with which it  
 fastens the soul to the body and pins it down and makes it corporeal,  
 accepting as true whatever the body certifies. The result of agreeing  
 with the body and finding pleasure in the same things is, I imagine,  
 that it cannot help becoming like it in character and training, so that  
 it can never get entirely away to the unseen world, but is always satu-  
 rated with the body when it sets out, and so soon falls back again into  
 e another body, where it takes root and grows. Consequently it is ex-  
 cluded from all fellowship with the pure and uniform and divine.

Yes, that is perfectly true, Socrates, said Cebes.

It is for these reasons, Cebes, that true philosophers exhibit self-  
 control and courage—not for the reasons which are generally sup-  
 posed. Or do you think that the popular view is right?

84 No, certainly not.

No, indeed. A philosopher's soul will take the view which I have described. It will not first expect to be set free by philosophy, and then allow pleasure and pain to reduce it once more to bondage, thus taking upon itself an endless task, like Penelope when she undid her own weaving. No, this soul secures immunity from its desires by following reason and abiding always in her company, and by contemplating the true and divine and un conjecturable, and drawing inspiration from it, because such a soul believes that this is the right way to live while life endures, and that after death it reaches a place b which is kindred and similar to its own nature, and there is rid forever of human ills. After such a training, my dear Simmias and Cebes, the soul can have no grounds for fearing that on its separation from the body it will be blown away and scattered by the winds, and so disappear into thin air, and cease to exist altogether.

There was silence for some time after Socrates had said this. He c himself, to judge from his appearance, was still occupied with the argument which he had just been stating, and so were most of us, but Simmias and Cebes went on talking in a low voice.

When Socrates noticed them he said, Why, do you feel that my account is inadequate? Of course it is still open to a number of doubts and objections, if you want to examine it in detail. If it is something else that you two are considering, never mind, but if you feel any difficulty about our discussion, don't hesitate to put forward your own views, and point out any way in which you think that my account could be improved. And by all means make use of my services d too, if you think I can help at all to solve the difficulty.

Very well, Socrates, said Simmias, I will be quite open with you. We have both been feeling difficulties for some time, and each of us has been urging the other to ask questions. We are anxious to have your answers, but we did not like to bother you, for fear of annoying you in your present misfortune.

When Socrates heard this he laughed gently and said, I am surprised at you, Simmias. I shall certainly find it difficult to convince the outside world that I do not regard my present lot as a misfortune if I cannot even convince you, and you are afraid that I am more e irritable now than I used to be. Evidently you think that I have less insight into the future than a swan; because when these birds feel that the time has come for them to die, they sing more loudly and sweetly than they have sung in all their lives before, for joy that they are going away into the presence of the god whose servants they are. It is 85 quite wrong for human beings to make out that the swans sing their last song as an expression of grief at their approaching end. People who say this are misled by their own fear of death, and fail to reflect that no bird sings when it is hungry or cold or distressed in any other way—not even the nightingale or swallow or hoopoe, whose song is supposed to be a lament. In my opinion neither they nor the swans

- sing because they are sad. I believe that the swans, belonging as they do to Apollo, have prophetic powers and sing because they know the good things that await them in the unseen world, and they are happier on that day than they have ever been before. Now I consider that I am in the same service as the swans, and dedicated to the same god, and that I am no worse endowed with prophetic powers by my master than they are, and no more disconsolate at leaving this life. So far as that fear of yours is concerned, you may say and ask whatever you like, so long as the Athenian officers of justice permit.

- Thank you, said Simmias. I will tell you my difficulty first and then Cebes shall tell you where he finds your theory unacceptable. I think, just as you do, Socrates, that although it is very difficult if not impossible in this life to achieve certainty about these questions, at the same time it is utterly feeble not to use every effort in testing the available theories, or to leave off before we have considered them in every way, and come to the end of our resources. It is our duty to do one of two things, either to ascertain the facts, whether by seeking instruction or by personal discovery, or, if this is impossible, to select the best and most dependable theory which human intelligence can supply, and use it as a raft to ride the seas of life—that is, assuming that we cannot make our journey with greater confidence and security by the surer means of a divine revelation. And so now, after what you have said, I shall not let any diffidence prevent me from asking my question, and so make me blame myself afterward for not having spoken my mind now. The fact is, Socrates, that on thinking it over, and discussing it with Cebes here, I feel that your theory has serious flaws in it.
- Your feeling is very likely right, my dear boy, said Socrates, but tell me where you think the flaws are.

- What I mean is this, said Simmias. You might say the same thing about tuning the strings of a musical instrument, that the attunement is something invisible and incorporeal and splendid and divine, and located in the tuned instrument, while the instrument itself and its strings are material and corporeal and composite and earthly and closely related to what is mortal. Now suppose that the instrument is broken, or its strings cut or snapped. According to your theory the attunement must still exist—it cannot have been destroyed, because it would be inconceivable that when the strings are broken the instrument and the strings themselves, which have a mortal nature, should still exist, and the attunement, which shares the nature and characteristics of the divine and immortal, should exist no longer, having predeceased its mortal counterpart. You would say that the attunement must still exist somewhere just as it was, and that the wood and strings will rot away before anything happens to it. I say this, Socrates, because, as I think you yourself are aware, we Pythagoreans have a theory of the soul which is roughly like this.

The body is held together at a certain tension between the extremes of hot and cold, and dry and wet, and so on, and our soul is a temperament or adjustment of these same extremes, when they are combined in just the right proportion. Well, if the soul is really an adjustment, c obviously as soon as the tension of our body is lowered or increased beyond the proper point, the soul must be destroyed, divine though it is—just like any other adjustment, either in music or in any product of the arts and crafts, although in each case the physical remains last considerably longer until they are burned up or rot away. Find us an answer to this argument, if someone insists that the soul, being a d temperament of physical constituents, is the first thing to be destroyed by what we call death.

Socrates opened his eyes very wide—a favorite trick of his—and smiled. Really, he said, Simmias' criticism is quite justified, so if any of you are readier-witted than I am, you had better answer him. It seems to me that he is not handling the argument at all badly. However, before we have the answer, I think we should hear what criticisms Cebes has to make in his turn, so that we may have time e to decide what we shall say. When we have heard him, we must either agree with them if they seem to be at all on the right note, or if not, we must then proceed to champion our theory.

Come on, Cebes, he said, tell us what has been troubling you.

Very well, said Cebes. It seems to me that the argument is just where it was. I mean that it is open to the same criticism that we made before. The proof that our soul existed before it took on this present shape is perfectly satisfying—I might even say convincing. I am not changing my position about that. But as for its still existing somewhere after we are dead, I think that the proof fails in this way. Mind you, I don't agree with Simmias' objection that soul is not stronger and more durable than body; it seems to me to be far superior in every way like that. Then why, your theory might inquire, are you still skeptical, when you can see that after a man dies even the weaker part of him continues to exist? Don't you think the more durable part of him must logically survive as long?

Well, here is my answer. I want you to consider whether there is b anything in what I say—because like Simmias I must have recourse to an illustration. Suppose that an elderly tailor has just died. Your theory would be just like saying that the man is not dead, but still exists somewhere safe and sound, and offering as proof the fact that the coat which he had made for himself and was wearing has not perished but is still intact. If anyone was skeptical, I suppose you would ask him which is likely to last longer, a man or a coat which is c being regularly used and worn, and when he replied that the former was far more likely, you would imagine that you had proved conclusively that the man is safe and sound, since the less-enduring object has not perished. But surely this is not so, Simmias—because I

want your opinion too. Anyone would dismiss such a view as absurd. The tailor makes and wears out any number of coats, but although he  
 d outlives all the others, presumably he perishes before the last one, and this does not mean that a man is inferior to a coat, or has a weaker hold upon life. I believe that this analogy might apply to the relation of soul to body, and I think that it would be reasonable to say of them in the same way that soul is a long-lived thing, whereas body is relatively feeble and short-lived. But while we may admit that each soul wears out a number of bodies, especially if it lives a great many years—because although the body is continually changing and disintegrating all through life, the soul never stops replacing what is worn  
 e away—still we must suppose that when the soul dies it is still in possession of its latest covering, and perishes before it in this case only, although when the soul has perished the body at last reveals its natural frailty and quickly rots away. If you accept this view there is no justification yet for any confidence that after death our souls still exist somewhere.

88 Suppose that one conceded to the exponent of immortality even more than you claim, granting not only that our souls existed before our birth, but also that some of them may continue to exist or come into existence after death, and be born and die again several times—soul having such natural vitality that it persists through successive incarnations—unless in granting this he made the further concession that the soul suffers no ill effects in its various rebirths, and so does not, at one of its ‘deaths,’ perish altogether. If he had to admit that nobody knows which of these ‘deaths’ or separations from the body  
 b may prove fatal to the soul, because such insight is impossible for any of us—on these terms, Socrates, no one but a fool is entitled to face death with confidence, unless he can prove that the soul is absolutely immortal and indestructible. Otherwise everyone must always feel apprehension at the approach of death, for fear that in this particular separation from the body his soul may be finally and utterly destroyed.

c Well, when we had heard them state their objections, we all felt very much depressed, as we told one another later. We had been quite convinced by the earlier part of the discussion, and now we felt that they had upset our convictions and destroyed our confidence not only in what had been said already, but also in anything that was to follow later. Perhaps we were incompetent to judge, or the facts themselves might prove to be unreliable.

ECHECRATES: You certainly have my full sympathy, Phaedo. After hearing your account I find myself faced with the same mis-  
 d giving. How can we believe in anything after this? Socrates’ argument was absolutely convincing, and now it is completely discredited. That theory that our soul is a sort of attunement has always had an extraordinary attraction for me, and when I heard it stated it reminded

me that I myself had formed the same opinion. What I really need now is another proof, right from the beginning, to convince me that when a man dies his soul does not die with him. Tell me, how did Socrates pick up the trail again? And did he show any sign of being e upset, like the rest of you, or did he quietly come to the rescue of the argument? And did he rescue it effectively or not? Tell us every detail as accurately as you can.

PHAEDO: I can assure you, Echecrates, that Socrates often astonished me, but I never admired him more than on this particular occasion. That he should have been ready with an answer was, I suppose, nothing unusual, but what impressed me was, first, the pleasant, kindly, appreciative way in which he received the two boys' objections, then his quick recognition of how the turn of the discussion had affected us, and lastly the skill with which he healed our wounds, rallied our scattered forces, and encouraged us to join him in pursuing the inquiry. 89

ECHECRATES: How did he do that?

PHAEDO: I will tell you. I happened to be sitting to the right of his bed, on a footstool, and he was much higher than I was. So he laid his hand on my head and gathered up the curls on my neck—he never missed a chance of teasing me about my curls—and said, Tomorrow, I suppose, Phaedo, you will cut off this beautiful hair. b

I expect so, Socrates, I said.

Not if you take my advice.

Why not? I asked.

Because I shall cut off mine today, and you ought to do the same, said Socrates, that is, if we let our argument die and fail to bring it to life again. What is more, if I were you, and let the truth escape me, I should make a vow like the Argives' never to let my hair grow c again until I had defeated the argument of Simmias and Cebes in a return battle.

But, I objected, not even Heracles can take on two at once.

You had better call upon me to be your Iolaus, he said, while the daylight lasts.

Very well, I said, but I am Iolaus appealing to Heracles, not Heracles to Iolaus.

The effect will be just the same, he said. But first there is one danger that we must guard against.

What sort of danger? I asked.

Of becoming misologic, he said, in the sense that people become d misanthropic. No greater misfortune could happen to anyone than that of developing a dislike for argument. Misology and misanthropy arise in just the same way. Misanthropy is induced by believing in somebody quite uncritically. You assume that a person is absolutely truthful and sincere and reliable, and a little later you find that he is shoddy and unreliable. Then the same thing happens again. After

repeated disappointments at the hands of the very people who might  
 e be supposed to be your nearest and most intimate friends, constant irritation ends by making you dislike everybody and suppose that there is no sincerity to be found anywhere. Have you never noticed this happening?

Indeed, I have.

Don't you feel that it is reprehensible? Isn't it obvious that such a person is trying to form human relationships without any critical understanding of human nature? Otherwise he would surely recognize the truth—that there are not many very good or very bad people,  
 90 but the great majority are something between the two.

How do you make that out? I asked.

On the analogy of very large or small objects, he said. Can you think of anything more unusual than coming across a very large or small man, or dog, or any other creature? Or one which is very swift or slow, ugly or beautiful, white or black? Have you never realized that extreme instances are few and rare, while intermediate ones are many and plentiful?

Certainly.

b So you think that if there were a competition in wickedness, very few would distinguish themselves even there?

Probably.

Yes, it is probable, said Socrates. However, you have led me into a digression. The resemblance between arguments and human beings lies not in what I said just now, but in what I said before, that when one believes that an argument is true without reference to the art of logic, and then a little later decides rightly or wrongly that it is false, and the same thing happens again and again—you know how  
 c it is, especially with those who spend their time in arguing both sides—they end by believing that they are wiser than anyone else, because they alone have discovered that there is nothing stable or dependable either in facts or in arguments, and that everything fluctuates just like the water in a tidal channel, and never stays at any point for any time.

That is perfectly true, I said.

Well, then, Phaedo, he said, supposing that there is an argument which is true and valid and capable of being discovered, if anyone  
 d nevertheless, through his experience of these arguments which seem to the same people to be sometimes true and sometimes false, attached no responsibility to himself and his lack of technical ability, but was finally content, in exasperation, to shift the blame from himself to the arguments, and spend the rest of his life loathing and decrying them, and so missed the chance of knowing the truth about reality—would it not be a deplorable thing?

It would indeed, I said.

Very well, he said, that is the first thing that we must guard

against. We must not let it enter our minds that there may be no validity in argument. On the contrary we should recognize that we ourselves are still intellectual invalids, but that we must brace ourselves and do our best to become healthy—you and the others partly with a view to the rest of your lives, but I directly in view of my death, because at the moment I am in danger of regarding it not philosophically but self-assertively. You know how, in an argument, people who have no real education care nothing for the facts of the case, and are only anxious to get their point of view accepted by the audience? Well, I feel that at this present moment I am as bad as they are, only with this difference, that my anxiety will be not to convince my audience, except incidentally, but to produce the strongest possible conviction in myself. This is how I weigh the position, my dear fellow—see how selfish I am! If my theory is really true, it is right to believe it, while, even if death is extinction, at any rate during this time before my death I shall be less likely to distress my companions by giving way to self-pity, and this folly of mine will not live on with me—which would be a calamity—but will shortly come to an end.

That, my dear Simmias and Cebes, is the spirit in which I am prepared to approach the discussion. As for you, if you will take my advice, you will think very little of Socrates, and much more of the truth. If you think that anything I say is true, you must agree with me; if not, oppose it with every argument that you have. You must not allow me, in my enthusiasm, to deceive both myself and you, and leave my sting behind when I fly away.

Well, we must go ahead, he continued. First remind me of what you said, if you find my memory inaccurate. Simmias, I believe, is troubled with doubts. He is afraid that, even if the soul is more divine and a higher thing than the body, it may nevertheless be destroyed first, as being a kind of attunement. Cebes on the other hand appeared to agree with me that soul is more enduring than body, but to maintain that no one can be sure that, after repeatedly wearing out a great many bodies, it does not at last perish itself, leaving the last body behind; and he thinks that death may be precisely this, the destruction of the soul, because the body never stops perishing all the time. Am I right, Simmias and Cebes, in thinking that these are the objections which we have to investigate?

They agreed that this was so.

Well, then, he said, do you reject all our previous arguments, or only some of them?

Only some of them, they said.

What is your opinion of the reasoning by which we asserted that learning is recollection, and that, if this is so, our souls must have existed somewhere else before they were confined in the body?

Speaking for myself, said Cebes, I found it remarkably convincing at the time, and I stick to it still as I do to no other theory.

Yes, indeed, said Simmias, it is just the same with me. I should be very much surprised if I ever changed my opinion about that.

But you will have to change it, my Theban friend, said Socrates, if the conception stands that an attunement is a composite thing, and that the soul is an attunement composed of our physical elements at a given tension. I imagine that you would not accept even from  
 b yourself the assertion that a composite attunement existed before the elements of which it was to be composed. Or would you?

Not for a moment, Socrates.

Don't you see that that is just what it amounts to when you say that the soul exists before it enters the human form or body, and also that it is composed of elements which do not yet exist? Surely an attunement is not at all like the object of your comparison. The in-  
 c strument and the strings and their untuned notes come first. The attunement is the last of all to be constituted and the first to be destroyed. How will this account harmonize with the other?

Not at all, said Simmias.

And yet, said Socrates, if any account ought to be harmonious, it should be an account of attunement.

Yes, it should, said Simmias.

Well, said Socrates, this one does not harmonize with your view. Make up your mind which theory you prefer—that learning is recollection, or that soul is an attunement.

The former, without any hesitation, Socrates, he said. The other appealed to me, without any proof to support it, as being based on  
 d plausible analogy, which is why most people find it attractive. But I realize that theories which rest their proof upon plausibility are impostors, and unless you are on your guard, they deceive you properly, both in geometry and everywhere else. On the other hand, the theory of recollection and learning derives from a hypothesis which is worthy of acceptance. The theory that our soul exists even before it enters the body surely stands or falls with the soul's possession of the ultimate standard of reality—a view which I have, to the best of my  
 e belief, fully and rightly accepted. It seems therefore that I must not accept, either from myself or from anyone else, the assertion that soul is an attunement.

There is this way of looking at it too, Simmias, said Socrates. Do you think that an attunement, or any other composite thing, should  
 93 be in a condition different from that of its component elements?

No, I do not.

And it should not act, or be acted upon, I presume, differently from them?

He agreed.

So an attunement should not control its elements, but should follow their lead?

He assented.

There is no question of its conflicting with them, either in movement or in sound or in any other way.

None at all.

Very well, then, is it not the nature of every attunement to be an attunement in so far as it is tuned?

I don't understand.

Surely, said Socrates, if it is tuned more, that is, in a greater degree—supposing this to be possible—it must be more of an attunement, and if it is tuned less, that is, in a lesser degree, it must be less of an attunement.

Quite so.

And is this the case with the soul—that one soul is, even minutely, more or less of a soul than another?

Not in the least.

Now please give me your closest attention, said Socrates. Do we say that one kind of soul possesses intelligence and goodness, and is good, and that another possesses stupidity and wickedness, and is evil? And is this true?

Yes, it is true.

Then how will a person who holds that the soul is an attunement account for the presence in it of goodness and badness? Will he describe them as yet another attunement or lack of it? Will he say that the good soul is in tune, and not only is an attunement itself, but contains another, whereas the bad soul is out of tune and does not contain another attunement?

I really could not say, replied Simmias, but obviously anyone who held that view would have to say something of the sort.

But we have already agreed, said Socrates, that no soul can be more or less of a soul than another, and this is the same as agreeing that no attunement can be more of an attunement and in a greater degree, or less of an attunement and in a lesser degree, than another. Is that not so?

Certainly.

And that what is neither more nor less of an attunement is neither more nor less in tune. Is that so?

Yes.

Does that which is neither more nor less in tune contain a greater or smaller proportion of attunement, or an equal one?

An equal one.

Then since no soul is any more or less than just a soul, it is neither more nor less in tune.

That is so.

Under this condition it cannot contain a greater proportion of discord or attunement.

Certainly not.

And again under this condition can one soul contain a greater

proportion of badness or goodness than another, assuming that badness is discord and goodness attunement?

No, it cannot.

- 94 Or rather, I suppose, Simmias, by strict reasoning no soul will contain any share of badness, if it is an attunement, because surely since attunement is absolutely attunement and nothing else, it can never contain any share of discord.

No, indeed.

Nor can the soul, since it is absolutely soul, contain a share of badness.

Not in the light of what we have said.

So on this theory every soul of every living creature will be equally good—assuming that it is the nature of all souls to be equally souls and nothing else.

I think that follows, Socrates.

- b Do you also think that this view is right? Would the argument ever have come to this if our hypothesis, that the soul is an attunement, had been correct?

Not the least chance of it.

Well, said Socrates, do you hold that it is any other part of a man than the soul that governs him, especially if it is a wise one?

No, I do not.

- c Does it yield to the feelings of the body, or oppose them? I mean, for instance, that when a person is feverish and thirsty it impels him the other way, not to drink, and when he is hungry, not to eat, and there are thousands of other ways in which we see the soul opposing the physical instincts. Is that not so?

Certainly.

Did we not also agree a little while ago that if it is an attunement it can never sound a note that conflicts with the tension or relaxation or vibration or any other condition of its constituents, but must always follow them and never direct them?

Yes, we did, of course.

- d Well, surely we can see now that the soul works in just the opposite way. It directs all the elements of which it is said to consist, opposing them in almost everything all through life, and exercising every form of control—sometimes by severe and unpleasant methods like those of physical training and medicine, and sometimes by milder ones, sometimes scolding, sometimes encouraging—and conversing with the desires and passions and fears as though it were quite separate and distinct from them. It is just like Homer's description in the *Odyssey* where he says that Odysseus

- e Then beat his breast, and thus reproved his heart,  
Endure, my heart; still worse hast thou endured.<sup>1</sup>

<sup>1</sup> *Odyssey* 20.17 sq.

Do you suppose that when he wrote that he thought that the soul was an attunement, liable to be swayed by physical feelings? Surely he regarded it as capable of swaying and controlling them, as something much too divine to rank as an attunement.

That is certainly how it seems to me, Socrates.

Good. In that case there is no justification for our saying that soul is a kind of attunement. We should neither agree with Homer nor 95 be consistent ourselves.

That is so.

Well now, said Socrates, we seem to have placated the Theban lady Harmonia with moderate success. But what about Cadmus, Cebes? How shall we placate him, and what argument shall we use?

I think that you will find a way, said Cebes. This argument which you brought forward against the attunement theory far surpassed all my expectations. When Simmias was explaining his difficulties I wondered very much whether anyone would be able to do b anything with his argument; so I was quite astonished that it could not stand up against your very first attack. I should not be surprised if Cadmus' argument met the same fate.

My dear fellow, said Socrates, don't boast, or some misfortune will upset the forthcoming argument. However, we will leave that to God; it is our task to come to close quarters in the Homeric manner and test the validity of your contention.

What you require, in a nutshell, is this. You consider that unless the confidence of a philosopher who at the point of dying believes c that after death he will be better off for having lived and ended his life in philosophy than in any other way of living is to be a blind and foolish confidence, the soul must be proved to be indestructible and immortal. To show that it has great vitality and a godlike nature, and even that it existed before we were born—all this, you say, may very well indicate not that the soul is immortal, but merely that it is long-lived, and pre-existed somewhere for a prodigious period of time, enjoying a great measure of knowledge and activity. But all this did not make it any the more immortal. Indeed its very entrance into the d human body was, like a disease, the beginning of its destruction; it lives this life in increasing weariness, and finally perishes in what we call death. You also say that, to our individual fears, it makes no difference whether it enters the body once or often. Anyone who does not know and cannot prove that the soul is immortal must be afraid, unless he is a fool.

That, I believe, is the substance of your objection, Cebes. I am deliberately reviewing it more than once, in order that nothing may e escape us, and that you may add to it or subtract from it anything that you wish.

Cebes said, But at the present moment there is no need for me to add or subtract anything; that is precisely my point of view.

After spending some time in reflection Socrates said, What you require is no light undertaking, Cebes. It involves a full treatment of the causes of generation and destruction. If you like, I will describe  
 96 my own experiences in this connection and then, if you find anything helpful in my account, you can use it to reassure yourself about your own objections.

Yes, indeed, said Cebes, I should like that very much.

Then listen, and I will tell you. When I was young, Cebes, I had an extraordinary passion for that branch of learning which is called natural science. I thought it would be marvelous to know the causes for which each thing comes and ceases and continues to be. I was  
 b constantly veering to and fro, puzzling primarily over this sort of question. Is it when heat and cold produce fermentation, as some have said, that living creatures are bred? Is it with the blood that we think, or with the air or the fire that is in us? Or is it none of these, but the brain that supplies our senses of hearing and sight and smell, and from these that memory and opinion arise, and from memory and opinion, when established, that knowledge comes? Then again I  
 c would consider how these faculties are lost, and study celestial and terrestrial phenomena, until at last I came to the conclusion that I was uniquely unfitted for this form of inquiry. I will give you a sufficient indication of what I mean. I had understood some things plainly before, in my own and other people's estimation, but now I was so befogged by these speculations that I unlearned even what I had thought I knew, especially about the cause of growth in human beings. Previously I had thought that it was quite obviously due to eating and  
 d drinking—that when, from the food which we consume, flesh is added to flesh and bone to bone, and when in the same way the other parts of the body are augmented by their appropriate particles, the bulk which was small is now large, and in this way the small man becomes a big one. That is what I used to believe—reasonably, don't you think?

Yes, I do, said Cebes.

Consider a little further. I had been content to think, when I saw a tall man standing beside a short one, that he was taller by a head, and similarly in the case of horses. And it seemed to me even more  
 e obvious that ten is more than eight because it contains two more, and that two feet is bigger than one because it exceeds it by half its own length.

And what do you believe about them now? asked Cebes.

Why, upon my word, that I am very far from supposing that I know the explanation of any of these things. I cannot even convince myself that when you add one to one either the first or the second  
 97 one becomes two, or they both become two by the addition of the one to the other. I find it hard to believe that, although when they were separate each of them was one and they were not two, now that they

have come together the cause of their becoming two is simply the union caused by their juxtaposition. Nor can I believe now, when you divide one, that this time the cause of its becoming two is the division, because this cause of its becoming two is the opposite of the former one; then it was because they were brought close together and added one to the other, but now it is because they are taken apart and separated one from the other. Nor can I now persuade myself that I understand how it is that things become one, nor, in short, why anything else comes or ceases or continues to be, according to this method of inquiry. So I reject it altogether, and muddle out a haphazard method of my own.

However, I once heard someone reading from a book, as he said, by Anaxagoras, and asserting that it is mind that produces order and is the cause of everything. This explanation pleased me. Somehow it seemed right that mind should be the cause of everything, and I reflected that if this is so, mind in producing order sets everything in order and arranges each individual thing in the way that is best for it. Therefore if anyone wished to discover the reason why any given thing came or ceased or continued to be, he must find out how it was best for that thing to be, or to act or be acted upon in any other way. On this view there was only one thing for a man to consider, with regard both to himself and to anything else, namely the best and highest good, although this would necessarily imply knowing what is less good, since both were covered by the same knowledge.

These reflections made me suppose, to my delight, that in Anaxagoras I had found an authority on causation who was after my own heart. I assumed that he would begin by informing us whether the earth is flat or round, and would then proceed to explain in detail the reason and logical necessity for this by stating how and why it was better that it should be so. I thought that if he asserted that the earth was in the center, he would explain in detail that it was better for it to be there; and if he made this clear, I was prepared to give up hankering after any other kind of cause. I was prepared also in the same way to receive instruction about the sun and moon and the other heavenly bodies, about their relative velocities and their orbits and all the other phenomena connected with them—in what way it is better for each one of them to act or be acted upon as it is. It never entered my head that a man who asserted that the ordering of things is due to mind would offer any other explanation for them than that it is best for them to be as they are. I thought that by assigning a cause to each phenomenon separately and to the universe as a whole he would make perfectly clear what is best for each and what is the universal good. I would not have parted with my hopes for a great sum of money. I lost no time in procuring the books, and began to read them as quickly as I possibly could, so that I might know as soon as possible about the best and the less good.

It was a wonderful hope, my friend, but it was quickly dashed. As I read on I discovered that the fellow made no use of mind and assigned to it no causality for the order of the world, but adduced  
 c causes like air and æther and water and many other absurdities. It seemed to me that he was just about as inconsistent as if someone were to say, The cause of everything that Socrates does is mind—and then, in trying to account for my several actions, said first that the reason why I am lying here now is that my body is composed of bones and sinews, and that the bones are rigid and separated at the  
 d joints, but the sinews are capable of contraction and relaxation, and form an envelope for the bones with the help of the flesh and skin, the latter holding all together, and since the bones move freely in their joints the sinews by relaxing and contracting enable me somehow to bend my limbs, and that is the cause of my sitting here in a bent position. Or again, if he tried to account in the same way for my conversing with you, adducing causes such as sound and air and hearing and a thousand others, and never troubled to mention the real  
 e reasons, which are that since Athens has thought it better to condemn me, therefore I for my part have thought it better to sit here, and more right to stay and submit to whatever penalty she orders. Because,  
 99 by dog, I fancy that these sinews and bones would have been in the neighborhood of Megara or Boeotia long ago—impelled by a conviction of what is best!—if I did not think that it was more right and honorable to submit to whatever penalty my country orders rather than take to my heels and run away. But to call things like that causes is too absurd. If it were said that without such bones and sinews and all the rest of them I should not be able to do what I think is right, it would be true. But to say that it is because of them that I  
 b do what I am doing, and not through choice of what is best—although my actions are controlled by mind—would be a very lax and inaccurate form of expression. Fancy being unable to distinguish between the cause of a thing and the condition without which it could not be a cause! It is this latter, as it seems to me, that most people, groping in the dark, call a cause—attaching to it a name to which it has no right. That is why one person surrounds the earth with a vortex, and so keeps it in place by means of the heavens, and another props it up on a pedestal of air, as though it were a wide platter. As for a power which keeps things disposed at any given moment in  
 c the best possible way, they neither look for it nor believe that it has any supernatural force. They imagine that they will someday find a more mighty and immortal and all-sustaining Atlas, and they do not think that anything is really bound and held together by goodness or moral obligation. For my part, I should be delighted to learn about  
 the workings of such a cause from anyone, but since I have been denied  
 100 knowledge of it, and have been unable either to discover it myself or to learn about it from another, I have worked out my own

makeshift approach to the problem of causation. Would you like me to give you a demonstration of it, Cebes?

I should like it very much indeed.

Well, after this, said Socrates, when I was worn out with my physical investigations, it occurred to me that I must guard against the same sort of risk which people run when they watch and study an eclipse of the sun; they really do sometimes injure their eyes, unless they study its reflection in water or some other medium. I conceived of something like this happening to myself, and I was afraid that by observing objects with my eyes and trying to comprehend them with each of my other senses I might blind my soul altogether. So I decided that I must have recourse to theories, and use them in trying to discover the truth about things. Perhaps my illustration is not quite apt, because I do not at all admit that an inquiry by means of theory employs 'images' any more than one which confines itself to facts. But however that may be, I started off in this way, and in every case I first lay down the theory which I judge to be soundest, and then whatever seems to agree with it—with regard either to causes or to anything else—I assume to be true, and whatever does not I assume not to be true. But I should like to express my meaning more clearly, because at present I don't think that you understand.

No, indeed I don't, said Cebes, not a bit.

Well, said Socrates, what I mean is this, and there is nothing new about it. I have always said it; in fact I have never stopped saying it, especially in the earlier part of this discussion. As I am going to try to explain to you the theory of causation which I have worked out myself, I propose to make a fresh start from those principles of mine which you know so well—that is, I am assuming the existence of absolute beauty and goodness and magnitude and all the rest of them. If you grant my assumption and admit that they exist, I hope with their help to explain causation to you, and to find a proof that soul is immortal.

Certainly I grant it, said Cebes. You need lose no time in drawing your conclusion.

Then consider the next step, and see whether you share my opinion. It seems to me that whatever else is beautiful apart from absolute beauty is beautiful because it partakes of that absolute beauty, and for no other reason. Do you accept this kind of causality?

Yes, I do.

Well, now, that is as far as my mind goes; I cannot understand these other ingenious theories of causation. If someone tells me that the reason why a given object is beautiful is that it has a gorgeous color or shape or any other such attribute, I disregard all these other explanations—I find them all confusing—and I cling simply and straightforwardly and no doubt foolishly to the explanation that the one thing that makes that object beautiful is the presence in it or

association with it, in whatever way the relation comes about, of absolute beauty. I do not go so far as to insist upon the precise details—only upon the fact that it is by beauty that beautiful things are beautiful. This, I feel, is the safest answer for me or for anyone else to give, and I believe that while I hold fast to this I cannot fall; it is safe  
 e for me or for anyone else to answer that it is by beauty that beautiful things are beautiful. Don't you agree?

Yes, I do.

Then is it also by largeness that large things are large and larger things larger, and by smallness that smaller things are smaller?

Yes.

So you too, like myself, would refuse to accept the statement that one man is taller than another 'by a head,' and that the shorter man is shorter by the same. You would protest that the only view  
 101 which you yourself can hold is that whatever is taller than something else is so simply by tallness—that is, because of tallness—and that what is shorter is so simply by shortness, that is, because of shortness. You would be afraid, I suppose, that if you said that one man is taller than another by a head, you would be faced by a logical objection—first that the taller should be taller and the shorter shorter by the same thing, and secondly that the taller person should be taller by a head, which is a short thing, and that it is unnatural that  
 b a man should be made tall by something short. Isn't that so?

Cebes laughed and said, Yes, it is.

Then you would be afraid to say that ten is more than eight 'by two,' or that two is the cause of its excess over eight, instead of saying that it is more than eight by, or because of, being a larger number, and you would be afraid to say that a length of two feet is greater than one foot by a half, instead of saying that it is greater by its larger size—because there is the same danger here too?

Quite so.

Suppose next that we add one to one. You would surely avoid saying that the cause of our getting two is the addition, or in the case  
 c of a divided unit, the division. You would loudly proclaim that you know of no other way in which any given object can come into being except by participation in the reality peculiar to its appropriate universal, and that in the cases which I have mentioned you recognize no other cause for the coming into being of two than participation in duality, and that whatever is to become two must participate in this, and whatever is to become one must participate in unity. You would dismiss these divisions and additions and other such niceties, leaving them for persons wiser than yourself to use in their explanations,  
 d while you, being nervous of your own shadow, as the saying is, and of your inexperience, would hold fast to the security of your hypothesis and make your answers accordingly. If anyone should fasten upon the hypothesis itself, you would disregard him and refuse to answer until you could consider whether its consequences were mutually con-

sistent or not. And when you had to substantiate the hypothesis itself, you would proceed in the same way, assuming whatever more ultimate hypothesis commended itself most to you, until you reached one which was satisfactory. You would not mix the two things together by discussing both the principle and its consequences, like one of these destructive critics—that is, if you wanted to discover any part of the truth. They presumably have no concern or care whatever for such an object, because their cleverness enables them to muddle everything up without disturbing their own self-complacence, but you, I imagine, if you are a philosopher, will follow the course which I describe.

102

You are perfectly right, said Simmias and Cebes together.

ECHECRATES: I can assure you, Phaedo, I am not surprised. It seems to me that Socrates made his meaning extraordinarily clear to even a limited intelligence.

PHAEDO: That was certainly the feeling of all of us who were present, Echeocrates.

ECHECRATES: No doubt, because it is just the same with us who were not present and are hearing it now for the first time. But how did the discussion go on?

PHAEDO: I think that when Socrates had got this accepted, and it was agreed that the various forms exist, and that the reason why other things are called after the forms is that they participate in the forms, he next went on to ask, If you hold this view, I suppose that when you say that Simmias is taller than Socrates but shorter than Phaedo, you mean that at that moment there are in Simmias both tallness and shortness?

Yes, I do.

But do you agree that the statement 'Simmias is bigger than Socrates' is not true in the form in which it is expressed? Surely the real reason why Simmias is bigger is not because he is Simmias but because of the height which he incidentally possesses, and conversely the reason why he is bigger than Socrates is not because Socrates is Socrates, but because Socrates has the attribute of shortness in comparison with Simmias' height.

True.

And again Simmias' being smaller than Phaedo is due not to the fact that Phaedo is Phaedo, but to the fact that Phaedo has the attribute of tallness in comparison with Simmias' shortness.

Quite so.

So that is how Simmias comes to be described as both short and tall, because he is intermediate between the two of them, and allows his shortness to be surpassed by the tallness of the one while he asserts his superior tallness over the shortness of the other.

He added with a smile, I seem to be developing an artificial style, but the facts are surely as I say.

Simmias agreed.

I am saying all this because I want you to share my point of view. It seems to me not only that the form of tallness itself absolutely declines to be short as well as tall, but also that the tallness which is in us never admits smallness and declines to be surpassed. It does one of two things. Either it gives way and withdraws as its opposite shortness approaches, or it has already ceased to exist by the time that the other arrives. It cannot stand its ground and receive the quality of shortness in the same way as I myself have done. If it did, it would become different from what it was before, whereas I have not lost my identity by acquiring the quality of shortness—I am the same man, only short—but my tallness could not endure to be short instead of tall. In the same way the shortness that is in us declines ever to become or be tall, nor will any other quality, while still remaining what it was, at the same time become or be the opposite quality; in such a situation it either withdraws or ceases to exist.

I agree with you entirely, said Cebes.

At this point one of the company—I can't remember distinctly who it was—said, Look here! Didn't we agree, earlier in the discussion, on the exact opposite of what you are saying now—that the bigger comes from the smaller and the smaller from the bigger, and that it is precisely from their opposites that opposites come? Now the view seems to be that this is impossible.

Socrates had listened with his head turned toward the speaker. It was brave of you to refresh my memory, he said, but you don't realize the difference between what we are saying now and what we said then. Then we were saying that opposite *things* come from opposite *things*; now we are saying that the opposite *itself* can never become opposite to *itself*—neither the opposite which is in us nor that which is in the real world. Then, my friend, we were speaking about objects which possess opposite qualities, and calling them by the names of the latter, but now we are speaking about the qualities themselves, from whose presence in them the objects which are called after them derive their names. We maintain that the opposites themselves would absolutely refuse to tolerate coming into being from one another.

As he spoke he looked at Cebes. I suppose that nothing in what he said worried you too, Cebes?

No, not this time, said Cebes, though I don't deny that a good many other things do.

So we are agreed upon this as a general principle, that an opposite can never be opposite to itself.

Absolutely.

Then consider this point too, and see whether you agree about it too. Do you admit that there are such things as heat and cold?

Yes, I do.

Do you think they are the same as snow and fire?

Certainly not.

Heat is quite distinct from fire, and cold from snow?

Yes.

But I suppose you agree, in the light of what we said before, that snow, being what it is, can never admit heat and still remain snow, just as it was before, only with the addition of heat. It must either withdraw at the approach of heat, or cease to exist.

Quite so.

Again, fire must either retire or cease to exist at the approach of cold. It will never have the courage to admit cold and still remain fire, just as it was, only with the addition of cold.

That is true.

So we find, in certain cases like these, that the name of the form is eternally applicable not only to the form itself, but also to something else, which is not the form but invariably possesses its distinguishing characteristic. But perhaps another example will make my meaning clearer. Oddness must always be entitled to this name by which I am now calling it, isn't that so?

Certainly.

This is the question. Is it unique in this respect, or is there something else, not identical with oddness, to which we are bound always to apply not only its own name but that of odd as well, because by its very nature it never loses its oddness? What I mean is illustrated by the case of the number three; there are plenty of other examples, but take the case of three. Don't you think that it must always be described not only by its own name but by that of odd, although odd and three are not the same thing? It is the very nature of three and five and all the alternate integers that every one of them is invariably odd, although it is not identical with oddness. Similarly two and four and all the rest of the other series are not identical with even, but each one of them always is even. Do you admit this, or not?

Of course I do.

Well, then, pay careful attention to the point which I want to make, which is this. It seems clear that the opposites themselves do not admit one another, but it also looks as though any things which, though not themselves opposites, always have opposites in them, similarly do not admit the opposite form to that which is in them, but on its approach either cease to exist or retire before it. Surely we must assert that three will sooner cease to exist or suffer any other fate than submit to become even while it is still three?

Certainly, said Cebes.

And yet two and three are not opposites.

No, they are not.

So it is not only the opposite forms that cannot face one another's approach; there are other things too which cannot face the approach of opposites.

That is quite true.

Shall we try, if we can, to define what sort of things these are?  
By all means.

- d Well, then, Cebes, would this describe them—that they are things which are compelled by some form which takes possession of them to assume not only its own form but invariably also that of some other form which is an opposite?

What do you mean?

Just what we were saying a minute ago. You realize, I suppose, that when the form of three takes possession of any group of objects, it compels them to be odd as well as three.

Certainly.

Then I maintain that into such a group the opposite form to the one which has this effect can never enter.

No, it cannot.

And it was the form of odd that had this effect?

Yes.

And the opposite of this is the form of even?

Yes.

- e So the form of even will never enter into three.

No, never.

In other words, three is incompatible with evenness.

Quite.

So the number three is uneven.

Yes.

- I proposed just now to define what sort of things they are which, although they are not themselves directly opposed to a given opposite, nevertheless do not admit it, as in the present example, three, although not the opposite of even, nevertheless does not admit it, because three is always accompanied by the opposite of even—and similarly with two and odd, or fire and cold, and hosts of others. Well, see  
105 whether you accept this definition. [Not only does an opposite not admit its opposite, but if anything is accompanied by a form which has an opposite, and meets that opposite, then the thing which is accompanied never admits the opposite of the form by which it is accompanied.] Let me refresh your memory; there is no harm in hearing a thing several times. Five will not admit the form of even, nor will ten, which is double five, admit the form of odd. Double has an opposite of its own, but at the same time it will not admit the form of  
b odd. Nor will one and a half, or other fractions such as one half or three quarters and so on, admit the form of whole. I assume that you follow me and agree.

I follow and agree perfectly, said Cebes.

Then run over the same ground with me from the beginning, and don't answer in the exact terms of the question, but follow my example. I say this because besides the 'safe answer' that I described at first, as the result of this discussion I now see another means of safety.

Suppose, for instance, that you ask me what must be present in body to make it hot. I shall not return the safe but ingenuous answer that it is heat, but a more sophisticated one, based on the results of our discussion—namely that it is fire. And if you ask what must be present in a body to make it diseased, I shall say not disease but fever. Similarly if you ask what must be present in a number to make it odd, I shall say not oddness but unity, and so on. See whether you have a sufficient grasp now of what I want from you.

Quite sufficient.

Then tell me, what must be present in a body to make it alive?

Soul.

Is this always so?

d

Of course.

So whenever soul takes possession of a body, it always brings life with it?

Yes, it does.

Is there an opposite to life, or not?

Yes, there is.

What?

Death.

Does it follow, then, from our earlier agreement, that soul will never admit the opposite of that which accompanies it?

Most definitely, said Cebes.

Well, now, what name did we apply just now to that which does not admit the form of even?

Uneven.

And what do we call that which does not admit justice, or culture?

Uncultured, and the other unjust.

e

Very good. And what do we call that which does not admit death?

Immortal.

And soul does not admit death?

No.

So soul is immortal.

Yes, it is immortal.

Well, said Socrates, can we say that that has been proved? What do you think?

Most completely, Socrates.

Here is another question for you, Cebes. If the uneven were necessarily imperishable, would not three be imperishable?

106

Of course.

Then again, if what is not hot were necessarily imperishable, when you applied heat to snow, would not the snow withdraw still intact and unmelted? It could not cease to exist, nor on the other hand could it remain where it was and admit the heat.

That is true.

In the same way I assume that if what is not cold were imperishable, when anything cold approached fire, it could never go out or cease to exist; it would depart and be gone unharmed.

That must be so.

- b Are we not bound to say the same of the immortal? [If what is immortal is also imperishable, it is impossible that at the approach of death soul should cease to be.] It follows from what we have already said that it cannot admit death, or be dead—just as we said that three cannot be even, nor can odd; nor can fire be cold, nor can the heat which is in the fire. But, it may be objected, granting, as has been agreed, that odd does not become even at the approach of even, why should it not cease to exist, and something even take its place? In  
c reply to this we could not insist that the odd does not cease to exist—because what is not even is not imperishable—but if this were conceded, we could easily insist that, at the approach of even, odd and three retire and depart. And we could be equally insistent about fire and heat and all the rest of them, could we not?

Certainly.

So now in the case of the immortal, if it is conceded that this is also imperishable, soul will be imperishable as well as immortal.

- d Otherwise we shall need another argument.

There is no need on that account, said Cebes. If what is immortal and eternal cannot avoid destruction, it is hard to see how anything else can.

And I imagine that it would be admitted by everyone, said Socrates, that God at any rate, and the form of life, and anything else that is immortal, can never cease to exist.

Yes indeed, by all men certainly, and even more, I suppose, by the gods.

- e Then since what is immortal is also indestructible, if soul is really immortal, surely it must be imperishable too.

Quite inevitably.

[So it appears that when death comes to a man, the mortal part of him dies, but the immortal part retires at the approach of death and escapes unharmed and indestructible.]

Evidently.

- 107 Then it is as certain as anything can be, Cebes, that soul is immortal and imperishable, and that our souls will really exist in the next world.

Well, Socrates, said Cebes, for my part I have no criticisms, and no doubt about the truth of your argument. But if Simmias here or anyone else has any criticism to make, he had better not keep it to himself, because if anyone wants to say or hear any more about this subject, I don't see to what other occasion he is to defer it.

As a matter of fact, said Simmias, I have no doubts myself either now, in view of what you have just been saying. All the same, the

subject is so vast, and I have such a poor opinion of our weak human nature, that I can't help still feeling some misgivings. b

Quite right, Simmias, said Socrates, and what is more, even if you find our original assumptions convincing, they still need more accurate consideration. If you and your friends examine them closely enough, I believe that you will arrive at the truth of the matter, in so far as it is possible for the human mind to attain it, and if you are sure that you have done this, you will not need to inquire further.

That is true, said Simmias.

But there is a further point, gentlemen, said Socrates, which deserves your attention. If the soul is immortal, it demands our care not only for that part of time which we call life, but for all time. And indeed it would seem now that it will be extremely dangerous to neglect it. If death were a release from everything, it would be a boon for the wicked, because by dying they would be released not only from the body but also from their own wickedness together with the soul, but as it is, since the soul is clearly immortal, it can have no escape or security from evil except by becoming as good and wise as it possibly can. For it takes nothing with it to the next world except its education and training, and these, we are told, are of supreme importance in helping or harming the newly dead at the very beginning of his journey there. d

This is how the story goes. When any man dies, his own guardian spirit, which was given charge over him in his life, tries to bring him to a certain place where all must assemble, and from which, after submitting their several cases to judgment, they must set out for the next world, under the guidance of one who has the office of escorting souls from this world to the other. When they have there undergone the necessary experiences and remained as long as is required, another guide brings them back again after many vast periods of time. c

Of course this journey is not as Aeschylus makes Telephus describe it. He says that the path to Hades is straightforward, but it seems clear to me that it is neither straightforward nor single. If it were, there would be no need for a guide, because surely nobody could lose his way anywhere if there were only one road. In fact, it seems likely that it contains many forkings and crossroads, to judge from the ceremonies and observances of this world. 108

Well, the wise and disciplined soul follows its guide and is not ignorant of its surroundings, but the soul which is deeply attached to the body, as I said before, hovers round it and the visible world for a long time, and it is only after much resistance and suffering that it is at last forcibly led away by its appointed guardian spirit. And when it reaches the same place as the rest, the soul which is impure through having done some impure deed, either by setting its hand to lawless bloodshed or by committing other kindred crimes which are the work of kindred souls, this soul is shunned and avoided by all. None will b

c company with it or guide it, and it wanders alone in utter desolation until certain times have passed, whereupon it is borne away of necessity to its proper habitation. But every soul that has lived throughout its life in purity and soberness enjoys divine company and guidance, and each inhabits the place which is proper to it. There are many wonderful regions in the earth, and the earth itself is neither in nature nor in size such as geographers suppose it to be—so someone has assured me.

d How can you say that, Socrates? said Simmias. I myself have heard a great many theories about the earth, but not this belief of yours. I should very much like to hear it.

Why, really, Simmias, I don't think that it calls for the skill of a Glaucus to explain what my belief is, but to prove that it is true seems to me to be too difficult even for a Glaucus. In the first place I should probably be unable to do it, and in the second, even if I knew how, it seems to me, Simmias, that my life is too short for a long explanation. However, there is no reason why I should not tell you what I believe

e about the appearance of the earth and regions in it.

Well, said Simmias, even that will do.

109 [This is what I believe, then, said Socrates. In the first place, if the earth is spherical and in the middle of the heavens, it needs neither air nor any other such force to keep it from falling; the uniformity of the heavens and the equilibrium of the earth itself are sufficient to support it. Any body in equilibrium, if it is set in the middle of a uniform medium, will have no tendency to sink or rise in any direction more than another, and having equal impulses will remain suspended. This is the first article of my belief.]

And quite right too, said Simmias.

Next, said Socrates, I believe that it is vast in size, and that we  
b who dwell between the river Phasis and the Pillars of Hercules inhabit only a minute portion of it—we live round the sea like ants or frogs round a pond—and there are many other peoples inhabiting similar regions. There are many hollow places all round the earth, places of every shape and size, into which the water and mist and air have collected. But the earth itself is as pure as the starry heaven in which it  
c lies, and which is called aether by most of our authorities. The water, mist, and air are the dregs of this aether, and they are continually draining into the hollow places in the earth. We do not realize that we are living in its hollows, but assume that we are living on the earth's surface. Imagine someone living in the depths of the sea. He might think that he was living on the surface, and seeing the sun and the other heavenly bodies through the water; he might think that the sea was the sky. He might be so sluggish and feeble that he had never  
d reached the top of the sea, never emerged and raised his head from the sea into this world of ours, and seen for himself—or even heard

from someone who had seen it—how much purer and more beautiful it really is than the one in which his people lives. Now we are in just the same position. [Although we live in a hollow of the earth, we assume that we are living on the surface, and we call the air heaven, as though it were the heaven through which the stars move. And this point too is the same, that we are too feeble and sluggish to make our way out to the upper limit of the air. If someone could reach to the summit, or put on wings and fly aloft, when he put up his head he would see the world above, just as fishes see our world when they put up their heads out of the sea. And if his nature were able to bear the sight, he would recognize that that is the true heaven and the true light and the true earth. For this earth and its stones and all the regions in which we live are marred and corroded, just as in the sea everything is corroded by the brine, and there is no vegetation worth mentioning, and scarcely any degree of perfect formation, but only caverns and sand and measureless mud, and tracts of slime wherever there is earth as well, and nothing is in the least worthy to be judged beautiful by our standards.] But the things above excel those of our world to a degree far greater still. If this is the right moment for an imaginative description, Simmias, it will be worth your while to hear what it is really like upon the earth which lies beneath the heavens. 110

Yes, indeed, Socrates, said Simmias, it would be a great pleasure to us, at any rate, to hear this description.

Well, my dear boy, said Socrates, the real earth, viewed from above, is supposed to look like one of these balls made of twelve pieces of skin, variegated and marked out in different colors, of which the colors which we know are only limited samples, like the paints which artists use, but there the whole earth is made up of such colors, and others far brighter and purer still. One section is a marvelously beautiful purple, and another is golden. All that is white of it is whiter than chalk or snow, and the rest is similarly made up of the other colors, still more and lovelier than those which we have seen. Even these very hollows in the earth, full of water and air, assume a kind of color as they gleam amid the different hues around them, so that there appears to be one continuous surface of varied colors. The trees and flowers and fruits which grow upon this earth are proportionately beautiful. The mountains too and the stones have a proportionate smoothness and transparency, and their colors are lovelier. The pebbles which are so highly prized in our world—the jaspers and rubies and emeralds and the rest—are fragments of these stones, but there everything is as beautiful as they are, or better still. This is because the stones there are in their natural state, not damaged by decay and corroded by salt water as ours are by the sediment which has collected here, and which causes disfigurement and disease to stones and earth, and animals and plants as well. The earth itself is adorned not only

- 111 with all these stones but also with gold and silver and the other metals, for many rich veins of them occur in plain view in all parts of the earth, so that to see them is a sight for the eyes of the blessed.

There are many kinds of animals upon it, and also human beings, some of whom live inland, others round the air, as we live round the sea, and others in islands surrounded by air but close to the mainland. In a word, as water and the sea are to us for our purposes, so is  
 b air to them, and as air is to us, so the æther is to them. Their climate is so temperate that they are free from disease and live much longer than people do here, and in sight and hearing and understanding and all other faculties they are as far superior to us as air is to water or æther to air in clarity.

They also have sanctuaries and temples which are truly inhabited by gods, and oracles and prophecies and visions and all other  
 c kinds of communion with the gods occur there face to face. They see the sun and moon and stars as they really are, and the rest of their happiness is after the same manner.

Such is the nature of the earth as a whole and of the things that are upon it. In the earth itself, all over its surface, there are many hollow regions, some deeper and more widely spread than that in which we live, others deeper than our region but with a smaller expanse,  
 d some both shallower than ours and broader. All these are joined together underground by many connecting channels, some narrower, some wider, through which, from one basin to another, there flows a great volume of water—monstrous unceasing subterranean rivers of waters both hot and cold—and of fire too, great rivers of fire, and many of liquid mud, some clearer, some more turbid, like the rivers in Sicily  
 e that flow mud before the lava comes, and the lava stream itself. By these the several regions are filled in turn as the flood reaches them.

All this movement to and fro is caused by an oscillation inside the earth, and this oscillation is brought about by natural means, as follows.

- One of the cavities in the earth is not only larger than the rest, but pierces right through from one side to the other. It is of this that  
 112 Homer speaks when he says, 'Far, far away, where lies earth's deepest chasm,'<sup>2</sup> while elsewhere both he and many other poets refer to it as Tartarus. Into this gulf all the rivers flow together, and from it they flow forth again, and each acquires the nature of that part of the  
 b earth through which it flows. The cause of the flowing in and out of all these streams is that the mass of liquid has no bottom or foundation; so it oscillates and surges to and fro, and the air or breath that belongs to it does the same, for it accompanies the liquid both as it rushes to the further side of the earth and as it returns to this. And just as when we breathe we exhale and inhale the breath in a continu-

<sup>2</sup> *Iliad* 8.14.

ous stream, so in this case too the breath, oscillating with the liquid, causes terrible and monstrous winds as it passes in and out. So when the water retires to the so-called lower region the streams in the earth c flow into those parts and irrigate them fully, and when in turn it ebbs from there and rushes back this way, it fills our streams again, and when they are filled they flow through their channels and through the earth; and arriving in those regions to which their ways have been severally prepared, they make seas and lakes and rivers and springs. Then sinking again beneath the ground, some by way of more and d further regions, others by fewer and nearer, they empty themselves once more into Tartarus, some much lower, some only a little lower than the point at which they were emitted, but they all flow in at a level deeper than their rise. Some flow in on the opposite side to that on which they came out, and others on the same side, while some make a complete circle and, winding like a snake one or even more times round the earth, descend as far as possible before they again discharge their waters. It is possible to descend in either direction as e far as the center, but no further, for either direction from the center is uphill, whichever way the streams are flowing.

Among these many various mighty streams there are four in particular. The greatest of these, and the one which describes the outermost circle, is that which is called Oceanus. Directly opposite to this and with a contrary course is Acheron, which not only flows through other desolate regions but passes underground and arrives at the 113 Acherusian Lake, where the souls of the dead for the most part come, and after staying there for certain fixed periods, longer or shorter, are sent forth again to the births of living creatures. Halfway between these two a third river has its rise, and near its source issues into a great place burning with sheets of fire, where it forms a boiling lake of muddy water greater than our sea. From there it follows a circular course, flowing turbid and muddy, and as it winds round inside the earth it comes at last to the margin of the Acherusian Lake, but does not mingle with the waters, and after many windings underground, it plunges into Tartarus at a lower point. This is the river called Pyriphlegethon, whose fiery stream belches forth jets of lava here and there in all parts of the world. Directly opposite to this in its turn the fourth river breaks out, first, they say, into a wild and dreadful place, all leaden gray, which is called the Stygian region, and the c lake which the river forms on its entry is called Styx. After falling into this, and acquiring mysterious powers in its waters, the river passes underground and follows a spiral course contrary to that of Pyriphlegethon, which it meets from the opposite direction in the Acherusian Lake. This river too mingles its stream with no other waters, but circling round falls into Tartarus opposite Pyriphlegethon, and its name, the poets say, is Cocytus.

Such is the conformation of the earth and its rivers. And when d

the newly dead reach the place to which each is conducted by his guardian spirit, first they submit to judgment, both those who have lived well and holily, and those who have not. Those who are judged to have lived a neutral life set out for Acheron, and embarking in those vessels which await them, are conveyed in them to the lake, and there they dwell, and undergoing purification are both absolved by punishment from any sins that they have committed, and rewarded e for their good deeds, according to each man's deserts. Those who on account of the greatness of their sins are judged to be incurable, as having committed many gross acts of sacrilege or many wicked and lawless murders or any other such crimes—these are hurled by their appropriate destiny into Tartarus, from whence they emerge no more.

Others are judged to have been guilty of sins which, though great, are curable—if, for example, they have offered violence to father or mother in a fit of passion, but spent the rest of their lives in penitence, or if they have committed manslaughter after the same fashion. These too must be cast into Tartarus, but when this has been done and they have remained there for a year, the surge casts them out—the manslaughterers down Cocytus and the offenders against their parents down Pyriphlegethon. And when, as they are swept along, they come past the Acherusian Lake, there they cry aloud and call upon those whom they have killed or misused, and calling, beg and entreat for leave to pass from the stream into the lake, and be received by them. If they prevail, they come out and there is an end of their distress, but if not, they are swept away once more into Tartarus b and from there back into the rivers, and find no release from their sufferings until they prevail upon those whom they have wronged, for this is the punishment which their judge has appointed for them.

But those who are judged to have lived a life of surpassing holiness—these are they who are released and set free from confinement in these regions of the earth, and passing upward to their pure abode, c make their dwelling upon the earth's surface. And of these such as have purified themselves sufficiently by philosophy live thereafter altogether without bodies, and reach habitations even more beautiful, which it is not easy to portray—nor is there time to do so now. But the reasons which we have already described provide ground enough, as you can see, Simmias, for leaving nothing undone to attain during life some measure of goodness and wisdom, for the prize is glorious and the hope great.

d Of course, no reasonable man ought to insist that the facts are exactly as I have described them. But that either this or something very like it is a true account of our souls and their future habitations—since we have clear evidence that the soul is immortal—this, I think, is both a reasonable contention and a belief worth risking, for the risk is a noble one. We should use such accounts to inspire our-

selves with confidence, and that is why I have already drawn out my tale so long.

[There is one way, then, in which a man can be free from all anxiety about the fate of his soul—if in life he has abandoned bodily pleasures and adornments, as foreign to his purpose and likely to do more harm than good, and has devoted himself to the pleasures of acquiring knowledge, and so by decking his soul not with a borrowed beauty but with its own—with self-control, and goodness, and courage, and liberality, and truth—has fitted himself to await his journey to the next world.] You, Simmias and Cebes and the rest, will each make this journey someday in the future, but for me the fated hour, as a tragic character might say, calls even now. In other words, it is about time that I took my bath. I prefer to have a bath before drinking the poison, rather than give the women the trouble of washing me when I am dead.

When he had finished speaking, Crito said, Very well, Socrates. But have you no directions for the others or myself about your children or anything else? What can we do to please you best?

Nothing new, Crito, said Socrates, just what I am always telling you. If you look after yourselves, whatever you do will please me and mine and you too, even if you don't agree with me now. On the other hand, if you neglect yourselves and fail to follow the line of life as I have laid it down both now and in the past, however fervently you agree with me now, it will do no good at all.

We shall try our best to do as you say, said Crito. But how shall we bury you?

Any way you like, replied Socrates, that is, if you can catch me and I don't slip through your fingers.

He laughed gently as he spoke, and turning to us went on, I can't persuade Crito that I am this Socrates here who is talking to you now and marshaling all the arguments. He thinks that I am the one whom he will see presently lying dead, and he asks how he is to bury me! As for my long and elaborate explanation that when I have drunk the poison I shall remain with you no longer, but depart to a state of heavenly happiness, this attempt to console both you and myself seems to be wasted on him. You must give an assurance to Crito for me—the opposite of the one which he gave to the court which tried me. He undertook that I should stay, but you must assure him that when I am dead I shall not stay, but depart and be gone. That will help Crito to bear it more easily, and keep him from being distressed on my account when he sees my body being burned or buried, as if something dreadful were happening to me, or from saying at the funeral that it is Socrates whom he is laying out or carrying to the grave or burying. Believe me, my dear friend Crito, misstatements are not merely jarring in their immediate context; they also have a bad effect

upon the soul. No, you must keep up your spirits and say that it is only my body that you are burying, and you can bury it as you please, in  
 116 whatever way you think is most proper.

With these words he got up and went into another room to bathe, and Crito went after him, but told us to wait. So we waited, discussing and reviewing what had been said, or else dwelling upon the greatness of the calamity which had befallen us, for we felt just as though we were losing a father and should be orphans for the rest of our lives. Meanwhile, when Socrates had taken his bath, his children were  
 b brought to see him—he had two little sons and one big boy—and the women of his household, you know, arrived. He talked to them in Crito's presence and gave them directions about carrying out his wishes. Then he told the women and children to go away, and came back himself to join us.

It was now nearly sunset, because he had spent a long time inside. He came and sat down, fresh from the bath, and he had only been talking for a few minutes when the prison officer came in, and walked up to him.

c Socrates, he said, at any rate I shall not have to find fault with you, as I do with others, for getting angry with me and cursing when I tell them to drink the poison—carrying out government orders. I have come to know during this time that you are the noblest and the gentlest and the bravest of all the men that have ever come here, and now especially I am sure that you are not angry with me, but with them, because you know who are responsible. So now—you know what I have come to say—good-by, and try to bear what must be as easily as you can.

d As he spoke he burst into tears, and turning round, went away. Socrates looked up at him and said, Good-by to you, too. We will do as you say.

Then addressing us he went on, What a charming person! All the time I have been here he has visited me, and sometimes had discussions with me, and shown me the greatest kindness—and how generous of him now to shed tears for me at parting! But come, Crito, let us do as he says. Someone had better bring in the poison, if it is ready-prepared; if not, tell the man to prepare it.

e But surely, Socrates, said Crito, the sun is still upon the mountains; it has not gone down yet. Besides, I know that in other cases people have dinner and enjoy their wine, and sometimes the company of those whom they love, long after they receive the warning, and only drink the poison quite late at night. No need to hurry. There is still plenty of time.

It is natural that these people whom you speak of should act in that way, Crito, said Socrates, because they think that they gain by it. And it is also natural that I should not, because I believe that I should  
 117 gain nothing by drinking the poison a little later—I should only make

myself ridiculous in my own eyes if I clung to life and hugged it when it has no more to offer. Come, do as I say and don't make difficulties.

At this Crito made a sign to his servant, who was standing near by. The servant went out and after spending a considerable time returned with the man who was to administer the poison. He was carrying it ready-prepared in a cup.

When Socrates saw him he said, Well, my good fellow, you understand these things. What ought I to do?

Just drink it, he said, and then walk about until you feel a weight in your legs, and then lie down. Then it will act of its own accord. b

As he spoke he handed the cup to Socrates, who received it quite cheerfully, Echecrates, without a tremor, without any change of color or expression, and said, looking up under his brows with his usual steady gaze, What do you say about pouring a libation from this drink? Is it permitted, or not?

We only prepare what we regard as the normal dose, Socrates, he replied.

I see, said Socrates. But I suppose I am allowed, or rather bound, c to pray the gods that my removal from this world to the other may be prosperous. This is my prayer, then, and I hope that it may be granted.

With these words, quite calmly and with no sign of distaste, he drained the cup in one breath.

Up till this time most of us had been fairly successful in keeping back our tears, but when we saw that he was drinking, that he had actually drunk it, we could do so no longer. In spite of myself the tears came pouring out, so that I covered my face and wept brokenheartedly—not for him, but for my own calamity in losing such a friend. d Crito had given up even before me, and had gone out when he could not restrain his tears. But Apollodorus, who had never stopped crying even before, now broke out into such a storm of passionate weeping that he made everyone in the room break down, except Socrates himself, who said, Really, my friends, what a way to behave! Why, that was my main reason for sending away the women, to prevent this sort of disturbance, because I am told that one should make one's end in a e tranquil frame of mind. Calm yourselves and try to be brave.

This made us feel ashamed, and we controlled our tears. Socrates walked about, and presently, saying that his legs were heavy, lay down on his back—that was what the man recommended. The man—he was the same one who had administered the poison—kept his hand upon Socrates, and after a little while examined his feet and legs, then pinched his foot hard and asked if he felt it. Socrates said no. Then he did the same to his legs, and moving gradually upward in this 118 way let us see that he was getting cold and numb. Presently he felt him again and said that when it reached the heart, Socrates would be gone.

The coldness was spreading about as far as his waist when Socrates uncovered his face, for he had covered it up, and said—they were his last words—Crito, we ought to offer a cock to Asclepius. See to it, and don't forget.

No, it shall be done, said Crito. Are you sure that there is nothing else?

Socrates made no reply to this question, but after a little while he stirred, and when the man uncovered him, his eyes were fixed. When Crito saw this, he closed the mouth and eyes.

Such, Echecrates, was the end of our comrade, who was, we may fairly say, of all those whom we knew in our time, the bravest and also the wisest and most upright man.

# CHARMIDES

---

*In the Charmides, as in the Lysis and the Laches, Socrates' aim is not to convert his hearers to what he believes, but to arouse each one to think for himself. There is no other dialogue in which he so quickly convicts the company of that—to the Greek—dark and dismal failure, ignorance, or in which he so completely disarms them by putting himself in the same sad case with them.*

*But the Charmides presents a difficulty absent from the other two. We can translate the Greek word for courage used in the Laches and the word for friendship in the Lysis, as the two dialogues prove, but the subject of the Charmides is, What is sophrosyne?—and that word cannot be translated by any one English word. The truth is that this quality, this sophrosyne, which to the Greeks was an ideal second to none in importance, is not among our ideals. We have lost the conception of it. Enough is said about it in Greek literature for us to be able to describe it in some fashion, but we cannot give it a name. It was the spirit behind the two great Delphic sayings, "Know thyself" and "Nothing in excess." Arrogance, insolent self-assertion, was the quality most detested by the Greeks. Sophrosyne was the exact opposite. It meant accepting the bounds which excellence lays down for human nature, restraining impulses to unrestricted freedom, to all excess, obeying the inner laws of harmony and proportion.*

*Considered as an argument, the dialogue is inferior to both the Lysis and the Laches. Socrates shows himself a master of quibbling often enough to keep up a sense of irritation in the reader, and to leave him after pages of hairsplitting definitions with very little idea of what all the talk has been about. He will almost certainly echo Socrates' conclusion, "I have failed utterly to discover what sophrosyne is."*

153 Yesterday evening we returned from the army at Potidaea, and having been a good while away, I thought that I should like to go and look at my old haunts. So I went into the palaestra of Taureas, which is over against the temple of Basile, and there I found a number of persons, most of whom I knew, but not all. My visit was unexpected, and no sooner did they see me entering than they saluted me from afar on  
b all sides, and Chaerephon, who always behaves like a madman, started up from among them and ran to me, seizing my hand and saying, How did you escape from the battle, Socrates? An engagement had taken place at Potidaea not long before we came away, of which the news had only just reached Athens.

Just as you see me now, I replied.

c There was a report, he said, that the engagement was very severe, and that many of our acquaintance had fallen.

That, I replied, was not far from the truth.

I suppose, he said, that you were present.

I was.

Then sit down here, and tell us the whole story, which as yet we have only heard imperfectly.

So saying he led me to a place by the side of Critias, the son of Callaeschrus, and when I had sat down and saluted him and the rest  
d of the company, I told them the news from the army, and answered their several inquiries.

Then, when there had been enough of this, I, in my turn, began to make inquiries about matters at home—about the present state of philosophy, and about the youth. I asked whether any of them were remarkable for wisdom or beauty, or both.

154 Critias glanced at the door and saw some youths coming in, and disputing noisily with one another, followed by a crowd. Of the beauties, Socrates, he said, I fancy that you will soon be able to form a judgment. For those who are just entering are the advance guard and lovers of the great beauty of the day, as he is thought to be, and he is likely to be not far off himself.

Who is he, I said, and who is his father?

b Charmides, he replied, is his name. He is my cousin, and the son of my uncle Glaucon. I rather think that you know him too, although he was not grown up at the time of your departure.

Certainly, I know him, I said, for he was remarkable even then when he was still a child, and I should imagine that by this time he must be almost a young man.

You will see, he said, in a moment what age he has reached and

From *The Dialogues of Plato*, translated with analyses and introductions by B. Jowett (4th edn., revised by order of the Jowett Copyright Trustees, Oxford, 1953; 1st edn., 1871).

what he is like. He had scarcely said the word, when Charmides entered.

Now you know, my friend, that I am not good at measuring, and in the presence of the beautiful I am like a measuring line without marks, for almost all young persons appear to be beautiful in my eyes. But at that moment, when I saw him, I confess that I was quite astonished at his beauty and stature. All the company seemed to be enamored of him. Amazement and confusion reigned when he entered, and a second troop of lovers followed behind him. That grown-up men like ourselves should have been affected in this way was not surprising, but I observed the boys and saw that all of them, down to the very smallest, turned and looked at him, as if he had been a statue.

Chaerephon called me and said, What do you think of the young man, Socrates? Has he not a beautiful face?

Most beautiful, I said.

But you would think nothing of his face, he replied, if you could see his naked form; he is absolutely perfect.

And to this they all agreed.

Ye gods, I said, what a paragon, if he has only one other slight addition!

What is that? said Critias.

If he has a noble soul. And being of your house, Critias, he may be expected to have this.

He is as fair and good within, as he is without, replied Critias.

Then, before we see his body, should we not ask him to strip and show us his soul? He is surely just of an age at which he will like to talk.

That he will, said Critias, and I can tell you that he is indeed a philosopher already, and also a considerable poet, not in his own opinion only, but in that of others.

That, my dear Critias, I replied, is a distinction which has long been in your family, and is inherited by you from Solon. But why do you not call him, and show him to me? For even if he were younger than he is, there could be no impropriety in his talking to us before you, his guardian and cousin.

Very well, he said, then I will call him. And turning to the attendant, he said, Call Charmides, and tell him that I want him to come and see a physician about the illness of which he spoke to me the day before yesterday.

Then again addressing me, he added, He has been complaining lately of having a headache when he rises in the morning. Now why should you not make him believe that you know a cure for the headache?

Why not, I said, if only he will come.

He will be sure to come, he replied.

So he came as he was bidden. Great amusement was occasioned  
 c by everyone making room and pushing with might and main at his  
 neighbor in order to sit next to him, until at the two ends of the row  
 one had to get up and the other was rolled over sideways. And he  
 came and sat down between Critias and me. But I, my friend, was be-  
 ginning to feel awkward. My former bold belief in my powers of  
 conversing naturally with him had vanished. And when Critias told  
 him that I was the person who had the cure, he looked at me in an in-  
 d describable manner, and made as though to ask me a question. And  
 all the people in the palaestra crowded about us, and at that moment,  
 my good friend, I caught a sight of the inwards of his garment, and  
 took the flame. Then I could no longer contain myself. I thought how  
 well Cydias understood the nature of love, when, in speaking of a fair  
 youth, he warns someone 'not to bring the fawn in the sight of the  
 e lion to be devoured by him,' for I felt that I had been overcome by a  
 sort of wild-beast appetite. But still when he asked me if I knew the  
 cure for the headache, I answered, though with an effort, that I did  
 know.

And what is it? he said.

I replied that it was a kind of leaf, which required to be accom-  
 panied by a charm, and if a person would repeat the charm at the  
 same time that he used the cure, he would be made whole, but that  
 without the charm the leaf would be of no avail.

156 Then I will write out the charm from your dictation, he said.

With my consent? I said. Or without my consent?

With your consent, Socrates, he said, laughing.

Very good, I said. So you know my name, do you?

I ought to know you, he replied, for there is a great deal said  
 about you among my companions, and I remember when I was a child  
 seeing you in company with Critias here.

I am glad to find that you remember me, I said, for I shall now  
 b be more at home with you and shall be better able to explain the na-  
 ture of the charm, about which I felt a difficulty before. For the charm  
 will do more, Charmides, than only cure the headache. I dare say that  
 you have heard eminent physicians say to a patient who comes to  
 them with bad eyes, that they cannot undertake to cure his eyes by  
 c themselves, but that if his eyes are to be cured, his head must be  
 treated too. And then again they say that to think of curing the head  
 alone, and not the rest of the body also, is the height of folly. And ar-  
 guing in this way they apply their regime to the whole body, and try to  
 treat and heal the whole and the part together. Did you ever observe  
 that this is what they say?

Yes, he said.

And they are right, and you would agree with them?

Yes, he said, certainly I should.

d His approving answers reassured me, and I began by degrees to

regain confidence, and my natural heat returned to me. Such, Charmides, I said, is the nature of the charm, which I learned when serving with the army from one of the physicians of the Thracian king Zalmoxis who are said to be able even to give immortality. This Thracian told me that in these notions of theirs, which I was just now mentioning, the Greek physicians are quite right as far as they go, but Zalmoxis, he added, our king, who is also a god, says further, 'that as you ought not to attempt to cure the eyes without the head, or the head without the body, so neither ought you to attempt to cure the body without the soul. And this,' he said, 'is the reason why the cure of many diseases is unknown to the physicians of Hellas, because they disregard the whole, which ought to be studied also, for the part can never be well unless the whole is well.' For all good and evil, whether in the body or in the whole man, originates, as he declared, in the soul, and overflows from thence, as if from the head into the eyes. And therefore if the head and body are to be well, you must begin by curing the soul—that is the first and essential thing. And the cure of the soul, my dear youth, has to be effected by the use of certain charms, and these charms are fair words, and by them temperance is implanted in the soul, and where temperance comes and stays, there health is speedily imparted, not only to the head, but to the whole body. And when he taught me the cure and the charm he added, 'Let no one persuade you to cure his head, until he has first given you his soul to be cured by the charm. For this,' he said, 'is the great error of our day in the treatment of human beings, that men try to be physicians of health and temperance separately.' And he strictly enjoined me not to let anyone, however rich or noble or fair, persuade me to give him the cure, without the charm. Now I have sworn, and I must keep my oath, and therefore if you will allow me to apply the Thracian charm first to your soul, as the stranger directed, I will afterward proceed to apply the cure to your head. But if not, I do not know what I am to do with you, my dear Charmides. 157

Critias, when he heard this, said, The headache will be a blessing to my young cousin, if the pain in his head compels him to improve his mind. Yet I can tell you, Socrates, that Charmides is not only pre-eminent in beauty among his equals, but also in that quality for which you say you have the charm—temperance, is it not? d

Yes, I said.

Then let me tell you that he is the most temperate of the young men of today, and for his age inferior to none in any quality.

Indeed, Charmides, I said, I think that you ought to excel others in all good qualities, for if I am not mistaken there is no one present who could easily point out two Athenian houses, whose union would be likely to produce a better or nobler scion than the two from which you are sprung. There is your father's house, which is descended from Critias, the son of Dropides, whose family has been commemorated e

- 158 in the panegyrics of Anacreon, Solon, and many other poets, as famous for beauty and virtue and all other high fortune. And your mother's house is equally distinguished, for your maternal uncle, Pyrilampes, is reputed never to have found his superior for stature and beauty in Persia at the court of the Great King, or anywhere on the continent of Asia in all the places to which he went as ambassador; that whole family is not a whit inferior to the other. Having such ancestors you ought to be first in all things, and, sweet son of Glaucon, your outward form is no dishonor to any of them. If to beauty you add temperance, and if in other respects you are what Critias declares you to be, then, dear Charmides, blessed is the son your mother bore. And here lies the point. For if, as he declares, you have this gift of temperance already, and are temperate enough, in that case you have no need of any charms, whether of Zalmoxis or of Abaris the Hyperborean, and I may as well let you have the cure of the head at once.
- c But if you have not yet acquired this quality, I must use the charm before I give you the medicine. Please, therefore, to inform me whether you admit the truth of what Critias has been saying. Have you or have you not this quality of temperance?

- Charmides blushed, and the blush heightened his beauty, for modesty is becoming in youth. He then made the graceful reply that he really could not at once answer, either yes or no, to the question d which I had asked. For, said he, if I affirm that I am not temperate, that would be a strange thing for me to say against myself, and also I should give the lie to Critias, and to many others who, according to him, think that I am temperate. But, on the other hand, if I say that I am, I shall have to praise myself, which would be ill manners, and therefore I do not know how to answer you.

- I said to him, That is a natural reply, Charmides, and I think that you and I ought together to inquire whether you have this quality about which I am asking or not, and then you will not be compelled e to say what you do not like; neither shall I rashly have recourse to medicine. Therefore, if you please, I will share the inquiry with you, but I will not press you if you would rather not.

There is nothing which I should like better, he said, and as far as I am concerned you may proceed in the way which you think best.

- I think, I said, that it would be best to approach the question in this way. If temperance abides in you, you must have an opinion about her. She must give some intimation of her nature and qualities, which 159 may enable you to form a notion of her. Is not that true?

Yes, he said, that I think is true.

You know your native language, I said, and therefore you must be able also to express your opinion.

Perhaps, he said.

In order, then, that we may form a conjecture whether you have

temperance abiding in you or not, tell me, I said, what, in your opinion, is temperance?

At first he hesitated, and was not very willing to answer. Then he said that he thought temperance was doing all things orderly and quietly—for example, walking in the streets, and talking, and indeed doing everything in that way. In a word, he said, I should answer that, in my opinion, temperance is a kind of quietness.

Are you right, Charmides? I said. No doubt some would affirm that the quiet are temperate, but let us see whether there is anything in this view. And first tell me whether you would not acknowledge temperance to be of the class of the noble and good? c

Yes.

But which is better when you are at the writing master's, to write the same letters quickly or quietly?

Quickly.

And to read quickly or slowly?

Quickly again.

And in playing the lyre, or wrestling, quickness and sharpness are far better than quietness and slowness?

Yes.

And the same holds in boxing and in the pancratorium?

Certainly.

And in leaping and running and in bodily exercises generally, actions done quickly and with agility are good and noble; those done slowly and quietly are bad and unsightly? d

It seems so.

Then, I said, in all bodily actions, not quietness, but the greatest agility and quickness, is noblest and best?

Yes, certainly.

And is temperance a good?

Yes.

Then, in reference to the body, not quietness, but quickness will be the more temperate, if temperance is a good?

Apparently, he said.

Again, I said, which is better—facility in learning, or difficulty in learning? e

Facility.

Yes, I said, and facility in learning is learning quickly, and difficulty in learning is learning quietly and slowly?

True.

And is it not better to teach another quickly and energetically, rather than quietly and slowly?

Yes.

Once more, which is better, to call to mind and to remember quickly and readily, or quietly and slowly?

The former.

160 And is not cleverness a quickness of the soul, and not a quietness?

True.

Is it not then better to understand what is said, whether at the writing master's or the music master's or anywhere else, not as quietly as possible, but as quickly as possible?

Yes.

And further, in the searchings or deliberations of the soul, not the quietest, as I imagine, and he who with difficulty deliberates and discovers, is thought worthy of praise, but he who does so most easily and quickly?

Quite true, he said.

Well then, in all that concerns either body or soul, swiftness and activity are clearly better than slowness and quietness?

Probably.

Then temperance is not quietness, nor is the temperate life quiet—certainly not upon this view, for the life which is temperate is admitted to be the good. And of two things one is true—either never, or very seldom, do the quiet actions in life appear to be better than the quick and energetic ones, or supposing at the best that of the nobler actions there are as many quiet as quick and vehement; still, even if we grant this, temperance will not be acting quietly any more than acting quickly and energetically, either in walking or talking or in anything else. Nor will the quiet life be more temperate than the unquiet, seeing that temperance was placed by us among the good and noble things, and the quick have been shown to be as good as the quiet.

I think that you are right, Socrates, he said.

Then once more, Charmides, I said, fix your attention more closely and look within you. Consider the effect which temperance has upon yourself, and the nature of that which should have this effect. Think over all this, and tell me truly and courageously—what is temperance?

After a moment's pause, in which he made a real manly effort to think, he said, My opinion is, Socrates, that temperance makes a man ashamed or modest, and that temperance is the same as modesty.

Very good, I said, and did not you admit, just now, that temperance is noble?

Yes, certainly, he said.

And therefore that temperate men are good men?

Yes.

And can that be good which does not make men good?

Certainly not.

And you would infer that temperance is not only noble, but also good?

That is my opinion.

Well, I said, but surely you would agree with Homer when he 161 says, 'Modesty is not good for a needy man'? <sup>1</sup>

Yes, he said, I agree.

Then I suppose that modesty is and is not good?

Apparently.

But temperance, whose presence makes men only good, and not bad, is always good?

That appears to me to be as you say.

And the inference is that temperance cannot be modesty—if temperance is good, and if modesty is as much an evil as a good? <sup>b</sup>

All that, Socrates, appears to me to be true, but I should like to know what you think about another definition of temperance, which I have just remembered that I heard from someone, 'Temperance is doing our own business.' Please consider whether he was right who affirmed that.

You wicked boy! I said. This is what Critias, or some other philosopher has told you. <sup>c</sup>

Someone else then, said Critias, for certainly I have not.

But what matter, said Charmides, from whom I heard this?

No matter at all, I replied, for the point is not who said the words, but whether they are true or not.

There you are in the right, Socrates, he replied.

To be sure, I said. Yet I should be surprised if we are able to discover their truth or falsehood, for they are a kind of riddle.

What makes you think so? he said.

Because, I said, he who uttered them seems to me to have meant <sup>d</sup> one thing, and said another. Is the schoolmaster, for example, to be regarded as doing nothing when he reads or writes?

I should rather think that he was doing something.

And does the schoolmaster write or read, or teach you boys to write or read, his own name only, or did you write your enemies' names as well as your own and your friends'?

As much one as the other.

And was there anything meddling or intemperate in this? <sup>e</sup>

Certainly not.

And yet you were doing what was not your own business if reading and writing are a form of doing.

But they certainly are.

And the healing art, my friend, and building, and weaving, and doing anything whatever which is done by art—these all clearly come under the head of doing?

Certainly.

And do you think that a state would be well ordered by a law

<sup>1</sup> *Odyssey* 17.347.

which compelled every man to weave and wash his own coat, and make his own shoes, and his own flask and strigil, and other implements, on this principle of everyone doing and performing his own, and abstaining from what is not his own?

I think not, he said.

But, I said, a temperate state will be a well-ordered state.

Of course, he replied.

Then temperance, I said, will not be doing one's own business—not at least in this way, or doing things of this sort?

It seems not.

Then, as I was just now saying, he who declared that temperance is a man doing his own business had a hidden meaning, for I do not think that he could have been such a fool as to mean this. Was he a fool who told you, Charmides?

Nay, he replied, I certainly thought him a very wise man.

Then I am quite certain that he put forth his definition as a riddle, thinking that no one would easily discover the meaning of the words, 'doing his own business.'

I dare say, he replied.

And what is the meaning of a man doing his own business? Can you tell me?

Indeed, I cannot, and I should not wonder if the man himself who used this phrase did not understand what he meant.

Whereupon he laughed slyly, and looked at Critias. Critias had long been showing uneasiness, for he felt that he had a reputation to maintain with Charmides and the rest of the company. He had, however, hitherto managed to restrain himself, but now he could no longer forbear, and I am convinced of the truth of the suspicion which I entertained at the time, that it was from Critias that Charmides had heard this answer about temperance. And Charmides, who did not want to defend it himself, but to make Critias defend it, tried to stir him up. He went on pointing out that he had been refuted, at which Critias grew angry, and appeared, as I thought, inclined to quarrel with him—just as a poet might quarrel with an actor who spoiled his poems in reciting them. So he looked hard at him and said, Do you imagine, Charmides, because you do not understand the meaning of this definition of temperance that its author likewise did not understand the meaning of his own words?

Why, at his age, I said, most excellent Critias, he can hardly be expected to understand, but you, who are older, and have studied, may well be assumed to know the meaning of them. And therefore, if you agree, and accept his definition of temperance, I would much rather argue with you than with him about the truth or falsehood of the definition.

I entirely agree, said Critias, and accept the definition.

Very good, I said, and now let me repeat my question. Do you

admit, as I was just now saying, that all craftsmen make or do something?

I do.

And do they make or do their own business only, or that of others also?

That of others also.

And are they temperate, seeing that they do not make or do their own business only?

Why not? he said.

No objection on my part, I said, but there may be a difficulty on his who proposes as a definition of temperance, 'doing one's own business,' and then says that there is no reason why those who do the business of others should not be temperate.

Nay, said he, did I ever acknowledge that those who do the business of others are temperate? I said those who make, not those who do.

What! I asked. Do you mean to say that doing and making are not the same?

No more, he replied, than making and working are the same. Thus much I have learned from Hesiod, who says that 'work is no disgrace.' <sup>2</sup> Now do you imagine that if he had meant by working and doing such things as you were describing, he would have said that there was no disgrace in them—for example, in the manufacture of shoes, or in selling dried fish, or sitting for hire in a house of ill fame? That, Socrates, is not to be supposed, but I conceive him to have distinguished making from doing and work, and, while admitting that making anything might sometimes become a disgrace, when the employment was not honorable, to have thought that work was never any disgrace at all. For things nobly and usefully made he called works, and such makings he called workings, and doings. And he must be supposed to have deemed only such things to be man's proper business, and all that is hurtful, not to be his business, and in that sense Hesiod, and any other wise man, may be reasonably supposed to call him wise who does his own work.

O Critias, I said, no sooner had you opened your mouth than I pretty well knew that you would call that which is proper to a man, and that which is his own, good, and that the makings of the good you would call doings, for I am no stranger to the endless distinctions which Prodicus draws about names. Now I have no objection to your giving names any signification which you please, if you will only tell me to what you apply them. Please then to begin again, and be a little plainer. Do you mean that this doing or making, or whatever is the word which you would use, of good things, is temperance?

I do, he said.

Then not he who does evil, but he who does good, is temperate?

<sup>2</sup> *Works and Days* 309.

Yes, he said, and you, friend, would agree.

No matter whether I should or not. Just now, not what I think, but what you are saying, is the point at issue.

Well, he answered, I mean to say that he who does evil, and not good, is not temperate, and that he is temperate who does good, and not evil. For temperance I define in plain words to be the doing of good actions.

164 And you may be very likely right in what you are saying, but I am surprised that you think temperate men to be ignorant of their own temperance?

I do not think so, he said.

And yet were you not saying, just now, that craftsmen might be temperate in doing another's work, as well as in doing their own?

I was, he replied, but what is your drift?

I have no particular drift, but I wish that you would tell me  
b whether a physician who cures a patient may do good to himself and good to his patient also.

I think that he may.

And he who does so does his duty?

Yes.

And does not he who does his duty act temperately or wisely?

Yes, he acts wisely.

But must the physician necessarily know when his treatment is likely to prove beneficial, and when not? And must every worker necessarily know when he is likely to be benefited, and when not to be benefited, by the work which he is doing?

I suppose not.

Then, I said, the physician may sometimes do good or harm,  
c without knowing which he has done, and yet in doing good, as you say, he has done temperately or wisely. Was not that your statement?

Yes.

Then, as would seem, in doing good he may act wisely or temperately, and be wise or temperate, but not know his own wisdom or temperance?

But that, Socrates, he said, is impossible, and therefore if this is, as you imply, the necessary consequence of any of my previous  
d admissions, I will withdraw them and will not be ashamed to acknowledge that I made a mistake, rather than admit that a man can be temperate or wise who does not know himself. For I would almost say that self-knowledge is the very essence of temperance, and in this I agree with him who dedicated the inscription 'Know thyself!' at Delphi. That inscription, if I am not mistaken, is put there as a sort of salutation which the god addresses to those who enter the temple—as  
e much as to say that the ordinary salutation of 'Hail!' is not right, and that the exhortation 'Be temperate!' is far better. If I rightly understand the meaning of the inscription, the god speaks to those who en-

ter his temple, not as men speak, but whenever a worshiper enters, the first word which he hears is 'Be temperate!' This, however, like a prophet he expresses in a sort of riddle, for 'Know thyself' and 'Be temperate!' are the same, as I maintain, and as the words imply, and yet they may be thought to be different. And succeeding sages who added 'Never too much,' or 'Give a pledge, and evil is nigh at hand,' would appear to have so distinguished them, for they imagined that 'Know thyself!' was a piece of advice which the god gave, and not his salutation of the worshipers at their first coming in, and they dedicated their own inscriptions under the idea that they too would give equally useful pieces of advice. Shall I tell you, Socrates, why I say all this? My object is to leave the previous discussion—in which I know not whether you or I are more right, but, at any rate, no clear result was attained—and to raise a new one in which I will attempt to prove, if you deny it, that temperance is self-knowledge. 165

Yes, I said, Critias, but you come to me as though I professed to know about the questions which I ask, and as though I could, if I only would, agree with you. Whereas the fact is that I am inquiring with you into the truth of that which is advanced from time to time, just because I do not know, and when I have inquired, I will say whether I agree with you or not. Please then to allow me time to reflect. b c

Reflect, he said.

I am reflecting, I replied, and discover that temperance or wisdom, if it is a species of knowledge, must be a science, and a science of something.

Yes, he said, the science of a man's self.

Is not medicine the science of health?

True.

And suppose that I were asked by you what is the use or effect of medicine, which is this science of health. I should answer that medicine is of very great use in producing health, which, as you will admit, is an excellent effect. d

Granted.

And if you were to ask me what is the result or effect of architecture, which is the science of building, I should say houses, and so of other arts, which all have their different results. Now I want you, Critias, to answer a similar question about temperance or wisdom, which, according to you, is the science of a man's self. Admitting this view, I ask of you, what good work, worthy of the name wise, does temperance or wisdom, which is the science of a man's self, effect? Answer me. e

That is not the true way of pursuing the inquiry, Socrates, he said, for wisdom is not like the other sciences, any more than they are like one another, but you proceed as if they were alike. For tell me, he said, what result is there of computation or geometry, in the same sense as a house is the result of building, or a garment of weaving, or

166 any other work of any of the many other arts? Can you show me any such result of them? You cannot.

That is true, I said, but still I can show you that each of these sciences has a subject which is different from the science. The art of computation, for instance, has to do with odd and even numbers in their numerical relations to themselves and to each other. Is not that true?

Yes.

And the odd and even numbers are not the same with the art of computation?

They are not.

b The art of weighing, again, has to do with lighter and heavier, but the art of weighing is one thing, and the heavy and the light are another. Do you admit that?

Yes.

Now, I want to know, what is that which is not wisdom, and of which wisdom is the science?

c You are just falling into the old error, Socrates, he said. You come asking wherein wisdom or temperance differs from the other sciences, and then you try to discover some respect in which it is like them. But it is not, for all the other sciences are of something else, and not of themselves. Wisdom alone is a science of other sciences and of itself. And of this, as I believe, you are very well aware, and you are only doing what you denied that you were doing just now, trying to refute me, instead of pursuing the argument.

d And what if I am? How can you think that I have any other motive in refuting you but what I should have in examining into myself? This motive would be just a fear of my unconsciously fancying that I knew something of which I was ignorant. And at this moment, I assure you, I pursue the argument chiefly for my own sake, and perhaps in some degree also for the sake of my other friends. For would you not say that the discovery of things as they truly are is a good common to all mankind?

Yes, certainly, Socrates, he said.

e Then, I said, be cheerful, sweet sir, and give your opinion in answer to the question which I asked, never minding whether Critias or Socrates is the person refuted. Attend only to the argument, and see what will come of the refutation.

I think that is reasonable, he replied, and I will do as you say.

Tell me, then, I said, what you mean to affirm about wisdom.

I mean to say that wisdom is the only science which is the science of itself as well as of the other sciences.

But the science of science, I said, will also be the science of the absence of science.

Very true, he said.

167 Then the wise or temperate man, and he only, will know himself,

and be able to examine what he knows or does not know, and to see what others know and think that they know and do really know, and what they do not know and fancy that they know when they do not. No other person will be able to do this. And this is wisdom and temperance and self-knowledge—for a man to know what he knows, and what he does not know. That is your meaning?

Yes, he said.

Now then, I said, since the third time brings luck, let us begin again, and ask, in the first place, whether it is or is not possible for a person to know that he knows what he knows and that he does not know what he does not know, and in the second place, whether, if perfectly possible, such knowledge is of any use.

That is what we have to consider, he said.

Well then, Critias, I said, see if you are in a better position than I am. I am in a difficulty. Shall I tell you the nature of the difficulty?

By all means.

Does not what you have been saying, if true, amount to this, that there must be a single science which is wholly a science of itself and of other sciences, and that the same is also the science of the absence of science?

Yes.

But consider how monstrous this proposition is, my friend. In any parallel case, the impossibility will be obvious to you.

How is that? And in what cases do you mean?

In such cases as this. Suppose that there is a kind of vision which is not like the ordinary vision, but a vision of itself and of other sorts of vision, and of the defect of them, which in seeing sees no color, but only itself and other sorts of vision. Do you think that there is such a kind of vision?

Certainly not.

Or is there a kind of hearing which hears no sound at all, but only itself and other sorts of hearing, or the defects of them?

There is not.

Or take all the senses together. Can you imagine that there is any sense which is a sense of itself and of other senses, but is incapable of perceiving the objects of the senses?

I think not.

Could there be any desire which is not the desire of any pleasure, but of itself and of all other desires?

Certainly not.

Or can you imagine a wish which wishes for no good, but only for itself and all other wishes?

I should answer no.

Or would you say that there is a love which is not the love of beauty, but of itself and of other loves?

I should not.

168 Or did you ever know of a fear which fears itself or other fears,  
but none of the objects of fear?

I never did, he said.

Or of an opinion which is an opinion of itself and of other opinions, and which has no opinion on the subjects of opinion in general? Certainly not.

But, it seems, we are assuming a science of this kind, which, having no subject matter, is a science of itself and of the other sciences?

Yes, that is what is affirmed.

It is certainly a curiosity if it really exists. We must not however as yet absolutely deny the possibility of such a science, but continue to inquire whether it exists.

b You are quite right.

Well then, this science of which we are speaking is a science of something, and is of a nature to be a science of something?

Yes.

Just as that which is greater is of a nature to be greater than something else?

Yes.

And this something else is less, if the other is conceived to be greater?

To be sure.

And if we could find something which is at once greater than itself and greater than other great things, but not greater than those things in comparison of which the others are greater, then that thing  
c would have the property of being greater and also less than itself?

That, Socrates, he said, is the inevitable inference.

Or if there be a double which is double of itself and of other doubles, both they and itself will be halves, for the double is relative to the half?

That is true.

And that which is more than itself will also be less, and that which is heavier will also be lighter, and that which is older will also  
d be younger—and the same of other things. That which has a nature relative to self will retain also the nature of its object; I mean to say, for example, that hearing is, as we say, of sound or voice. Is that true?

Yes.

Then if hearing hears itself, it must hear a voice, for there is no other way of hearing.

Certainly.

And sight also, my excellent friend, if it sees itself must have a  
e color, for sight cannot see that which has no color.

No.

Do you remark, Critias, that in several of the examples which

have been recited the notion of a relation to self is altogether inadmissible, and in other cases hardly credible—inadmissible, for example, in the case of magnitudes, numbers, and the like?

Very true.

But in the case of hearing and sight, or in the power of self-motion, and the power of heat to burn, and so on, this relation to self will be regarded as incredible by some, but perhaps not by others. 169 And some great man, my friend, is wanted, who will satisfactorily determine for us whether there is nothing which has an inherent property of relation to self rather than to something else, or some things only and not others, and whether in this class of self-related things, if there be such a class, that science which is called wisdom or temperance is included. I altogether distrust my own power of determining these matters. I am not certain whether such a science of science b can possibly exist, and even if it does undoubtedly exist, I should not acknowledge it to be wisdom or temperance, until I can also see whether such a science would or would not do us any good, for I have an impression that temperance is a benefit and a good. And therefore, O son of Callaeschrus, as you maintain that temperance or wisdom is a science of science, and also of the absence of science, I will request you to show in the first place, as I was saying before, the possibility, and in the second place, the advantage, of such a science. And then perhaps you may satisfy me that you are right in your view of tem- c perance.

Critias heard me say this, and saw that I was in a difficulty, and as one person when another yawns in his presence catches the infection of yawning from him, so did he seem to be driven into a difficulty by my difficulty. But as he had a reputation to maintain, he was ashamed to admit before the company that he could not answer my challenge or determine the question at issue, and he made an unintelligible attempt to hide his perplexity. d

In order that the argument might proceed, I said to him, Well then, Critias, if you like, let us assume that this science of science is possible—whether the assumption is right or wrong may hereafter be investigated. Admitting its complete possibility, will you tell me how such a science enables us to distinguish what we know or do not know, which, as we were saying, is self-knowledge or wisdom? Was not that it?

Yes, Socrates, he said, and the rest I think follows. For he who has this science or knowledge which knows itself will become like the knowledge which he has, in the same way that he who has swift- e ness will be swift, and he who has beauty will be beautiful, and he who has knowledge will know. In the same way he who has that knowledge which is self-knowing, will know himself.

I do not doubt, I said, that a man will know himself, when he

possesses that which has self-knowledge, but what necessity is there that, having this, he should know what he knows and what he does not know?

170 Because, Socrates, they are the same.

Very likely, I said, but I fear I remain as stupid as ever, for still I fail to comprehend how this knowing what you know and do not know is the same as the knowledge of self.

What do you mean? he said.

This is what I mean, I replied. I will admit that there is a science of science. Can this do more than determine that of two things one is and the other is not science or knowledge?

No, just that.

b Is it then the same thing as knowledge or want of knowledge of health, or the same as knowledge or want of knowledge of justice? Certainly not.

The one is medicine, and the other is politics, whereas that of which we are speaking is knowledge pure and simple.

Very true.

And if a man has only knowledge of knowledge, without any further knowledge of health and justice, the probability is that he will only know that he knows something, and has a certain knowledge, both in his own case and in that of others.

True.

c Then how will this knowledge or science teach him to know what he knows? For he knows health not through wisdom or temperance but through the art of medicine, and he has learned harmony from the art of music and building from the art of building, but in neither case from wisdom or temperance—and the same of other things.

It seems so.

How will wisdom, regarded only as a knowledge of knowledge or science of science, ever teach him that he knows health, or that he knows building?

It is impossible.

Then he who is ignorant of these things will only know that he knows, but not what he knows?

True.

d Then wisdom or being wise appears to be not the knowledge of the things which we do or do not know, but only the knowledge that we know or do not know?

That is the inference.

Then he who has this knowledge will not be able to establish whether a claimant knows or does not know that which he says that he knows; he will only know that he has a knowledge of some kind, but wisdom will not show him of what the knowledge is?

It seems not.

e Neither will he be able to distinguish the pretender in medicine

from the true physician, nor between any other true and false professor of knowledge. Let us consider the matter in this way. If the wise man or any other man wants to distinguish the true physician from the false, how will he proceed? He will not talk to him about the science of medicine, for as we were saying, the physician understands nothing but health and disease.

True.

But the physician knows nothing about science, for this has been assumed to be the province of wisdom alone.

True.

And further, since medicine is science, we must infer that he 171 does not know anything about medicine.

Exactly.

Then the wise man may indeed know that the physician has some kind of science or knowledge, but when he wants to discover the nature of this he will ask, What is the subject matter? For the several sciences are distinguished not by the mere fact that they are sciences, but by the nature of their subjects. Is not that true?

Quite true.

And medicine is distinguished from other sciences as having the subject matter of health and disease?

Yes.

And he who would inquire into the nature of medicine must test it in health and disease, which are the sphere of medicine, and not in what is extraneous and is not its sphere?

True.

And he who wishes to make a fair test of the physician as a physician will test him in what relates to these?

He will.

He will consider whether what he says is true, and whether what he does is right, in relation to health and disease?

He will.

But can anyone pursue the inquiry into either unless he have a knowledge of medicine?

He cannot.

No one at all, it would seem, except the physician can have this knowledge—and therefore not the wise man. He would have to be a physician as well as a wise man.

Very true.

Then, assuredly, wisdom or temperance, if it is no more than a science of science and of the absence of science or knowledge, will not be able to distinguish the physician who knows what concerns his profession from one who does not know but pretends or thinks that he knows, or any other professor of anything at all. Like any other artist, the wise or temperate man will only know the man of his own trade, and no one else.

That is evident, he said.

- d But then what profit, Critias, I said, is there any longer in wisdom or temperance which yet remains, if this is wisdom? If, indeed, as we were supposing at first, the wise man were able to distinguish what he knew and did not know, and that he knew the one and did not know the other, and to recognize a similar faculty of discernment in others, there would certainly be a great advantage in being wise, for then we should never make a mistake, but should pass through life the unerring guides of ourselves and of those who are under us. We
- e should not attempt to do what we did not know, but we should find out those who know, and hand the business over to them and trust in them. Nor should we allow those who were under us to do anything which they were not likely to do well, and they would be likely to do well just that of which they had knowledge. And the house or state which was ordered or administered under the guidance of wisdom, and everything else of which wisdom was the lord, would be sure to be
- 172 well ordered, for with truth guiding and error eliminated, in all their doings men must do nobly and well, and doing well means happiness. Was not this, Critias, what we spoke of as the great advantage of wisdom—to know what is known and what is unknown to us?

Very true, he said.

And now you perceive, I said, that no such science is to be found anywhere.

I perceive, he said.

- b May we assume then, I said, that wisdom, viewed in this new light as a knowledge of knowledge and ignorance, has this advantage—that he who possesses such knowledge will more easily learn anything which he learns, and that everything will be clearer to him, because, in addition to the several objects of knowledge, he sees the science, and this also will better enable him to test the knowledge which others have of what he knows himself, whereas the inquirer who is without this knowledge may be supposed to have a feebleness and less effective insight? Are not these, my friend, the real advantages which are to be gained from wisdom? And are not we looking
- c and seeking after something more than is to be found in her?

It may be, he said.

- Perhaps it may, I said, or perhaps again we have been inquiring to no purpose—as I am led to infer, because I observe that if this is wisdom, some strange consequences would follow. Let us, if you please, assume the possibility of this science of sciences, and not refuse to allow that, as was originally suggested, wisdom is the knowledge of what we know and do not know. Assuming all this, let us consider more closely, Critias, whether wisdom, such as this, would do us
- d much good. For we were wrong, I think, in supposing, as we were saying just now, that such wisdom ordering the government of house or state would be a great benefit.

How so? he said.

Why, I said, we were far too ready to admit the great benefits which mankind would obtain from their severally doing the things which they knew, and committing the things of which they are ignorant to those who were better acquainted with them.

Were we not right in making that admission?

I think not.

How very strange, Socrates!

There, I said, I most emphatically agree with you, and I was thinking as much just now when I said that strange consequences would follow, and that I was afraid we were on the wrong track. For however sure we may be that this is wisdom, I certainly cannot make out what good this sort of thing does to us.

What do you mean? he said. I wish that you could make me understand what you mean.

I dare say that what I am saying is nonsense, I replied, and yet if a man has any feeling of what is due to himself, he cannot let the thought which comes into his mind pass away unheeded and unexamined.

I like that, he said.

Hear, then, I said, my own dream—whether coming through the horn or the ivory gate, I cannot tell. The dream is this. Let us suppose that wisdom is such as we are now defining, and that she has absolute sway over us. Then, each action will be done according to the arts or sciences, and no one professing to be a pilot when he is not, no physician or general or anyone else pretending to know matters of which he is ignorant, will deceive or elude us. Our health will be improved; our safety at sea, and also in battle, will be assured; our coats and shoes, and all other instruments and implements will be skillfully made, because the workmen will be good and true. Aye, and if you please, you may suppose that prophecy will be a real knowledge of the future, and will be under the control of wisdom, who will deter deceivers and set up the true prophets in their place as the revealers of the future. Now I quite agree that mankind, thus provided, would live and act according to knowledge, for wisdom would watch and prevent ignorance from intruding on us in our work. But whether by acting according to knowledge we shall act well and be happy, my dear Critias—this is a point which we have not yet been able to determine.

Yet I think, he replied, that if you discard knowledge, you will hardly find the crown of happiness in anything else.

Well, just answer me one small question, I said. Of what is this knowledge? Do you mean a knowledge of shoemaking?

God forbid.

Or of working in brass?

Certainly not.

Or in wool, or wood, or anything of that sort?

No, I do not.

Then, I said, we are giving up the doctrine that he who lives according to knowledge is happy, for these live according to knowledge, and yet they are not allowed by you to be happy. But I think that you mean to confine happiness to those who live according to knowledge of some particular thing, such for example as the prophet, who, as I  
 174 was saying, knows the future. Is it of him you are speaking or of someone else?

Yes, I mean him, but there are others as well.

Who? I said. Evidently someone who knows the past and present as well as the future, and is ignorant of nothing. Let us suppose that there is such a person, and if there is, you will allow that he is the most knowing of all living men.

Certainly he is.

Yet I should like to know one thing more. Which of the different kinds of knowledge makes him happy? Or do all equally make him happy?

Not all equally, he replied.

b But which most tends to make him happy? The knowledge of what past, present, or future thing? Is it, for example, the knowledge of the game of draughts?

Nonsense, draughts indeed!

Or of computation?

No.

Or of health?

That is nearer the truth, he said.

And that knowledge which is nearest of all, I said, is the knowledge of what?

The knowledge with which he discerns good and evil.

c You villain! I said. You have been carrying me round in a circle, and all this time hiding from me the fact that it is not the life according to knowledge which makes men act rightly and be happy, not even if it be knowledge of all the sciences, but one science only, that of good and evil. For, let me ask you, Critias, whether, if you take away this science from the others, medicine will not equally give health, and shoemaking equally produce shoes, and the art of the weaver clothes—whether the art of the pilot will not equally save our lives at sea, and the art of the general in war?

Equally.

d And yet, my dear Critias, none of these things will be well or beneficially done, if the science of the good be wanting.

True.

But this science, it seems, is not wisdom or temperance, but a science of human advantage—not a science of other sciences, or of ignorance, but of good and evil. And if this be of advantage, then wisdom or temperance must be something else.

And why, he replied, will not wisdom be of advantage? For, however much we assume that wisdom is a science of sciences, and has a sway over other sciences, surely she will have this particular science of the good under her control, and in this way will benefit us. e

And will wisdom give health? I said. Is not this rather the effect of medicine? Or does wisdom do the work of any of the other arts—do they not each of them do their own work? Have we not long ago asseverated that wisdom is only the knowledge of knowledge and of ignorance, and of nothing else?

It seems so.

Then wisdom will not be the producer of health?

Certainly not.

We found that health belonged to a different art?

175

Yes.

Nor does wisdom give advantage, my good friend, for that again we have just now been attributing to another art.

Very true.

How then can wisdom be advantageous, when it produces no advantage?

Apparently it cannot, Socrates.

You see, then, Critias, that I was not far wrong in fearing that I was making no sound inquiry into wisdom—I was quite right in depreciating myself, for that which is admitted to be the best of all things would never have seemed to us useless, if I had been good for b anything at an inquiry. But now I have been utterly defeated, and have failed to discover what that is to which the lawgiver gave this name of temperance or wisdom. And yet many more admissions were made by us than could be fairly granted, for we admitted that there was a science of science, although the argument said no, and protested against us. And we admitted further that this science knew the works of the other sciences—although this too was denied by the c argument—because we wanted to show that the wise man had knowledge of what he knew and of what he did not know. We generously made the concession, and never even considered the impossibility of a man knowing in a sort of way that which he does not know at all. According to our admission, he knows that which he does not know—than which nothing, as I think, can be more irrational. And yet, after finding us so easy and good-natured, the inquiry is still unable to d discover the truth, but mocks us to a degree, and has insolently proved the inutility of temperance or wisdom if truly described by a definition such as we have spent all this time in discussing and fashioning together—which result, as far as I am concerned, is not so much to be lamented.

But for your sake, Charmides, I am very sorry—that you, having such beauty and such wisdom and temperance of soul, should have e no profit nor good in life from your wisdom and temperance. And still

more am I grieved about the charm which I learned with so much pain, and to so little profit, from the Thracian, in order to produce a thing which is nothing worth. I think indeed that there is a mistake, and that I must be a bad inquirer, for wisdom or temperance I believe to be really a great good. And happy are you, Charmides, if you possess  
 176 it. Wherefore examine yourself, and see whether you have this gift and can do without the charm, for if you can, I would rather advise you to regard me simply as a fool who is never able to reason out anything, and to rest assured that the more wise and temperate you are, the happier you will be.

Charmides said, I am sure that I do not know, Socrates, whether I have or have not this gift of wisdom and temperance, for how can I know whether I have a thing, of which even you and Critias are, as you say, unable to discover the nature? Yet I do not quite believe you,  
 b and I am sure, Socrates, that I do need the charm, and as far as I am concerned, I shall be willing to be charmed by you daily, until you say that I have had enough.

Very good, Charmides, said Critias. If you do this I shall have a proof of your temperance—that is, if you allow yourself to be charmed by Socrates, and never desert him in things great or small.

You may depend on my following and not deserting him, said  
 c Charmides. If you who are my guardian command me, I should be very wrong not to obey you.

And I do command you, he said.

Then I will do as you say, and begin this very day.

You, sirs, I said, what are you conspiring about?

We are not conspiring, said Charmides. We have conspired already.

And you are about to use violence, without even giving me a hearing in court?

Yes, I shall use violence, he replied, since he orders me, and therefore you had better consider what you will do.

d But the time for consideration has passed, I said. When you are determined on anything, and in the mood of violence, you are irresistible.

Do not you resist me then, he said.

I shall not resist you then, I replied.

# LACHES

*When this dialogue is added to the Lysis Socrates' method as a teacher is clear. In both he discusses a quality that is perfectly familiar to everyone present, with the same result. They finally realize that although they have always taken it for granted, they cannot state what it is because they do not really know it. In the Laches this quality is courage, and the conclusion is the more striking because two of the speakers are distinguished generals, Laches and Nicias, and because the former describes the great courage he had seen Socrates show on the field. All three are conspicuous examples of what they are discussing, but this does not affect Socrates' demonstration that since none of them, himself included, can define it, they have no real knowledge of it. Merely to act bravely without knowing what bravery is belongs only to the ignorant and inferior. To be virtuous without any clear idea of virtue itself is of small importance—"The unexamined life is not worth living." He tells them that the whole company had best go to school again and try to get educated. He will do so himself.*

*Of all the dialogues this is perhaps the easiest to read. The argument is clear, the characters come vividly to life, and nowhere is Socrates more delightfully presented.*

- 178 **LYSIMACHUS:** You have seen the exhibition of the man fighting in armor, Nicias and Laches, but we did not tell you at the time the reason why my friend Melesias and I asked you to go with us and see him. I think that we may as well confess what this was, for we certainly ought not to have any reserve with you. Some laugh at the very notion of consulting others, and when they are asked will not say  
b what they think. They guess at the wishes of the person who asks them, and answer according to his, and not according to their own, opinion. But as we know that you are good judges, and will say exactly what you think, we have taken you into our counsels. The matter about which I am making all this preface is as follows. Melesias and I have each a son. That is his son, and he is named Thucydides, after  
179 his grandfather, and this is mine, who is also called after his grandfather, my father, Aristides. Now, we are resolved to take the greatest care of the youths, and not, like most fathers, to let them do as they please when they are no longer children, but we mean to begin at once and do the utmost that we can for them. And knowing you to have  
b sons of your own, we thought that you of all men were most likely to have attended to their training and improvement, and, if perchance you have seldom given any thought to the subject, we may remind you that you ought to have done so, and would invite you to assist us in the fulfillment of a common duty. I will tell you, Nicias and Laches, even at the risk of being tedious, how we came to think of this.

- Melesias and I live together, and our sons live with us. And now,  
c as I was saying at first, we are going to be open with you. Both of us often talk to the lads about the many noble deeds which our own fathers did in war and peace—in managing the affairs of the allies, and those of the city—but neither of us has any deeds of his own which he can show. The truth is that we are ashamed of this contrast being seen by them, and we blame our fathers for letting us be  
d spoiled in the days of our youth, while they were occupied with the concerns of others. And we urge all this upon the lads, pointing out to them that they will not grow up to honor if they are rebellious and take no pains about themselves, but that if they take pains they may, perhaps, become worthy of the names which they bear. They, on their part, promise to comply with our wishes, and our care is to discover what studies or pursuits are likely to be most improving to them.  
e Someone commended to us the art of fighting in armor, which he thought an excellent accomplishment for a young man to learn, and he praised the man whose exhibition you have seen, and told us to go and see him. And we determined that we would go, and get you to accompany us to see the sight—intending at the same time to ask you to

advise us, and, if you wish, to share in our project for the education of our sons. That is the matter which we wanted to talk over with you, and we hope that you will give us your opinion about this art of fighting in armor, and about any other studies or pursuits which you would or would not recommend for a young man, and will tell us whether you would like to join in our proposal. 180

NICIAS: As far as I am concerned, Lysimachus and Melesias, I applaud your purpose and will gladly join with you, and I believe that you, Laches, will be equally glad.

LACHES: Certainly, Nicias, and I quite approve of the remark b which Lysimachus made about his own father and the father of Melesias, and which is applicable, not only to them, but to us, and to everyone who is occupied with public affairs. As he says, such persons are too apt to be negligent and careless of their own children and their private concerns. There is much truth in that remark of yours, Lysimachus. But why, besides consulting us, do you not consult our friend c Socrates about the education of the youths? He is of the same deme with you, and is always passing his time in places where the youth have any noble study or pursuit, such as you are inquiring after.

LYSIMACHUS: Why, Laches, has Socrates ever attended to matters of this sort?

LACHES: Certainly, Lysimachus.

NICIAS: That I have the means of knowing as well as Laches, for quite lately he supplied me with a teacher of music for my son—Damon, the pupil of Agathocles, who is a most accomplished man in d every way, as well as a musician, and a companion of inestimable value for young men at their age.

LYSIMACHUS: Those who have reached my time of life, Socrates and Nicias and Laches, fall out of acquaintance with the young, because they are generally detained at home by old age, but you, O son of Sophroniscus, should let your fellow demesman have the benefit of any advice which you are able to give. Moreover, I have a claim upon e you as an old friend of your father, for he and I were always companions and friends, and to the hour of his death there never was a difference between us. And now it comes back to me, at the mention of your name, that I have heard these lads talking to one another at home, and often speaking of Socrates in terms of the highest praise, but I have never thought to ask them whether the son of Sophroniscus was the person whom they meant. Tell me, my boys, whether this is 181 the Socrates of whom you have often spoken?

SON: Certainly, father, this is he.

LYSIMACHUS: I am delighted to hear, Socrates, that you maintain the name of your father, who was a most excellent man, and I further rejoice at the prospect of our family ties being renewed.

LACHES: Indeed, Lysimachus, you ought not to give him up, for I can assure you that I have seen him maintaining, not only his

- b father's, but also his country's name. He was my companion in the retreat from Delium, and I can tell you that if others had only been like him, the honor of our country would have been upheld, and the great defeat would never have occurred.

LYSIMACHUS: That praise is truly honorable to you, Socrates, given as it is by witnesses entitled to all credit and for such qualities as those which they ascribe to you. Let me tell you the pleasure which I feel in hearing of your fame, and I hope that you will regard me as one of your warmest friends. You ought to have visited us long ago, c and made yourself at home with us, but now, from this day forward, as we have at last found one another out, do as I say—come and make acquaintance with me, and with these young men, that you and yours may continue as my friends. I shall expect you to do so, and shall venture at some future time to remind you of your duty. But what say you all of the matter of which we were beginning to speak—the art of fighting in armor? Is that a practice in which the lads may be advantageously instructed?

- d SOCRATES: I will endeavor to advise you, Lysimachus, as far as I can in this matter, and also in every way will comply with your wishes; but as I am younger and not so experienced, I think that I ought certainly to hear first what my elders have to say, and to learn of them, and if I have anything to add, then I may venture to give my opinion and advice to them as well as to you. Suppose, Nicias, that one or other of you begin.

- NICIAS: I have no objection, Socrates, and my opinion is that e the acquirement of this art is in many ways useful to young men. It is an advantage to them that instead of the favorite amusements of their leisure hours they should have one which tends to improve their bodily health. No gymnastics could be better or harder exercise, and 182 this, and the art of riding, are of all arts most befitting to a free man, for they who are thus exercised in the use of arms are the only persons being trained for the contest in which we are engaged, and in the accomplishments which it requires. Moreover in actual battle, when you have to fight in a line with a number of others, such an acquirement will be of some use, and will be of the greatest service whenever the ranks are broken and you have to fight singly, either in pursuit, b when you are attacking someone who is defending himself, or in fight, when you have to defend yourself against an assailant. Certainly he who possessed the art could not meet with any harm at the hands of a single person, or perhaps of several, and in every case he would have a great advantage. Further, this sort of skill inclines a man to the love of other noble lessons, for every man who has learned how to fight in armor will desire to learn the proper arrangement of an army, which is the sequel of the lesson. And when he has learned c this, and his ambition is once fired, he will go on to learn the complete art of the general. There is no difficulty in seeing that the knowl-

edge and practice of other military arts will be honorable and valuable to a man, and this lesson may be the beginning of them.

Let me add a further advantage, which is by no means a slight one—that this science will make any man a great deal more daring and resolute in the field. And I will not disdain to mention, what by some may be thought to be a small matter—he will have a more impressive appearance at the right time, that is to say, at the time when his appearance will strike terror into his enemies. My opinion then, <sup>d</sup> Lysimachus, is, as I say, that the youths should be instructed in this art, and for the reasons which I have given. But Laches may take a different view, and I shall be very glad to hear what he has to say.

LACHES: I should not like to maintain, Nicias, that any kind of knowledge is not to be learned, for all knowledge appears to be a good. And if, as the teachers of the art affirm, this use of arms is <sup>e</sup> really a species of knowledge, and if it is such as Nicias describes, then it ought to be learned, but if not, and if those who profess to teach it are deceivers only, or if it be knowledge, but not of a valuable sort, then what is the use of learning it? I say this, because I think that if it had been really valuable, the Lacedaemonians, whose whole life is passed in finding out and practicing the arts which give them an advantage over other nations in war, would have discovered this one. <sup>183</sup> And even if they have not, still these professors of the art cannot have failed to discover that of all the Hellenes the Lacedaemonians have the greatest interest in such matters, and that a master of the art who was honored among them would be sure to make his fortune among other nations, just as a tragic poet would who is honored among ourselves—which is the reason why he who fancies that he can write a tragedy does not go about exhibiting in the states outside Attica, but <sup>b</sup> rushes hither straight, and exhibits at Athens, and this is natural. Whereas I perceive that these fighters in armor regard Lacedaemon as a sacred inviolable territory, which they do not touch with the point of their foot, but they make a circuit of the neighboring states, and would rather exhibit to any others than to the Spartans—and particularly to those who would themselves acknowledge that they are by no means first-rate in the arts of war.

Further, Lysimachus, I have encountered a good many of these <sup>c</sup> gentlemen in actual service, and have taken their measure, which I can give you at once, for none of these masters of fence have ever been distinguished in war—there has been a sort of fatality about them; while in all other arts the men of note have been always those who have practiced the art, these appear to be a most unfortunate exception. For example, this very Stesilaus, whom you and I have just witnessed exhibiting in all that crowd and making such great pro- <sup>d</sup> fessions of his powers, I had a better opportunity of seeing at another time making in actual battle a real exhibition of himself involuntarily. He was a marine on board a ship which charged a transport

vessel, and was armed with a weapon, half spear, half scythe; the weapon was as singular as its owner. To make a long story short, I will only tell you what happened to this notable invention of the scythe-spear. He was fighting, and the scythe was caught in the rigging of the other ship, and stuck fast, and he tugged, but was unable to get his weapon free. The two ships were passing one another. He first ran along his own ship holding on to the spear, but as the other ship passed by and drew him after as he was holding on to the spear, he let it slip through his hand until he retained only the end of the handle. The people in the transport clapped their hands, and laughed at his ridiculous figure, and when someone threw a stone, which fell on the deck at his feet, and he quitted his hold of the scythe-spear, the crew of his own trireme also burst out laughing; they could not refrain when they beheld the weapon waving in the air, suspended from the transport.

Now I do not deny that there may be something in such an art, as Nicias asserts, but I tell you my experience, and, as I said at first, whether this be an art of which the advantage is so slight, or not an art at all but only an imposition, in either case such an acquirement is not worth having. For my opinion is that if the professor of this art be a coward, he will be likely to become rash, and his character will be only more clearly revealed, or if he be brave, and fail ever so little, other men will be on the watch, and he will be greatly traduced. For there is a jealousy of such pretenders, and unless a man be pre-eminent in valor, he cannot help being ridiculous, if he says that he has this sort of skill. Such is my judgment, Lysimachus, on the study of this art, but, as I said at first, ask Socrates, and do not let him go until he has given you his opinion of the matter.

LYSIMACHUS: I am going to ask this favor of you, Socrates, as is the more necessary because the two counselors disagree, and someone is in a manner still needed who will decide between them. Had they agreed, no arbiter would have been required. But as Laches has voted one way and Nicias another, I should like to hear with which of our two friends you agree.

SOCRATES: What, Lysimachus, are you going to accept the opinion of the majority?

LYSIMACHUS: Why, yes, Socrates. What else am I to do?

SOCRATES: And would you do so too, Melesias? If you were deliberating about the gymnastic training of your son, would you follow the advice of the majority of us, or the opinion of the one who had been trained and exercised under a skillful master?

MELESIAS: The latter, Socrates, as would surely be reasonable.

SOCRATES: His one vote would be worth more than the vote of all us four?

MELESIAS: Presumably.

SOCRATES : And for this reason, as I imagine—because a good decision is based on knowledge and not on numbers?

MELESIAS : To be sure.

SOCRATES : Now too, then, must we not first of all ask whether there is any one of us who is an expert in that about which we are deliberating? If there is, let us take his advice, though he be one only, and not mind the rest; if there is not, let us seek further counsel. Is this a trifle which you and Lysimachus have at stake? Are you not risking the greatest of your possessions? For children are your riches, and upon their turning out well or ill depends the whole order of their father's house. 185

MELESIAS : That is true.

SOCRATES : Great care, then, is required in this matter?

MELESIAS : Certainly.

SOCRATES : Suppose, as I was just now saying, that we were b considering, or wanting to consider, which of us had the best knowledge of gymnastics. Should we not select him who had learned and practiced the art, and had good teachers?

MELESIAS : I think that we should.

SOCRATES : But would there not arise a prior question about the nature of the art of which we want to find the teachers?

MELESIAS : I do not understand.

SOCRATES : Let me try to make my meaning plainer then. I do not think that we have as yet decided what that is about which we are consulting, when we ask which of us is or is not skilled in the art, and has or has not had teachers of the art. c

NICIAS : Why, Socrates, is not the question whether young men ought or ought not to learn the art of fighting in armor?

SOCRATES : Yes, Nicias, but there is also a prior question, which I may illustrate in this way. When a person considers about applying a medicine to the eyes, would you say that he is consulting about the medicine or about the eyes?

NICIAS : About the eyes.

SOCRATES : And when he considers whether he shall set a bridle d on a horse and at what time, he is thinking of the horse and not of the bridle?

NICIAS : True.

SOCRATES : And in a word, when he considers anything for the sake of another thing, he thinks of the end and not of the means?

NICIAS : Certainly.

SOCRATES : And when you call in an adviser, you should see whether he too is skillful in the accomplishment of the end which you have in view?

NICIAS : Most true.

SOCRATES : And at present we have in view some knowledge, of e which the end is the soul of youth?

NICIAS: Yes.

SOCRATES: And we must inquire whether any of us is skillful or successful in the treatment of the soul, and which of us has had good teachers?

LACHES: Well but, Socrates, did you never observe that some persons who have had no teachers are more skillful than those who have, in some things?

SOCRATES: Yes, Laches, I have observed that, but you would not be very willing to trust them if they professed to be masters of their art, unless they could show some proof of their skill or excellence in one or more works.

LACHES: That is true.

SOCRATES: And therefore, Laches and Nicias, as Lysimachus and Melesias, in their anxiety to improve the minds of their sons, have asked our advice about them, we likewise should tell them, if we can, what teachers we know of who were in the first place men of merit and experienced trainers of the minds of youth, and then taught also  
b ourselves. Or if any of us says that he has had no teacher but that he has works of his own to show, then he should point out to them what Athenians or strangers, bond or free, he is generally acknowledged to have improved. But if we can show neither teachers nor works, then we should tell them to look out for other advisers; we should not run the risk of spoiling the children of friends, and thereby incurring the most formidable accusation which can be brought against anyone by those nearest to him.

As for myself, Lysimachus and Melesias, I am the first to confess  
c that I have never had a teacher of the art of virtue, although I have always from my earliest youth desired to have one. But I am too poor to give money to the Sophists, who are the only professors of moral improvement, and to this day I have never been able to discover the art myself, though I should not be surprised if Nicias or Laches has discovered or learned it; for they are far wealthier than I am, and may therefore have learned of others, and they are older too, so that they  
d have had more time to make the discovery. And I really believe that they are able to educate a man, for unless they had been confident in their own knowledge, they would never have spoken thus unhesitatingly of the pursuits which are advantageous or hurtful to a young man. I repose confidence in both of them, but I am surprised to find that they differ from one another. And therefore, Lysimachus, as Laches suggested that you should detain me, and not let me go until I answered, I in turn earnestly beseech and advise you to detain Laches  
e and Nicias, and question them. I would have you say to them, Socrates avers that he has no knowledge of the matter—he is unable to decide which of you speaks truly—neither discoverer nor student is he of anything of the kind. But you, Laches and Nicias, should each of you tell us who is the most skillful educator whom you have ever known,

and whether you invented the art yourselves, or learned of another, and if you learned, who were your respective teachers, and who were 187  
 their brothers in the art. And then, if you are too much occupied in politics to teach us yourselves, let us go to them, and present them with gifts, or make interest with them, or both, in the hope that they may be induced to take charge of our children and of yours, and then they will not grow up to be worthless, and disgrace their ancestors. But if you are yourselves original discoverers in that field, give us some proof of your skill. Who are they who, having been worthless persons, have become under your care good and noble? For if this is your first attempt at education, there is a danger that you may be trying the experiment, not on the *vile corpus* of a Carian slave, but on b  
 your own sons or the sons of your friends, and, as the proverb says, 'break the large vessel in learning to make pots.' Tell us then, what qualifications you claim or do not claim.

Make them tell you that, Lysimachus, and do not let them off.

LYSIMACHUS: I very much approve of the words of Socrates, my friends, but you, Nicias and Laches, must determine whether you will be questioned, and give an explanation about matters of this sort. c  
 Assuredly, Melesias and I would be greatly pleased to hear you answer the questions which Socrates asks, if you will, for I began by saying that we took you into our counsels because we thought that no doubt you had attended to the subject, especially as you have children who, like our own, are nearly of an age to be educated. Well then, if you have no objection, suppose that you take Socrates into partnership, and do you and he ask and answer one another's questions, for, as he has well said, we are deliberating about the most important of our concerns. I hope that you will see fit to comply with our request.

NICIAS: I see very clearly, Lysimachus, that you have only known Socrates' father, and have no acquaintance with Socrates himself—at least, you can only have known him when he was a child, and may have met him among his fellow demesmen, in company with e  
 his father, at a sacrifice or at some other gathering. You clearly show that you have never known him since he arrived at manhood.

LYSIMACHUS: Why do you say that, Nicias?

NICIAS: Because you seem not to be aware that anyone who is close to Socrates and enters into conversation with him is liable to be drawn into an argument, and whatever subject he may start, he will be continually carried round and round by him, until at last he finds that he has to give an account both of his present and past life, and when he is once entangled, Socrates will not let him go until he 188  
 has completely and thoroughly sifted him. Now I am used to his ways, and I know that he will certainly do as I say, and also that I myself shall be the sufferer, for I am fond of his conversation, Lysimachus. And I think that there is no harm in being reminded of any wrong thing which we are, or have been, doing; he who does not fly from b

reproof will be sure to take more heed of his afterlife. As Solon says, he will wish and desire to be learning so long as he lives, and will not think that old age of itself brings wisdom.<sup>1</sup> To me, to be cross-examined by Socrates is neither unusual nor unpleasant. Indeed, I was fairly certain all along that where Socrates was, the subject of discussion would soon be ourselves, not our sons, and therefore, I say for my part, I am quite willing to discourse with Socrates in his own manner. But you had better ask our friend Laches what his feeling may be.

LACHES: I have but one feeling, Nicias, or shall I say two feelings, about discussions? Some would think that I am a lover, and to others I may seem to be a hater, of discourse. For when I hear a man discoursing of virtue, or of any sort of wisdom, who is a true man and worthy of his theme, I am delighted beyond measure, and I compare the man and his words, and note the harmony and correspondence of them. And such a one I deem to be the true musician, attuned to a fairer harmony than that of the lyre, or any pleasant instrument of music, for he truly has in his own life a harmony of words and deeds arranged—not in the Ionian, or in the Phrygian mode, nor yet in the Lydian, but in the true Hellenic mode, which is the Dorian, and no other. Such a one makes me merry with the sound of his voice, and when I hear him I am thought to be a lover of discourse; so eager am I in drinking in his words. But a man whose actions do not agree with his words is an annoyance to me, and the better he speaks the more I hate him, and then I seem to be a hater of discourse.

As to Socrates, I have no knowledge of his words, but of old, as appears, I have had experience of his deeds, and his deeds show that he is entitled to noble sentiments and complete freedom of speech. And if his words accord, then I am of one mind with him, and shall be delighted to be interrogated by a man such as he is, and shall not be annoyed at having to learn of him, for I too agree with Solon, 'that I would fain grow old, learning many things.'<sup>2</sup> But I must be allowed to add 'from the good only.' Socrates must be willing to allow that the teacher himself is a good man, or I shall be a dull and reluctant pupil, but that the teacher is rather young, or not as yet in repute—anything of that sort is of no account with me. And therefore, Socrates, I invite you to teach and confute me as much as ever you like, and also learn of me anything which I know. So high is the opinion which I have entertained of you ever since the day on which you were my companion in danger, and gave a proof of your valor such as only the man of merit can give. Therefore, say whatever you like, and do not mind about the difference of our ages.

SOCRATES: I cannot say that either of you shows any reluctance to take counsel and advise with me.

LYSIMACHUS: But this is our proper business, and yours as

<sup>1</sup> Solon, fr. 10.      <sup>2</sup> Ibid.

well as ours, for I reckon you as one of us. Please then to take my place, and find out from Nicias and Laches what we want to know, for the sake of the youths, and talk and consult with them, for I am old, and my memory is bad, and I do not remember the questions which I intend to ask, or the answers to them, and if there is any digression I lose the thread. I will therefore beg of you to carry on the proposed discussion by yourselves, and I will listen, and Melesias and I will act upon your conclusions. d

SOCRATES: Let us, Nicias and Laches, comply with the request of Lysimachus and Melesias. There will be no harm in asking ourselves the question which was proposed to us just now. Who have been our own instructors in this sort of training, or whom have we ourselves made better? But another mode of carrying on the inquiry e will bring us equally to the same point, and perhaps starts nearer to first principles. For if we know that the addition of something would improve some other thing, and are able to make the addition, then, clearly, we must know how that about which we are advising may be best and most easily attained. Perhaps you do not understand what I mean. Then let me make my meaning plainer in this way. Suppose we know that the addition of sight makes better the eyes which possess 190 this gift, and also are able to impart sight to the eyes; then, clearly, we know the nature of sight, and should be able to advise how this gift of sight may be best and most easily attained. But if we knew neither what sight is, nor what hearing is, we should not be very good medical advisers about the eyes or the ears, or about the best mode of giving sight and hearing to them. b

LACHES: That is true, Socrates.

SOCRATES: And are not our two friends, Laches, at this very moment inviting us to consider in what way the gift of virtue may be imparted to their sons for the improvement of their minds?

LACHES: Very true.

SOCRATES: Then must we not first know the nature of virtue? For how can we advise anyone about the best mode of attaining something of whose nature we are wholly ignorant? c

LACHES: I do not think that we can, Socrates.

SOCRATES: We say then, Laches, that we know the nature of virtue.

LACHES: Yes.

SOCRATES: And that which we know we must surely be able to tell?

LACHES: Certainly.

SOCRATES: I would not have us begin, my friend, with inquiring about the whole of virtue, for that may be more than we can accomplish. Let us first consider whether we have a sufficient knowledge of a part; the inquiry will thus probably be made easier to us. d

LACHES: Let us do as you wish, Socrates.

SOCRATES: Then which of the parts of virtue shall we select? Must we not select that to which the art of fighting in armor is supposed to conduce? And is not that generally thought to be courage?

LACHES: Yes, certainly.

SOCRATES: Then, Laches, suppose that we first set about determining the nature of courage, and in the second place proceed to inquire how the young men may attain this quality by the help of studies and pursuits. Tell me, if you can, what is courage.

LACHES: Indeed, Socrates, I see no difficulty in answering. He is a man of courage who does not run away, but remains at his post and fights against the enemy. There can be no mistake about that.

SOCRATES: Very good, Laches, and yet I fear that I did not express myself clearly, and therefore you have answered not the question which I intended to ask, but another.

LACHES: What do you mean, Socrates?

191 SOCRATES: I will endeavor to explain. You would call a man courageous who remains at his post, and fights with the enemy?

LACHES: Certainly I should.

SOCRATES: And so should I, but what would you say of another man, who fights flying, instead of remaining?

LACHES: How flying?

SOCRATES: Why, as the Scythians are said to fight, flying as well as pursuing, and as Homer says in praise of the horses of Aeneas, that they knew 'how to pursue, and fly quickly hither and thither,' and he passes an encomium on Aeneas himself, as having a knowledge of fear or flight, and calls him 'a deviser of fear or flight.'<sup>3</sup>

LACHES: Yes, Socrates, and there Homer is right, for he was speaking of chariots, as you were speaking of the Scythian cavalry. Now cavalry have that way of fighting, but the heavy-armed soldier fights, as I say, remaining in his rank.

SOCRATES: And yet, Laches, you must except the Lacedaemonians at Plataea, who, when they came upon the light shields of the Persians, are said not to have been willing to stand and fight, and to have fled. But when the ranks of the Persians were broken, they turned upon them like cavalry, and won the Battle of Plataea.

LACHES: That is true.

SOCRATES: That was my meaning when I said that I was to blame in having put my question badly, and that this was the reason of your answering badly. For I meant to ask you not only about the courage of the heavy-armed soldiers, but about the courage of cavalry and every other style of soldier—and not only who are courageous in war, but who are courageous in perils by sea, and who in disease, or in poverty, or again in politics, are courageous, and not only who are courageous against pain or fear, but mighty to contend against de-

<sup>3</sup> *Iliad* 5.223, 8.108.

sires and pleasures, either fixed in their rank or turning upon their enemy. There is this sort of courage—is there not, Laches?

LACHES: Certainly, Socrates.

SOCRATES: Now all these are courageous, but some have courage in pleasures and some in pains, some in desires and some in fears. And some are cowards under the same conditions, as I should imagine.

LACHES: Very true.

SOCRATES: I was asking about courage and cowardice in general. And I will begin with courage, and once more ask what is that common quality, which is the same in all these cases, and which is called courage? Do you now understand what I mean?

LACHES: Not overwell.

SOCRATES: I mean this. As I might ask what is that quality 192 which is called quickness, and which is found in running, in playing the lyre, in speaking, in learning, and in many other similar actions, or rather which we possess in nearly every action that is worth mentioning of arms, legs, mouth, voice, mind—would you not apply the term quickness to all of them?

LACHES: Quite true.

SOCRATES: And suppose I were to be asked by someone, What is that common quality, Socrates, which, in all these activities, you call quickness? I should say the quality which accomplishes much in a little time—whether in running, speaking, or in any other sort of action.

LACHES: You would be quite correct.

SOCRATES: And now, Laches, do you try and tell me in like manner, What is that common quality which is called courage, and which includes all the various uses of the term when applied both to pleasure and pain, and in all the cases to which I was just now referring?

LACHES: I should say that courage is a sort of endurance of the soul, if I am to speak of the universal nature which pervades them all. c

SOCRATES: But that is what we must do if we are to answer our own question. And yet I cannot say that every kind of endurance is, in my opinion, to be deemed courage. Hear my reason. I am sure, Laches, that you would consider courage to be a very noble quality.

LACHES: Most noble, certainly.

SOCRATES: And you would say that a wise endurance is also good and noble?

LACHES: Very noble.

SOCRATES: But what would you say of a foolish endurance? d Is not that, on the other hand, to be regarded as evil and hurtful?

LACHES: True.

SOCRATES: And is anything noble which is evil and hurtful?

LACHES: I ought not to say that, Socrates.

SOCRATES: Then you would not admit that sort of endurance to be courage—for it is not noble, but courage is noble?

LACHES: You are right.

SOCRATES: Then, according to you, only the wise endurance is courage?

LACHES: It seems so.

e SOCRATES: But as to the epithet 'wise'—wise in what? In all things small as well as great? For example, if a man shows the quality of endurance in spending his money wisely, knowing that by spending he will acquire more in the end, do you call him courageous?

LACHES: Assuredly not.

SOCRATES: Or, for example, if a man is a physician, and his son, or some patient of his, has inflammation of the lungs, and begs that he may be allowed to eat or drink something, and the other is inflexible and refuses, is that courage?

193 LACHES: No, that is not courage at all, any more than the last.

SOCRATES: Again, take the case of one who endures in war, and is willing to fight, and wisely calculates and knows that others will help him, and that there will be fewer and inferior men against him than there are with him, and suppose that he has also advantages in position—would you say of such a one who endures with all this wisdom and preparation that he or some man in the opposing army who is in the opposite circumstances to these and yet endures and remains at his post is the braver?

b LACHES: I should say that the latter, Socrates, was the braver.

SOCRATES: But, surely, this is a foolish endurance in comparison with the other?

LACHES: That is true.

SOCRATES: Then you would say that he who in an engagement of cavalry endures, having a knowledge of horsemanship, is not so courageous as he who endures, having no such knowledge?

LACHES: So I should say.

SOCRATES: And he who endures, having a knowledge of the use of the sling, or the bow, or of any other art, is not so courageous as he who endures, not having such a knowledge?

c LACHES: True.

SOCRATES: And he who descends into a well, and dives, and holds out in this or any similar action, having no skill in diving or the like, is, as you would say, more courageous than those who have this skill?

LACHES: Why, Socrates, what else can a man say?

SOCRATES: Nothing, if that be what he thinks.

LACHES: But that is what I do think.

SOCRATES: And yet men who thus run risks and endure are foolish, Laches, in comparison with those who do the same things, having the skill to do them.

LACHES : That is true.

SOCRATES : But foolish boldness and endurance appeared before to be base and hurtful to us?

LACHES : Quite true.

SOCRATES : Whereas courage was acknowledged to be a noble quality.

LACHES : True.

SOCRATES : And now on the contrary we are saying that the foolish endurance, which was before held in dishonor, is courage.

LACHES : So we are.

SOCRATES : And are we right in saying so?

LACHES : Indeed, Socrates, I am sure that we are not right.

SOCRATES : Then according to your statement, you and I, Laches, are not attuned to the Dorian mode, which is a harmony of words and deeds, for our deeds are not in accordance with our words. Anyone would say that we had courage who saw us in action, but not, I imagine, he who heard us talking about courage just now.

LACHES : That is most true.

SOCRATES : And is this condition of ours satisfactory?

LACHES : Quite the reverse.

SOCRATES : Suppose, however, that we admit the principle of which we are speaking to a certain extent?

LACHES : To what extent and what principle do you mean? 194

SOCRATES : The principle of endurance. If you agree, we too must endure and persevere in the inquiry, and then courage will not laugh at our faintheartedness in searching for courage, which after all may frequently be endurance.

LACHES : I am ready to go on, Socrates, and yet I am unused to investigations of this sort. But the spirit of controversy has been aroused in me by what has been said, and I am really grieved at being thus unable to express my meaning. For I fancy that I do know the nature of courage, but, somehow or other, she has slipped away from me, and I cannot get hold of her and tell her nature. b

SOCRATES : But, my dear friend, should not the good sportsman follow the track, and not give up?

LACHES : Certainly, he should.

SOCRATES : Shall we then invite Nicias to join us? He may be better at the sport than we are. What do you say?

LACHES : I should like that. c

SOCRATES : Come then, Nicias, and do what you can to help your friends, who are tossing on the waves of argument, and at the last gasp. You see our extremity, and may save us and also settle your own opinion, if you tell us what you think about courage.

NICIAS : I have been thinking, Socrates, that you and Laches are not defining courage in the right way, for you have forgotten an excellent saying which I have heard from your own lips.

SOCRATES: What is it, Nicias?

d NICIAS: I have often heard you say that 'Every man is good in that in which he is wise, and bad in that in which he is unwise.'

SOCRATES: That is certainly true, Nicias.

NICIAS: And therefore if the brave man is good, he is also wise.

SOCRATES: Do you hear him, Laches?

LACHES: Yes, I hear him, but I do not very well understand him.

SOCRATES: I think that I understand him, and he appears to me to mean that courage is a sort of wisdom.

LACHES: What sort of wisdom, Socrates?

e SOCRATES: That is a question which you must ask of him.

LACHES: Yes.

SOCRATES: Tell him then, Nicias, what sort of wisdom you think courage to be, for you surely do not mean the wisdom which plays the flute?

NICIAS: Certainly not.

SOCRATES: Nor the wisdom which plays the lyre?

NICIAS: No.

SOCRATES: But what is this knowledge then, and of what?

LACHES: I think that you put the question to him very well, Socrates, and I would like him to say what is the nature of this knowledge or wisdom.

195 NICIAS: I mean to say, Laches, that courage is the knowledge of that which inspires fear or confidence in war, or in anything.

LACHES: How strangely he is talking, Socrates.

SOCRATES: Why do you say so, Laches?

LACHES: Why, surely courage is one thing, and wisdom another.

SOCRATES: That is just what Nicias denies.

LACHES: Yes, that is what he denies; that is where he is so silly.

SOCRATES: Suppose that we instruct instead of abusing him?

b NICIAS: Certainly, Socrates, but having been proved to be talking nonsense himself, Laches wants to prove that I have been doing the same.

LACHES: Very true, Nicias, and you are talking nonsense, as I shall endeavor to show. Let me ask you a question. Do not physicians know the dangers of disease? Or do the courageous know them? Or are the physicians the same as the courageous?

NICIAS: Not at all.

LACHES: No more than the husbandmen who know the dangers of husbandry, or than other craftsmen, who have a knowledge of that which inspires them with fear or confidence in their own arts, and yet c they are not courageous a whit the more for that.

SOCRATES: What do you think of Laches' argument, Nicias? He appears to be saying something of importance.

NICIAS : Yes, he is saying something, but it is not true.

SOCRATES : How so?

NICIAS : Why, because he thinks that the physician's knowledge of illness extends beyond the nature of health and disease. But in fact the physician knows no more than this. Do you imagine, Laches, that he knows whether health or illness is the more terrible to a man? Had not many a man better never get up from a sickbed? I should like to know whether you think that life is always better than death. May not death often be the better of the two? d

LACHES : Yes, certainly so in my opinion.

NICIAS : And do you think that the same things are terrible to those who had better die, and to those who had better live?

LACHES : Certainly not.

NICIAS : And do you suppose that the physician knows this, or indeed any other specialist, except the man who is skilled in the grounds of fear and hope? And him I call the courageous.

SOCRATES : Do you understand his meaning, Laches?

LACHES : Yes, I suppose that, in his way of speaking, the soothsayers are the courageous men. For who but one of them can know to whom to die or to live is better? And yet, Nicias, would you allow that you are yourself a soothsayer, or are you neither a soothsayer nor courageous? e

NICIAS : What! Do you mean to say that the soothsayer ought to know the grounds of hope or fear?

LACHES : Indeed I do. Who but he?

NICIAS : Much rather I should say he of whom I speak, for the soothsayer ought to know only the signs of things that are about to come to pass, whether it be death or disease, or loss of property, or victory, or defeat in war or in any sort of contest. But whether the suffering or not-suffering of these things will be best for a man is a question which is no more for a soothsayer to decide than for anyone else. 196

LACHES : I cannot understand what Nicias would be at, Socrates, for he represents the courageous as neither a soothsayer, nor a physician, nor in any other character—unless he means to say that he is a god. My opinion is that he does not like honestly to confess that he is talking nonsense, but that he shuffles up and down in order to conceal the difficulty into which he has got himself. You and I, Socrates, might have practiced a similar shuffle just now, if we had only wanted to avoid the appearance of inconsistency. And if we had been arguing in a court of law there might have been reason in so doing, but why should a man deck himself out with vain words at a meeting of friends such as this? b

SOCRATES : I quite agree with you, Laches, that he should not. c  
But perhaps Nicias is serious, and not merely talking for the sake of talking. Let us ask him just to explain what he means, and if he has

reason on his side we will agree with him; if not, we will instruct him.

LACHES: Do you ask him, Socrates, if you will. I think that I have asked enough.

SOCRATES: I do not see why I should not, and my questioning will do for both of us.

LACHES: Very good.

d SOCRATES: Then tell me, Nicias, or rather tell us, for Laches and I are partners in the argument, do you mean to affirm that courage is the knowledge of the grounds of hope and fear?

NICIAS: I do.

SOCRATES: And not every man has this knowledge; the physician and the soothsayer have it not, and they will not be courageous unless they acquire it—that is what you were saying?

NICIAS: I was.

SOCRATES: Then this is certainly not a thing which every sow would know, as the proverb says, and therefore she could not be courageous.

NICIAS: I think not.

e SOCRATES: Clearly not, Nicias, not even the sow of Crommyon would be called by you courageous. And this I say not as a joke, but because I think that he who assents to your doctrine cannot allow that any wild beast is courageous, unless he admits that a lion, or a leopard, or perhaps a boar, has such a degree of wisdom that he knows things which but a few human beings ever know by reason of their difficulty. He who takes your view of courage must affirm that a lion is not naturally more disposed to courage than a stag, nor a bull than a monkey.

197 LACHES: Capital, Socrates. Upon my word, that is truly good. And I hope, Nicias, that you will tell us whether you really mean that those animals which we all admit to be courageous are in fact wiser than mankind, or whether you will have the boldness, in the face of universal opinion, to deny their courage.

NICIAS: Why, Laches, I do not describe as courageous animals or any other creatures which have no fear of dangers because they are devoid of understanding, but only as fearless and senseless. Do you imagine that I should call all little children courageous, who fear no dangers because they have no understanding? There is a difference, to my way of thinking, between fearlessness and courage. I am of opinion that thoughtful courage is a quality possessed by very few, but that rashness and boldness, and fearlessness which has no forethought, are very common qualities possessed by many men, many women, many children, many animals. And you, and men in general, call by the term 'courageous' actions which I call rash—my courageous actions are wise actions.

LACHES: Behold, Socrates, how admirably, as he thinks, he

dresses himself out in words, while seeking to deprive of the honor of courage those whom all the world acknowledges to be courageous.

NICIAS: Not you, Laches, so do not be alarmed. I am quite willing to say of you, and also of Lamachus and of many other Athenians, that you are wise, being courageous.

LACHES: I could answer that, but I would not have you cast in my teeth that I am a haughty Aexonian.

SOCRATES: Do not answer him, Laches. I rather fancy that you are not aware of the source from which his wisdom is derived. He has got all this from my friend Damon, and Damon is always with Prodicus, who, of all the Sophists, is considered to be the best at analyzing the meaning of words of this sort.

LACHES: Yes, Socrates, and the examination of such niceties is a much more proper employment for a Sophist than for a great statesman whom the city chooses to preside over her affairs.

SOCRATES: Yes, my sweet friend, but great affairs and great minds properly go together. And I think that Nicias deserves that we should see what he has in view when he so defines courage.

LACHES: Then see for yourself, Socrates.

SOCRATES: That is what I am going to do, my dear friend. Do not, however, suppose I shall let you out of the partnership, for I shall expect you to apply your mind, and join with me in the consideration of the question.

LACHES: I will if you think that I ought.

SOCRATES: Yes, I do, but I must beg of you, Nicias, to begin again. You remember that we originally considered courage to be a part of virtue.

NICIAS: Very true.

SOCRATES: And you yourself said that it was a part, and there were many other parts, all of which taken together are called virtue.

NICIAS: Certainly.

SOCRATES: Do you agree with me about the parts? For I say that justice, temperance, and the like, are all of them parts of virtue as well as courage. Would you not say the same?

NICIAS: Certainly.

SOCRATES: Well then, so far we are agreed. And now let us proceed a step, and try to arrive at a similar agreement about the fearful and the hopeful. I do not want you to be thinking one thing and us another. Let me then tell you our opinion, and if I am wrong you shall set us right. In our opinion the terrible and the hopeful are the things which do and do not create fear, and fear is not of the present nor of the past, but is of future and expected evil. Do you not agree to that, Laches?

LACHES: Yes, Socrates, entirely.

SOCRATES: That is our view, Nicias. The terrible things, as I should say, are the evils which are future, and the hopeful are the

good or not-evil things which are future. Do you or do you not agree with me?

NICIAS: I agree.

SOCRATES: And the knowledge of these things you call courage?

NICIAS: Precisely.

SOCRATES: And now let me see whether you agree with Laches and myself as to a third point.

NICIAS: What is that?

d       SOCRATES: I will tell you. He and I have a notion that there is not one knowledge or science of the past, another of the present, a third of what may and will be best in the future, but that of all three there is one science only. For example, there is one science of medicine which is concerned with the superintendence of health equally  
e in all times, present, past, and future, and one science of husbandry in like manner, which is concerned with the productions of the earth in all times. As to the military art, you yourselves will be my witnesses that it makes excellent provision for the future as well as the present, and that the general claims to be the master and not the servant  
199 of the soothsayer, because he knows better what is happening or is likely to happen in war, and accordingly the law places the soothsayer under the general, and not the general under the soothsayer. Am I not correct in saying so, Laches?

LACHES: Quite correct.

SOCRATES: And do you, Nicias, also acknowledge that the same science has understanding of the same things, whether future, present, or past?

NICIAS: Yes, indeed, Socrates, that is my opinion.

b       SOCRATES: And courage, my friend, is, as you say, a knowledge of the fearful and of the hopeful?

NICIAS: Yes.

SOCRATES: And the fearful, and the hopeful, are admitted to be future goods and future evils?

NICIAS: True.

SOCRATES: And the same science has to do with the same things in the future or at any time?

NICIAS: That is true.

SOCRATES: Then courage is a science which is concerned not only with the fearful and hopeful, for they are future only. Courage, like the other sciences, is concerned not only with good and evil  
c of the future, but of the present and past, and of any time.

NICIAS: That, as I suppose, is true.

SOCRATES: Then the answer which you have given, Nicias, includes only a third part of courage, but our question extended to the whole nature of courage. And according to your view—that is, according to your present view—courage is not only the knowledge of

the hopeful and the fearful, but seems to include nearly every good and evil without reference to time. What do you say to that alteration in your statement?

NICIAS: I agree, Socrates.

SOCRATES: But then, my dear friend, if a man knew all good and evil, and how they are and have been and will be produced, would he not be perfect, and wanting in no virtue, whether justice or temperance or holiness? He alone would be competent to distinguish between what is to be feared and what is not, whether it be supernatural or natural, and would take the proper precautions to secure that all shall be well, for he would know how to deal aright both with gods and with men.

NICIAS: I think, Socrates, that there is a great deal of truth in what you say.

SOCRATES: But then, Nicias, courage, according to this new definition of yours, instead of being only a part of virtue, will be all virtue?

NICIAS: It would seem so.

SOCRATES: But we were saying that courage is one of the parts of virtue?

NICIAS: Yes, that was what we were saying.

SOCRATES: And that is in contradiction with our present view?

NICIAS: That appears to be the case.

SOCRATES: Then, Nicias, we have not discovered what courage is.

NICIAS: It seems not.

LACHES: And yet, friend Nicias, I imagined that you would have made the discovery, when you were so contemptuous of the answers which I made to Socrates. I had very great hopes that you would have been led to it by the wisdom of Damon.

NICIAS: I perceive, Laches, that you think nothing of having displayed your ignorance of the nature of courage, but you look only to see whether I have not made a similar display. And if we are both equally ignorant of the things which a man with any self-respect should know, that, I suppose, will be of no consequence. You certainly appear to me very like the rest of the world, looking at your neighbor and not at yourself. I am of opinion that enough has been said on the subject which we have been discussing, and if the treatment has been in any way inadequate, that may be hereafter corrected with the help of Damon, whom you think to laugh down although you have never seen him, and of others. And when I am satisfied myself, I will freely impart my satisfaction to you, for I think that you are very much in want of knowledge.

LACHES: You are a philosopher, Nicias; of that I am aware. Nevertheless I would recommend Lysimachus and Melesias not to

take you and me as advisers about the education of their children, but, as I said at first, they should ask Socrates and not let him off; if my own sons were old enough, I should do the same.

NICIAS: To that I quite agree, if Socrates is willing to take them under his charge. I should not wish for anyone else to be the tutor of  
 d Niceratus. But I observe that whenever I mention the matter to him he recommends to me some other tutor and refuses himself. Perhaps he may be more ready to listen to you, Lysimachus.

LYSIMACHUS: He ought, Nicias, for certainly I would do things for him which I would not do for many others. What do you say, Socrates—will you comply? And are you ready to give assistance in the improvement of the youths?

e SOCRAATES: Indeed, Lysimachus, I should be very wrong in refusing to aid in the improvement of anybody. And if I had shown in this conversation that I had a knowledge which Nicias and Laches have not, then I admit that you would be right in inviting me to perform this duty, but as we are all in the same perplexity, why should  
 201 one of us be preferred to another? I certainly think that no one should, and under these circumstances, let me offer you a piece of advice—  
 and this need not go farther than ourselves. I maintain, my friends, that every one of us should seek out the best teacher whom he can find, first for ourselves who are greatly in need of one, and then for the youths, regardless of expense or anything. But I cannot advise that we remain as we are. And if anyone laughs at us for going to school at  
 b our age, I would quote to them the authority of Homer, who says, 'Modesty is not good for a needy man.'<sup>4</sup> Let us then, regardless of what may be said of us, concern ourselves both with our own education and that of the youths, together.

LYSIMACHUS: I like your proposal, Socrates, and as I am the oldest, I am also the most eager to go to school with the boys. Let me  
 c beg a favor of you. Come to my house tomorrow at dawn, and we will advise about these matters. For the present, let us make an end of the conversation.

SOCRAATES: I will come to you tomorrow, Lysimachus, as you propose, God willing.

<sup>4</sup> *Odyssey* 17.347.

# LYSIS

---

*The interest of the Lysis does not lie in the matter of the discussion but in the manner. Socrates questions two boys, close friends, on what friendship is. They are sure that they know, but the more they try to explain the less they feel that they really know. They come to see under Socrates' guiding hand that every statement they make is unsatisfactory. But his object is by no means to resolve their difficulties for them. He declares that he knows as little as they do. How ridiculous it is, he tells them at the end, that he and they who are friends should not know what friendship is.*

*This method of teaching is Socrates' own among the great teachers of mankind. All of the others would have been concerned to give Lysis and his friend a higher ideal of friendship, to point them on to a loftier idea, to form in their young minds a mold of nobility which might persist. That Socrates would have been pleased to do all this is a matter of course; the reason he made no attempt is that he did not believe it could be done. It was his conviction that truth cannot be taught, it must be sought. His only desire in talking to the boys was to make them use their minds. To him the best that could be done for them was to arouse them to think. In that way they might finally turn the process to their own inner world and examine themselves—"The unexamined life is not worth living"—and learn to know themselves. So and only so could they discover the spark of good within, which they alone could kindle into a flame. Among the dialogues the Lysis has no superior as an illustration of Socrates' method.*

203 I was walking straight from the Academy to the Lyceum, by the road which skirts the outside of the walls, and had reached the little gate where is the source of the Panops, when I fell in with Hippothales, the son of Hieronymus, Ctesippus the Paeanian, and some more young men, standing together in a group.

Hippothales, seeing me approach, called out, Ha, Socrates, whither b and whence?

From the Academy, I replied, and I am going straight to the Lyceum.

Straight to us, I hope, cried he. Won't you turn in? It will be worth your while.

Turn in where? said I. And whom do you mean by us?

There, he replied, pointing out to me an enclosure facing the wall, with a door open. There we are passing our time, he added, we whom you see, and a great many other fine fellows too.

And what's all this, pray? And how are you passing your time?

204 This is a palaestra that has been lately erected, and we are passing our time principally in conversations, of which we should be very glad to give you a share.

You are very kind, I answered. And who is your teacher there? A friend and admirer of yours, Miccus.

And no ordinary man either, I rejoined, a most competent Sophist.

Won't you come with us, then, he said, to see both him and all our party there too?

b Here, where I am, was my reply, I should like first to be informed, what I am to enter for, and who is your prime beauty?

Some think one, and some another, Socrates.

But whom do you think, Hippothales? Tell me this.

c He answered only with a blush. So I added, Hippothales, son of Hieronymus, there is no longer any need for you to tell me whether you are in love or not, since I am sure you are not only in love, but pretty far gone in it too by this time. For though in most matters I am a poor useless creature, yet by some means or other I have received from heaven the gift of being able to detect at a glance both a lover and a beloved.

On hearing this, he blushed still more deeply than before. Whereupon Ctesippus broke in, It is very fine of you, Hippothales, turning red in this way, and making such a fuss about telling Socrates the name, when he is quite sure, if he stays ever so short a time in your company, to be bored to death by hearing it always repeated. At any rate, Socrates, he has deafened our ears for us, and filled them d full of Lysis. Nay, if he be but a little tipsy when he talks of him,

---

From *Socratic Discourses by Plato and Xenophon*, translated by J. Wright (Everyman's Library, London and New York, first pub. 1910).

we can easily fancy, on waking, even the next morning, that we are still hearing the name of Lysis. But his constant talk about him, bad as it is, is not the worst—nothing like so bad as when he begins to deluge us with his poems and speeches, and, worse and worse, to sing a song on his darling in a portentous voice, which we are compelled to listen to with patience.

Your Lysis must be quite a juvenile, I rejoined. I conjecture this e from my not knowing the name when you mentioned it.

Why, they don't often call him by his own name, Socrates; he still goes by his father's, the latter being so well known. Still, I am sure, you cannot be a stranger to the boy's appearance; that's quite enough to know him by.

Say, then, whose son he is.

Democrates' of Aexone, his eldest.

Well done, Hippothales, said I. A noble, and in every way a brilliant choice is this which you have made. But come now, go on 205 about him with me, just as you do with your friends here, that I may know what language a lover ought to hold with regard to his favorite, either to his face or before others.

And do you really, Socrates, set any value on what this fellow says?

Do you mean, I asked, absolutely to deny being in love with the person he mentions?

No, not that, he answered, but I do the making verses or speeches on him.

He is out of his senses, doting, mad, cried Ctesippus.

But, I replied, I don't want to hear any of your verses, Hippothales, nor any song either that you may have composed upon your b darling, but I should like to have an idea of their sense, that I may know how you behave toward your favorite.

Ctesippus will tell you all about it, Socrates, I don't doubt. He must remember it well enough, if it be true, as he says, that I dinned it into his ears till he was deaf.

Oh, I know it, cried Ctesippus, right thoroughly too. It is such a joke, Socrates. The idea of a lover devoting himself exclusively to the object of his love, and yet having nothing of a personal interest to say to him that any child might not say—isn't it absurd? But stories c that all the city rings with, about Democrates, and Lysis, the boy's grandfather, and all his ancestors—their wealth, their breeds of horses, their victories at the Pythian, Isthmian, Nemean with four steeds and single—all these he works into poem and speech, aye, and stories too, still further out-of-date than these. For in a sort of poem the other day, he gave us the whole account of Heracles' entertain- d ment, telling us how their ancestor received that hero into his house on the strength of his relationship, being himself son of Zeus, by the daughter of the founder of Aexone. Yes, Socrates, such, among others,

are the old wives' tales that our lover here is ever singing and reciting, and condemning us moreover to listen to.

On hearing this, I said to the lover, You ridiculous Hippothales, before you have gained the victory, you compose and sing a hymn of praise on yourself.

It isn't on myself, Socrates, that I either make or sing it.

You fancy not, said I.

How is it so? said he.

e In every way, I replied, these songs have reference to you. If you succeed in winning such a youth as you describe, all that you have said and sung will redound to your honor, and be in fact your hymn of triumph, as if you had gained a victory in obtaining such a favorite. But if he escape your grasp, then the higher the eulogium you have passed on him, the greater will be the blessings which you will seem to have missed, and the greater consequently the ridicule you will incur. All connoisseurs, therefore, in matters of love, are careful of praising their favorites before they have won them, from their doubts as to the result of the affair. Moreover, your beauties, when lauded and made much of, become gorged with pride and arrogance. Don't you think so?

I do, he replied.

And the more arrogant they are, the harder they become to be caught?

It is to be expected, at any rate.

Well, what should you say to a huntsman that frightened the prey he was in chase of, and rendered it harder to be caught?

b That he was a very sorry one, certainly.

And if by speech and song he renders it wild instead of luring it, he can be no favorite of the Muses, can he?

I think not.

Have a care then, Hippothales, that you do not lay yourself open with your poetry to all these reproaches. And yet I am sure, that to a man who injured himself by his poetry, you would not be willing to accord the title of a good poet, so long as he did himself harm.

c No, indeed, that would be too unreasonable, he replied. But it is on this very account, Socrates, that I put myself in your hands, and beg you to give me any advice you may have to bestow, as to the course of conduct or conversation that a lover ought to adopt in order to render himself agreeable to the object of his affection.

That were no such easy matter, I replied. But if you would bring me to speak with Lysis, perhaps I could give you a specimen of what you ought to say to him, in place of the speeches and songs which you are in the habit of treating him with, according to your friends here.

Well, there is no difficulty in that, he rejoined. If you will only go into the palaestra with Ctesippus, and sit down and begin to talk, I

have little doubt that he will come to you of his own accord, for he is singularly fond of listening. And, moreover, as they are keeping the Hermaea, boys and men are all mixed up together today. So he is pretty certain to join you. But if he does not, Ctesippus knows him, through his cousin Menexenus, who is Lysis' particular friend. You can get Ctesippus, therefore, to summon him, in case he does not come of himself.

This be our plan, I cried. And taking Ctesippus with me, I walked toward the palaestra, the rest following.

On entering we found that the boys had finished their sacrifices, and, the ceremony being now pretty well over, were playing together at knucklebones, all in their holiday dress. The greater part were carrying on their game in the court outside, but some of them were in a corner of the dressing room, playing at odd and even with a number of bones which they drew out of small baskets. Round these were stationed others looking on, among whom was Lysis, and he stood in the midst of boys and youths with a chaplet on his head, unmatched in face or form. You would say he was not beautiful merely, but even of a noble mien. For ourselves, we withdrew to the opposite part of the room, and sitting down, as nothing was going on there, began to talk. While thus engaged, Lysis kept turning round and eyeing us, evidently wishing to join us. For some time though he remained in doubt, not liking to walk up alone. But when Menexenus looked in from his game in the court and on seeing Ctesippus and me came to sit down with us, Lysis also followed at sight of his friend, and took a seat by his side.

There came up, moreover, the rest of our party, among them Hippothales, who, seeing them form into a good-sized group, screened himself behind them in a position where he did not think he could be seen by Lysis—so fearful was he of giving him offense. And thus placed near him, he listened to our conversation.

I began it by turning my eyes on Menexenus, and saying, Son of Demophon, which of you two is the elder?

It is a disputed point, he replied.

And do you dispute, too, which is the better fellow?

Right heartily, was his answer.

And so too, I suppose, which is the more beautiful?

At this they both laughed.

I will not ask you, I added, which is the wealthier, for you are friends, are you not?

Oh dear, yes! they both cried.

And friends, they tell us, share and share alike; so in this respect, at any rate, there will be no difference between you, if only you give me a true account of your friendship.

To this they both assented.

I was then proceeding to inquire which of the two excelled in

justice, and which in wisdom, when someone came up and carried off Menexenus, telling him that the master of the palaestra wanted him—I presume, on business connected with the sacrifice. Accordingly he left us, and I went on questioning Lysis.

Lysis, said I, I suppose your father and mother love you very dearly?

Very dearly, he answered.

They would wish you then to be as happy as possible.

Of course.

e Do you think a man happy if he is a slave, and may not do any thing he wants?

No, that indeed I don't.

Well, if your father and mother love you, and wish you to become happy, it is clear that they try in every way to make you happy.

To be sure they do.

They allow you then, I suppose, to do what you wish, and never scold you, or hinder you from doing what you want to do?

Yes, but they do though, Socrates, and pretty frequently too.

208 How? said I. They wish you to be happy, and yet hinder you from doing what you want. But tell me this. If you wanted to ride on one of your father's chariots, and take the reins during a race, would they not allow you?

No, most assuredly they would not.

Whom would they then? I asked.

There is a charioteer paid by my father.

Paid! cried I. Do they allow a paid servant in preference to you to do what he pleases with the horses, and, what is more, give him money for so doing?

b Not a doubt about it, Socrates, he replied.

Well, but your pair of mules I am sure they let you drive, and even if you wished to take the whip and whip them, they would allow you.

Allow me, would they? said he.

Would they not? said I. Is there no one allowed to whip them?

Of course there is—the mule driver.

Is he a slave or free?

A slave, he answered.

c A slave then, it appears, they think of more account than you, their son; they entrust their property to him rather than to you, and they allow him to do what he pleases, while you they hinder. But answer me further. Do they let you rule yourself, or not even allow you this?

Rule myself! I should think not, said he.

You have someone to rule you, then?

Yes, my governor here.

Not a slave?

Yes, but he is, though, ours.

Shocking! I exclaimed. A free man to be ruled by a slave. But how, pray, does this governor exercise his authority?

He takes me to school, of course.

And do you mean to say that they rule you there, too—the schoolmasters?

Most certainly they do.

Very many then, it appears, are the masters and rulers whom your father sets over you on purpose. But come now, when you go home to your mother, she, I am sure, lets you do what you please—that you may be as happy as she can make you—either with her wool or her loom, when she is spinning. It cannot possibly be that she hinders you from touching her comb or her shuttle, or any other of her spinning implements.

He burst out laughing. I can assure you, Socrates, he said, she not only hinders me, but would get me a good beating if I did touch them.

Beating! cried I. You haven't done your father or mother any wrong, have you?

Not I, he answered.

Whatever is the reason, then, that they hinder you, in this shocking manner, from being happy, and acting as you please, and keep you, all the day long, in a state of bondage to someone or other—and, in a word, of doing hardly anything at all you want to do? So that it seems you get no good whatever from your fortune, large as it is, but all have control over it, rather than you, nor, again, from that beautiful person of yours, for it, too, is under the care and charge of other people, while you, poor Lysis, have control over nothing at all, nor do a single thing you wish.

Because I'm not old enough yet, Socrates.

That should be no hindrance, son of Democrates, since there are things, I fancy, which both your father and mother allow you to do, without waiting for you to be old enough. When they wish, for example, to have anything written or read, it is you, I conceive, whom they appoint to the office, before anyone else in the house. Isn't it?

Beyond a question, he replied.

In these matters, then, you are allowed to do as you please; you may write whichever letter you like first, and whichever you like second. And in reading you enjoy the same liberty. And when you take up your lyre, neither father nor mother, I imagine, hinders you from tightening or loosening such strings as you choose, or from playing with your fingers or stick, as you may think proper. Or do they hinder you in such matters?

Oh dear, no! he exclaimed.

What in the world, then, can be the reason, Lysis, that in these matters they don't hinder you, while in the former they do?

I suppose it is, Socrates, because I understand the one, and don't understand the other.

Oh! That's it, is it, my fine fellow? It is not, then, for you to be old enough that your father is waiting in all cases, but on the very day that he thinks you are wiser than he is, he will hand over to you himself and his property.

I shouldn't wonder, said he.

Nor I, said I. But again. Does your neighbor follow the same rule that your father does with regard to you? Do you expect he will  
d hand over to you his house to manage, as soon as he thinks you have a better idea of the management of a house than he has himself, or will he keep it in his own hands?

Hand it over to me, I should think.

And the Athenians? Will they, do you imagine, hand over to you their matters directly they perceive that you are wise enough to manage them?

Yes, I expect so.

But come now, I asked, what will the Great King do? When his meat is cooking, will he allow his eldest son, heir to the throne of Asia,  
e to throw into the gravy whatever he chooses, or us, rather, if we come before him, and prove that we have a better idea than his son has of dressing a dish?

Us, to be sure, said he.

And the prince he won't allow to put in the least morsel even, while with us he would make no difficulty, though we wished to throw in salt by handfuls?

Exactly.

Once more. If his son had something the matter with his eyes, would he allow him to touch them himself, if he thought him ignorant  
210 of the healing art, or rather hinder him?

Hinder him.

But against us, on the other hand, if he conceived us to be skilled in the art, he would, I imagine, make no objection, even though we wished to force open the eyes, and sprinkle in ashes, as he would suppose us to be rightly advised.

True, he would not.

And so, with everything else whatsoever, he would entrust it to us rather than to himself or his son, if he believed that we knew more about it than either of them did.

Necessarily he would, Socrates.

You see then, said I, how the case stands, dear Lysis. All matters of which we have a good idea will be put into our hands by all  
b people, whether Greeks or barbarians, men or women. We shall act, with regard to them, exactly as we please; no one will intentionally stand in our way. And not only shall we be free ourselves in these matters, but we shall be lords over others, and they will be in fact our

property, as we shall have the enjoyment of them. With regard to matters, on the other hand, into which we have acquired no insight, no one will ever allow us to act as we think proper, but all persons, to the best of their power, will hinder us from meddling with them—not only strangers, but even our own father and mother, and if we possess any nearer relation. And we ourselves, in these matters, shall be subject to others, and they will be, in fact, the property of others, as we shall derive no advantage from them. Do you allow this to be the case?

I do.

Will anyone, then, count us his friends, will anyone love us in those matters in which we are of no use?

Indeed no.

According to this, then, not even you are loved by your own father, nor is anyone else by anyone else in the world, in so far as you or he is useless?

So it would appear, he said.

If, therefore, you acquire knowledge, my son, all men will be friendly to you, all men will be attached to you, for you will be useful and good. If not, you will have no friend in anyone, not even in your father or mother, or any of your own family. Now is it possible, Lysis, for a man to have a great idea of himself in those matters of which he has yet no idea?

How can he possibly? he replied.

And if you still require, as you do, an instructor, you are still without ideas.

True, he answered.

It cannot be, then, that you have a great idea of yourself, if as yet you have no idea.

No, really, Socrates, I don't see how I can.

On receiving this reply from Lysis, I turned my eyes on Hippothales, and was on the point of making a great blunder. For it came into my head to say, This is the way, Hippothales, that you should talk to your favorite, humbling and checking, instead of puffing him up and pampering him, as you now do. However, on seeing him writhing with agitation at the turn the conversation was taking, I recollected that though standing so near, he didn't wish to be seen by Lysis. So I recovered myself in time, and forbore to address him.

At this moment, too, Menexenus returned and took the seat by Lysis, from which he had previously arisen.

Whereupon Lysis, in a boyish fondling way, said to me in a low voice, so that Menexenus couldn't hear, I say, Socrates, say over again to Menexenus what you have been saying to me.

No, Lysis, I replied, *you* must tell him that; you were certainly attending.

I should think I was too, he rejoined.

Try to remember it then, as well as you can, that you may give  
b him a clear account of the whole, and if there's anything you forget, ask me about it some other day—the first time you meet me.

Well, I'll do as you tell me, Socrates, with all my heart; you may rely upon that. But say something else to him now, will you, that I, too, may hear it, till it's time for me to go home.

Well, I must do so, I replied, since it's you who bid me. But/ mind you come to my aid, if Menexenus tries to baffle me. You know don't you, that he's fond of a dispute?

Oh yes, desperately, I know. And that's the very reason I want  
c you to talk with him.

That I may make myself ridiculous, eh?

Oh dear, no, Socrates, but that you may put him down.

Put him down, indeed, cried I. That's no such easy matter. He's a redoubtable man, this, a scholar of Ctesippus'. And here's his master too, himself, to help him—don't you see?—Ctesippus.

Trouble yourself about no one, Socrates, he said, but begin, attack him.

As you will, said I.

At this point of our byplay Ctesippus cried out, What's that you  
d two there are feasting on by yourselves, without giving us a share?

Never fear, said I, you shall have a share. There's something I've said that Lysis here doesn't understand. He says, though, he thinks Menexenus knows, and bids me ask him.

Why don't you ask him then? he rejoined.

Just what I mean to do, I replied. Answer, Menexenus, the questions I ask. From my earliest childhood I have had a particular  
e fancy; everyone has. One longs for horses, another for dogs, a third for money, a fourth for office. For my part, I look on these matters with equanimity, but on the acquisition of friends, with all a lover's passion, and I would choose to obtain a good friend rather than the best quail or cock in the world; I should prefer one to both horse and dog—nay, I fully believe, that I would far sooner acquire a friend and companion, than all the gold of Darius, aye, or than Darius him-  
212 self. So fond am I of friendship. On seeing, therefore, you and Lysis, I am lost in wonder, while I count you most happy, at your being able, at your years, to acquire this treasure with such readiness and ease—in that you, Menexenus, have gained so early and true a friend in Lysis, and he the same in you—while I, on the contrary, am so far from making the acquisition, that I do not even know how one man becomes the friend of another, but wish on this very point to appeal to you as a connoisseur. Answer me this. As soon as one man loves another, which of the two becomes the friend—the lover of the loved,  
b or the loved of the lover? Or does it make no difference?

None in the world, that I can see, he replied.

How? said I. Are both friends, if only one loves?

I think so, he answered.

Indeed! Is it not possible for one who loves, not to be loved in return by the object of his love?

It is.

Nay, is it not possible for him even to be hated—treatment, if I mistake not, which lovers frequently fancy they receive at the hands of their favorites? Though they love their darlings as dearly as possible, they often imagine that they are not loved in return, often that they are even hated. Don't you believe this to be true?

Quite true, he replied.

Well, in such a case as this, the one loves, the other is loved.

Just so.

Which of the two, then, is the friend of the other—the lover of the loved, whether or no he be loved in return, and even if he be hated, or the loved of the lover? Or is neither the friend of the other, unless both love each other?

The latter certainly seems to be the case, Socrates.

If so, I continued, we think differently now from what we did before. Then it appeared that if one loved, both were friends, but now, that unless both love, neither are friends.

Yes, I'm afraid we have contradicted ourselves.

This being the case then, the lover is not a friend to anything that does not love him in return.

Apparently not.

People, then, are not friends to horses, unless their horses love them in return, nor friends to quails or to dogs, nor again, to wine or to gymnastics, unless their love be returned—nor friends to wisdom, unless wisdom loves them in return. But in each of these cases, the individual loves the object, but is not a friend to it, and the poet is wrong who says,

Happy the man who, to whom he's a friend, has children, and horses  
Metlesome, dogs of the chase, guest in a faraway land.<sup>1</sup>

I don't think he is wrong, Socrates.

But do you think he's right?

Yes, I do.

The lover then, it appears, Menexenus, is a friend to the object of his love, whether the object love, or even hate him. Just as to quite young children, who are either not yet old enough to love, or who are old enough to feel hatred when punished by father or mother, their parents, all the time even that they are being hated, are friends in the very highest degree.

Yes, such appears to be the case.

<sup>1</sup> Solon 21.2.

By this reasoning, then, it is not the object of love that is the friend, but the lover.

Apparently.

And so, not the object of hatred that is the enemy, but the hater. Clearly.

It frequently happens, then, that people are enemies to those  
 b who love them, and friends to those who hate them—that is, are enemies to their friends, and friends to their enemies—if it be true that the lover is the friend, but not the loved. But surely, my dear friend, it were grossly unreasonable, nay, rather, I think altogether impossible, for a man to be a friend to his enemy, and an enemy to his friend.

Yes, Socrates, it does seem impossible.

Well, then, if this be impossible, it must be the object of the love that is the friend to the lover.

Clearly.

And so again, the object of the hatred that is the enemy to the hater.

Necessarily.

But if this be true, we cannot help arriving at the same conclusion  
 c as we did in the former case—namely, that it often happens that a man is not a friend, but even an enemy to a friend, as often, that is, as he is not loved, but even hated by the man whom he loves—and often again, that he is not an enemy, but even a friend to an enemy, as often, in fact, as he is not hated, but even loved by the man whom he hates.

No, I'm afraid we can't.

What are we to do then, said I, if neither those who love are to be friends, nor those who are loved, nor, again, those who both love and are loved? Are there any other people besides these that we can say become friends to each other?

To tell you the truth, Socrates, said he, I don't see my way at all.

Is it possible, Menexenus, said I, that from first to last we have  
 d been conducting our search improperly?

I am sure I think it is, Socrates, cried Lysis. And he blushed as he said so. For the words seemed to burst from him against his will in the intensity of the interest he was paying to the conversation—an interest which his countenance had evinced all the time we were talking.

I then, wishing to relieve Menexenus, and charmed with the other's intelligence, turned to Lysis, and directing my discourse to him,  
 e observed, Yes, Lysis, you are quite right, I think, in saying that if we had conducted our search properly, we should never have lost ourselves in this manner. Let us proceed, however, on this line of inquiry no longer—for I look upon it as a very difficult sort of road—but let us go back again to that point at which we turned aside, and follow  
 214 in the steps of the poets. For poets, I conceive, are as good as fa-

thers and guides to us in matters of wisdom. Well, the poets, if I mistake not, put forward no slight claims for those who happen to be friends, but tell us that it is God himself who makes them friends, by leading them one to another. They express, if I remember right, their opinion thus: 'Like men, I trow, to like, God ever leads,'<sup>2</sup> and makes them known. You have met with the verse, have you not? b

Oh, yes.

And also with the writings of those learned sages which tell the same story—namely, that like must of necessity be ever friendly with like. And these are they, if I mistake not, who talk and write on nature and the universe.

True, they are.

Well, do you think they are right in what they say? I asked.

Perhaps, said he.

Perhaps, I answered, in half—perhaps, too, even in all—only we don't understand. For, as it appears to us, the nearer wicked men c come to each other, and the more they see of each other, the greater enemies they become. For they injure each other. And it is impossible, I take it, for men to be friends, if they injure and are injured in turn.

So it is, he replied.

By this, then, it would appear, that half of their assertion cannot be true, if we suppose them to mean that wicked men are like one another.

So it would.

But they mean to say, I imagine, that the good are like and friendly with the good, but that the bad, as is remarked of them in another place, are not ever even like themselves, but are variable and not to be reckoned upon. And if a thing be unlike and at variance with d itself, it will be long, I take it, before it becomes like to or friendly with anything else. Don't you think so too?

I do, he answered.

When, therefore, my friend, our authors assert that like is friendly with like, they mean, I imagine, to intimate, though obscurely enough, that the good man is a friend to the good man only, but that the bad man never engages in a true friendship either with a good or a bad man. Do you agree?

He nodded assent.

We know then now, I continued, who it is that are friends, for our argument shows us that it must be those who are good.

Quite clearly too, I think, said he. e

And so do I, I rejoined. Still there is a something in the way that troubles me; so let us, with the help of heaven, see what it is that I suspect. Like men are friendly with like men, in so far as they are like, and such a man is useful to such a man. Or rather, let us put it in

<sup>2</sup> *Odyssey* 17.218.

215 this way. Is there any good or harm that a like thing can do to a like thing, which it cannot also do to itself? Is there any that can be done to it, which cannot also be done to it by itself? And if not, how can such things be held in regard by each other, when they have no means of assisting one another? Can this possibly be?

No, not possibly.

And if a thing be not held in regard, can it be a friend?

Certainly not.

But, you will say, the like man is not a friend to the like man, but the good will be a friend to the good, in so far as he is good, not in so far as he is like.

Perhaps I may.

And I should rejoin, Will not the good man, in so far as he is good, be found to be sufficient for himself?

Yes.

b And if sufficient, he will want nothing so far as his sufficiency goes.

Of course not.

And if he does not want anything he won't feel regard for anything either.

To be sure not.

And what he does not feel regard for, he cannot love.

Not he.

And if he does not love, he won't be a friend.

Clearly not.

How then, I wonder, will the good be ever friends at all with the good, when neither in absence do they feel regret for each other, being sufficient for themselves apart, nor when present together have they any need of one another? Is there any possible way by which such people can be brought to care for each other?

None whatever.

c And if they do not care for each other, they cannot possibly be friends.

True, they cannot.

Look and see then, Lysis, how we have been led into error. If I mistake not, we are deceived in the whole, and not only in the half.

How so? he asked.

Once upon a time, I replied, I heard a statement made which has just this moment flashed across my mind. It was that nothing is so hostile to like as like, none so hostile to the good as the good. And among other arguments, my informant adduced the authority of  
d Hesiod, telling me that, according to him, 'Potter ever jars with potter, bard with bard, and poor with poor.'<sup>8</sup> And so, he added, by a universal and infallible law the nearer any two things resemble one

<sup>8</sup> *Works and Days* 25.

another, the fuller do they become of envy, strife, and hatred—and the greater the dissimilarity, the greater the friendship. For the poor are obliged to make themselves friends of the rich, and the weak of the strong, for the sake of their assistance; the sick man also must be friendly with the physician, and, in short, everyone who is without knowledge must feel regard and affection for those who possess it. Nay, he proceeded with increased magnificence of position to assert e that the like was so far from being friendly with the like, that the exact opposite was the case; the more any two things were contrary, the more were they friendly to each other. For everything, he says, craves for its contrary, and not for its like—the dry craves for moisture, the cold for heat, the bitter for sweetness, the sharp for bluntness, the empty to be filled, the full to be emptied. And everything else follows the same rule. For the contrary, he added, is food to the contrary; the like can derive no advantage from the like. And I can assure you I thought him extremely clever as he said all this. He stated 216 his case so well. But you, my friends, what do you think of it?

Oh, it seems very fair at first hearing, said Menexenus.

Shall we admit then that nothing is so friendly to a thing as its contrary?

By all means.

But if we do, Menexenus, will there not spring upon us suddenly and uncouthly and exultingly those universal-knowledge men, the masters of dispute, and ask us, whether there is anything in the world so contrary to enmity as friendship? And if they do, what must be our answer? Can we possibly help admitting that they are right? b

No, we cannot.

Well then, they will say, is friendship a friend to enmity, or enmity to friendship?

Neither one nor the other, he replied.

But justice, I suppose, is a friend to injustice, temperance to intemperance, good to evil.

No, I don't think this can be the case.

Well but, I rejoined, if one thing is friend to another thing in virtue of being its contrary, these things must of necessity be friendly.

So they must, he allowed.

It follows then, I think, that neither like is friendly with like, nor contrary with contrary.

Apparently it does.

Well, then, said I, let us look again, and see whether we be not c still as far as ever from finding friendship, since it is clearly none of these things I have mentioned, but whether that which is neither good nor evil may not possibly turn out, however late, to be friendly with the good.

How do you mean? he asked.

Why, to tell you the truth, said I, I don't know myself, being quite

dizzied by the entanglement of the subject. I am inclined though to think that, in the words of the old proverb, the beautiful is friendly. Certainly the friendly has the appearance of being something soft and smooth and slippery, and probably it is from being of this character that it slides and slips through our fingers so easily. Now I am of this opinion, because the good, I assert, is beautiful. Don't you think so?

I do, said he.

I further assert, with a diviner's foresight, that to the beautiful and good that which is neither good nor evil is friendly. And my reasons for divining this I will tell you. I conceive I recognize three distinct classes, good, evil, and, thirdly, that which is neither good nor evil. Do you allow this distinction?

I do.

Now that good is friendly with good, or evil with evil, or good with evil, we are hindered by our previous arguments from believing. It remains then that, if there be anything friendly with anything, that which is neither good nor evil must be friendly either with the good or with that which resembles itself. For nothing, I am sure, can be friendly with evil.

True.

But neither can like be friendly with like; this we also said, did we not?

We did.

That then which is neither good nor evil will not be friendly with that which resembles itself.

Clearly not.

217 It follows then, I conceive, that friendship can only exist between good and that which is neither evil nor good.

Necessarily, as it appears.

What think you then, my children? I proceeded to say. Is our present position guiding us in a right direction? If we look attentively, we perceive that a body which is in health has no need whatever of the medical art or of any assistance, for it is sufficient in itself. And therefore no one in health is friendly with a physician on account of his health.

Just so, he replied.

But the sick man *is*, I imagine, on account of his sickness.

Undoubtedly.

b Sickness, you will allow, is an evil, the art of medicine, both useful and good.

Yes.

But a body, if I mistake not, in so far as it is a body, is neither good nor evil.

Exactly.

A body though is compelled, on account of sickness, to embrace and love the medical art.

I think so.

That, then, which is neither evil nor good becomes friendly with good, on account of the presence of evil.

Apparently.

But evidently it becomes so before it is itself made evil by the evil which it contains. For, once become evil, it can no longer, you will allow, be desirous of or friendly with good, for evil, we said, cannot possibly be friendly with good.

No, it cannot possibly.

Now mark what I say. I say that some things are themselves such as that which is present with them, some things are not such. For example, if you dye a substance with any color, the color which is dyed in is present, I imagine, with the substance which is dyed.

To be sure it is.

After the process then, is the dyed substance such, in point of color, as that which is applied?

I don't understand, he said.

But you will thus, said I. If anyone were to dye your locks of gold with white lead, would they, after the dyeing, be, or appear, white?

Appear.

And yet whiteness would, at any rate, be present with them.

True.

But still they would not, as yet, be at all the more white on that account, but though whiteness is present with them, they are neither white nor black.

Precisely.

But when, my dear Lysis, old age has brought upon them this same color, then they become really such as that which is present with them, white by the presence of white.

Yes, indeed they do.

This, then, is the question I want to ask. If a thing be present in a substance, will the substance be such as that which is present with it, or will it be such, if the thing is present under certain conditions, under certain conditions not?

The latter rather, said he.

That then which is neither evil nor good is, in some cases, when evil is present with it, not evil as yet; in other cases it has already become such.

Exactly.

Well then, said I, when it is not evil as yet, though evil be present with it, this very presence of evil makes it desirous of good, but the presence which makes it evil deprives it, at the same time, of its desire and friendship for good. For it is no longer a thing neither evil nor good, but already evil, and evil, we said, cannot be friendly with good.

True, it cannot be.

On the same ground then we may further assert that those who are already wise are no longer friends to wisdom, be they gods, or be they men, nor, again, are those friends to wisdom who are so possessed of foolishness as to be evil, for no evil and ignorant man is a friend to wisdom. There remain then those who possess indeed this evil, the evil of foolishness, but who are not, as yet, in consequence of it, foolish or ignorant, but still understand that they do not know the things they do not know. And thus, you see, it is those  
b who are neither good nor evil, as yet, that are friends to wisdom [philosophers], but those who are evil are not friends, nor again are the good. For that contrary is not friendly with contrary, nor like with like, was made apparent in the former part of our discourse. Do you remember?

Oh perfectly, they both cried.

Now then, Lysis and Menexenus, I continued, we have, as it appears, discovered, beyond a dispute, what it is that is friendly, and not friendly. Whether in respect of the soul, or of the body, or of anything else whatsoever, that, we pronounce, which is neither evil nor  
c good is friendly with good on account of the presence of evil.

To this conclusion they both yielded a hearty and entire assent.

For myself, I was rejoicing, with all a hunter's delight, at just grasping the prey I had been so long in chase of, when presently there came into my mind, from what quarter I cannot tell, the strangest sort of suspicion. It was that the conclusions to which we had arrived were not true, and, sorely discomfited, I cried, Alackaday, Lysis, alack, Menexenus, we have, I fear me, but dreamed our treasure.

d Why so? said Menexenus.

I am afraid, I answered, that, just as if with lying men, we have fallen in with some such false reasonings in our search after friendship.

How do you mean? he asked.

Look here, said I. If a man be a friend, is he a friend to someone, or not?

To someone, of course.

For the sake of nothing, and on account of nothing, or for the sake and on account of something?

For the sake of and on account of something.

Is he a friend to that thing, for the sake of which he is a friend to his friend, or is he to it neither friend nor foe?

I don't quite follow, he said.

e No wonder, said I, but perhaps you will if we take this course, and I too, I think, shall better understand what I am saying. The sick man, as we just now said, is a friend to the physician. Is he not?

He is.

On account of sickness, for the sake of health?

Yes.

Sickness is an evil?

Beyond a doubt.

But what is health? I asked. A good, an evil, or neither one nor the other?

A good, he replied.

219

We further stated, I think, that the body, a thing neither good nor evil, is, on account of sickness—that is to say, on account of an evil—a friend to the medical art. And the medical art is a good, and it is for the sake of health that the medical art has received the friendship, and health is a good, is it not?

It is.

Is the body a friend, or not a friend, to health?

A friend.

And a foe to sickness?

Most decidedly.

That, then, it appears, which is neither good nor evil is a friend to good on account of an evil to which it is a foe, for the sake of a good to which it is a friend?

So it seems.

The friendly, then, is a friend for the sake of that to which it is a friend, on account of that to which it is a foe?

Apparently.

Very well, said I. But arrived as we are, I added, at this point, let us pay all heed, my children, that we be not misled. That friend is become friend to friend—that is to say, that like is become friend to like, which we declared to be impossible—is a matter I will allow to pass, but there is another point which we must attentively consider, in order that we may not be deceived by our present position. A man is a friend, we said, to the medical art for the sake of health.

c

We did.

Is he a friend to health too?

To be sure he is.

For the sake of something?

Yes.

For the sake of something, then, to which he is friendly, if this, too, is to follow our previous admission?

Certainly.

But is he not again a friend to that thing for the sake of some other thing to which he is a friend?

Yes.

Can we possibly help, then, being weary of going on in this manner, and is it not necessary that we advance at once to a beginning, which will not again refer us to friend upon friend, but arrive at that to which we are in the first instance friends, and for the sake of which we say we are friends to all the rest?

d

It is necessary, he answered.

This, then, is what I say we must consider, in order that all those other things, to which we said we were friendly, for the sake of that one thing, may not, like so many shadows of it, lead us into error, but that we may establish that thing as the first, to which we are really and truly friends. For let us view the matter thus. If a man sets a high value upon a thing—for instance, if, as is frequently the case, a father prizes a son above everything else he has in the world—may such a father be led by the extreme regard he has for his son to set a high value upon other things also? Suppose, for example, he were to hear of his having drunk some hemlock; would he set a high value on wine, if he believed that wine would cure his son?

Of course he would.

And on the vessel also which contained the wine?

Certainly.

Do you mean to say, then, that he sets an equal value on both, on a cup of earthenware and his own son, on his own son and a quart of wine? Or is the truth rather thus? All such value as this is set not on those things which are procured for the sake of another thing, but on that for the sake of which all such things are procured. We often talk, I do not deny, about setting a high value on gold and silver, but is the truth on this account at all the more so? No, what we value supremely is that, whatever it may be found to be, for the sake of which gold, and all other subsidiaries, are procured. Shall we not say so?

Unquestionably.

And does not the same reasoning hold with regard to friendship? When we say we are friendly to things for the sake of a thing to which we are friendly, do we not clearly use a term with regard to them which belongs to another? And do we not appear to be in reality friendly only with that in which all these so-called friendships terminate?

Yes, he said, this would appear to be the truth.

With that, then, to which we are truly friendly, we are not friendly for the sake of any other thing to which we are friendly.

True, we are not.

This point, then, we dismiss, as sufficiently proved. But, to proceed, are we friends to good?

I imagine so.

And good is loved on account of evil, and the case stands thus. If, of the three classes that we just now distinguished, good, evil, and that which is neither evil nor good, two only were to be left to us, but evil were to be removed out of our path, and were never again to come in contact either with body or soul, or any other of these things, which in themselves we say are neither good nor evil, would it not come to pass that good would no longer be useful to us, but have become useless? For if there were nothing any more to hurt us, we

should have no need whatever of any assistance. And thus you see it would then be made apparent that it was only on account of evil that we felt regard and affection for good, as we considered good to be a medicine for evil, and evil to be a disease. But where there is no disease, there is, we are aware, no need of medicine. This, then, it appears, is the nature of good. It is loved on account of evil by us who are intermediate between evil and good, but in itself, and for itself, it is of no use.

Yes, he said, such would seem to be the case.

It follows, then, I think, that the original thing to which we are friendly, that wherein all those other things terminate to which we said we were friendly for the sake of another thing, bears to these things no resemblance at all. For to these things we called ourselves friendly for the sake of another thing to which we were friendly, but that to which we are really friendly appears to be of a nature exactly the reverse of this, since we found that we were friendly to it for the sake of a thing to which we were unfriendly, and, if this latter be removed, we are, it seems, friendly to it no longer.

Apparently not, said he, according at least to our present position.

But tell me this, said I. If evil be extinguished, will it no longer be possible to feel hunger or thirst, or any similar desire? Or will hunger exist, as long as man and the whole animal creation exist, but exist without being hurtful? And will thirst, too, and all other desires exist, but not be evil, inasmuch as evil is extinct? It is ridiculous though, to ask what will exist or not exist, in such a case, for who can know? But this, at any rate, we do know, that even at present it is possible for a man to be injured by the sensation of hunger, and possible for him also to be profited. Is it not? 221

Certainly it is.

And so, too, a man who feels thirst, or any similar desire, may feel it in some cases with profit to himself, in other cases with hurt, and in other cases again, with neither one nor the other. b

Assuredly he may.

Well, if evil is being extinguished, is there any reason in the world for things that are not evil to be extinguished with it?

None whatever.

There will exist, then, those desires which are neither evil nor good, even if evil be extinct.

Clearly.

Is it possible for a man who is desirous and enamored not to love that of which he is desirous and enamored?

I think not.

There will exist then, it appears, even if evil be extinct, certain things to which we are friendly. c

Yes, there will.

But if evil were the cause of our being friendly to anything, it would not be possible, when evil was extinct, for any man to be friendly to anything. For if a cause be extinct, surely it is no longer possible for that to exist of which it was the cause.

True, it is not.

But earlier we agreed that the friendly loved something, and on account of something, and at the same time we were of opinion that it was on account of evil that that which is neither good nor evil loved the good.

So we were.

d But now, it appears, we have discovered some other cause of loving and being loved.

So it does.

Is it true, then, as we were just now saying, that desire is the cause of friendship, and that whatever desires is friendly to that which it desires, and friendly at the time of its feeling the desire? And was all that, which we previously said about being friendly, mere idle talk, put together after the fashion of a lengthy poem?

I am afraid it was, he replied.

But that, I continued, which feels desire, feels desire for that of which it is in want. Does it not?

Yes.

e And that which is in want is friendly with that of which it is in want.

I imagine so.

And becomes in want of that which is taken from it?

Of course.

That then which belongs to a man, is found, it seems, Lysis and Menexenus, to be the object of his love, and friendship, and desire.

They both assented.

If, then, you two are friendly to each other, by some tie of nature you belong to each other?

To be sure we do, they cried together.

And so, in general, said I, if one man, my children, is desirous and enamored of another, he can never have conceived his desire, or love, 222 or friendship, without in some way belonging to the object of his love, either in his soul, or in some quality of his soul, or in disposition, or in form.

I quite believe you, cried Menexenus—but Lysis said not a word.

Well, then, I continued, that which by nature belongs to us, it has been found necessary for us to love.

So it appears, said Menexenus.

It cannot possibly be then, but that a true and genuine lover is loved in return by the object of his love.

b To this conclusion Lysis and Menexenus nodded a sort of re-

luctant assent, while Hippothales in his rapture kept changing from color to color.

I, however, with a view of reconsidering the subject, proceeded to say, Well, if there is a difference between that which belongs to us and that which is like, we are now, I conceive, in a condition to say what is meant by a friend. But if they happen to be the same, it's no such easy matter to get rid of our former assertion, that like was useless to like, in so far as it was like, for to admit ourselves friendly with that which is useless were outrageous. What say you then, said I, since we are, as it were, intoxicated by our talk, to our allowing that there is a difference between that which belongs and that which is like?

Let us do so by all means, he replied.

Shall we further say that good belongs to everyone and that to everyone evil is a stranger, or rather, that good belongs to good, evil to evil, and that which is neither evil nor good, to that which is of the same nature?

They both agreed that the latter was their opinion in each particular.

It appears then, said I, that we have fallen again into positions, with regard to friendship, which we previously rejected. For, according to our present admission, the unjust will be no less friendly to the unjust, and the evil no less friendly to the evil, than the good to the good.

So it would appear, said he.

And again, said I, if we assert that what is good and what belongs to us are one and the same, will it not result that none are friendly with the good but the good? And this, too, I think, is a position in which we imagined that we proved ourselves wrong. Don't you remember?

Oh, yes, they both cried.

What other way then is left us of treating the subject? Clearly none. I therefore, like our clever pleaders at the bar, request you to reckon up all that I have said. If neither those who love or are loved, neither the like nor the unlike, nor the good, nor those who belong to us, nor any other of all the suppositions which we passed in review—they are so numerous that I can remember no more—if, I say, not one of them is the object of friendship, I no longer know what I am to say.

With this confession, I was just on the point of rousing to my aid one of the elders of our party, when all of a sudden, like beings of another world, there came down upon us the attendants of Menexenus and Lysis, holding their brothers by the hand, and calling out to the young gentlemen to come home, as it was already late. At first, both we and the bystanders were for driving them off, but finding that they

did not mind us at all, but grumbled at us in sad Greek, and persisted in calling the boys—fancying, moreover, that from having tippled at the feast, they would prove awkward people to deal with—we owned ourselves vanquished, and broke up the party.

However, just as they were leaving, I managed to call out, Well, Lysis and Menexenus, we have made ourselves rather ridiculous to-day, I, an old man, and you children. For our hearers here will carry away the report that though we conceive ourselves to be friends with each other—you see I class myself with you—we have not as yet been able to discover what we mean by a friend.

# EUTHYPHRO

---

*Socrates and Euthyphro meet at the entrance to the law courts, and to Euthyphro's surprised question—"What has taken you from your haunts in the Lyceum?"—Socrates answers that a charge has been brought against him which is rather a grand one, that of corrupting the youth of Athens, and that the prosecutor knows just how it is done and how Socrates is doing it. But why, he asks in turn, is Euthyphro here? The reason, the latter answers, is that he is prosecuting his own father on a charge of murder. Socrates' astonishment at this does not disturb him. He is by profession an interpreter of religion, a theologian, and he tells Socrates that with his special insight into what is right and wrong he knows that he is acting in the spirit of true piety. When Socrates asks what then is piety, he gives the answer characteristic of the orthodox everywhere—in effect, "Piety is thinking as I do." His sincerity is as patent as his conceit. He really believes that he ought to prosecute his father who though certainly not a murderer is not free from blame.*

*The conversation that follows is chiefly an attempt to define piety, and comes to nothing, but in the course of it Socrates makes a distinction fundamental in reasoning and often disregarded, that the good is not good because the gods approve it, but the gods approve it because it is good.*

*The real interest of the dialogue, however, is the picture of Socrates just before his trial. There is no question that he realized the danger he was in, but Plato, who knew him best of all, shows him engaging humorously and ironically and keenly in a discussion completely removed from his own situation. Just at the end he says that if only Euthyphro will instruct him in what true piety is he will tell his accuser that he has become the pupil of a great theologian and is going to lead a better life. But Euthyphro, by this time in no mood to define anything, gives up. "Another time, then, Socrates," he says and hurries away.*

2 EUTHYPHRO: This, Socrates, is something new? What has taken you from your haunts in the Lyceum, and makes you spend your time at the royal porch? You surely cannot have a case at law, as I have, before the Archon-King.

SOCRATES: My business, Euthyphro, is not what is known at Athens as a case at law; it is a criminal prosecution.

b EUTHYPHRO: How is that? You mean that somebody is prosecuting you? I never would believe that you were prosecuting anybody else.

SOCRATES: No indeed.

EUTHYPHRO: Then somebody is prosecuting you?

SOCRATES: Most certainly.

EUTHYPHRO: Who is it?

SOCRATES: I am not too clear about the man myself, Euthyphro. He appears to me to be a young man, and unknown. I think, however, that they call him Meletus, and his deme is Pitthos, if you happen to know anyone named Meletus of that deme—a hook-nosed man with long straight hair, and not much beard.

EUTHYPHRO: I don't recall him, Socrates. But tell me, of what  
c does he accuse you?

SOCRATES: His accusation? It is no mean charge. For a man of his age it is no small thing to have settled a question of so much importance. He says, in fact, that he knows the method by which young people are corrupted, and knows who the persons are that do it. He is, quite possibly, a wise man, and, observing that my ignorance has led me to corrupt his generation, comes like a child to his mother to accuse me to the city. And to me he appears to be the only one who begins his political activity aright, for the right way to begin is to pay  
d attention to the young, and make them just as good as possible—precisely as the able farmer will give his attention to the young plants  
3 first, and afterward care for the rest. And so Meletus no doubt begins by clearing us away, the ones who ruin, as he says, the tender shoots of the young. That done, he obviously will care for the older generation, and will thus become the cause, in the highest and widest measure, of benefit to the state. With such a notable beginning, his chances of success look good.

EUTHYPHRO: I hope so, Socrates, but I'm very much afraid it will go the other way. When he starts to injure you, it simply looks to me like beginning at the hearth to hurt the state. But tell me what he says you do to corrupt the young.

b SOCRATES: It sounds very queer, my friend, when first you hear it. He says I am a maker of gods; he charges me with making new

From *On the Trial and Death of Socrates*, translated with introduction by Lane Cooper (Ithaca, New York, 1941; copyright 1941 by Lane Cooper).

gods, and not believing in the old ones. These are his grounds for prosecuting me, he says.

EUTHYPHRO: I see it, Socrates. It is because you say that ever and anon you have the spiritual sign! So he charges you in this indictment with introducing novelties in religion, and that is the reason why he comes to court with this slanderous complaint, well knowing how easily such matters can be misrepresented to the crowd. For my own part, when I speak in the Assembly about matters of religion, and tell them in advance what will occur, they laugh at me as if I were a madman, and yet I never have made a prediction that did not come true. But the truth is, they are jealous of all such people as ourselves. No, we must not worry over them, but go to meet them.

SOCRATES: Dear Euthyphro, if we were only laughed at, it would be no serious matter. The Athenians, as it seems to me, are not very much disturbed if they think that so-and-so is clever, so long as he does not impart his knowledge to anybody else. But the moment they suspect that he is giving his ability to others, they get angry, whether out of jealousy, as you say, or, it may be, for some other reason.

EUTHYPHRO: With regard to that, I am not very eager to test their attitude to me.

SOCRATES: Quite possibly you strike them as a man who is chary of himself, and is unwilling to impart his wisdom; as for me, I fear I am so kindly they will think that I pour out all I have to everyone, and not merely without pay—nay, rather, glad to offer something if it would induce someone to hear me. Well then, as I said just now, if they were going to laugh at me, as you say they do at you, it wouldn't be at all unpleasant to spend the time laughing and joking in court. But if they take the matter seriously, then there is no knowing how it will turn out. Only you prophets can tell!

EUTHYPHRO: Well, Socrates, perhaps no harm will come of it at all, but you will carry your case as you desire, and I think that I shall carry mine.

SOCRATES: Your case, Euthyphro? What is it? Are you prosecuting, or defending?

EUTHYPHRO: Prosecuting.

SOCRATES: Whom?

EUTHYPHRO: One whom I am thought a maniac to be attacking.

SOCRATES: How so? Is it someone who has wings to fly away with?

EUTHYPHRO: He is far from being able to do that; he happens to be old, a very old man.

SOCRATES: Who is it, then?

EUTHYPHRO: It is my father.

SOCRATES: Your father, my good friend?

EUTHYPHRO: Just so.

SOCRATES: What is the complaint? Of what do you accuse him?

EUTHYPHRO: Of murder, Socrates.

SOCRATES: Good heavens, Euthyphro! Surely the crowd is ignorant of the way things ought to go. I fancy it is not correct for any ordinary person to do that [to prosecute his father on this charge],  
b but only for a man already far advanced in point of wisdom.

EUTHYPHRO: Yes, Socrates, by heaven! Far advanced!

SOCRATES: And the man your father killed, was he a relative of yours? Of course he was? You never would prosecute your father, would you, for the death of anybody who was not related to you?

EUTHYPHRO: You amuse me, Socrates. You think it makes a difference whether the victim was a member of the family, or not related, when the only thing to watch is whether it was right or not for the man who did the deed to kill him. If he was justified, then let him go; if not, you have to prosecute him, no matter if the man who killed  
c him shares your hearth, and sits at table with you. [The pollution is the same if, knowingly, you associate with such a man, and do not cleanse yourself, and him as well, by bringing him to justice] The victim in this case was a laborer of mine, and when we were cultivating land in Naxos, we employed him on our farm. One day he had been drinking, and became enraged at one of our domestics, and cut his throat; whereupon my father bound him hand and foot, and threw him into a ditch. Then he sent a man to Athens to find out from the seer what ought to be done—meanwhile paying no attention to the  
d man who had been bound, neglecting him because he was a murderer and it would be no great matter even if he died. And that was just what happened. Hunger, cold, and the shackles finished him before the messenger got back from visiting the seer. That is why my father and my other kin are bitter at me when I prosecute my father as a murderer. They say he did not kill the man, and had he actually done it, the victim was himself a murderer, and for such a man one need have no consideration. They say that for a son to prosecute his  
e father as a murderer is unholy. How ill they know divinity in its relation, Socrates, to what is holy or unholy!

SOCRATES: But you, by heaven! Euthyphro, you think that you have such an accurate knowledge of things divine, and what is holy and unholy, that, in circumstances such as you describe, you can accuse your father? You are not afraid that you yourself are doing an unholy deed?

EUTHYPHRO: Why, Socrates, if I did not have an accurate  
5 knowledge of all that, I should be good for nothing, and Euthyphro would be no different from the general run of men.

SOCRATES: Well then, admirable Euthyphro, the best thing I can do is to become your pupil, and challenge Meletus before the trial

comes on. Let me tell him that in the past I have considered it of great importance to know about things divine, and that now, when he asserts that I erroneously put forward my own notions and inventions on this head, I have become your pupil. I could say, Come, Meletus, if you agree that Euthyphro has wisdom in such matters, you must admit as well that I hold the true belief, and must not prosecute. If you do not, you must lodge your complaint, not against me, but against my aforesaid master; accuse him of corrupting the elder generation, me and his own father—me by his instruction, his father by correcting and chastising him.

And if he would not yield, would neither quit the suit nor yet indict you rather than myself, then I would say the same in court as when I challenged him!

EUTHYPHRO: Yes, Socrates, by heaven! If he undertook to bring me into court, I guess I would find out his rotten spot, and our talk there would concern him sooner by a long shot than ever it would me!

SOCRATES: Yes, my dear friend, that I know, and so I wish to be your pupil. This Meletus, I perceive, along presumably with everybody else, appears to overlook you, but sees into me so easily and keenly that he has attacked me for impiety. So, in the name of heaven, tell me now about the matter you just felt sure you knew quite thoroughly. State what you take piety and impiety to be with reference to murder and all other cases. Is not the holy always one and the same thing in every action, and, again, is not the unholy always opposite to the holy, and like itself? And as unholiness does it not always have its one essential form, which will be found in everything that is unholy?

EUTHYPHRO: Yes, surely, Socrates.

SOCRATES: Then tell me. How do you define the holy and the unholy?

EUTHYPHRO: Well then, I say that the holy is what I am now doing, prosecuting the wrongdoer who commits a murder or a sacrilegious robbery, or sins in any point like that, whether it be your father, or your mother, or whoever it may be. And not to prosecute would be unholy. And, Socrates, observe what a decisive proof I will give you that such is the law. It is one I have already given to others; I tell them that the right procedure must be not to tolerate the impious man, no matter who. Does not mankind believe that Zeus is the most excellent and just among the gods? And these same men admit that Zeus shackled his own father [Cronus] for swallowing his [other] sons unjustly, and that Cronus in turn had gelded his father [Uranus] for like reasons. But now they are enraged at me when I proceed against my father for wrongdoing, and so they contradict themselves in what they say about the gods and what they say of me.

SOCRATES: There, Euthyphro, you have the reason why the

charge is brought against me. It is because, whenever people tell such stories about the gods, I am prone to take it ill, and, so it seems, that is why they will maintain that I am sinful. Well, now, if you who are  
 b so well versed in matters of the sort entertain the same beliefs, then necessarily, it would seem, I must give in, for what could we urge who admit that, for our own part, we are quite ignorant about these matters? But, in the name of friendship, tell me! Do you actually believe that these things happened so?

EUTHYPHRO: Yes, Socrates, and things even more amazing, of which the multitude does not know.

SOCRATES: And you actually believe that war occurred among the gods, and there were dreadful hatreds, battles, and all sorts of fearful things like that? Such things as the poets tell of, and good  
 c artists represent in sacred places; yes, and at the great Panathenaic festival the robe that is carried up to the Acropolis is all inwrought with such embellishments? What is our position, Euthyphro? Do we say that these things are true?

EUTHYPHRO: Not these things only, Socrates, but, as I just now said, I will, if you wish, relate to you many other stories about the gods, which I am certain will astonish you when you hear them.

SOCRATES: I shouldn't wonder. You shall tell me all about them when we have the leisure at some other time. At present try to tell me more clearly what I asked you a little while ago, for, my friend,  
 d you were not explicit enough before when I put the question. What is holiness? You merely said that what you are now doing is a holy deed—namely, prosecuting your father on a charge of murder.

EUTHYPHRO: And, Socrates, I told the truth.

SOCRATES: Possibly. But, Euthyphro, there are many other things that you will say are holy.

EUTHYPHRO: Because they are.

SOCRATES: Well, bear in mind that what I asked of you was not to tell me one or two out of all the numerous actions that are holy; I wanted you to tell me what is the essential form of holiness which makes all holy actions holy. I believe you held that there is one ideal form by which unholy things are all unholy, and by which all holy  
 e things are holy. Do you remember that?

EUTHYPHRO: I do.

SOCRATES: Well then, show me what, precisely, this ideal is, so that, with my eye on it, and using it as a standard, I can say that any action done by you or anybody else is holy if it resembles this ideal, or, if it does not, can deny that it is holy.

EUTHYPHRO: Well, Socrates, if that is what you want, I certainly can tell you.

SOCRATES: It is precisely what I want.

EUTHYPHRO: Well then, what is pleasing to the gods is holy,  
 7 and what is not pleasing to them is unholy.

SOCRATES: Perfect, Euthyphro! Now you give me just the answer that I asked for. Meanwhile, whether it is right I do not know, but obviously you will go on to prove your statement true.

EUTHYPHRO: Indeed I will.

SOCRATES: Come now, let us scrutinize what we are saying. What is pleasing to the gods, and the man that pleases them, are holy; what is hateful to the gods, and the man they hate, unholy. But the holy and unholy are not the same; the holy is directly opposite to the unholy. Isn't it so?

EUTHYPHRO: It is.

SOCRATES: And the matter clearly was well stated.

EUTHYPHRO: I accept it, Socrates; that was stated. b

SOCRATES: Was it not also stated, Euthyphro, that the gods revolt and differ with each other, and that hatreds come between them?

EUTHYPHRO: That was stated.

SOCRATES: Hatred and wrath, my friend—what kind of disagreement will produce them? Look at the matter thus. If you and I were to differ about numbers, on the question which of two was the greater, would a disagreement about that make us angry at each other, and make enemies of us? Should we not settle things by calculation, c and so come to an agreement quickly on any point like that?

EUTHYPHRO: Yes, certainly.

SOCRATES: And similarly if we differed on a question of greater length or less, we would take a measurement, and quickly put an end to the dispute?

EUTHYPHRO: Just that.

SOCRATES: And so, I fancy, we should have recourse to scales, and settle any question about a heavier or lighter weight?

EUTHYPHRO: Of course.

SOCRATES: What sort of thing, then, is it about which we differ, till, unable to arrive at a decision, we might get angry and be enemies to one another? Perhaps you have no answer ready, but listen to me. See if it is not the following—right and wrong, the noble and the base, and good and bad. Are not these the things about which we differ, till, unable to arrive at a decision, we grow hostile, when we do grow hostile, to each other, you and I and everybody else? d

EUTHYPHRO: Yes, Socrates, that is where we differ, on these subjects.

SOCRATES: What about the gods, then, Euthyphro? If, indeed, they have dissensions, must it not be on these subjects?

EUTHYPHRO: Quite necessarily.

SOCRATES: Accordingly, my noble Euthyphro, by your account some gods take one thing to be right, and others take another, and similarly with the honorable and the base, and good and bad. They would hardly be at variance with each other, if they did not differ on these questions. Would they? e

EUTHYPHRO: You are right.

SOCRATES: And what each one of them thinks noble, good, and just, is what he loves, and the opposite is what he hates?

EUTHYPHRO: Yes, certainly.

SOCRATES: But it is the same things, so you say, that some of  
 8 them think right, and others wrong, and through disputing about these they are at variance, and make war on one another. Isn't it so?

EUTHYPHRO: It is.

SOCRATES: Accordingly, so it would seem, the same things will be hated by the gods and loved by them; the same things would alike displease and please them.

EUTHYPHRO: It would seem so.

SOCRATES: And so, according to this argument, the same things, Euthyphro, will be holy and unholy.

EUTHYPHRO: That may be.

SOCRATES: In that case, admirable friend, you have not answered what I asked you. I did not ask you to tell me what at once is holy and unholy, but it seems that what is pleasing to the gods is also  
 b hateful to them. Thus, Euthyphro, it would not be strange at all if what you now are doing in punishing your father were pleasing to Zeus, but hateful to Cronus and Uranus, and welcome to Hephaestus, but odious to Hera, and if any other of the gods disagree about the matter, satisfactory to some of them, and odious to others.

EUTHYPHRO: But, Socrates, my notion is that, on this point, there is no difference of opinion among the gods—not one of them but thinks that if a person kills another wrongfully, he ought to pay for it.

SOCRATES: And what of men? Have you never heard a man  
 c contending that someone who has killed a person wrongfully, or done some other unjust deed, ought not to pay the penalty?

EUTHYPHRO: Why! There is never any end to their disputes about these matters; it goes on everywhere, above all in the courts. People do all kinds of wrong, and then there is nothing they will not do or say in order to escape the penalty.

SOCRATES: Do they admit wrongdoing, Euthyphro, and, while admitting it, deny that they ought to pay the penalty?

EUTHYPHRO: No, not that, by any means.

SOCRATES: Then they will not do and say quite everything. Unless I am mistaken, they dare not say or argue that if they do wrong they should not pay the penalty. No, I think that they deny  
 d wrongdoing. How about it?

EUTHYPHRO: It is true.

SOCRATES: Therefore they do not dispute that anybody who does wrong should pay the penalty. No, the thing that they dispute about is likely to be who is the wrongdoer, what he did, and when.

EUTHYPHRO: That is true.

SOCRATES: Well then, isn't that precisely what goes on among the gods, if they really do have quarrels about right and wrong, as you say they do? One set will hold that some others do wrong, and the other set deny it? For that other thing, my friend, I take it no one, whether god or man, will dare to say—that the wrongdoer should not e pay the penalty!

EUTHYPHRO: Yes, Socrates, what you say is true—in the main.

SOCRATES: It is the individual act, I fancy, Euthyphro, that the disputants dispute about, both men and gods, if gods ever do dispute. They differ on a certain act; some hold that it was rightly done, the others that it was wrong. Isn't it so?

EUTHYPHRO: Yes, certainly.

SOCRATES: Then come, dear Euthyphro, teach me as well, and 9 let me grow more wise. What proof have you that all the gods think that your servant died unjustly, your hireling, who, when he had killed a man, was shackled by the master of the victim, and perished, dying because of his shackles before the man who shackled him could learn from the seers what ought to be done with him? What proof have you that for a man like him it is right for a son to prosecute his father, and indict him on a charge of murder? Come on. Try to make it clear to me beyond all doubt that under these conditions the gods must all consider this action to be right. If you can adequately b prove it to me, I will never cease from praising you for your wisdom.

EUTHYPHRO: But, Socrates, that, very likely, would be no small task, although I could indeed make it very clear to you.

SOCRATES: I understand. You think that I am duller than the judges; obviously you will demonstrate to them that what your father did was wrong, and that the gods all hate such deeds.

EUTHYPHRO: I shall prove it absolutely, Socrates, if they will listen to me.

SOCRATES: They are sure to listen if they think that you speak c well. But while you were talking, a notion came into my head, and I asked myself, Suppose that Euthyphro proved to me quite clearly that all the gods consider such a death unjust; would I have come one whit the nearer for him to knowing what the holy is, and what is the unholy? The act in question, seemingly, might be displeasing to the gods, but then we have just seen that you cannot define the holy and unholy in that way, for we have seen that a given thing may be displeasing, and also pleasing, to gods. So on this point, Euthyphro, I will let you off; if you like, the gods shall all consider the act unjust, and they all shall hate it. But suppose that we now correct our definition, and d say what the gods all hate is unholy, and what they love is holy, whereas what some of them love, and others hate, is either both or neither. Are you willing that we now define the holy and unholy in this way?

EUTHYPHRO: What is there to prevent us, Socrates?

**SOCRATES:** Nothing to prevent me, Euthyphro. As for you, see whether when you take this definition you can quite readily instruct me, as you promised.

**EUTHYPHRO:** Yes, I would indeed affirm that holiness is what the gods all love, and its opposite is what the gods all hate, unholiness.

**SOCRATES:** Are we to examine this position also, Euthyphro, to see if it is sound? Or shall we let it through, and thus accept our own and others' statement, and agree to an assertion simply when somebody says that a thing is so? Must we not look into what the speaker says?

**EUTHYPHRO:** We must. And yet, for my part, I regard the present statement as correct.

**SOCRATES:** We shall soon know better about that, my friend. Now think of this. Is what is holy holy because the gods approve it, or do they approve it because it is holy?

**EUTHYPHRO:** I do not get your meaning.

**SOCRATES:** Well, I will try to make it clearer. We speak of what is carried and the carrier, do we not, of led and leader, of the seen and that which sees? And you understand that in all such cases the things are different, and how they differ?

**EUTHYPHRO:** Yes, I think I understand.

**SOCRATES:** In the same way what is loved is one thing, and what loves is another?

**EUTHYPHRO:** Of course.

**SOCRATES:** Tell me now, is what is carried 'carried' because something carries it, or is it for some other reason?

**EUTHYPHRO:** No, but for that reason.

**SOCRATES:** And what is led, because something leads it? And what is seen, because something sees it?

**EUTHYPHRO:** Yes, certainly.

**SOCRATES:** Then it is not because a thing is seen that something sees it, but just the opposite—because something sees it, therefore it is seen. Nor because it is led, that something leads it, but because something leads it, therefore it is led. Nor because it is carried, that something carries it, but because something carries it, therefore it is carried. Do you see what I wish to say, Euthyphro? It is this. Whenever an effect occurs, or something is effected, it is not the thing effected that gives rise to the effect; no, there is a cause, and then comes this effect. Nor is it because a thing is acted on that there is this effect; no, there is a cause for what it undergoes, and then comes this effect. Don't you agree?

**EUTHYPHRO:** I do.

**SOCRATES:** Well then, when a thing is loved, is it not in process of becoming something, or of undergoing something, by some other thing?

EUTHYPHRO: Yes, certainly.

SOCRATES: Then the same is true here as in the previous cases. It is not because a thing is loved that they who love it love it, but it is loved because they love it.

EUTHYPHRO: Necessarily.

SOCRATES: Then what are we to say about the holy, Euthyphro? According to your argument, is it not loved by all the gods?

EUTHYPHRO: Yes.

SOCRATES: Because it is holy, or for some other reason?

EUTHYPHRO: No, it is for that reason.

SOCRATES: And so it is because it is holy that it is loved; it is not holy because it is loved.

EUTHYPHRO: So it seems.

SOCRATES: On the other hand, it is beloved and pleasing to the gods just because they love it?

EUTHYPHRO: No doubt of that.

SOCRATES: So what is pleasing to the gods is not the same as what is holy, Euthyphro, nor, according to your statement, is the holy the same as what is pleasing to the gods. They are two different things.

EUTHYPHRO: How may that be, Socrates?

SOCRATES: Because we are agreed that the holy is loved because it is holy, and is not holy because it is loved. Isn't it so?

EUTHYPHRO: Yes.

SOCRATES: Whereas what is pleasing to the gods is pleasing to them just because they love it, such being its nature and its cause. Its being loved of the gods is not the reason of its being loved.

EUTHYPHRO: You are right.

SOCRATES: But suppose, dear Euthyphro, that what is pleasing to the gods and what is holy were not two separate things. In that case if holiness were loved because it was holy, then also what was pleasing to the gods would be loved because it pleased them. And, on the other hand, if what was pleasing to them pleased because they loved it, then also the holy would be holy because they loved it. But now you see that it is just the opposite, because the two are absolutely different from each other, for the one [what is pleasing to the gods] is of a sort to be loved because it is loved, whereas the other [what is holy] is loved because it is of a sort to be loved. Consequently, Euthyphro, it looks as if you had not given me my answer—as if when you were asked to tell the nature of the holy, you did not wish to explain the essence of it. You merely tell an attribute of it, namely, that it appertains to holiness to be loved by all the gods. What it is, as yet you have not said. So, if you please, do not conceal this from me. No, begin again. Say what the holy is, and never mind if gods do love it, nor if it has some other attribute; on that we shall not split. Come, speak out. Explain the nature of the holy and unholy.

EUTHYPHRO: Now, Socrates, I simply don't know how to tell you what I think. Somehow everything that we put forward keeps moving about us in a circle, and nothing will stay where we put it.

SOCRATES: Your statements, Euthyphro, look like the work of  
c Daedalus, founder of my line. If I had made them, and they were my positions, no doubt you would poke fun at me, and say that, being in his line, the figures I construct in words run off, as did his statues, and will not stay where they are put. Meanwhile, since they are your definitions, we need some other jest, for in fact, as you see yourself, they will not stand still.

EUTHYPHRO: But, Socrates, it seems to me that the jest is quite to the point. This tendency in our statements to go in a circle, and  
d not to stay in one place, it is not I who put it there. To my mind, it is you who are the Daedalus; so far as I am concerned, they would have held their place.

SOCRATES: If so, my friend, I must be more expert in his art than he, in that he merely made his own works capable of moving, whereas I give this power not merely to my own, but, seemingly, to the works of other men as well. And the rarest thing about my talent is that I am an unwilling artist, since I would rather see our arguments  
e stand fast and hold their ground than have the art of Daedalus plus all the wealth of Tantalus to boot. But enough of this. And since, to my mind, you are languid, I will myself make bold with you to show how you might teach me about holiness. Do not weaken. See if you do not think that of necessity all that is holy is just.

EUTHYPHRO: Yes, I do.

SOCRATES: Well then, is all justice holy too? Or, granted that  
12 all holiness is just, is justice not all holy, but some part of it is holy, and some part of it is not?

EUTHYPHRO: I do not follow, Socrates.

SOCRATES: And yet you surpass me in your wisdom not less than by your youth. I repeat, you are languid through your affluence in wisdom. Come, lucky friend, exert yourself! What I have to say is not so hard to grasp. I mean the very opposite of what the poet wrote.

Zeus, who brought that all to pass, and made it all to grow,  
b You will not name, for where fear is, there too is reverence.<sup>1</sup>

On that I differ from the poet. Shall I tell you why?

EUTHYPHRO: By all means.

SOCRATES: I do not think that 'where fear is, there too is reverence.' For it seems to me that there are many who fear sickness, poverty, and all the like, and so are afraid, but have no reverence whatever for the things they are afraid of. Does it not seem so to you?

EUTHYPHRO: Yes, certainly.

<sup>1</sup> Stasinus, fr. 20.

SOCRATES: Where, however, you have reverence, there you have fear as well. Is there anybody who has reverence and a sense of shame about an act, and does not at the same time dread and fear an evil reputation?

EUTHYPHRO: Yes, he will be afraid of it.

SOCRATES: So it is not right to say that 'where fear is, there too is reverence.' No, you may say that where reverence is, there too is fear—not, however, that where fear is, there always you have reverence. Fear, I think, is wider in extent than reverence. Reverence is a part of fear, as the uneven is a part of number; thus you do not have the odd wherever you have number, but where you have the odd you must have number. I take it you are following me now?

EUTHYPHRO: Yes, indeed.

SOCRATES: Well then, what I asked you was like that. I asked you if wherever justice is, there is holiness as well; or, granted that wherever there is holiness, there is justice too, if where justice is, the holy is not always to be found. Thus holiness would be a part of justice. Shall we say so, or have you a different view?

EUTHYPHRO: No, that is my opinion. I think that you are clearly right.

SOCRATES: Then see what follows. If holiness is a part of justice, it seems to me that we must find out what part of justice it is. Suppose, for instance, in our case just now, you had asked me what part of number is the even, and which the even number is. I would have said it is the one that corresponds to the isosceles, and not to the scalene. Does it not seem so to you?

EUTHYPHRO: It does.

SOCRATES: Then try to show me in this way what part of the just is holiness, so that we may tell Meletus to cease from wronging me, and to give up prosecuting me for irreligion, because we have adequately learned from you of piety and holiness, and the reverse.

EUTHYPHRO: Well then, Socrates, I think that the part of justice which is religious and is holy is the part that has to do with the service of the gods; the remainder is the part of justice that has to do with the service of mankind.

SOCRATES: And what you say there, Euthyphro, to me seems excellent. There is one little point, however, on which I need more light. I am not yet quite clear about the thing which you call 'service.' I suppose you do not mean the sort of care we give to other things. The 'service' of the gods is not like that—the sort of thing we have in mind when we assert that it is not everybody who knows how to care for horses. It is the horseman that knows, is it not?

EUTHYPHRO: Yes, certainly.

SOCRATES: I suppose it is the special care that appertains to horses?

EUTHYPHRO: Yes.

SOCRATES: In the same way, it is not everyone who knows about the care of dogs; it is the huntsman.

EUTHYPHRO: True.

b SOCRATES: The art of the huntsman is the care of dogs.

EUTHYPHRO: Yes.

SOCRATES: And that of the herdsman is the care of cattle.

EUTHYPHRO: Yes, certainly.

SOCRATES: And in the same way, Euthyphro, holiness and piety mean caring for the gods? Do you say so?

EUTHYPHRO: I do.

SOCRATES: And so the aim of all this care and service is the same? I mean it thus. The care is given for the good and welfare of the object that is served. You see, for instance, how the horses that are cared for by the horseman's art are benefited and made better. Don't you think so?

EUTHYPHRO: Yes, I do.

c SOCRATES: And so no doubt the dogs by the art of the huntsman, the cattle by that of the herdsman, and in like manner all the rest. Unless, perhaps, you think that the care may tend to injure the object that is cared for?

EUTHYPHRO: By heaven, not I!

SOCRATES: The care aims at its benefit?

EUTHYPHRO: Most certainly.

SOCRATES: Then holiness, which is the service of the gods, must likewise aim to benefit the gods and make them better? Are you prepared to say that when you do a holy thing you make some deity better?

EUTHYPHRO: By heaven, not I!

d SOCRATES: Nor do I fancy, Euthyphro, that you mean it so—far from it. No, it was on this account that I asked just what you meant by service of the gods, supposing that, in fact, you did not mean that sort of care.

EUTHYPHRO: And, Socrates, you were right. I do not mean it so.

SOCRATES: Good. And now what kind of service of the gods will holiness be?

EUTHYPHRO: Socrates, it is the kind that slaves give to their masters.

SOCRATES: I understand. It seems to be a kind of waiting on the gods.

EUTHYPHRO: Just that.

SOCRATES: See if you can tell me this. The art which serves physicians, what result does it serve to produce? Don't you think that it is health?

EUTHYPHRO: I do.

**SOCRATES:** Further, what about the art that serves the shipwrights? What result does it serve to produce?

**EUTHYPHRO:** Obviously, Socrates, the making of a ship.

**SOCRATES:** And that which serves the builders serves the building of a house?

**EUTHYPHRO:** Yes.

**SOCRATES:** Now tell me, best of friends, about the service of the gods. What result will this art serve to produce? You obviously know, since you profess to be the best informed among mankind on things divine!

**EUTHYPHRO:** Yes, Socrates, I say so, and I tell the truth.

**SOCRATES:** Then tell me, I adjure you, what is that supreme result which the gods produce when they employ our services?

**EUTHYPHRO:** They do many things and noble, Socrates.

**SOCRATES:** Just as the generals do, my friend. All the same you would have no trouble in summing up what they produce, by saying it is victory in war. Isn't it so?

**EUTHYPHRO:** Of course.

**SOCRATES:** And the farmers too, I take it, produce many fine results, but the net result of their production is the food they get from the earth.

**EUTHYPHRO:** Yes, surely.

**SOCRATES:** Well now, of the many fine and noble things which the gods produce, what is the sum of their production?

**EUTHYPHRO:** Just a little while ago I told you, Socrates, that the task is not a light one to learn precisely how all these matters stand. I will, however, simply tell you this. If anyone knows how to say and do things pleasing to the gods in prayer and sacrifice, that is holiness, and such behavior saves the family in private life together with the common interests of the state. To do the opposite of things pleasing to the gods is impious, and this it is that upsets all and ruins everything.

**SOCRATES:** Surely, Euthyphro, if you had wished, you could have summed up what I asked for much more briefly. But the fact is that you are not eager to instruct me. That is clear. But a moment since, you were on the very point of telling me—and you slipped away. Had you given the answer, I would now have learned from you what holiness is, and would be content. As it is—for perforce the lover must follow the loved one wherever he leads the way—once more, how do you define the holy, and what is holiness? Don't you say that it is a science of sacrifice and prayer?

**EUTHYPHRO:** I do.

**SOCRATES:** Well, and is not sacrifice a giving to the gods, and prayer an asking them to give?

**EUTHYPHRO:** Precisely, Socrates.

d       SOCRATES: By this reasoning, holiness would be the science of asking from the gods and giving to them.

EUTHYPHRO: Quite right, Socrates; you have caught my meaning perfectly.

SOCRATES: Yes, my friend, for I have my heart set on your wisdom, and give my mind to it, so that nothing you say shall be lost. No, tell me, what is this service to the gods? You say it is to ask of them and give to them?

EUTHYPHRO: I do.

SOCRATES: And hence to ask aright will be to ask them for those things of which we stand in need from them?

EUTHYPHRO: What else?

e       SOCRATES: And, on the other hand, to give aright will be to give them in return those things which they may need to receive from us? I take it there would be no art in offering anyone a gift of something that he did not need.

EUTHYPHRO: True, Socrates.

SOCRATES: And therefore, Euthyphro, holiness will be a mutual art of commerce between gods and men.

EUTHYPHRO: An art of commerce, if you like to call it so.

SOCRATES: Well, I do not like it if it is not so. But tell me, what advantage could come to the gods from the gifts which they receive  
15 from us? Everybody sees what they give us. No good that we possess but is given by them. What advantage can they gain by what they get from us? Have we so much the better of them in this commerce that we get all good things from them, and they get nothing from us?

EUTHYPHRO: What! Socrates. Do you suppose that the gods gain anything by what they get from us?

SOCRATES: If not, then what would be the meaning, Euthyphro, of these gifts to the gods from us?

EUTHYPHRO: What do you think they ought to mean but worship, honor, and, as I just now said, good will?

b       SOCRATES: So, Euthyphro, the holy is what pleases them, not what is useful to them, nor yet what the gods love?

EUTHYPHRO: I believe that what gives them pleasure is precisely what they love.

SOCRATES: And so once more, apparently the holy is that which the gods love.

EUTHYPHRO: Most certainly.

SOCRATES: After that, will you be amazed to find your statements walking off, and not staying where you put them? And will you accuse me as the Daedalus who makes them move, when you are yourself far more expert than Daedalus, and make them go round in a circle? Don't you see that our argument has come full circle to the point where it began? Surely you have not forgotten how in what was

said before we found that holiness and what is pleasing to the gods c were not the same, but different from each other. Do you not remember?

EUTHYPHRO: I do.

SOCRATES: And are you not aware now that you say that what the gods love is holy? But is not what the gods love just the same as what is pleasing to the gods?

EUTHYPHRO: Yes, certainly.

SOCRATES: Well then, either we were wrong in our recent conclusion, or if that was right, our position now is wrong.

EUTHYPHRO: So it seems.

SOCRATES: And so we must go back again, and start from the beginning to find out what the holy is. As for me, I never will give up until I know. Ah! Do not spurn me, but give your mind with all your d might now at length to tell me the absolute truth, for if anybody knows, of all mankind, it is you, and one must not let go of you, you Proteus, until you tell. If you did not know precisely what is holy and unholy, it is unthinkable that for a simple hireling you ever would have moved to prosecute your aged sire on a charge of murder. No, you would have feared to risk the wrath of the gods on the chance that you were not doing right, and would have been afraid of the talk of men. But now I am sure that you think you know exactly what is holy and what is not. So tell me, peerless Euthyphro, and do not e hide from me what you judge it to be.

EUTHYPHRO: Another time, then, Socrates, for I am in a hurry, and must be off this minute.

SOCRATES: What are you doing, my friend? Will you leave, and dash me down from the mighty expectation I had of learning from you what is holy and what is not, and so escaping from Meletus' indictment? I counted upon showing him that now I had gained wisdom about things divine from Euthyphro, and no longer out of 16 ignorance made rash assertions and forged innovations with regard to them, but would lead a better life in future.

# MENEXENUS

---

*This dialogue stands apart from all the others. It is not a dialogue—it is a speech of Socrates that professes to review the history of Athens, especially from the days of Marathon on. Its authorship has been questioned, but less today than formerly. If it is by Plato then the question shifts to why he wrote it, and no ready answer presents itself. Certainly not because he was interested in its subject, the unqualified praise of Athens. Socrates declares that she has an unbroken record of glorious deeds. She has never been conquered by others. The Peloponnesian War is described at some length without so much as a hint that the Spartans were the victors.*

*Still, if the speech—oration, rather—had some claim to be read, except that Plato wrote it, if it were wise or amusing or at all like Socrates, that sort of thing would matter little, but it is as full of copy-book maxims as of bad history. The beginning is entertaining when Socrates talks about Aspasia who, he declared, has been teaching him a speech, a funeral oration, but all the rest is dullness unrelieved, not a characteristic of Plato.*

*Those who uphold his authorship say it is a satire on Fourth-of-July orations in general and in particular on Pericles' famous funeral oration in which Athens is praised to the skies. If that is the case, the satire is so far in the background as to be out of sight, except just at the beginning and a few sentences at the end where we might be listening to Socrates.*

SOCRATES : Whence come you, Menexenus? Are you from the 234  
Agora?

MENEXENUS : Yes, Socrates, I have been at the Council.

SOCRATES : And what might you be doing at the Council? And yet I need hardly ask, for I see that you, believing yourself to have arrived at the end of education and of philosophy, and to have had enough of them, are mounting upward to things higher still, and, though rather young for the post, are intending to govern us elder men, like the rest of your family, which has always provided someone b  
who kindly took care of us.

MENEXENUS : Yes, Socrates, I shall be ready to hold office, if you allow and advise that I should, but not if you think otherwise. I went to the Council Chamber because I heard that the Council was about to choose someone who was to speak over the dead. For you know that there is to be a public funeral?

SOCRATES : Yes, I know. And whom did they choose?

MENEXENUS : No one. They delayed the election until tomorrow, but I believe that either Archinus or Dion will be chosen.

SOCRATES : O Menexenus! Death in battle is certainly in many respects a noble thing. The dead man gets a fine and costly funeral, al- c  
though he may have been poor, and an elaborate speech is made over him by a wise man who has long ago prepared what he has to say, although he who is praised may not have been good for much. The speakers praise him for what he has done and for what he has not 235  
done—that is the beauty of them—and they steal away our souls with their embellished words. In every conceivable form they praise the city, and they praise those who died in war, and all our ancestors who went before us, and they praise ourselves also who are still alive, until I feel quite elevated by their laudations, and I stand listening to their words, Menexenus, and become enchanted by them, and all in a moment I imagine myself to have become a greater and nobler and b  
finer man than I was before. And if, as often happens, there are any foreigners who accompany me to the speech, I become suddenly conscious of having a sort of triumph over them, and they seem to experience a corresponding feeling of admiration at me, and at the greatness of the city, which appears to them, when they are under the influence of the speaker, more wonderful than ever. This consciousness of dignity lasts me more than three days, and not until the fourth or fifth day do I come to my senses and know where I am—in the c  
meantime I have been living in the Islands of the Blessed. Such is the art of our rhetoricians, and in such manner does the sound of their words keep ringing in my ears.

MENEXENUS : You are always making fun of the rhetoricians,

---

From *The Dialogues of Plato*, translated with analyses and introductions by B. Jowett (3rd edn., Oxford, 1892; 1st edn., 1871).

Socrates. This time, however, I am inclined to think that the speaker who is chosen will not have much to say, for he has been called upon to speak at a moment's notice, and he will be compelled almost to improvise.

- d     SOCRATES: But why, my friend, should he not have plenty to say? Every rhetorician has speeches ready-made, nor is there any difficulty in improvising that sort of stuff. Had the orator to praise Athenians among Peloponnesians, or Peloponnesians among Athenians, he must be a good rhetorician who could succeed and gain credit. But there is no difficulty in a man's winning applause when he is contending for fame among the persons whom he is praising.

MENEXENUS: Do you think not, Socrates?

SOCRATES: Certainly not.

- e     MENEXENUS: Do you think that you could speak yourself if there should be a necessity, and if the Council were to choose you?

SOCRATES: That I should be able to speak is no great wonder, Menexenus, considering that I have an excellent mistress in the art of rhetoric—she who has made so many good speakers, and one who was the best among all the Hellenes, Pericles, the son of Xanthippus.

MENEXENUS: And who is she? I suppose that you mean Aspasia.

- SOCRATES: Yes, I do, and besides her I had Connus, the son of  
236 Metrobius, as a master, and he was my master in music, as she was in rhetoric. No wonder that a man who has received such an education should be a finished speaker. Even the pupil of very inferior masters—say, for example, one who had learned music of Lamprus and rhetoric of Antiphon the Rhamnusian—might make a figure if he were to praise the Athenians among the Athenians.

MENEXENUS: And what would you be able to say if you had to speak?

- SOCRATES: Of my own wit, most likely nothing, but yesterday  
b I heard Aspasia composing a funeral oration about these very dead. For she had been told, as you were saying, that the Athenians were going to choose a speaker, and she repeated to me the sort of speech which he should deliver—partly improvising and partly from previous thought, putting together fragments of the funeral oration which Pericles spoke, but which, as I believe, she composed.

MENEXENUS: And can you remember what Aspasia said?

- SOCRATES: I ought to be able, for she taught me, and she was  
c ready to strike me because I was always forgetting.

MENEXENUS: Then why will you not rehearse what she said?

SOCRATES: Because I am afraid that my mistress may be angry with me if I publish her speech.

MENEXENUS: Nay, Socrates, let us have the speech, whether Aspasia's or anyone else's, no matter. I hope that you will oblige me.

**SOCRATES:** But I am afraid that you will laugh at me if I continue the games of youth in old age.

**MENEXENUS:** Far otherwise, Socrates. Let us by all means have the speech.

**SOCRATES:** Truly I have such a disposition to oblige you that if you bid me dance naked I should not like to refuse, since we are alone. <sup>d</sup> Listen then. If I remember rightly, she began as follows, with the mention of the dead.

There is a tribute of deeds and of words. The departed have already had the first, when going forth on their destined journey they were attended on their way by the state and by their friends; the tribute of words remains to be given to them, as is meet and by law ordained. For noble words are a memorial and a crown of noble actions, which are given to the doers of them by the hearers. A word is needed which will duly praise the dead and gently admonish the living, exhorting the brethren and descendants of the departed to imitate their virtue, and consoling their fathers and mothers and the survivors, if any, who may chance to be alive of the previous generation. <sup>e</sup> <sup>237</sup> What sort of a word will this be, and how shall we rightly begin the praises of these brave men? In their life they rejoiced their own friends with their valor, and their death they gave in exchange for the salvation of the living. And I think that we should praise them in the order in which nature made them good, for they were good because they were sprung from good fathers. Wherefore let us first of all praise the goodness of their birth, secondly, their nurture and education, and then let us set forth how noble their actions were, and how <sup>b</sup> worthy of the education which they had received.

And first as to their birth. Their ancestors were not strangers, nor are these their descendants sojourners only, whose fathers have come from another country, but they are the children of the soil, dwelling and living in their own land. And the country which brought them up is not like other countries, a stepmother to her children, but their own true mother; she bore them and nourished them and received them, and in her bosom they now repose. It is meet and right, <sup>c</sup> therefore, that we should begin by praising the land which is their mother, and that will be a way of praising their noble birth.

The country is worthy to be praised, not only by us, but by all mankind—first, and above all, as being dear to the gods. This is proved by the strife and contention of the gods respecting her. And ought not the country which the gods praise to be praised by all mankind? <sup>d</sup> The second praise which may be fairly claimed by her is that at the time when the whole earth was sending forth and creating diverse animals, tame and wild, she our mother was free and pure from savage monsters, and out of all animals selected and brought forth man, who is superior to the rest in understanding, and alone has justice

- e and religion. And a great proof that she brought forth the common ancestors of us and of the departed is that she provided the means of support for her offspring. For as a woman proves her motherhood by giving milk to her young ones—and she who has no fountain of milk is not a mother—so did this our land prove that she was the mother of men, for in those days she alone and first of all brought forth wheat and barley for human food, which is the best and noblest sustenance for man, whom she regarded as her true offspring. And these  
 238 are truer proofs of motherhood in a country than in a woman, for the woman in her conception and generation is but the imitation of the earth, and not the earth of the woman. And of the fruit of the earth she gave a plenteous supply, not only to her own, but to others also, and afterward she made the olive to spring up to be a boon to her children, and to help them in their toils. And when she had herself  
 b nursed them and brought them up to manhood, she gave them gods to be their rulers and teachers, whose names are well known, and need not now be repeated. They are the gods who ordered our lives, and instructed us, first of all men, in the arts for the supply of our daily needs, and taught us the acquisition and use of arms for the defense of the country.

- Thus born into the world and thus educated, the ancestors of the departed lived and made themselves a government, which I ought  
 c briefly to commemorate. For government is the nurture of man, and the government of good men is good, and of bad men bad. And I must show that our ancestors were trained under a good government, and for this reason they were good, and our contemporaries are also good, among whom our departed friends are to be reckoned. Then as now, and indeed always, from that time to this, speaking generally, our government was an aristocracy—a form of government which  
 d receives various names, according to the fancies of men, and is sometimes called democracy, but is really an aristocracy or government of the best which has the approval of the many. For kings we have always had, first hereditary and then elected, and authority is mostly in the hands of the people, who dispense offices and power to those who appear to be most deserving of them. Neither is a man rejected from weakness or poverty or obscurity of origin, nor honored by reason of the opposite, as in other states, but there is one principle—he who appears to be wise and good is a governor and ruler. The basis of  
 e this our government is equality of birth, for other states are made up of all sorts and unequal conditions of men, and therefore their governments are unequal—there are tyrannies and there are oligarchies, in which the one party are slaves and the others masters. But we and our  
 239 citizens are brethren, the children all of one mother, and we do not think it right to be one another's masters or servants, but the natural equality of birth compels us to seek for legal equality, and to recognize no superiority except in the reputation of virtue and wisdom.

And so their and our fathers, and these, too, our brethren, being nobly born and having been brought up in all freedom, did both in their public and private capacity many noble deeds famous over the whole world. They were the deeds of men who thought that they ought to fight both against Hellenes for the sake of Hellenes on behalf of freedom, and against barbarians in the common interest of Hellas. Time would fail me to tell of their defense of their country against the invasion of Eumolpus and the Amazons, or of their defense of the Argives against the Cadmeans, or of the Heraclidae against the Argives. Besides, the poets have already declared in song to all mankind their glory, and therefore any commemoration of their deeds in prose which we might attempt would hold a second place. They already have their reward, and I say no more of them, but there are other worthy deeds of which no poet has worthily sung, and which are still wooing the poet's Muse. Of these I am bound to make honorable mention, and shall invoke others to sing of them also in lyric and other strains, in a manner becoming the actors.

And first I will tell how the Persians, lords of Asia, were enslaving Europe, and how the children of this land, who were our fathers, held them back. Of these I will speak first, and praise their valor, as is meet and fitting. He who would rightly estimate them should place himself in thought at that time, when the whole of Asia was subject to the third king of Persia. The first king, Cyrus, by his valor freed the Persians, who were his countrymen, and subjected the Medes, who were their lords, and he ruled over the rest of Asia, as far as Egypt. And after him came his son, who ruled all the accessible part of Egypt and Libya. The third king was Darius, who extended the land boundaries of the empire to Scythia, and with his fleet held the sea and the islands. None presumed to be his equal; the minds of all men were enthralled by him—so many and mighty and warlike nations had the power of Persia subdued.

Now Darius had a quarrel against us and the Eretrians, because, as he said, we had conspired against Sardis, and he sent half a million men in transports and vessels of war, and three hundred ships, and Datis as commander, telling him to bring the Eretrians and Athenians to the king, if he wished to keep his head on his shoulders. He sailed against the Eretrians, who were reputed to be among the noblest and most warlike of the Hellenes of that day, and they were numerous, but he conquered them all in three days. And when he had conquered them, in order that no one might escape, he searched the whole country after this manner. His soldiers, coming to the borders of Eretria and spreading from sea to sea, joined hands and passed through the whole country, in order that they might be able to tell the king that no one had escaped them. And from Eretria they went to Marathon with a like intention, expecting to bind the Athenians in the same yoke of necessity in which they had bound the Eretrians.

Having effected one half of their purpose, they were in the act of attempting the other, and none of the Hellenes dared to assist either the Eretrians or the Athenians, except the Lacedaemonians, and they arrived a day too late for the battle, but the rest were panic-stricken and kept quiet, too happy in having escaped for a time. He who has present to his mind that conflict will know what manner of men they were who received the onset of the barbarians at Marathon, and chastened the pride of the whole of Asia, and by the victory which they gained over the barbarians first taught other men that the power of the Persians was not invincible, but that hosts of men and the multitude of riches alike yield to valor. And I assert that those men are the fathers not only of ourselves, but of our liberties and of the liberties of all who are on the continent, for that was the action to which the Hellenes looked back when they ventured to fight for their own safety in the battles which ensued—they became disciples of the men of Marathon.

241 To them, therefore, I assign in my speech the first place, and the second to those who fought and conquered in the sea fights at Salamis and Artemisium, for of them, too, one might have many things to say—of the assaults which they endured by sea and land, and how they repelled them. I will mention only that act of theirs which appears to me to be the noblest, and which followed that of Marathon and came nearest to it. For the men of Marathon only showed the Hellenes that it was possible to ward off the barbarians by land, the many by the few, but there was no proof that they could be defeated by ships, and at sea the Persians retained the reputation of being invincible in numbers and wealth and skill and strength. This is the glory of the men who fought at sea, that they dispelled the second terror which had hitherto possessed the Hellenes, and so made the fear of numbers, whether of ships or men, to cease among them. And so the soldiers of Marathon and the sailors of Salamis became the schoolmasters of Hellas—the one teaching and habituating the Hellenes not to fear the barbarians at sea, and the others not to fear them by land.

Third in order, for the number and valor of the combatants, and third in the salvation of Hellas, I place the Battle of Plataea. And now the Lacedaemonians as well as the Athenians took part in the struggle. They were all united in this greatest and most terrible conflict of all, wherefore their virtues will be celebrated in times to come, as they are now celebrated by us. But at a later period many Hellenic tribes were still on the side of the barbarians, and there was a report that the Great King was going to make a new attempt upon the Hellenes, and therefore justice requires that we should also make mention of those who crowned the previous work of our salvation, and drove and purged away all barbarians from the sea. These were the men who fought by sea at the river Eurymedon, and who went on

the expedition to Cyprus, and who sailed to Egypt and diverse other places, and they should be gratefully remembered by us, because they compelled the king in fear for himself to look to his own safety instead of plotting the destruction of Hellas.

And so the war against the barbarians was fought out to the end 242 by the whole city on their own behalf, and on behalf of their countrymen. There was peace, and our city was held in honor. And then, as prosperity makes men jealous, there succeeded a jealousy of her, and jealousy begot envy, and so she became engaged against her will in a war with the Hellenes. On the breaking out of war, our citizens met the Lacedaemonians at Tanagra, and fought for the freedom of the Boeotians; the issue was doubtful, and was decided by the engagement which followed. For when the Lacedaemonians had gone on their way, leaving the Boeotians, whom they were aiding, on the third day after the Battle of Tanagra, our countrymen conquered at Oenophyta, and righteously restored those who had been unrighteously exiled. And they were the first after the Persian War who fought on behalf of liberty in aid of Hellenes against Hellenes. They were brave men, and freed those whom they aided, and were the first too who were honorably interred in this sepulcher by the state. c

Afterward there was a mighty war, in which all the Hellenes joined, and devastated our country, which was very ungrateful of them. And our countrymen, after defeating them in a naval engagement and taking their leaders, the Spartans, at Sphagia, when they might have destroyed them, spared their lives, and gave them back, d and made peace, considering that they should war with their fellow countrymen only until they gained a victory over them, and not because of the private anger of the state destroy the common interest of Hellas—but that with barbarians they should war to the death. Worthy of praise are they also who waged this war, and are here interred, for they proved, if anyone doubted the superior prowess of the Athenians in the former war with the barbarians, that their doubts had no foundation—showing by their victory in the civil war with Hellas, in which they subdued the other chief state of the Hellenes, e that they could conquer singlehanded those with whom they had been allied in the war against the barbarians.

After the peace there followed a third war, which was of a terrible and desperate nature, and in this many brave men who are here interred lost their lives—many of them had won victories in Sicily, whither they had gone over the seas to fight for the liberties of the 243 Leontines, to whom they were bound by oaths, but owing to the distance the city was unable to help them, and they lost heart and came to misfortune, their very enemies and opponents winning more renown for valor and temperance than the friends of others. Many also fell in naval engagements at the Hellespont, after having in one day taken all the ships of the enemy, and defeated them in other naval b

engagements. And what I call the terrible and desperate nature of the war is that the other Hellenes, in their extreme animosity toward the city, should have entered into negotiations with their bitterest enemy, the king of Persia, whom they, together with us, had expelled—him, without us, they again brought back, barbarian against Hellenes, and all the hosts, both of Hellenes and barbarians, were united against

- c Athens. And then shone forth the power and valor of our city. Her enemies had supposed that she was exhausted by the war, and our ships were blockaded at Mytilene. But the citizens themselves embarked, and came to the rescue with sixty other ships, and their valor was confessed of all men, for they conquered their enemies and delivered their friends. And yet by some evil fortune they were left to perish at sea, and therefore are not interred here. Ever to be remembered and honored are they, for by their valor not only that sea fight was won for us, but the entire war was decided by them, and through them the city gained the reputation of being invincible, even though attacked by all mankind. And that reputation was a true one, for the defeat which came upon us was our own doing. We were never conquered by others, and to this day we are still unconquered by them, but we were our own conquerors, and received defeat at our own hands.

- e Afterward there was quiet and peace abroad, but there sprang up war at home, and if men are destined to have civil war, no one could have desired that his city should take the disorder in a milder form. How joyful and natural was the reconciliation of those who came from the Piraeus and those who came from the city. With what moderation did they order the war against the tyrants in Eleusis, and
- 244 in a manner how unlike what the other Hellenes expected! And the reason of this gentleness was the veritable tie of blood, which created among them a friendship as of kinsmen, faithful not in word only, but in deed. And we ought also to remember those who then fell by one another's hands, and on such occasions as these to reconcile them with sacrifices and prayers, praying to those who have power over them, that they may be reconciled even as we are reconciled. For they did not attack one another out of malice or enmity, but they
- b were unfortunate. And that such was the fact we ourselves are witnesses, who are of the same race with them, and have mutually received and granted forgiveness of what we have done and suffered.

- After this there was perfect peace, and the city had rest. And her feeling was that she forgave the barbarians, who had severely suffered at her hands and severely retaliated, but that she was indignant at the ingratitude of the Hellenes, when she remembered how they had received good from her and returned evil, having made common cause
- c with the barbarians, depriving her of the ships which had once been their salvation, and dismantling our walls, which had preserved their own from falling. She thought that she would no longer defend the

Hellenes, when enslaved either by one another or by the barbarians, and did accordingly. This was our feeling, while the Lacedaemonians were thinking that we who were the champions of liberty had fallen, and that their business was to subject the remaining Hellenes. And why should I say more? For the events of which I am speaking happened not long ago and we can all of us remember how the chief peoples of Hellas, Argives and Boeotians and Corinthians, came to feel the need of us, and, what is the greatest miracle of all, the Persian king himself was driven to such extremity as to come round to the opinion, that from this city, of which he was the destroyer, and from no other, his salvation would proceed.

And if a person desired to bring a deserved accusation against our city, he would find only one charge which he could justly urge—that she was too compassionate and too favorable to the weaker side. And in this instance she was not able to hold out or keep her resolution of refusing aid to her injurers when they were being enslaved, but she was softened, and did in fact send out aid, and delivered the Hellenes from slavery, and they were free until they afterward enslaved themselves, whereas to the Great King she refused to give the assistance of the state, for she could not forget the trophies of Marathon and Salamis and Plataea, but she allowed exiles and volunteers to assist him, and they were his salvation. And she herself, when she was compelled, entered into the war, and built walls and ships, and fought with the Lacedaemonians on behalf of the Parians. Now the king fearing this city and wanting to stand aloof, when he saw the Lacedaemonians growing weary of the war at sea, asked of us, as the price of his alliance with us and the other allies, to give up the Hellenes in Asia, whom the Lacedaemonians had previously handed over to him—he thinking that we should refuse, and that then he might have a pretense for withdrawing from us. About the other allies he was mistaken, for the Corinthians and Argives and Boeotians, and the other states, were quite willing to let them go, and swore and covenanted that, if he would pay them money, they would make over to him the Hellenes of the continent, and we alone refused to give them up and swear. Such was the natural nobility of this city, so sound and healthy was the spirit of freedom among us, and the instinctive dislike of the barbarian, because we are pure Hellenes, having no admixture of barbarism in us. For we are not like many others, descendants of Pelops or Cadmus or Aegyptus or Danaus, who are by nature barbarians, and yet pass for Hellenes, and dwell in the midst of us, but we are pure Hellenes, uncontaminated by any foreign element, and therefore the hatred of the foreigner has passed unadulterated into the lifeblood of the city. And so, notwithstanding our noble sentiments, we were again isolated, because we were unwilling to be guilty of the base and unholy act of giving up Hellenes to barbarians. And we were in the same case as when we were subdued

before, but, by the favor of heaven, we managed better, for we ended the war without the loss of our ships or walls or colonies; the enemy was only too glad to be quit of us. Yet in this war we lost many brave men, such as were those who fell owing to the ruggedness of the ground at the Battle of Corinth, or by treason at Lechaemum. Brave  
 246 men, too, were those who delivered the Persian king, and drove the Lacedaemonians from the sea. I remind you of them, and you must celebrate them together with me, and do honor to their memories.

Such were the actions of the men who are here interred, and of others who have died on behalf of their country; many and glorious things I have spoken of them, and there are yet many more, and more glorious, things remaining to be told—many days and nights  
 b would not suffice to tell of them. Let them not be forgotten, and let every man remind their descendants that they also are soldiers who must not desert the ranks of their ancestors, or from cowardice fall behind. Even so I exhort you this day, and in all future time, whenever I meet with any of you, shall continue to remind and exhort you, O ye  
 c sons of heroes, that you strive to be the bravest of men. And I think that I ought now to repeat what your fathers desired to have said to you who are their survivors, when they went out to battle, in case anything happened to them. I will tell you what I heard them say, and what, if they had only speech, they would fain be saying, judging from what they then said. And you must imagine that you hear them saying what I now repeat to you.

d Sons, the event proves that your fathers were brave men, for we might have lived dishonorably, but have preferred to die honorably rather than bring you and your children into disgrace, and rather than dishonor our own fathers and forefathers—considering that life is not life to one who is a dishonor to his race, and that to such a one neither men nor gods are friendly, either while he is on the earth or after death in the world below. Remember our words, then, and what-  
 e ever is your aim let virtue be the condition of the attainment of your aim, and know that without this all possessions and pursuits are dishonorable and evil. For neither does wealth bring honor to the owner, if he be a coward; of such a one the wealth belongs to another, and not to himself. Nor do beauty and strength of body, when dwelling in a base and cowardly man, appear comely, but the reverse of comely, making the possessor more conspicuous, and manifesting forth his cowardice. And all knowledge, when separated from justice  
 247 and virtue, is seen to be cunning and not wisdom; wherefore make this your first and last and constant and all-absorbing aim—to exceed, if possible, not only us but all your ancestors in virtue, and know that to excel you in virtue only brings us shame, but that to be excelled by you is a source of happiness to us. And we shall most likely be defeated, and you will most likely be victors in the contest, if you  
 b learn so to order your lives as not to abuse or waste the reputation

of your ancestors, knowing that to a man who has any self-respect, nothing is more dishonorable than to be honored, not for his own sake, but on account of the reputation of his ancestors. The honor of parents is a fair and noble treasure to their posterity, but to have the use of a treasure of wealth and honor, and to leave none to your successors, because you have neither money nor reputation of your own, is alike base and dishonorable. And if you follow our precepts you will be received by us as friends, when the hour of destiny brings c you hither, but if you neglect our words and are disgraced in your lives, no one will welcome or receive you. This is the message which is to be delivered to our children.

Some of us have fathers and mothers still living, and we would urge them, if, as is likely, we shall die, to bear the calamity as lightly as possible, and not to condole with one another, for they have sor- d rows enough, and will not need anyone to stir them up. While we gently heal their wounds, let us remind them that the gods have heard the chief part of their prayers, for they prayed, not that their children might live forever, but that they might be brave and renowned. And this, which is the greatest good, they have attained. A mortal man cannot expect to have everything in his own life turning out according to his will, and they, if they bear their misfortunes bravely, will be truly deemed brave fathers of the brave. But if they give way to their e sorrows, either they will be suspected of not being our parents, or we of not being such as our panegyrists declare. Let not either of the two alternatives happen, but rather let them be our chief and true panegyrists, who show in their lives that they are true men, and had men for their sons. Of old the saying, 'Nothing too much,' appeared to be, and really was, well said. For he whose happiness rests with him- 248 self, if possible, wholly, and if not, as far as possible, who is not hanging in suspense on other men, or changing with the vicissitude of their fortune, has his life ordered for the best. He is the temperate and valiant and wise, and when his riches come and go, when his children are given and taken away, he will remember the proverb, 'Neither rejoicing overmuch nor grieving overmuch,' for he relies upon himself. And such we would have our parents to be—that is our word and wish, and as such we now offer ourselves, neither lamenting over- b much, nor fearing overmuch, if we are to die at this time. And we entreat our fathers and mothers to retain these feelings throughout their future life, and to be assured that they will not please us by sorrowing and lamenting over us. But, if the dead have any knowledge of the living, they will displease us most by making themselves miserable and by taking their misfortunes too much to heart, and they c will please us best if they bear their loss lightly and temperately. For our life will have the noblest end which is vouchsafed to man, and should be glorified rather than lamented. And if they will direct their minds to the care and nurture of our wives and children, they will

soonest forget their misfortunes, and live in a better and nobler way,  
 a and be dearer to us.

This is all that we have to say to our families, and to the state we would say, Take care of our parents and of our sons—let her worthily cherish the old age of our parents, and bring up our sons in the right way. But we know that she will of her own accord take care of them, and does not need any exhortation of ours.

This, O ye children and parents of the dead, is the message  
 e which they bid us deliver to you, and which I do deliver with the utmost seriousness. And in their name I beseech you, the children, to imitate your fathers, and you, parents, to be of good cheer about yourselves, for we will nourish your age, and take care of you both publicly and privately in any place in which one of us may meet one of you who are the parents of the dead. And the care of you which the city shows, you know yourselves, for she has made provision by law concerning the parents and children of those who die in war; the  
 249 highest authority is specially entrusted with the duty of watching over them above all other citizens, and they will see that the fathers and mothers have no wrong done to them. The city herself shares in the education of the children, desiring as far as it is possible that their orphanhood may not be felt by them. While they are children she is a parent to them, and when they have arrived at man's estate she sends them to their several duties, in full armor clad; and bringing freshly to their minds the ways of their fathers, she places in  
 b their hands the instruments of their fathers' virtues. For the sake of the omen, she would have them from the first begin to rule over their own houses arrayed in the strength and arms of their fathers. And as for the dead, she never ceases honoring them, celebrating, in common for all, rites which become the property of each, and in addition to this, holding gymnastic and equestrian contests, and musical festivals of every sort. She is to the dead in the place of a son and heir,  
 c and to their sons in the place of a father, and to their parents and elder kindred in the place of a guardian—ever and always caring for them. Considering this, you ought to bear your calamity the more gently, for thus you will be most endeared to the dead and to the living, and your sorrows will heal and be healed. And now do you and all, having lamented the dead in common according to the law, go your  
 d ways.

You have heard, Menexenus, the oration of Aspasia the Milesian.

MENEXENUS: Truly, Socrates, I marvel that Aspasia, who is only a woman, should be able to compose such a speech—she must be a rare one.

SOCRATES: Well, if you are incredulous, you may come with me and hear her.

MENEXENUS: I have often met Aspasia, Socrates, and know what she is like.

SOCRATES : Well, and do you not admire her, and are you not grateful for her speech?

MENEXENUS : Yes, Socrates, I am very grateful to her or to him who told you, and still more to you who have told me. e

SOCRATES : Very good. But you must take care not to tell of me, and then at some future time I will repeat to you many other excellent political speeches of hers.

MENEXENUS : Fear not. Only let me hear them, and I will keep the secret.

SOCRATES : Then I will keep my promise.

# LESSER

*This dialogue can be ascribed to Plato only because it always has been, from Aristotle's day on. It is inferior to all the others. The argument is between Socrates and a Sophist, Hippias, who says that he has never found anyone superior to him in anything. It turns upon voluntary and involuntary wrongdoing, Hippias maintaining that it is better to do wrong unintentionally than intentionally and Socrates taking the opposite side. He starts with the assertion that a wrestler is better who falls purposely than one who falls because he cannot help it, and that to sing out of tune because one has a bad ear is worse than to do so deliberately, and thus that to make mistakes voluntarily is better than to err involuntarily, and so on, to the inevitable conclusion that the good man is he who knowingly does wrong.*

*At this point Hippias demurs and Socrates says that he sympathizes with him, but then he is just an ordinary man, ignorant and in a very bad way if the wisest Sophist cannot show him the truth.*

EUDICUS: Why are you silent, Socrates, after the magnificent display which Hippias has been making? Why do you not either refute his words, if he seems to you to have been wrong in any point, or join with us in commending him? There is the more reason why you should speak, because we are now alone, and the audience is confined to those who may fairly claim to take part in a philosophical discussion. 363

SOCRATES: I should greatly like, Eudicus, to ask Hippias the meaning of what he was saying just now about Homer. I have heard b your father, Apemantus, declare that the *Iliad* of Homer is a finer poem than the *Odyssey* in the same degree that Achilles was a better man than Odysseus; Odysseus, he would say, is the central figure of the one poem and Achilles of the other. Now, I should like to know, if Hippias has no objection to tell me, what he thinks about these two heroes, and which of them he maintains to be the better. He has already told us in the course of his exhibition many things of various c kinds about Homer and diverse other poets.

EUDICUS: I am sure that Hippias will be delighted to answer anything which you would like to ask. Tell me, Hippias, if Socrates asks you a question, will you answer him?

HIPPIAS: Indeed, Eudicus, I should be strangely inconsistent if I refused to answer Socrates, when at each Olympic festival, as I went up from my house at Elis to the temple of Olympia, where all d the Hellenes were assembled, I continually professed my willingness to perform any of the exhibitions which I had prepared, and to answer any questions which anyone had to ask.

SOCRATES: Truly, Hippias, you are to be congratulated, if at 364 every Olympic festival you have such an encouraging opinion of your own wisdom when you go up to the temple. I doubt whether any muscular hero would be so fearless and confident in offering his body to the combat at Olympia, as you are in offering your mind.

HIPPIAS: And with good reason, Socrates, for since the day when I first entered the lists at Olympia I have never found any man who was my superior in anything.

SOCRATES: What an ornament, Hippias, will the reputation of b your wisdom be to the city of Elis and to your parents! But to return, what say you of Odysseus and Achilles? Which is the better of the two? And in what particular does either surpass the other? For when you were exhibiting and there was company in the room, though I could not follow you, I did not like to ask what you meant, because a crowd of people were present, and I was afraid that the question might interrupt your exhibition. But now that there are not so many of us, and my friend Eudicus bids me ask, I wish you would tell me

- c what you were saying about these two heroes, so that I may clearly understand. How did you distinguish them?

HIPPIAS : I shall have much pleasure, Socrates, in explaining to you more clearly than I could in public my views about these and also about other heroes. I say that Homer intended Achilles to be the bravest of the men who went to Troy, Nestor the wisest, and Odysseus the wiliest.

- d SOCRATES : O rare Hippias, will you be so good as not to laugh, if I find a difficulty in following you, and repeat my questions several times over? Please to answer me kindly and gently.

HIPPIAS : I should be greatly ashamed of myself, Socrates, if I, who teach others and take money of them, could not, when I was asked by you, answer in a civil and agreeable manner.

- e SOCRATES : Thank you. The fact is that I seemed to understand what you meant when you said that the poet intended Achilles to be the bravest of men, and also that he intended Nestor to be the wisest, but when you said that he meant Odysseus to be the wiliest, I must confess that I could not understand what you were saying. Will you tell me, and then I shall perhaps understand you better, has not Homer made Achilles wily?

HIPPIAS : Certainly not, Socrates. He is the most straightforward of mankind, and when Homer introduces them talking with one another in the passage called 'The Prayers,' Achilles is supposed by the poet to say to Odysseus,

- 365 Son of Laertes, sprung from heaven, crafty Odysseus, I will speak out plainly the word which I intend to carry out in act, and which will, I believe, be accomplished. For I hate him like the gates of death who thinks  
b one thing and says another. But I will speak that which shall be accomplished.<sup>1</sup>

Now, in these verses he clearly indicates the character of the two men. He shows Achilles to be true and simple, and Odysseus to be wily and false, for he supposes Achilles to be addressing Odysseus in these lines.

SOCRATES : Now, Hippias, I think that I understand your meaning. When you say that Odysseus is wily, you clearly mean that he is false?

- c HIPPIAS : Exactly so, Socrates. It is the character of Odysseus, as he is represented by Homer in many passages of both the *Iliad* and the *Odyssey*.

SOCRATES : And Homer must be presumed to have meant that the true man is not the same as the false?

HIPPIAS : Of course, Socrates.

SOCRATES : And is that your own opinion, Hippias?

<sup>1</sup> *Iliad* 9.308 sq.

HIPPIAS: Certainly. How can I have any other?

SOCRATES: Well, then, as there is no possibility of asking Homer what he meant in these verses of his, let us leave him, but as you show a willingness to take up his cause, and your opinion agrees with what you declare to be his, will you answer on behalf of yourself and him?

HIPPIAS: I will. Ask shortly anything which you like.

SOCRATES: Do you say that the false, like the sick, have no power to do things, or that they have the power to do things?

HIPPIAS: I should say that they have power to do many things, and in particular to deceive mankind.

SOCRATES: Then, according to you, they are both powerful and wily, are they not?

HIPPIAS: Yes.

SOCRATES: And are they wily, and do they deceive by reason of their simplicity and folly, or by reason of their cunning and a certain sort of prudence?

HIPPIAS: By reason of their cunning and prudence, most certainly.

SOCRATES: Then they are prudent, I suppose?

HIPPIAS: So they are—very.

SOCRATES: And if they are prudent, do they know or do they not know what they do?

HIPPIAS: Of course, they know very well, and that is why they do mischief to others.

SOCRATES: And having this knowledge, are they ignorant, or are they wise?

366

HIPPIAS: Wise, certainly, at least in so far as they can deceive.

SOCRATES: Stop, and let us recall to mind what you are saying. Are you not saying that the false are powerful and prudent and knowing and wise in those things about which they are false?

HIPPIAS: To be sure.

SOCRATES: And the true differ from the false—the true and the false are the very opposite of each other?

HIPPIAS: That is my view.

SOCRATES: Then, according to your view, it would seem that the false are to be ranked in the class of the powerful and wise?

HIPPIAS: Assuredly.

SOCRATES: And when you say that the false are powerful and wise in so far as they are false, do you mean that they have or have not the power of uttering their falsehoods if they like?

HIPPIAS: I mean to say that they have the power.

SOCRATES: In a word, then, the false are they who are wise and have the power to speak falsely?

HIPPIAS: Yes.

SOCRATES: Then a man who has not the power of speaking falsely and is ignorant cannot be false?

HIPPIAS: You are right.

SOCRATES: And every man has power who does that which he wishes at the time when he wishes. I am not speaking of any special case in which he is prevented by disease or something of that sort, but I am speaking generally, as I might say of you that you are able to write my name when you like. Would you not call a man able who could do that?

HIPPIAS: Yes.

SOCRATES: And tell me, Hippias, are you not a skillful calculator and arithmetician?

HIPPIAS: Yes, Socrates, assuredly I am.

SOCRATES: And if someone were to ask you what is the sum of 3 multiplied by 700, you would tell him the true answer in a moment, if you pleased?

HIPPIAS: Certainly I should.

SOCRATES: Is not that because you are the wisest and ablest of men in these matters?

HIPPIAS: Yes.

SOCRATES: And being as you are the wisest and ablest of men in these matters of calculation, are you not also the best?

HIPPIAS: To be sure, Socrates, I am the best.

SOCRATES: And, therefore, you would be the most able to tell the truth about these matters, would you not?

HIPPIAS: Yes, I should.

SOCRATES: And could you speak falsehoods about them equally well? I must beg, Hippias, that you will answer me with the same frankness and magnanimity which has hitherto characterized you. If a person were to ask you what is the sum of 3 multiplied by 700, would not you be the best and most consistent teller of a falsehood, having always the power of speaking falsely as you have of speaking truly, about these same matters, if you wanted to tell a falsehood, and not to answer truly? Would the ignorant man be better able to tell a falsehood in matters of calculation than you would be, if you chose? Might he not sometimes stumble upon the truth, when he wanted to tell a lie, because he did not know, whereas you who are the wise man, if you wanted to tell a lie would always and consistently lie?

HIPPIAS: Yes, there you are quite right.

SOCRATES: Does the false man tell lies about other things, but not about number, or when he is making a calculation?

HIPPIAS: To be sure, he would tell as many lies about number as about other things.

SOCRATES: Then may we further assume, Hippias, that there are men who are false about calculation and number?

HIPPIAS: Yes.

SOCRATES: Who can they be? For you have already admitted that he who is false must have the ability to be false. You said, as you will remember, that he who is unable to be false will not be false.

HIPPIAS: Yes, I remember, it was so said.

SOCRATES: And were you not yourself just now shown to be best able to speak falsely about calculation?

HIPPIAS: Yes, that was another thing which was said.

SOCRATES: And are not you likewise said to speak truly about calculation?

HIPPIAS: Certainly.

SOCRATES: Then the same person is able to speak both falsely and truly about calculation? And that person is he who is good at calculation—the arithmetician?

HIPPIAS: Yes.

SOCRATES: Who, then, Hippias, is discovered to be false at calculation? Is he not the good man? For the good man is the able man, and he is the true man.

HIPPIAS: That is evident.

SOCRATES: Do you not see, then, that the same man is false and also true about these same matters? And the true man is not a whit better than the false, for indeed he is the same with him and not the very opposite, as you were just now imagining.

HIPPIAS: Not in that instance, clearly.

SOCRATES: Shall we examine other instances?

HIPPIAS: Certainly, if you are disposed.

SOCRATES: Are you not also skilled in geometry?

HIPPIAS: I am.

SOCRATES: Well, and does not the same hold in that science also? Is not the same person best able to speak falsely or to speak truly about diagrams, and he is—the geometrician?

HIPPIAS: Yes.

SOCRATES: He and no one else is good at it?

HIPPIAS: Yes, he and no one else.

SOCRATES: Then the good and wise geometer has this double power in the highest degree, and if there be a man who is false about diagrams the good man will be he, for he is able to be false, whereas the bad is unable, and for this reason is not false, as has been admitted.

HIPPIAS: True.

SOCRATES: Once more—let us examine a third case, that of the astronomer, in whose art, again, you, Hippias, profess to be a still greater proficient than in the preceding, do you not?

HIPPIAS: Yes, I am.

SOCRATES: And does not the same hold of astronomy?

HIPPIAS: True, Socrates.

SOCRATES: And in astronomy, too, if any man be able to speak

falsely it will be the good astronomer, but he who is not able will not speak falsely, for he has no knowledge.

HIPPIAS: Clearly not.

SOCRATES: Then in astronomy also, the same man will be true and false?

HIPPIAS: It would seem so.

SOCRATES: And now, Hippias, consider the question at large  
 b about all the sciences, and see whether the same principle does not  
 always hold. I know that in most arts you are the wisest of men, as I  
 have heard you boasting in the Agora at the tables of the money-  
 changers, when you were setting forth the great and enviable stores  
 of your wisdom, and you said that upon one occasion, when you went  
 to the Olympic games, all that you had on your person was made by  
 yourself. You began with your ring, which was of your own work-  
 manship, and you said that you could engrave rings, and you had an-  
 c other seal which was also of your own workmanship, and a strigil and  
 an oil flask, which you had made yourself. You said also that you  
 had made the shoes which you had on your feet, and the cloak and  
 the short tunic, but what appeared to us all most extraordinary, and  
 a proof of singular art, was the girdle of your tunic, which, you said,  
 was as fine as the most costly Persian fabric, and of your own weav-  
 ing. Moreover, you told us that you had brought with you poems,  
 epic, tragic, and dithyrambic, as well as prose writings of the most  
 d various kinds, and you said that your skill was also pre-eminent in the  
 arts which I was just now mentioning, and in the true principles of  
 rhythm and harmony and of orthography. And, if I remember rightly,  
 there were a great many other accomplishments in which you ex-  
 celled. I have forgotten to mention your art of memory, which you re-  
 gard as your special glory, and I dare say that I have forgotten many  
 e other things, but, as I was saying, only look to your own arts—and  
 there are plenty of them—and to those of others, and tell me, having  
 regard to the admissions which you and I have made, whether you  
 discover any department of art or any description of wisdom or cun-  
 ning, whichever name you use, in which the true and false are differ-  
 369 ent and not the same. Tell me, if you can, of any. But you cannot.

HIPPIAS: Not without consideration, Socrates.

SOCRATES: Nor will consideration help you, Hippias, as I be-  
 lieve, but then if I am right, remember what the consequence will be.

HIPPIAS: I do not know what you mean, Socrates.

SOCRATES: I suppose that you are not using your art of mem-  
 ory, doubtless because you think that such an accomplishment is not  
 needed on the present occasion. I will therefore remind you of what  
 you were saying. Were you not saying that Achilles was a true man,  
 b and Odysseus false and wily?

HIPPIAS: I was.

SOCRATES: And now do you perceive that the same person has

turned out to be false as well as true? If Odysseus is false he is also true, and if Achilles is true he is also false, and so the two men are not opposed to one another, but they are alike.

HIPPIAS: O Socrates, you are always weaving the meshes of an argument, selecting the most difficult point, and fastening upon details instead of grappling with the matter in hand as a whole. Come now, and I will demonstrate to you, if you will allow me, by many satisfactory proofs, that Homer has made Achilles a better man than Odysseus, and a truthful man too, and that he has made the other crafty, and a teller of many untruths, and inferior to Achilles. And then, if you please, you shall make a speech on the other side, in order to prove that Odysseus is the better man, and this may be compared to mine, and then the company will know which of us is the better speaker.

SOCRATES: O Hippias, I do not doubt that you are wiser than I am. But I have a way, when anybody else says anything, of giving close attention to him, especially if the speaker appears to me to be a wise man. Having a desire to understand, I question him, and I examine and analyze and put together what he says, in order that I may understand, but if the speaker appears to me to be a poor hand, I do not interrogate him, or trouble myself about him. And you may know by this who they are whom I deem to be wise men, for you will see that when I am talking with a wise man, I am very attentive to what he says and ask questions of him, in order that I may learn and be improved by him. And I could not help remarking while you were speaking, when you recited the verses in which Achilles, as you argued, attacks Odysseus as a deceiver, that you must be strangely mistaken, because Odysseus, the man of wiles, is never found to tell a lie, but Achilles is found to be wily on your own showing. At any rate he speaks falsely, for first he utters these words, which you just now repeated,

He is hateful to me even as the gates of death who thinks one thing and says another.<sup>2</sup>

And then he says, a little while afterward, he will not be persuaded by Odysseus and Agamemnon; neither will he remain at Troy, but, says he,

Tomorrow, when I have offered sacrifices to Zeus and all the gods, having loaded my ships well, I will drag them down into the deep. And then you shall see, if you have a mind, and if such things are a care to you, early in the morning my ships sailing over the fishy Hellespont, and my men eagerly plying the oar, and, if the illustrious shaker of the earth gives me a good voyage, on the third day I shall reach the fertile Phthia.<sup>3</sup>

<sup>2</sup> *Iliad* 9.308 sq.

<sup>3</sup> *Iliad* 9.357 sq.

And before that, when he was reviling Agamemnon, he said,

And now to Phthia I will go, since to return home in the beaked ships is far better, nor am I inclined to stay here in dishonor and amass d wealth and riches for you.<sup>4</sup>

But although on that occasion, in the presence of the whole army, he spoke after this fashion, and on the other occasion to his companions, he appears never to have made any preparation or attempt to draw down the ships, as if he had the least intention of sailing home —so nobly regardless was he of the truth. Now I, Hippias, originally asked you the question, because I was in doubt as to which of the two heroes was intended by the poet to be the better, and because I e thought that both of them were pre-eminent, and that it would be difficult to decide which was the better of them, not only in respect of truth and falsehood, but of virtue generally, for even in this matter of speaking the truth they are much upon a par.

HIPPIAS: There you are wrong, Socrates, for in so far as Achilles speaks falsely, the falsehood is obviously unintentional. He is compelled against his will to remain and rescue the army in their misfortune. But when Odysseus speaks falsely he is voluntarily and intentionally false.

SOCRATES: You, sweet Hippias, like Odysseus, are a deceiver yourself.

371 HIPPIAS: Certainly not, Socrates. What makes you say so?

SOCRATES: Because you say that Achilles does not speak falsely from design, when he is not only a deceiver, but besides being a braggart, in Homer's description of him is so cunning, and so far superior to Odysseus in lying and pretending, that he dares to contradict himself, and Odysseus does not find him out; at any rate he does not appear to say anything to him which would imply that he b perceived his falsehood.

HIPPIAS: What do you mean, Socrates?

SOCRATES: Did you not observe that afterward, when he is speaking to Odysseus, he says that he will sail away with the early dawn, but to Ajax he tells quite a different story?

HIPPIAS: Where is that?

SOCRATES: Where he says,

I will not think about bloody war until the son of warlike Priam, illustrious Hector, comes to the tents and ships of the Myrmidons, slaughtering c the Argives and burning the ships with fire. And about my tent and dark ship, I suspect that Hector, although eager for the battle, will nevertheless stay his hand.<sup>5</sup>

Now, do you really think, Hippias, that the son of Thetis, who had

<sup>4</sup> *Iliad* 1.169 sq.    <sup>5</sup> *Iliad* 9.650.

been the pupil of the sage Chiron, had such a bad memory, or would d have carried the art of lying to such an extent—when he had been assailing liars in the most violent terms only the instant before—as to say to Odysseus that he would sail away, and to Ajax that he would remain, and that he was not rather practicing upon the simplicity of Odysseus, whom he regarded as an ancient, and thinking that he would get the better of him by his own cunning and falsehood?

HIPPIAS: No, I do not agree with you, Socrates, but I believe that Achilles is induced to say one thing to Ajax, and another to e Odysseus, in the innocence of his heart, whereas Odysseus, whether he speaks falsely or truly, speaks always with a purpose.

SOCRATES: Then Odysseus would appear after all to be better than Achilles?

HIPPIAS: Certainly not, Socrates.

SOCRATES: Why, were not the voluntary liars only just now shown to be better than the involuntary?

HIPPIAS: And how, Socrates, can those who intentionally err, and voluntarily and designedly commit iniquities, be better than those who err and do wrong involuntarily? Surely there is a great excuse to 372 be made for a man telling a falsehood or doing an injury or any sort of harm to another, in ignorance. And the laws are obviously far more severe on those who lie or do evil, voluntarily, than on those who do evil involuntarily.

SOCRATES: You see, Hippias, as I have already told you, how pertinacious I am in questioning wise men. And I think that this is the b only good point about me, for I am full of defects, and always getting things wrong in some way or other. My deficiency is proved to me by the fact that when I meet one of you who are famous for wisdom, and to whose wisdom all the Hellenes are witnesses, I am found out to know nothing. For speaking generally, I hardly ever have the same opinion about anything which you have, and what proof of ignorance can be greater than to differ from wise men? But I have c one singular good quality, which is my salvation. I am not ashamed to learn, and I ask and inquire, and am very grateful to those who answer me, and never fail to give them my grateful thanks. And when I learn a thing I never deny my teacher, or pretend that the lesson is a discovery of my own, but I praise his wisdom, and proclaim what I have learned from him. And now I cannot agree in what you are saying, but I strongly disagree. Well, I know that this is my own fault, and d is a defect in my character, but I will not pretend to be more than I am, and my opinion, Hippias, is the very contrary of what you are saying, for I maintain that those who hurt or injure mankind, and speak falsely and deceive, and err voluntarily, are better far than those who do wrong involuntarily. Sometimes, however, I am of the opposite opinion, for I am all abroad in my ideas about this matter, a condition obviously occasioned by ignorance. And just now I happen to

e be in a crisis of my disorder at which those who err voluntarily appear to me better than those who err involuntarily. My present state of mind is due to our previous argument, which inclines me to believe that in general those who do wrong involuntarily are worse than those who do wrong voluntarily, and therefore I hope that you will be good to me, and not refuse to heal me, for you will do me a much greater  
 373 benefit if you cure my soul of ignorance than you would if you were to cure my body of disease. I must, however, tell you beforehand, that if you make a long oration to me you will not cure me, for I shall not be able to follow you; but if you will answer me, as you did just now, you will do me a great deal of good, and I do not think that you will be any the worse yourself. And I have some claim upon you also, O son of Apemantus, for you incited me to converse with Hippias, and now, if Hippias will not answer me, you must entreat him on my behalf.

b EUDICUS: But I do not think, Socrates, that Hippias will require any entreaty of mine, for he has already said that he will refuse no man. Did you not say so, Hippias?

HIPPIAS: Yes, I did, but then, Eudicus, Socrates is always troublesome in an argument, and appears to be dishonest.

SOCRATES: Excellent Hippias, I do not do so intentionally—if I did, it would show me to be a wise man and a master of wiles, as you would argue—but unintentionally, and therefore you must pardon me, for, as you say, he who is unintentionally dishonest should be pardoned.

c EUDICUS: Yes, Hippias, do as he says, and for our sake, and also that you may not belie your profession, answer whatever Socrates asks you.

HIPPIAS: I will answer, as you request me, and do you ask whatever you like.

SOCRATES: I am very desirous, Hippias, of examining this question, as to which are the better—those who err voluntarily or involuntarily? And if you will answer me, I think that I can put you in the way of approaching the subject. You would admit, would you not, that there are good runners?

d HIPPIAS: Yes.

SOCRATES: And there are bad runners?

HIPPIAS: Yes.

SOCRATES: And he who runs well is a good runner, and he who runs ill is a bad runner?

HIPPIAS: Very true.

SOCRATES: And he who runs slowly runs ill, and he who runs quickly runs well?

HIPPIAS: Yes.

SOCRATES: Then in a race, and in running, swiftness is a good, and slowness is an evil quality?

HIPPIAS: To be sure.

SOCRATES: Which of the two then is a better runner? He who

runs slowly voluntarily, or he who runs slowly involuntarily?

HIPPIAS: He who runs slowly voluntarily.

SOCRATES: And is not running a species of doing?

HIPPIAS: Certainly.

SOCRATES: And if a species of doing, a species of action?

HIPPIAS: Yes.

SOCRATES: Then he who runs badly does a bad and dishonorable action in a race?

HIPPIAS: Yes, a bad action, certainly.

SOCRATES: And he who runs slowly runs badly?

HIPPIAS: Yes.

SOCRATES: Then the good runner does this bad and disgraceful action voluntarily, and the bad involuntarily?

HIPPIAS: That is to be inferred.

SOCRATES: Then he who involuntarily does evil actions is worse in a race than he who does them voluntarily?

HIPPIAS: Yes, in a race.

SOCRATES: Well, but at a wrestling match—which is the better wrestler, he who falls voluntarily or involuntarily?

HIPPIAS: He who falls voluntarily, doubtless.

SOCRATES: And is it worse and more dishonorable at a wrestling match, to fall, or to throw another?

HIPPIAS: To fall.

SOCRATES: Then, at a wrestling match, he who voluntarily does base and dishonorable actions is a better wrestler than he who does them involuntarily?

HIPPIAS: That appears to be the truth.

SOCRATES: And what would you say of any other bodily exercise—is not he who is better made able to do both that which is strong and that which is weak, that which is fair and that which is foul, so that when he does bad actions with the body, he who is better made does them voluntarily, and he who is worse made does them involuntarily?

HIPPIAS: Yes, that appears to be true about strength.

SOCRATES: And what do you say about grace, Hippias? Is not he who is better made able to assume evil and disgraceful figures and postures voluntarily, as he who is worse made assumes them involuntarily?

HIPPIAS: True.

SOCRATES: Then voluntary ungracefulness comes from excellence of the bodily frame, and involuntary from the defect of the bodily frame?

HIPPIAS: True.

SOCRATES: And what would you say of an unmusical voice? Would you prefer the voice which is voluntarily or involuntarily out of tune?

HIPPIAS: That which is voluntarily out of tune.

SOCRATES: The involuntary is the worse of the two?

HIPPIAS: Yes.

SOCRATES: And would you choose to possess goods or evils?

HIPPIAS: Goods.

SOCRATES: And would you rather have feet which are voluntarily or involuntarily lame?

d HIPPIAS: Feet which are voluntarily lame.

SOCRATES: But is not lameness a defect or deformity?

HIPPIAS: Yes.

SOCRATES: And is not blinking a defect of the eyes?

HIPPIAS: Yes.

SOCRATES: And would you rather always have eyes with which you might voluntarily blink and not see, or with which you might involuntarily blink?

HIPPIAS: I would rather have eyes which voluntarily blink.

SOCRATES: Then in your own case you deem that which voluntarily acts ill better than that which involuntarily acts ill?

HIPPIAS: Yes, certainly, in cases such as you mention.

SOCRATES: And does not the same hold of ears, nostrils, mouth, and of all the senses—those which involuntarily act ill are not  
e to be desired, as being defective, and those which voluntarily act ill are to be desired as being good?

HIPPIAS: I agree.

SOCRATES: And what would you say of instruments—which are the better sort of instruments to have to do with, those with which a man acts ill voluntarily or involuntarily? For example, had a man better have a rudder with which he will steer ill, voluntarily or involuntarily?

HIPPIAS: He had better have a rudder with which he will steer ill voluntarily.

SOCRATES: And does not the same hold of the bow and the lyre, the flute and all other things?

HIPPIAS: Very true.

375 SOCRATES: And would you rather have a horse of such a temper that you may ride him ill voluntarily or involuntarily?

HIPPIAS: I would rather have a horse which I could ride ill voluntarily.

SOCRATES: That would be the better horse?

HIPPIAS: Yes.

SOCRATES: Then with a horse of better temper, vicious actions would be produced voluntarily, and with a horse of bad temper involuntarily?

HIPPIAS: Certainly.

SOCRATES: And that would be true of a dog, or of any other animal?

HIPPIAS: Yes.

SOCRATES: And is it better to possess the mind of an archer who voluntarily or involuntarily misses the mark?

HIPPIAS: Of him who voluntarily misses.

SOCRATES: This would be the better mind for the purposes of archery?

HIPPIAS: Yes.

SOCRATES: Then the mind which involuntarily errs is worse than the mind which errs voluntarily?

HIPPIAS: Yes, certainly, in the use of the bow.

SOCRATES: And what would you say of the art of medicine—has not the mind which voluntarily works harm to the body more of the healing art?

HIPPIAS: Yes.

SOCRATES: Then in the art of medicine the voluntary is better than the involuntary?

HIPPIAS: Yes.

SOCRATES: Well, and in lute playing and in flute playing, and in all arts and sciences, is not that mind the better which voluntarily does what is evil and dishonorable, and goes wrong, and is not the worse that which does so involuntarily?

HIPPIAS: That is evident.

SOCRATES: And what would you say of the characters of slaves? Should we not prefer to have those who voluntarily do wrong and make mistakes, and are they not better in their mistakes than those who commit them involuntarily?

HIPPIAS: Yes.

SOCRATES: And should we not desire to have our own minds in the best state possible?

HIPPIAS: Yes.

SOCRATES: And will our minds be better if they do wrong and make mistakes voluntarily, or involuntarily?

HIPPIAS: Oh, Socrates, it would be a monstrous thing to say that those who do wrong voluntarily are better than those who do wrong involuntarily!

SOCRATES: And yet that appears to be the only inference.

HIPPIAS: I do not think so.

SOCRATES: But I imagined, Hippias, that you did. Please to answer once more. Is not justice a power, or knowledge, or both? Must not justice, at all events, be one of these?

HIPPIAS: Yes.

SOCRATES: But if justice is a power of the soul, then the soul which has the greater power is also the more just, for that which has the greater power, my good friend, has been proved by us to be the better.

HIPPIAS: Yes, that has been proved.

SOCRATES: And if justice is knowledge, then the wiser will be

the juster soul, and the more ignorant the more unjust?

HIPPIAS: Yes.

SOCRATES: But if justice be power as well as knowledge—then will not the soul which has both knowledge and power be the more just, and that which is the more ignorant be the more unjust? Must it not be so?

HIPPIAS: Clearly.

SOCRATES: And is not the soul which has the greater power and wisdom also better, and better able to do both good and evil in every action?

376 HIPPIAS: Certainly.

SOCRATES: The soul, then, which acts ill, acts voluntarily by power and art—and these, either one or both of them, are elements of justice?

HIPPIAS: That seems to be true.

SOCRATES: And to do injustice is to do ill, and not to do injustice is to do well?

HIPPIAS: Yes.

SOCRATES: And will not the better and abler soul, when it does wrong, do wrong voluntarily, and the bad soul involuntarily?

HIPPIAS: Clearly.

b SOCRATES: And the good man is he who has the good soul, and the bad man is he who has the bad?

HIPPIAS: Yes.

SOCRATES: Then the good man will do wrong voluntarily, and the bad man involuntarily, if the good man is he who has the good soul?

HIPPIAS: Which he certainly has.

SOCRATES: Then, Hippias, he who voluntarily does wrong and disgraceful things, if there be such a man, will be the good man?

HIPPIAS: There I cannot agree with you.

c SOCRATES: Nor can I agree with myself, Hippias, and yet that seems to be the conclusion which, as far as we can see at present, must follow from our argument. As I was saying before, I am all abroad, and being in perplexity am always changing my opinion. Now, that I or any ordinary man should wander in perplexity is not surprising, but if you wise men also wander, and we cannot come to you and rest from our wandering, the matter begins to be serious both to us and to you.

# ION

*In this little dialogue Plato is amusing himself. Socrates talks with Ion whose profession is to give recitals of Homer on special occasions and who is convinced that he is the greatest artist in that line throughout Greece. His naïve and complete self-satisfaction is amusingly contrasted with Socrates' very gentle irony. Ion is no antagonist to draw down upon him anything more drastic. Socrates treats him most gently and he feels as self-satisfied at the end as he did at the beginning.*

*The real interest in the conversation—it cannot be called a discussion—is what Socrates says about art. Heretofore in all the arts in Athens the emotions and the intellect had worked together. There was a balance of power. That is the uniqueness of Greek art; it is an intellectual art. In the Ion Socrates disputes the possibility of such a balance. Art, he says, is not dependent upon the emotions; it belongs to the realm of knowledge. "Each separate art has had assigned to it by the deity the power of knowing a particular occupation," as the art of the physician or the sculptor, but poetry is not art; it is not guided by rules as art is. It is inspiration, not knowledge. Poets and their interpreters like Ion are "not in their senses," but "a poet is a light and winged thing, and holy, and never able to compose until he has become inspired, and is beside himself, and reason is no longer in him."*

*The dialogue by itself is proof that the balance between opposites which had made the Periclean Age possible was passing away and had already passed to such a degree that the greatest of the Athenians had to put his effort into counteracting the rapidly growing disorder in a state ruled more and more not by the mind, but by the emotions.*

- 530       SOCRATES: Welcome, Ion! And whence come you now to pay us a visit? From your home in Ephesus?
- ION: No, Socrates, I come from Epidaurus and the festival of Asclepius.
- SOCRATES: What! Do the citizens of Epidaurus, in honoring the god, have a contest between rhapsodes too?
- ION: Indeed they do. They have every sort of musical competition.
- SOCRATES: So? And did you compete? And how did you succeed?
- b        ION: We carried off first prize, Socrates.
- SOCRATES: Well done! See to it, now, that we win the Panathenaea also.
- ION: It shall be so, God willing.
- SOCRATES: I must say, Ion, I am often envious of you rhapsodists in your profession. Your art requires of you always to go in fine array, and look as beautiful as you can, and meanwhile you must be conversant with many excellent poets, and especially with Homer, the best and most divine of all. You have to understand his thought, and
- c        not merely learn his lines. It is an enviable lot! In fact, one never could be a rhapsode if one did not comprehend the utterances of the poet, for the rhapsode must become an interpreter of the poet's thought to those who listen, and to do this well is quite impossible unless one knows just what the poet is saying. All that, of course, will excite one's envy.
- ION: What you say is true, Socrates; to me, at all events, this aspect of the art has given the most concern. And I judge that I, of all
- d        men, have the finest things to say on Homer, that neither Metrodorus of Lampsacus, nor Stesimbrotus of Thasos, nor Glaucon, nor anyone else who ever lived, had so many reflections, or such fine ones, to present on Homer as have I.
- SOCRATES: That is pleasant news, Ion, for obviously you will not begrudge me a display of your talent.
- ION: Not at all. And, Socrates, it really is worth while to hear how well I have embellished Homer. In my opinion I deserve to be crowned with a wreath of gold by the Homeridae.
- SOCRATES: Another time I shall find leisure to hear your recitation. At the moment do but answer me so far. Are you skilled in
- 531       Homer only, or in Hesiod and Archilochus as well?
- ION: No, only in regard to Homer; to me that seems enough.
- SOCRATES: Is there any point on which both Homer and Hesiod say the same thing?
- ION: Indeed, I think so; there are many cases of it.

SOCRATES : In those cases, then, would you interpret what Homer says better than what Hesiod says?

ION : In the cases where they say the same, Socrates, I should do b  
equally well with both.

SOCRATES : But what about the cases where they do not say the same? For example, take the art of divination; Homer and Hesiod both speak of it.

ION : Quite so.

SOCRATES : Well then, where they say the same on the art of divination, and where they differ on it, would you interpret better what these two poets say, or would one of the diviners, one of the good ones, do so?

ION : One of the diviners.

SOCRATES : But suppose you were a diviner. If you were competent to explain the passages where they agree, would you not be competent to explain as well the passages where they differ?

ION : Manifestly, yes.

SOCRATES : How is it, then, that you are skilled in Homer, but c  
not in Hesiod or the other poets? Does Homer treat of matters different from those that all the other poets treat of? Wasn't his subject mainly war, and hasn't he discussed the mutual relations of men good and bad, or the general run as well as special craftsmen, the relations of the gods to one another and to men, as they forgather, the phenomena of the heavens and occurrences in the underworld, and the birth of gods and heroes? Are not these the subjects Homer dealt with in his d  
poetry?

ION : What you say is true, Socrates.

SOCRATES : And what about the other poets? Haven't they dealt with these same themes?

ION : Yes, but, Socrates, not in the same way.

SOCRATES : How so? In a worse way than he?

ION : Far worse.

SOCRATES : He in a better way?

ION : Better indeed, I warrant you.

SOCRATES : Well now, Ion darling, tell me. When several persons are discussing number, and one of them talks better than the rest, there will be someone who distinguishes the good speaker?

ION : I agree.

SOCRATES : It will be the same one who distinguishes those who e  
are speaking badly, or will it be another?

ION : No doubt the same.

SOCRATES : And this will be the one who knows the art of numbers?

ION : Yes.

SOCRATES : Tell me. When several are discussing diet, and what foods are wholesome, and one of them speaks better than the

rest, will a given person see the excellence of the best speaker, and another the inferiority of the worse, or will the same man distinguish both?

ION: Obviously, I think, the same.

SOCRATES: Who is he? What is he called?

ION: The doctor.

SOCRATES: We may therefore generalize, and say: When several persons are discussing a given subject, the man who can distinguish the one who is talking well on it, and the one who is  
532 talking badly, will always be the same. Or, if he does not recognize the one who is talking badly, then, clearly, neither will he recognize the one who is talking well, granted that the subject is the same.

ION: That is so.

SOCRATES: Then the same man will be skilled with respect to both?

ION: Yes.

SOCRATES: Now you assert that Homer and the other poets, among them Hesiod and Archilochus, all treat of the same subjects, yet not all in the same fashion, but the one speaks well, and the rest of them speak worse.

ION: And what I say is true.

b SOCRATES: Then you, if you can recognize the poet who speaks well, could also recognize the poets who speak worse, and see that they speak worse.

ION: So it seems.

SOCRATES: Well then, my best of friends, when we say that Ion has equal skill in Homer and all other poets, we shall not be mistaken. It must be so, since you yourself admit that the same man will be competent to judge of all who speak of the same matters, and that the poets virtually all deal with the same subjects.

ION: Then what can be the reason, Socrates, for my behavior?  
c When anyone discusses any other poet, I pay no attention, and can offer no remark of any value. I frankly doze. But whenever anyone mentions Homer, immediately I am awake, attentive, and full of things to say.

SOCRATES: The riddle is not hard to solve, my friend. No, it is plain to everyone that not from art and knowledge comes your power to speak concerning Homer. If it were art that gave you power, then you could speak about all the other poets as well. There is an art of poetry as a whole? Am I not right?

ION: Yes.

d SOCRATES: And is not the case the same with any other art you please, when you take it as a whole? The same method of inquiry holds for all the arts? Do you want some explanation, Ion, of what I mean by that?

ION: Yes, Socrates, upon my word I do. It gives me joy to listen to you wise men.

SOCRATES: I only wish you were right in saying that, Ion. But 'wise men'! That means you, the rhapsodists and actors, and the men whose poems you chant, while I have nothing else to tell besides the truth, after the fashion of the ordinary man. For example, take the question I just now asked you. Observe what a trivial and commonplace remark it was that I uttered, something anyone might know, when I said that the inquiry is the same whenever one takes an art in its entirety. Let us reason the matter out. There is an art of painting taken as a whole?

ION: Yes.

SOCRATES: And there are and have been many painters, good and bad?

ION: Yes indeed.

SOCRATES: Now, take Polygnotus, son of Aglaophon. Have you ever seen a man with the skill to point out what is good and what is not in the works of Polygnotus, but without the power to do so in the works of other painters? A man who, when anybody shows the works of other painters, dozes off, is at a loss, has nothing to suggest, but when he has to express a judgment on one particular painter, say Polygnotus or anyone else you choose, wakes up, and is attentive, and is full of things to say?

ION: No, on my oath, I never saw the like.

SOCRATES: Or, again, take sculpture. Have you ever seen a man with the skill to judge the finer works of Daedalus, son of Metion, or of Epeus, son of Panopeus, or of Theodorus of Samos, or the works of any other single sculptor, but, confronted by the works of other sculptors, is at a loss, and dozes off, without a thing to say?

ION: No, on my oath, I never saw one.

SOCRATES: Yet further, as I think, the same is true of playing on the flute, and on the harp, and singing to the harp, and rhapsody. You never saw a man with the skill to judge of Olympus, of Thamyrras, or of Orpheus, or of Phemius, the rhapsodist at Ithaca, but is at a loss, has no remark to make concerning Ion the Ephesian, and his success or failure in reciting.

ION: On that I cannot contradict you, Socrates. But of this thing I am conscious, that I excel all men in speaking about Homer, and on him have much to say, and that everybody else avers I do it well, but on the other poets I do not. Well then, see what that means.

SOCRATES: I do see, Ion, and in fact will proceed to show you what to my mind it betokens. As I just now said, this gift you have of speaking well on Homer is not an art; it is a power divine, impelling you like the power in the stone Euripides called the magnet, which most call 'stone of Heraclea.' This stone does not simply attract the

iron rings, just by themselves; it also imparts to the rings a force enabling them to do the same thing as the stone itself, that is, to attract another ring, so that sometimes a chain is formed, quite a long one, of iron rings, suspended from one another. For all of them, however, their power depends upon that loadstone. Just so the Muse. She first makes men inspired, and then through these inspired ones others share in the enthusiasm, and a chain is formed, for the epic poets, all the good ones, have their excellence, not from art, but are inspired, possessed, and thus they utter all these admirable poems. So is it also with the good lyric poets; as the worshipping Corybantes are not in their senses when they dance, so the lyric poets are not in their senses when they make these lovely lyric poems. No, when once they launch into harmony and rhythm, they are seized with the Bacchic transport, and are possessed—as the bacchantes, when possessed, draw milk and honey from the rivers, but not when in their senses. So the spirit of the lyric poet works, according to their own report. For the poets tell us, don't they, that the melodies they bring us are gathered from rills that run with honey, out of glens and gardens of the Muses, and they bring them as the bees do honey, flying like the bees? And what they say is true, for a poet is a light and winged thing, and holy, and never able to compose until he has become inspired, and is beside himself, and reason is no longer in him. So long as he has this in his possession, no man is able to make poetry or to chant in prophecy. Therefore, since their making is not by art, when they utter many things and fine about the deeds of men, just as you do about Homer, but is by lot divine—therefore each is able to do well only that to which the Muse has impelled him—one to make dithyrambs, another panegyric odes, another choral songs, another epic poems, another iambs. In all the rest, each one of them is poor, for not by art do they utter these, but by power divine, since if it were by art that they knew how to treat one subject finely, they would know how to deal with all the others too. Herein lies the reason why the deity has bereft them of their senses, and uses them as ministers, along with soothsayers and godly seers; it is in order that we listeners may know that it is not they who utter these precious revelations while their mind is not within them, but that it is the god himself who speaks, and through them becomes articulate to us. The most convincing evidence of this statement is offered by Tynnichus of Chalcis. He never composed a single poem worth recalling, save the song of praise which everyone repeats, well-nigh the finest of all lyrical poems, and absolutely what he called it, an 'Invention of the Muses.' By this example above all, it seems to me, the god would show us, lest we doubt, that these lovely poems are not of man or human workmanship, but are divine and from the gods, and that the poets are nothing but interpreters of the gods, each one possessed by the divinity to whom he is in bondage. And to prove

this, the deity on purpose sang the loveliest of all lyrics through the most miserable poet. Isn't it so, Ion? Don't you think that I am right? 535

ION: You are indeed, I vow! Socrates, your words in some way touch my very soul, and it does seem to me that by dispensation from above good poets convey to us these utterances of the gods.

SOCRATES: Well, and you rhapsodists, again, interpret the utterances of the poets?

ION: There also you are right.

SOCRATES: Accordingly, you are interpreters of interpreters?

ION: Undeniably.

SOCRATES: Wait now, Ion; tell me this. And answer frankly b what I ask you. Suppose you are reciting epic poetry well, and thrill the spectators most deeply. You are chanting, say, the story of Odysseus as he leaped up to the dais, unmasked himself to the suitors, and poured the arrows out before his feet, or of Achilles rushing upon Hector, or one of the pitiful passages, about Andromache, or Hecuba, or Priam. When you chant these, are you in your senses? Or are you carried out of yourself, and does not your soul in an ecstasy conceive c herself to be engaged in the actions you relate, whether they are in Ithaca, or Troy, or wherever the story puts them?

ION: How vivid, Socrates, you make your proof for me! I will tell you frankly that whenever I recite a tale of pity, my eyes are filled with tears, and when it is one of horror or dismay, my hair stands up on end with fear, and my heart goes leaping.

SOCRATES: Well now, Ion, what are we to say of a man like d that? There he is, at a sacrifice or festival, got up in holiday attire, adorned with golden chaplets, and he weeps, though he has lost nothing of his finery. Or he recoils with fear, standing in the presence of more than twenty thousand friendly people, though nobody is stripping him or doing him damage. Shall we say that the man is in his senses?

ION: Never, Socrates, upon my word. That is strictly true.

SOCRATES: Now then, are you aware that you produce the same effects in most of the spectators too?

ION: Yes, indeed, I know it very well. As I look down at them e from the stage above, I see them, every time, weeping, casting terrible glances, stricken with amazement at the deeds recounted. In fact, I have to give them very close attention, for if I set them weeping, I myself shall laugh when I get my money, but if they laugh, it is I who have to weep at losing it.

SOCRATES: Well, do you see that the spectator is the last of the rings I spoke of, which receive their force from one another by virtue of the loadstone? You, the rhapsodist and actor, are the middle ring, 536 and the first one is the poet himself. But it is the deity who, through all the series, draws the spirit of men wherever he desires, transmitting

the attractive force from one into another. And so, as from the loadstone, a mighty chain hangs down, of choric dancers, masters of the chorus, undermasters, obliquely fastened to the rings which are suspended from the Muse. One poet is suspended from one Muse, another  
 b from another; we call it being 'possessed,' but the fact is much the same, since he is *held*. And from these primary rings, the poets, others are in turn suspended, some attached to this one, some to that, and are filled with inspiration, some by Orpheus, others by Musaeus. But the majority are possessed and held by Homer, and, Ion, you are one of these, and are possessed by Homer. And whenever anyone chants the work of any other poet, you fall asleep, and haven't a thing to say, but when anybody gives tongue to a strain of this one, you are  
 c awake at once, your spirit dances, and you have much to say, for not by art or science do you say of Homer what you say, but by dispensation from above and by divine possession. So the worshipping Corybantes have a lively feeling for that strain alone which is of the deity by whom they are possessed, and for that melody are well supplied with attitudes and utterances, and heed no others. And so it is with you, Ion. When anyone mentions Homer, you are ready, but about the  
 d other poets you are at a loss. You ask me why you are ready about Homer and not about the rest. Because it is not by art but by lot divine that you are eloquent in praise of Homer.

ION: Well put, I grant you, Socrates. And yet I should be much surprised if by your argument you succeeded in convincing me that I am possessed or mad when I praise Homer. Nor do I think that you yourself would find me so if you heard me speaking upon Homer.

SOCRATES: And indeed I wish to hear you, but not until you  
 e have answered me as follows. On what point in Homer do you speak well? Not on all points, I take it.

ION: I assure you, Socrates, I do it on every point, without exception.

SOCRATES: Yet not, I fancy, on those matters of which you happen to be ignorant, but Homer tells of?

ION: And the matters Homer tells of, and I do not know, what are they?

537 SOCRATES: Why, does not Homer in many passages speak of arts, and have much to say about them? About driving a chariot, for instance; if I can recollect the lines, I'll repeat them to you.

ION: No, let me do it, for I know them.

SOCRATES: Then recite for me what Nestor says to Antilochus, his son, where he warns him to be careful at the turning post, in the lay of the horse race in honor of Patroclus.

ION:

b Thysself lean slightly in the burnished car  
 To the left of them, then call upon the off horse  
 With goad and voice; with hand give him free rein.

And at the post let the near horse come so close  
That the nave of the well-wrought wheel shall seem  
To graze the stone. Which yet beware to strike! <sup>1</sup>

SOCRATES: That will do. Now, Ion, in these lines, which will c  
be more capable of judging whether Homer speaks aright or not, a  
doctor or a charioteer?

ION: The charioteer, no doubt.

SOCRATES: Because that is his art, or for some other reason?

ION: No, because it is his art.

SOCRATES: Each separate art, then, has had assigned to it by  
the deity the power of knowing a particular occupation? I take it that  
what we know by the pilot's art we do not know by the art of medicine  
as well.

ION: No indeed. d

SOCRATES: And what we know by medical art we do not know  
by the builder's art as well.

ION: No indeed.

SOCRATES: Well, and so it is with all the arts? What we know  
by one of them, we do not know by another? But before you answer  
that, just tell me this. Do you allow a distinction between arts? One  
differs from another?

ION: Yes.

SOCRATES: Now with me the mark of differentiation is that  
one art means the knowledge of one kind of thing, another art the  
knowledge of another, and so I give them their respective names. Do  
you do that?

ION: Yes.

SOCRATES: If they meant simply knowledge of the same e  
things, why should we distinguish one art from another? Why call  
them different, when both would give us the same knowledge? For  
example, take these fingers. I know that there are five of them, and  
you know the same as I about them. Suppose I asked you if we  
knew this same matter, you and I, by the same art, that of arithmetic,  
or by different arts. I fancy you would hold that we knew it by the  
same?

ION: Yes.

SOCRATES: Then tell me now what just a little while ago I was 538  
on the point of asking you. Does that seem true to you of all the arts  
—that, necessarily, the same art makes us know the same, another art  
not the same, but, if it really is another art, it must make us know  
something else?

ION: That is my opinion, Socrates.

SOCRATES: Well then, if one does not possess a given art, one

will not be capable of rightly knowing what belongs to it in word or action?

b ION: That is true.

SOCRATES: Then, in the lines which you recited, which will have the better knowledge whether Homer speaks aright or not, you or a charioteer?

ION: The charioteer.

SOCRATES: Doubtless because you are a rhapsode, and not a charioteer?

ION: Yes.

SOCRATES: The rhapsode's art is different from the charioteer's?

ION: Yes.

SOCRATES: If it is another art, then, it is a knowledge also about other matters.

ION: Yes.

c SOCRATES: Now what about the passage in which Homer tells how Hecamede, Nestor's concubine, gave the wounded Machaon the broth to drink? The passage runs something like this:

She grated goat's-milk cheese in Pramnian wine,  
With brazen grater, adding onion as a relish to the brew.<sup>2</sup>

On the question whether Homer here speaks properly or not, is it for the art of the physician, or the rhapsode's art, to discriminate aright?

ION: The art of the physician.

SOCRATES: What of this? The passage in which Homer says:

d       She plunged to the bottom like a leaden sinker  
Which, mounted on the horntip from a field ox,  
Speeds its way bringing mischief to voracious fish.<sup>3</sup>

What shall we say? Is it rather for the art of fishing, or the rhapsode's art, to decide on what the verses mean, and whether they are good or not?

ION: Obviously, Socrates, it is for the art of fishing.

e SOCRATES: Reflect now. Suppose that you were questioning, and asked me, 'Now, Socrates, you find it is for these several arts to judge in Homer, severally, what appertains to each of them. Come then, pick me out the passages concerning the diviner, and the diviner's art, the kind of things that appertain to him, regarding which he must be able to discern whether the poetry is good or bad?' Observe how easily and truly I can answer you. The poet does, in fact, treat of this matter in the *Odyssey* too—for example, when a scion of Melampus, the diviner Theoclymenus, says to the wooers:

539       Ah, wretched men, what bane is this ye suffer? Shrouded in night

<sup>2</sup> *Iliad* 11:639-40.   <sup>3</sup> *Iliad* 24.80 sq.

Are your heads and your faces and your limbs below,  
 And kindled is the voice of wailing, and cheeks are wet with tears.  
 And the porch is full of ghosts; the hall is full of them,  
 Hastening hellward beneath the gloom, and the sun  
 Has perished out of heaven, and an evil mist infolds the world.<sup>4</sup>

b

And he treats of it in many places in the *Iliad*—for instance, in the lay of the battle at the wall. There he says:

For, as they were eager to pass over, a bird approached them,  
 An eagle of lofty flight, skirting the host on the left,  
 And in its talons bearing a monstrous blood-red serpent,  
 Still alive and struggling; nor had it yet forgot the joy of battle.  
 Writhing back, it smote the bird that held it, upon the breast  
 Beside the neck, and the bird did cast it from him,  
 In the agony of pain, to the earth,  
 And dropped it in the middle of the throng.  
 And, with a cry, himself went flying on the gusty wind.<sup>5</sup>

c

d

These passages, I contend, and others like them, appertain to the diviner to examine and to judge.

ION: And, Socrates, you are right.

SOCRATES: And you are right too, Ion, when you say so. Come now, you do for me what I have done for you. From both the *Odyssey* and *Iliad* I picked out for you the passages belonging to the doctor, the diviner, and the fisherman; now you likewise, since you are better versed than I in Homer, pick out for me the sort of passages, Ion, that concern the rhapsode and the rhapsode's art, the passages it befits the rhapsode, above all other men, to examine and to judge.

ION: All passages, Socrates, is what I say.

SOCRATES: Surely, Ion, you don't mean *all*! Are you really so forgetful? Indeed, it would ill become a man who is a rhapsode to forget.

ION: Why? What am I forgetting?

540

SOCRATES: Don't you remember how you stated that the art of the rhapsode was different from the charioteer's?

ION: I remember.

SOCRATES: Well, and you admitted also that, being different, it had another field of knowledge?

ION: Yes.

SOCRATES: Well then, by your own account the art of rhapsody will not know everything, nor the rhapsode either.

ION: The exceptions, Socrates, are doubtless only such matters as that.

SOCRATES: In 'such matters' you must include approximately all the other arts. Well, as the rhapsode does not know the subject

<sup>4</sup> *Odyssey* 20.351 sq.

<sup>5</sup> *Iliad* 12.200 sq.

matter of them all, what sort of matters *will* he know?

ION: The kind of thing, I judge, that a man would say, and a woman would say, and a slave and a free man, a subject and a ruler—the suitable thing for each.

SOCRATES: You mean, the rhapsode will know better what the ruler of a ship in a storm at sea should say than will the pilot?

ION: No, in that case the pilot will know better.

SOCRATES: But suppose it is the ruler of a sick man. Will the rhapsode know better what the ruler should say than will the doctor?

ION: No, not in that case, either.

SOCRATES: But you say, 'the kind of speech that suits a slave.'

ION: Yes.

SOCRATES: You mean, for instance, if the slave is a cowherd, it is not he who will know what one should say to quiet angry cattle, but the rhapsode?

ION: Surely not.

SOCRATES: Well, 'the kind of speech that suits a woman'—one who spins—about the working up of wool?

ION: No.

SOCRATES: Well, the rhapsodist will know 'the kind of speech that suits a man'—a general exhorting his soldiers?

ION: Yes! That is the sort of thing the rhapsodist will know.

SOCRATES: What! Is the rhapsode's art the general's?

ION: At all events I ought to know the kind of speech a general should make.

SOCRATES: Indeed, you doubtless have the talents of a general, Ion! And suppose you happened to have skill in horsemanship, along with skill in playing on the lyre, you would know when horses were well or badly ridden, but if I asked you, 'By which art, Ion, do you know that horses are well managed—is it because you are a horseman, or because you play the lyre?' What answer would you give me?

ION: I should say, 'It is by my skill as horseman.'

SOCRATES: Then, too, if you were picking out good players on the lyre, you would admit that you discerned them by your art in playing the lyre, and not by your art as horseman?

ION: Yes.

SOCRATES: But when you know of military matters, do you know them because you are competent as a general, or as a rhapsode?

ION: I cannot see a bit of difference.

541 SOCRATES: What, no difference, you say? You mean to call the art of the rhapsode and the art of the general a single art, or two?

ION: To me, there is a single art.

SOCRATES: And so, whoever is an able rhapsode is going to be an able general as well?

ION: Unquestionably, Socrates.

SOCRATES : And then, whoever happens to be an able general is an able rhapsode too.

ION : No, I do not think that holds.

SOCRATES : But you think the other does? That whoever is an able rhapsode is an able general too?

ION : Absolutely!

SOCRATES : Well, and you are the ablest rhapsodist in Greece?

ION : Yes, Socrates, by far.

SOCRATES : And the ablest general, Ion? The ablest one in Greece?

ION : You may be sure of it, for, Socrates, I learned this also out of Homer.

SOCRATES : Then, Ion, how in heaven's name is this? You are at once the ablest general and ablest rhapsodist among the Greeks, and yet you go about Greece performing as a rhapsode, but not as a general. What think you? The Greeks are in great need of a rhapsode adorned with a wreath of gold, and do not need a general at all?

ION : It is because my native city, Socrates, is under your dominion, and your military rule, and has no need whatever of a general. As for yours and Lacedaemon, neither would choose me for general; you think yourselves sufficient to yourselves.

SOCRATES : Excellent Ion, you know who Apollodorus is, of Cyzicus, don't you?

ION : What might he be?

SOCRATES : The man whom the Athenians at various times have chosen for their general, although he is an alien. The same is true of Phanosthenes of Andros, and Heraclides of Clazomenae, also aliens, who nevertheless, when they had shown their competence, were raised to the generalship by the city, and put in other high positions. And Ion of Ephesus, will she not elect him general, and accord him honors, if his worth becomes apparent? Why, you inhabitants of Ephesus are originally Athenians, are you not, and Ephesus is a city inferior to none? But the fact is, Ion, that if you are right, if it really is by art and knowledge that you are able to praise Homer, then you do me wrong. You assure me that you have much fine knowledge about Homer, and you keep offering to display it, but you are deceiving me. Far from giving the display, you will not even tell me what subject it is on which you are so able, though all this while I have been entreating you to tell. No, you are just like Proteus; you twist and turn, this way and that, assuming every shape, until finally you elude my grasp and reveal yourself as a general. And all in order not to show how skilled you are in the lore concerning Homer! So if you are an artist, and, as I said just now, if you only promised me a display on Homer in order to deceive me, then you are at fault. But if you are not an artist, if by lot divine you are possessed by Homer, and so, knowing nothing,

speak many things and fine about the poet, just as I said you did, then you do no wrong. Choose, therefore, how you will be called by us, whether we shall take you for a man unjust, or for a man divine.

ION: The difference, Socrates, is great. It is far lovelier to be deemed divine.

SOCRATES: This lovelier title, Ion, shall be yours, to be in our minds divine, and not an artist, in praising Homer.

# GORGIAS

---

*In this dialogue Socrates is different. Except for two passing allusions his usual profession of ignorance has been dropped. He never says that he cannot teach because he does not know. In the Gorgias he does know, he is eager to teach—at times he talks with the fervor of an evangelist. This is not the case in the first half, where the aged Gorgias, a famous teacher of rhetoric, is refuted by Socrates when he tries to state what is the greatest good for mankind, and a pupil, Polus, eagerly takes up the argument on his behalf. Polus starts with the assertion that the greatest good is power—the all-powerful tyrant is the happy man. Slowly he is driven by Socrates to the conclusion that far from being happy the tyrant is more miserable than those he injures because to do wrong is misery; to suffer wrong is as nothing in comparison. Furthermore, the wrongdoer who is not punished, as is the case of the powerful, is more miserable than the one who is. These statements astonish Polus and dismay him even while Socrates makes them, but he sees that they result inevitably from the argument.*

*At this point a third man, Callicles, steps in. Is Socrates just making fun? he asks. If not, he is turning human life upside down. He pretends to be seeking for the truth, but really he is just talking religion. (Callicles calls it philosophy, but he means by it what we mean by religion.) A little religion, he says, is all very well, even good for the young, but if a man keeps on with it he is ruined. He will never gain wealth and honor that way. On the contrary, anybody can injure him and he won't defend himself. He will let himself be boxed on the ears with impunity. This is when Socrates begins to talk with fervor. He is speaking now not only to Callicles—he is thinking of all men. "For you see the subject of our discussion—and on what subject should even a man of slight intelligence be more serious?—namely, what kind of life one should live."*

*Callicles states his position briefly and clearly. The happy man is he who has let his passions and desires grow to the uttermost and has the power to satisfy them. This is acting according to nature and not mere convention. Men praise self-control and the like only out of weakness and cowardice, because they have not the power to take what they want. Socrates in answer repeats what he had said to*

*Polus. To do wrong is the worst that can befall a man. To suffer wrong is little in comparison.*

*What follows can hardly be called an argument. The two men cannot agree enough to be able to argue. They are too far apart. Finally Callicles is silenced, but nothing more, though Socrates' intense desire to convince him, to convert him, grows clearer and clearer. In the end he is not reasoning with him, he is exhorting him, preaching to him. He must induce him to see that the good is altogether different from the safe. He begs him not to mind if someone insults and strikes him. "For heaven's sake, let him and be of good cheer." (Turn to him the other cheek.) You can suffer by doing right, but you can never suffer harm.*

*The reader remembers what Phaedo said before Socrates drank the poison, "It never occurred to me to feel sorry for him. He seemed quite happy."*

447        **CALLICLES:** This is how they say you should take part in warfare and battle, Socrates.

**SOCRATES:** What, have we arrived at the latter end of a feast, as the saying goes?

**CALLICLES:** Yes, and a very charming feast, for Gorgias has just given us a fine and varied display.

**SOCRATES:** Well, Chaerephon here is to blame, Callicles, for he compelled us to loiter in the market place.

b        **CHAEREPHON:** 'Tis no matter, Socrates, for I can supply the remedy too. Gorgias is a friend of mine, and will treat us to another display, now, if you want, or if not, later.

**CALLICLES:** What, Chaerephon? Is Socrates anxious to hear Gorgias?

**CHAEREPHON:** That is the very reason why we are here.

**CALLICLES:** Any time you like to come home with me, then, for Gorgias is staying with me and will give you an exhibition.

c        **SOCRATES:** Most kind of you, Callicles, but would he also be willing to converse with us? I want to learn from him what is the scope of his art and just what he professes and teaches. As for the exhibition, let him give us that, as you suggest, on some other occasion.

**CALLICLES:** There's nothing like asking him, Socrates, for that was one feature of his display. He bade any one of the company present just now ask any questions he pleased, and said he would answer all such questions.

**SOCRATES:** Splendid! Chaerephon, ask him.

**CHAEREPHON:** Ask him what?

**SOCRATES:** Who he is.

d

**CHAEREPHON:** What do you mean?

**SOCRATES:** Well, supposing he were a maker of shoes, he would surely answer you that he was a cobbler. You see what I mean, do you not?

**CHAEREPHON:** I see, and I will ask him. Tell me, Gorgias, is Calicles right in saying that you profess to answer any question you are asked?

**GORGIAS:** He is right, Chaerephon; that is the very statement I made just now, and I assure you that nobody has asked me a new question these many years. 448

**CHAEREPHON:** You must indeed be ready with your answers, Gorgias.

**GORGIAS:** You are at liberty to make the experiment, Chaerephon.

**POLUS:** Yes indeed, and upon me, if you wish, Chaerephon, for Gorgias, I think, is played out; he has already spoken at great length.

**CHAEREPHON:** Why, Polus, do you think you could answer better than Gorgias?

**POLUS:** What does that matter, if it is well enough for you?

b

**CHAEREPHON:** Not at all, but since you want to, you may answer.

**POLUS:** Proceed.

**CHAEREPHON:** I will. If Gorgias were an expert in the same art as his brother Herodicus, what should we rightly call him? By the same professional name as his brother?

**POLUS:** Assuredly.

**CHAEREPHON:** Then we should be correct in calling him a doctor?

**POLUS:** Yes.

**CHAEREPHON:** And if he were skilled in the same art as Aristophon, son of Aglaophon, or Aristophon's brother, what should we rightly call him?

**POLUS:** Obviously a painter.

c

**CHAEREPHON:** But, as it is, in what craft is he expert, and by what name should we correctly call him?

**POLUS:** There are many arts, Chaerephon, among mankind experimentally devised by experience, for experience guides our life along the path of art, inexperience along the path of chance. And in each of these different arts different men partake in different ways,

the best men following the best arts. And Gorgias here is one of the best and partakes in the noblest of arts.

- d     SOCRATES: It is plain, Gorgias, that Polus is well equipped to make speeches, but he fails to accomplish what he promised to Chaerephon.

GORGAS: Pray, how is that, Socrates?

SOCRATES: It seems that he does not quite answer the question asked.

GORGAS: Well, if you prefer it, you may ask him yourself.

SOCRATES: No, not if you are ready to answer instead; I would much rather question you. For it is obvious from what Polus has said that he is much better versed in what is called rhetoric than in dialogue.

- e     POLUS: How is that, Socrates?

SOCRATES: Why, Polus, because when Chaerephon asks in what art Gorgias is proficient, you praise his art as though someone were attacking it, but neglect to answer what it is.

POLUS: Did I not answer that it was the noblest of arts?

- SOCRATES: Certainly. But no one is asking in what kind of art Gorgias is engaged but what it actually is and what we should call Gorgias. On the lines laid down before by Chaerephon, when you answered correctly and briefly, tell us now in similar manner what this  
449 art is and what name we must give to Gorgias. Or rather, Gorgias, tell us yourself in what art you are expert and what we should call you.

GORGAS: The art of rhetoric, Socrates.

SOCRATES: Then we must call you a rhetorician?

GORGAS: Yes, and a good one, Socrates, if you really want to call me what, in Homer's expression, I boast myself to be.

SOCRATES: That is what I want.

GORGAS: Then call me so.

- b     SOCRATES: Are we to say that you can make rhetoricians of others also?

GORGAS: That is the profession I make both here and elsewhere.

SOCRATES: Would you be willing, Gorgias, to continue our present method of conversing by question and answer, postponing to some other occasion lengthy discourses of the type begun by Polus? You must not, however, disappoint us in your promise but show yourself ready to answer the question briefly.

- GORGAS: There are certain answers, Socrates, that must necessarily be given at length; however, I will attempt to answer as briefly as possible. For that too is one of the claims I make, that nobody could give the same answers more briefly than I.

SOCRATES: That is what I want, Gorgias; give me an exhibition of this brevity of yours, and reserve a lengthy discourse for another time.

GORGAS : I will do so, and you will admit you have never heard a speaker more concise.

SOCRATES : Well then, you claim that you are an expert in the art of rhetoric and that you can make rhetoricians of others. Now just a what is the scope of rhetoric? Weaving, for example, has to do with the making of garments. You agree?

GORGAS : Yes.

SOCRATES : And music with composing melodies?

GORGAS : Yes.

SOCRATES : By Hera, Gorgias, I marvel at your answers; they could not be briefer.

GORGAS : Yes, I think I succeed pretty well, Socrates.

SOCRATES : Good, and now answer in the same way about rhetoric. What is the field of this science?

GORGAS : Words.

SOCRATES : Of what kind, Gorgias? Those that reveal to the sick what treatment will restore their health? e

GORGAS : No.

SOCRATES : Then rhetoric is not concerned with every kind of words.

GORGAS : Certainly not.

SOCRATES : Yet it makes men able to speak.

GORGAS : Yes.

SOCRATES : And able to think also about the matter of their discourse?

GORGAS : Of course.

SOCRATES : Now does not the science of medicine, which we 450 have just mentioned, make men able to think and to speak about their patients?

GORGAS : Assuredly.

SOCRATES : Then medicine also, it seems, is concerned with words.

GORGAS : Yes.

SOCRATES : Words about diseases?

GORGAS : Certainly.

SOCRATES : And is not gymnastics concerned with words that relate to good or bad bodily condition?

GORGAS : Undoubtedly.

SOCRATES : And so it is with the other arts also, Gorgias. Each b of them is concerned with words that have to do with its own subject matter.

GORGAS : Evidently.

SOCRATES : Then, as the other arts have to do with words, why do you not call them by the name of 'rhetoric,' since you call rhetoric any art that is concerned with words?

GORGAS : Because all the knowledge of the other arts is in

general, Socrates, concerned with manual crafts and similar activities, whereas rhetoric deals with no such manual product but all its activity and all that it accomplishes is through the medium of words. Therefore I claim that the art of rhetoric has to do with words, and maintain that my claim is correct.

SOCRATES: I wonder whether I understand the kind of thing you wish to call it. But I shall soon know more clearly. Answer me this. We admit, do we not, the existence of arts?

GORGIAS: Yes.

SOCRATES: Among the various arts there are, I think, some that consist for the most part of action and have little need of words, and some in fact have no need, but their function can be achieved in silence, as for instance painting and sculpture and many others. I fancy it is with such arts that you say rhetoric has no concern, is it not?

GORGIAS: You are entirely right in your opinion, Socrates.

SOCRATES: But there are other arts that secure their result entirely through words and have practically no need, or very little need, of action—arithmetic, for instance, and calculation and geometry and the game of draughts and many other arts, some of which involve almost as many words as actions, and many of them far more, their whole achievement and effect in general being due to words. It is to this kind of art, I believe, that you assign rhetoric.

GORGIAS: You are right.

SOCRATES: But I do not imagine that you intend to call any of these aforementioned arts rhetoric, though your actual expression was that 'the art which secures its effect through words is rhetoric.' And anyone who wished to make trouble in our debate might object: Then you call arithmetic rhetoric, Gorgias? But I do not think you mean by rhetoric either arithmetic or geometry.

451 GORGIAS: You are right, Socrates, and your supposition is quite correct.

SOCRATES: Come then, and complete for yourself the answer for which I asked. Since rhetoric is one of those arts that for the most part employ words, and since there are other such arts also, try to tell me what is the field of that particular art securing its effect through words which is called rhetoric. Suppose that somebody should ask me about any of the arts recently mentioned: Socrates, what is the art of arithmetic? I should reply, as you did just now, that it is one of the arts which secure their effect through speech. And if he should further inquire in what field, I should reply that of the odd and the even, however great their respective numbers might be. And if he should next inquire, What art do you call calculation? I should say that this art too is one of those that secure their entire effect through words. And if he should further demand in what field, I should reply, like the mover of an amendment in the Assembly, that in details 'hereinbe-

fore mentioned' the art of calculation resembles arithmetic—for its field is the same, the even and the odd—but that calculation differs in this respect, that it investigates how the odd and the even are related both to themselves and to each other in regard to number. And if anyone should ask about astronomy and, when I said that this science too secures its effect entirely through words, should demand, What is the field of discourses relating to astronomy, Socrates? I should reply, the movement of the stars, the sun, and the moon, and their relative speed.

GORGAS : Your statement, Socrates, is quite correct.

SOCRATES : And now let us have your reply, Gorgias. Rhetoric is one of the arts that achieve and fulfill their function entirely through words, is it not?

GORGAS : That is so.

SOCRATES : Tell me then in what field. What is the subject matter of the words employed by rhetoric?

GORGAS : The greatest and noblest of human affairs, Socrates.

SOCRATES : But, Gorgias, what you are now saying is disputable and not yet clear. I think you must have heard men singing at drinking parties the familiar song in which they enumerate our blessings, health being the first, beauty the second, and third, as the composer of the song claims, wealth obtained without dishonesty.

GORGAS : I have heard it. But what is the point of your remark?

SOCRATES : Suppose the men who produce the blessings praised by the author of that song should suddenly appear, the doctor, the trainer, and the businessman, and the doctor should speak first and say, Socrates, Gorgias is deceiving you. It is not his craft, but mine, that is concerned with the greatest blessing to mankind.

If I were to ask him, Who are you that make such a claim? he would, I suppose, answer that he was a physician.

Then what do you mean? Is the product of your art the greatest blessing of all?

Of course, he would doubtless reply. Health, Socrates! What greater blessing has man than health?

And then suppose that after him the physical trainer should say, I too should be surprised if Gorgias could display to you a blessing greater than mine.

I should say to him in turn, And who are you, my good fellow, and what is your function?

A trainer, he would answer, and my task is to make men strong and beautiful of body.

And after the trainer the businessman would speak, in utter contempt, I imagine, of all others, Pray consider, Socrates, whether you believe there is any greater blessing than wealth, whether in the pocket of Gorgias or of any other man.

What? we should say to him. Is that what you make?

Yes, he would reply.

And who are you?

A businessman.

Then, we shall say, do you judge wealth to be the greatest blessing for man?

Of course, he will answer.

And yet Gorgias here insists that his art produces greater benefits than yours, we shall say.

It is obvious then that he will next inquire, And what is this benefit? Let Gorgias tell us.

- d And so come, Gorgias, imagine you are questioned by these men and by myself as well, and answer what it is you claim to be the greatest blessing to man, and claim also to produce.

GORGIAS: Something, Socrates, that is in very truth the greatest boon, for it brings freedom to mankind in general and to each man dominion over others in his own country.

SOCRATES: And what exactly do you mean by that?

- e GORGIAS: I mean the power to convince by your words the judges in court, the senators in Council, the people in the Assembly, or in any other gathering of a citizen body. And yet possessed of such power you will make the doctor, you will make the trainer your slave, and your businessman will prove to be making money, not for himself, but for another, for you who can speak and persuade multitudes.

- 453 SOCRATES: Now at last, Gorgias, you have revealed most precisely, it seems to me, what art you consider rhetoric to be, and if I understand you aright, you assert that rhetoric is a creator of persuasion, and that all its activity is concerned with this, and this is its sum and substance. Can you state any wider scope for rhetoric than to produce persuasion in the soul of the hearer?

GORGIAS: By no means, Socrates; I think you define it adequately, for that is its sum and substance.

- b SOCRATES: Then listen, Gorgias. I am convinced, you may be sure, that if there is any man who in a discussion with another is anxious to know just what is the real subject under discussion, I am such a man, and I am confident that you are too.

GORGIAS: What then, Socrates?

- c SOCRATES: I will tell you. Just what that persuasion is which you claim is produced by rhetoric, and with what subjects it deals, I assure you, I do not know, but I have a suspicion as to what persuasion you mean, and its field. Yet I shall ask you nonetheless what you mean by the conviction produced by rhetoric and what is its province. And why shall I ask you instead of speaking myself, when I have this suspicion? Not for your sake, but because I am anxious that the argument should so proceed as to clarify to the utmost the matter under discussion. Consider whether I am right in asking you that further

question. If I had asked you what kind of painter Zeuxis was and you had answered, a painter of living creatures, might I not with justice ask you what kind of living creatures, and where they may be found?

GORGAS : Certainly.

SOCRATES : And the reason is that there are other painters with many other living subjects?

GORGAS : Yes.

SOCRATES : Whereas, if Zeuxis had been the only painter, yours would have been a good answer?

GORGAS : Certainly.

SOCRATES : Then come, tell me about rhetoric. Do you think that rhetoric alone produces persuasion, or do other arts as well? What I mean is this. When a man teaches a subject, does he persuade where he teaches, or not?

GORGAS : One cannot deny that, Socrates; certainly he persuades.

SOCRATES : Let us take once more the same arts as we discussed just now. Arithmetic and the arithmetician teach us, do they not, the properties of a number?

GORGAS : Certainly.

SOCRATES : And consequently persuade us?

GORGAS : Yes.

SOCRATES : Then arithmetic is also a creator of persuasion?

GORGAS : Evidently.

SOCRATES : Now, if anyone should ask us what kind of persuasion and in what field, we shall answer him, I suppose, that which teaches about the odd and the even in all their quantities, and we shall be able to prove that all the other arts just mentioned are creators of persuasion and name the type and the field, shall we not? 454

GORGAS : Yes.

SOCRATES : Then rhetoric is not the only creator of persuasion.

GORGAS : That is true.

SOCRATES : Then since other arts besides rhetoric produce this result, we should be justified in asking next, as in the case of the painter, Of what kind of persuasion is rhetoric the art, and what is its province? Do you not think that is a fair question to ask next? b

GORGAS : I do.

SOCRATES : Then answer, Gorgias, since you share my opinion.

GORGAS : The kind of persuasion employed in the law courts and other gatherings, Socrates, as I said just now, and concerned with right and wrong.

SOCRATES : I suspected too, Gorgias, that you meant this kind of persuasion, with such a province; it is merely that you may not be surprised if a little later I ask you the same kind of question, though the answer seems clear to me. Yet I may repeat it—for, as I said, I am c

questioning you, not for your own sake, but in order that the argument may be carried forward consecutively, and that we may not form the habit of suspecting and anticipating each other's views, but that you may complete your own statements as you please, in accordance with your initial plan.

GORGAS : I think your method is right, Socrates.

SOCRATES : Then let us consider the next point. Is there a state which you call 'having learned'?

GORGAS : There is.

SOCRATES : And such a thing as 'having believed'?

GORGAS : There is.

d      SOCRATES : Now do you think that to have learned and to have believed, or knowledge and belief, are one and the same or different?

GORGAS : I consider them different, Socrates.

SOCRATES : You are right, and you can prove it thus. If anybody were to say to you, Can there be both a false belief and a true, Gorgias? you would, I think, say that there is.

GORGAS : Yes.

SOCRATES : But can there be both a false and a true knowledge?

GORGAS : By no means.

SOCRATES : Then it is obvious that knowledge and belief are not the same.

GORGAS : You are right.

e      SOCRATES : But both those who have learned and those who believe have been persuaded.

GORGAS : That is so.

SOCRATES : Shall we lay it down then that there are two forms of persuasion, the one producing belief without knowledge, the other knowledge?

GORGAS : Certainly.

SOCRATES : Now which kind of conviction about right and wrong is produced in the law courts and other gatherings by rhetoric? That which issues in belief without knowledge, or that which issues in knowledge?

GORGAS : Evidently, Socrates, that which issues in belief.

455      SOCRATES : Then rhetoric apparently is a creator of a conviction that is persuasive but not instructive about right and wrong.

GORGAS : Yes.

SOCRATES : Then the rhetorician too does not instruct courts and other assemblies about right and wrong, but is able only to persuade them, for surely he could not instruct so large a gathering in a short time about matters so important.

GORGAS : No indeed.

SOCRATES : Well then, let us see just exactly what we are saying about rhetoric, for I cannot myself yet understand what I mean.

Whenever there is a gathering in the city to choose doctors or ship-  
wrights or any other professional group, surely the rhetorician will  
not then give his advice, for it is obvious that in each such choice it is  
the real expert who must be selected. And when it is a question about  
the building of walls or equipment of harbors or dockyards, we  
consult, not the rhetoricians, but the master builders, and again  
when we need advice about a choice of generals or some tactical  
formation against the enemy or the occupation of positions, mili-  
tary experts will advise us, not rhetoricians. Or what do you say,  
Gorgias, about such matters? Since you claim yourself to be a rheto-  
rician and to make rhetoricians of others, it is right to examine  
you on the qualities of your art. And so, imagine that my interest is  
on your behalf, for perhaps some of those present are anxious to  
become your disciples—there are some, I know, quite a number, in  
fact—who would be bashful perhaps about questioning you. And so,  
just imagine that when I inquire, they too are asking. What shall we  
gain, Gorgias, if we associate with you? On what subjects shall we be  
able to advise the city, about right and wrong alone, or the subjects  
just mentioned by Socrates?

Try to answer them, then.

GORGAS : Well, Socrates, I will try to reveal to you clearly the  
full scope of rhetoric, for you have shown me the path excellently.  
You know, of course, that your dockyards and the walls of Athens and  
her harbor equipment are due to the advice, partly of Themistocles,  
partly of Pericles, not to that of architects.

SOCRATES : That is what they say, Gorgias, about Themistocles,  
and Pericles I myself heard when he recommended the building of  
the middle wall.

GORGAS : And when any of the choices you mentioned just now  
is in question, Socrates, you see that it is the orators who give advice  
and carry their motions.

SOCRATES : That is what surprises me, Gorgias, and that is why  
I asked you long since what is the scope of rhetoric. When so looked  
at, it seems to me to possess almost superhuman importance.

GORGAS : Ah, if only you knew all, Socrates, and realized that  
rhetoric includes practically all other faculties under her control.  
And I will give you good proof of this. I have often, along with my  
brother and with other physicians, visited one of their patients who  
refused to drink his medicine or submit to the surgeon's knife or  
cautery, and when the doctor was unable to persuade them, I did so,  
by no other art but rhetoric. And I claim too that, if a rhetorician and  
a doctor visited any city you like to name and they had to contend  
in argument before the Assembly or any other gathering as to which  
of the two should be chosen as doctor, the doctor would be nowhere,  
but the man who could speak would be chosen, if he so wished. And  
if he should compete against any other craftsman whatever, the

rhetorician rather than any other would persuade the people to choose him, for there is no subject on which a rhetorician would not speak more persuasively than any other craftsman, before a crowd. Such then is the scope and character of rhetoric, but it should be used, Socrates, like every other competitive art. We must not employ other  
 d competitive arts against one and all merely because we have learned boxing or mixed fighting or weapon combat, so that we are stronger than our friends and foes; we must not, I say, for this reason strike our friends or wound or kill them. No indeed, and if a man who is physically sound has attended the wrestling school and has become a good boxer, and then strikes his father or mother or any others of his kinsmen or friends, we must not for this reason detest or banish  
 e from our cities the physical trainers or drill instructors. For they imparted this instruction for just employment against enemies or wrongdoers, in self-defense not aggression, but such people per-  
 457 versely employ their strength and skill in the wrong way. And so the teachers are not guilty, and the craft is not for this reason evil or to blame, but rather, in my opinion, those who make improper use of it. And the same argument applies also to rhetoric. The rhetorician is competent to speak against anybody on any subject, and to prove  
 b himself more convincing before a crowd on practically every topic he wishes, but he should not any the more rob the doctors—or any other craftsmen either—of their reputation, merely because he has this power. One should make proper use of rhetoric as of athletic gifts. And if a man becomes a rhetorician and makes a wrongful use of this faculty and craft, you must not, in my opinion, detest and  
 c banish his teacher from the city. For he imparted it for a good use, but the pupil abuses it. And therefore it is the man who abuses it whom we should rightly detest and banish and put to death, not his instructor.

SOCRATES: I think, Gorgias, that, like myself, you have had much experience in discussions and must have observed that speakers can seldom define the topic of debate and after mutual instruc-  
 d tion and enlightenment bring the meeting to a close, but if they are in dispute and one insists that the other's statements are incorrect or obscure, they grow angry and imagine their opponent speaks with malice toward them, being more anxious for verbal victory than to investigate the subject under discussion. And finally some of them part in the most disgraceful fashion, after uttering and listening to such abusive language that their audience are disgusted with them-  
 e selves for having deigned to give ear to such fellows. Now why do I say this? Because, it seems to me, what you are now saying is not quite consistent or in tune with what you said at first about rhetoric. But I am afraid to cross-examine you, for fear you might think my pertinacity is directed against you, and not to the clarification of the

matter in question. Now, if you are the same kind of man as I am, I <sup>458</sup> should be glad to question you; if not, I will let you alone. And what kind of man am I? One of those who would gladly be refuted if anything I say is not true, and would gladly refute another who says what is not true, but would be no less happy to be refuted myself than to refute, for I consider that a greater benefit, inasmuch as it is a greater boon to be delivered from the worst of evils oneself than to deliver another. And I believe there is no worse evil for man than a false opinion about the subject of our present discussion. If you then are the same kind of man as I am, let us continue, but if you feel that we <sup>b</sup> should drop the matter, then let us say good-by to the argument and dismiss it.

GORGIAS: No, I claim to be myself the type of man you indicate, but perhaps we ought to have been thinking of our audience. For quite a time ago before your arrival I gave a long display to the company present, and now, perhaps, if we continue our debate, it will be a prolonged affair. So we should consider the convenience of our audience, in case we are detaining here some who are anxious to be <sup>c</sup> doing something else.

CHAEREPHON: You can hear for yourselves, Gorgias and Socrates, the protests of the company, who are eager to hear whatever you have to say; as for me, heaven forbid I should have any engagement so pressing as to desert a conversation of such a character and between such interlocutors for however profitable an occupation.

CALLICLES: Indeed, Chaerephon, I too have listened to many <sup>d</sup> a debate, but I think I have never enjoyed one so much as this. I shall be delighted in fact if you are ready to talk all day long.

SOCRATES: Well, I have no objections to offer, if Gorgias is willing.

GORGIAS: After all this, Socrates, it would be disgraceful of me to refuse, when I personally volunteered to meet any question that might be put. But if those present agree, carry on the conversation and ask what you will. <sup>e</sup>

SOCRATES: Then listen, Gorgias, to what surprises me in your statement, for perhaps you were right and I misunderstood you. You claim you can make a rhetorician of any man who wishes to learn from you?

GORGIAS: Yes.

SOCRATES: With the result that he would be convincing about any subject before a crowd, not through instruction but by persuasion?

GORGIAS: Certainly.

SOCRATES: Well, you said just now that a rhetorician will be more persuasive than a doctor regarding health.

GORGIAS: Yes, I said so, before a crowd. 459

SOCRATES: And before a crowd means among the ignorant, for surely, among those who know, he will not be more convincing than the doctor.

GORGIAS: That is quite true.

SOCRATES: Then if he is more persuasive than the doctor, he is more persuasive than the man who knows?

GORGIAS: Certainly.

b SOCRATES: Though not himself a doctor.

GORGIAS: Yes.

SOCRATES: And he who is not a doctor is surely ignorant of what a doctor knows.

GORGIAS: Obviously.

SOCRATES: Therefore when the rhetorician is more convincing than the doctor, the ignorant is more convincing among the ignorant than the expert. Is that our conclusion, or is something else?

GORGIAS: That is the conclusion, in this instance.

c SOCRATES: Is not the position of the rhetorician and of rhetoric the same with respect to other arts also? It has no need to know the truth about things but merely to discover a technique of persuasion, so as to appear among the ignorant to have more knowledge than the expert?

GORGIAS: But is not this a great comfort, Socrates, to be able without learning any other arts but this one to prove in no way inferior to the specialists?

d SOCRATES: Whether or not the rhetorician is inferior to other craftsmen for this reason, we will consider later, if the question should prove relevant. But now let us first investigate whether the relation of the rhetorician to right and wrong, the noble and the base, the just and the unjust is the same as it is to health and the objects of the other arts—whether he does not know what is right or wrong, noble or base, just or unjust, but has contrived a technique of persuasion in these matters, so that, though ignorant, he appears among the ignorant to know better than the expert. Or must your prospective  
e pupil in rhetoric have such knowledge and bring it with him when he comes to you? And if he is ignorant, will you, his teacher of rhetoric, teach your pupil none of these things—for that is not your concern—but make him appear before the crowd to have such knowledge, when he has it not, and appear to be a good man, when he is not? Or will you be utterly unable to teach him rhetoric if he does not beforehand know the truth about these matters? How do we stand here, Gorgias? In heaven's name, reveal, as you promised just now, the true  
460 power of rhetoric.

GORGIAS: Well, Socrates, I suppose that if he does not possess this knowledge, he can learn these things also from me.

SOCRATES: Stop one moment! What you say is right. If you make a rhetorician of any man, he must already have knowledge of

right and wrong either by previous acquaintance or by learning it from you.

GORGias: Certainly.

SOCRATES: Now is not the man who has learned the art of carpentry a carpenter?

GORGias: Yes.

SOCRATES: And he who has learned the art of music a musician?

GORGias: Yes.

SOCRATES: And he who has learned medicine a physician? And so too on the same principle, the man who has learned anything becomes in each case such as his knowledge makes him?

GORGias: Certainly.

SOCRATES: Then according to this principle he who has learned justice is just.

GORGias: Most assuredly.

SOCRATES: And the just man, I suppose, does just acts?

GORGias: Yes.

SOCRATES: Now the rhetorician must necessarily be just, and the man must wish to do just actions?

GORGias: Evidently.

SOCRATES: Then the just man will never wish to do injustice?

GORGias: Necessarily.

SOCRATES: And our argument demands that the rhetorician be just?

GORGias: Yes.

SOCRATES: Then the rhetorician will never wish to do wrong?

GORGias: Evidently not.

SOCRATES: Now do you remember saying a short while ago that we should not blame our trainers or expel them from our cities, if a boxer practices his art in a wrongful manner and does injury, and so too if a rhetorician makes wrongful use of his rhetoric, we should not censure or banish his instructor but rather the guilty man who wrongly employs rhetoric? Was this said or not?

GORGias: It was said.

SOCRATES: But now it is clear that this same rhetorician would never do wrong, is it not?

GORGias: It is clear.

SOCRATES: And in our earlier discussion, Gorgias, it was stated that rhetoric is concerned with words that deal, not with the odd and even, but with right and wrong. Is that so?

GORGias: Yes.

SOCRATES: Now at the time when you stated this, I considered that rhetoric could never be a thing of evil, since its discourse is always concerned with justice. But when a little later you said that the rhetorician might actually make an evil use of rhetoric, I was

surprised, and considering that what was said was inconsistent, I spoke as I did, saying that if, like myself, you thought it of value to be refuted, it was worth while pursuing the conversation, but if not, we should let it drop. And as a result of our subsequent review you can see for yourself it is admitted that the rhetorician is incapable of making a wrong use of rhetoric and unwilling to do wrong. Now, by the dog, Gorgias, it will need no short discussion to settle satisfactorily where the truth lies.

POLUS: What, Socrates? Is what you are saying your true opinion about rhetoric? Or do you imagine just because Gorgias was ashamed not to admit that the rhetorician will know the just also and the honorable and the good, and that, if any man came to him without this knowledge, he himself would instruct him, and then, as result, I suppose, of this admission a contradiction arose in the argument—which is just what you love and you yourself steer the argument in that direction—why, who do you think will deny that he himself knows the right and will teach it to others? But it is the height of bad taste to lead discussions into such channels.

SOCRATES: My noble friend Polus, the very reason why we acquire friends and children is that when we ourselves grow old and make slips, you younger people present may set us right both in actions and in words. And now if Gorgias and I are tripping anywhere in our argument, here you are to lend a helping hand—it is only right that you should do so—and if you think that any of our admissions are at fault, I am willing to retract whatever you desire, provided that you observe one condition.

POLUS: What is that?

SOCRATES: That you restrain that exuberance, Polus, which you set out to use at first.

POLUS: What? May I not speak at what length I please?

SOCRATES: It would indeed be hard on you, my good friend, if, on coming to Athens, the one spot in Greece where there is the utmost freedom of speech, you alone should be denied it. But look at my side. Would it not be hard on me also, if I may not go away and refuse to listen, when you speak at length and will not answer the question? But if you have any interest in what has been said and wish to set it right, then, as I said just now, retract whatever you please, question and answer in turn, as Gorgias and I did, and refute me and be refuted. For you say, to be sure, that you know what Gorgias knows, do you not?

POLUS: I do.

SOCRATES: And do you not also bid anyone at any time to ask you what he will, since you know how to answer?

POLUS: Certainly.

SOCRATES: Then do whichever of the two you choose now, question or answer.

POLUS: Well then, I will do so. Answer me, Socrates. Since Gorgias seems to you at a loss regarding the nature of rhetoric, what do you say it is?

SOCRATES: Are you asking what art I hold it to be?

POLUS: I am.

SOCRATES: To tell you the truth, Polus, no art at all.

POLUS: But what do you think rhetoric is?

SOCRATES: Something of which you claim to have made an art in your treatise which I recently read. c

POLUS: What do you mean?

SOCRATES: I call it a kind of routine.

POLUS: Then you think rhetoric is a routine?

SOCRATES: Subject to your approval, I do.

POLUS: What kind of routine?

SOCRATES: One that produces gratification and pleasure.

POLUS: Then you do not think rhetoric a fine thing, if it can produce gratification among men?

SOCRATES: What, Polus? Have you already learned from me what I consider rhetoric to be, that you proceed to ask if I do not think it a fine thing?

POLUS: Have I not learned that you call it a kind of routine?

SOCRATES: Well, since you prize gratification so highly, will you gratify me to a small extent?

POLUS: I will.

SOCRATES: Then ask me what kind of art I consider cookery.

POLUS: I will. What art is cookery?

SOCRATES: No art, Polus.

POLUS: Then what is it? Tell me.

SOCRATES: In my opinion, a kind of routine.

POLUS: Tell me, what routine?

SOCRATES: One that produces gratification and pleasure, I claim, Polus.

POLUS: Then cookery and rhetoric are identical?

SOCRATES: By no means, but each is a part of the same activity.

POLUS: And what is that?

SOCRATES: I am afraid it may sound unmannerly to tell the truth, and I hesitate for fear that Gorgias may think I am caricaturing his profession. For my part, I do not know whether this is the rhetoric that Gorgias practices—for we reached no definite conclusion in our recent argument as to his opinion—but what I mean by rhetoric is part of an activity that is not very reputable. 463

GORGAS: What is it, Socrates? Tell us and feel no scruples about me.

SOCRATES: Well then, Gorgias, the activity as a whole, it seems to me, is not an art, but the occupation of a shrewd and

- enterprising spirit, and of one naturally skilled in its dealings with  
 b men, and in sum and substance I call it 'flattery.' Now it seems to me that there are many other parts of this activity, one of which is cookery. This is considered an art, but in my judgment is no art, only a routine and a knack. And rhetoric I call another part of this general activity, and beautification, and sophistic—four parts with four distinct objects. Now if Polus wishes to question me, let him do so, for he has not yet ascertained what part of flattery I call rhetoric. He does not  
 c realize that I have not yet answered him, but proceeds to ask if I do not think it something fine. But I shall not answer whether I consider rhetoric a fine thing or a bad until I have first answered what it is. For that is not right, Polus. Then if you wish to question me, ask me what part of flattery I claim rhetoric to be.

POLUS: I will then; answer, what part?

- d SOCRATES: I wonder whether you will understand my answer. Rhetoric in my opinion is the semblance of a part of politics.

POLUS: Well then, do you call it good or bad?

SOCRATES: Bad—for evil things I call bad—if I must answer you as though you already understood what I mean.

GORGIAS: Why, Socrates, even I myself do not grasp your meaning.

- e SOCRATES: Naturally enough, Gorgias, for I have not yet clarified my statement. But Polus here, like a foal, is young and flighty.

GORGIAS: Well, let him alone, and tell me what you mean by saying that rhetoric is the semblance of a part of politics.

SOCRATES: I will try to explain to you my conception of rhetoric, and if it is wrong, Polus will refute me. You admit the existence of bodies and souls?

464 GORGIAS: Of course.

SOCRATES: And do you not consider that there is a healthy condition for each?

GORGIAS: I do.

SOCRATES: And a condition of apparent, but not real health? For example, many people appear to be healthy of body, and no one could perceive they are not so, except a doctor or some physical trainer.

GORGIAS: That is true.

SOCRATES: There exists, I maintain, both in body and in soul, a condition which creates an impression of good health in each case, although it is false.

- b GORGIAS: That is so.

SOCRATES: Let me see now if I can explain more clearly what I mean. To the pair, body and soul, there correspond two arts—that concerned with the soul I call the political art; to the single art that relates to the body I cannot give a name offhand. But this single art

that cares for the body comprises two parts, gymnastics and medicine, and in the political art what corresponds to gymnastics is legislation, while the counterpart of medicine is justice. Now in each case c the two arts encroach upon each other, since their fields are the same, medicine upon gymnastics, and justice upon legislation; nevertheless there is a difference between them. There are then these four arts which always minister to what is best, one pair for the body, the other for the soul. But flattery perceiving this—I do not say by knowledge but by conjecture—has divided herself also into four branches, and insinuating herself into the guise of each of these parts, pretends to be d that which she impersonates. And having no thought for what is best, she regularly uses pleasure as a bait to catch folly and deceives it into believing that she is of supreme worth. Thus it is that cookery has impersonated medicine and pretends to know the best foods for the body, so that, if a cook and a doctor had to contend in the presence of children or of men as senseless as children, which of the two, doctor or cook, was an expert in wholesome and bad food, the doctor would starve to death. This then I call a form of flattery, and e I claim that this kind of thing is bad—I am now addressing you, 465 Polus—because it aims at what is pleasant, ignoring the good, and I insist that it is not an art but a routine, because it can produce no principle in virtue of which it offers what it does, nor explain the nature thereof, and consequently is unable to point to the cause of each thing it offers. And I refuse the name of art to anything irrational. But if you have any objections to lodge, I am willing to submit to further examination.

Cookery then, as I say, is a form of flattery that corresponds to b medicine, and in the same way gymnastics is personated by beautification, a mischievous, deceitful, mean, and ignoble activity, which cheats us by shapes and colors, by smoothing and draping, thereby causing people to take on an alien charm to the neglect of the natural beauty produced by exercise.

To be brief, then, I will express myself in the language of geometricians—for by now perhaps you may follow me. Sophistic is c to legislation what beautification is to gymnastics, and rhetoric to justice what cookery is to medicine. But, as I say, while there is this natural distinction between them, yet because they are closely related, Sophist and rhetorician, working in the same sphere and upon the same subject matter, tend to be confused with each other, and they know not what to make of each other, nor do others know what to make of them. For if the body was under the control, not of the d soul, but of itself, and if cookery and medicine were not investigated and distinguished by the soul, but the body instead gave the verdict, weighing them by the bodily pleasures they offered, then the principle of Anaxagoras would everywhere hold good—that is something you

know about, my dear Polus—and all things would be mingled in indiscriminate confusion, and medicine and health and cookery would be indistinguishable.

Well, now you have heard my conception of rhetoric. It is the counterpart in the soul of what cookery is to the body. And perhaps I have acted strangely in speaking at such great length after forbidding you a lengthy discourse. But it is only fair that you should excuse me, for when I spoke briefly you did not understand and you were unable to make anything of the answer I gave you but needed an explanation.

466 If then I cannot follow any answer of yours, you too may speak at length; but if I can, then indulge me by being brief, for that is fair. And now, make what you can of my answer.

POLUS: What is it you say then? Do you hold that rhetoric is flattery?

SOCRATES: No, I said 'a part of flattery.' Can you not remember at your age, Polus? What will you do when you are older?

POLUS: Do you think then that good rhetoricians are considered but poor creatures in the cities because they are flatterers?

b SOCRATES: Is that a question, or the beginning of a speech?

POLUS: It is a question I am asking.

SOCRATES: In my opinion they are not considered at all.

POLUS: How are they not considered? Are they not most powerful in their cities?

SOCRATES: No, if by power you mean something good for its possessor.

POLUS: I do indeed mean that.

SOCRATES: Then in my opinion rhetoricians have the least power of any in the state.

POLUS: What? Do they not, like tyrants, put to death any man c they will, and deprive of their fortunes and banish whomsoever it seems best?

SOCRATES: By the dog, at every word you utter, Polus, I am puzzled as to whether you are speaking for yourself and expressing your own views, or questioning me.

POLUS: I am questioning you.

SOCRATES: Well, my friend, then you ask me two questions at once.

POLUS: What two questions?

SOCRATES: Did you not say just now, Do not the orators put to death whomsoever they will, and deprive of their fortunes and banish d from the state whomsoever it seems best?

POLUS: I did.

SOCRATES: Then I claim that there are two questions here, and I will answer both. I say, Polus, that orators and tyrants have the very least power of any in our cities, as I stated just now, for they do

practically nothing that they will, but do only what seems best to them.

POLUS : Well, is not that to possess great power?

SOCRATES : No indeed, according to Polus.

POLUS : According to me? Indeed I affirm that it is.

SOCRATES : By the —, you do not, since you said that great power was a good for its possessor.

POLUS : So I do say.

SOCRATES : Do you call it good, then, if a man without intelligence does what seems best to him? And do you call this great power?

POLUS : Not I.

SOCRATES : Then refute me and prove that orators have intelligence and that rhetoric is an art, not a form of flattery. But if you leave me unrefuted, then the orators who do what seems good to them in our cities and the tyrants will possess no benefit herein, for power, as you say, is a good, but you too admit that to do what seems good to you without intelligence is an evil, do you not? 467

POLUS : I do.

SOCRATES : Then how can rhetoricians or tyrants possess great power in our cities, unless Polus proves against Socrates that they do what they will?

POLUS : This fellow . . .

SOCRATES : I deny that they do what they will; now refute me.

POLUS : Did you not just now admit that they do what seems best to them?

SOCRATES : Yes, and I still admit it.

POLUS : Then are they not doing what they will?

SOCRATES : That I deny.

POLUS : When they do what seems good to them?

SOCRATES : Yes.

POLUS : What you say is shocking and fantastic, Socrates.

SOCRATES : No need to offend, Polus, my friend—to address you in your own style. But if you have any questions to ask me, prove that my view is false; if not, answer for yourself.

POLUS : Well, I am willing to answer, if only to learn what you mean.

SOCRATES : Do you consider, then, that men will what on any occasion they are doing, or rather that for the sake of which they act as they do? For example, do you consider that those who drink medicine at the doctor's orders will what they are doing, namely the drinking of medicine with all its unpleasantness, or the health for the sake of which they drink?

POLUS : Obviously, the health.

SOCRATES : So too with those who sail the seas and engage in money-making in general—they do not will what they do on each

occasion. For who desires to sail and suffer dangers and troubles? But they will, in my opinion, that for the sake of which they sail, namely wealth, for it is for wealth's sake that they sail.

POLUS: Certainly.

SOCRATES: And is not this a general truth? If a man acts with some purpose, he does not will the act, but the purpose of the act.

e POLUS: Yes.

SOCRATES: Now is there anything in the world that is not either good or bad or intermediate between the two, neither good nor bad?

POLUS: Things must inevitably be so, Socrates.

SOCRATES: And by good you mean wisdom and health and wealth and other such things, and by evils their opposites?

POLUS: I do.

468 SOCRATES: And by neither good nor bad you mean such things as partake now of the one, now of the other, and sometimes of neither, as for example, sitting, walking, running, and sailing, or again such objects as stones and timbers and the like? Is not that what you mean? Or do you mean some other class of objects by what is neither good nor bad?

POLUS: No, I mean these.

SOCRATES: Now do men, when they act, perform these indifferent actions for the sake of good, or the good for the sake of the indifferent?

POLUS: Surely the indifferent for the sake of the good.

b SOCRATES: It is in pursuit of the good, then, that we walk when we walk, thinking this the better course, and when on the contrary we stand, we stand for the same reason, for the sake of the good. Is it not so?

POLUS: Yes.

SOCRATES: And do we not kill a man, when we do so, or banish him or confiscate his property, because we think it better so to act than not?

POLUS: Certainly.

SOCRATES: Then those who act thus always act for the sake of the good.

POLUS: I agree.

c SOCRATES: Now did we not admit that when we act with some purpose in view, we do not will the act but the purpose of the act?

POLUS: Certainly.

SOCRATES: Then when we slaughter or banish from the city or deprive of property, we do not thus simply will these acts. But if they are advantageous to us, we will them; if harmful, we do not. For as you say, we will the good, not what is neither good nor evil, nor what

is evil. Do you think my statement is true or not, Polus? Why do you not answer?

POLUS: It is true.

SOCRATES: If we admit this, then if a man, whether tyrant or rhetorician, kills another or banishes him or confiscates his property, because he thinks it to his advantage, and it proves to be to his harm, the man surely does what seems good to him, does he not?

POLUS: Yes.

SOCRATES: But is he doing what he wills, if his conduct proves harmful? Why do you not answer?

POLUS: No, it seems to me he is not doing what he wills.

SOCRATES: Can such a man possibly possess great power then in his city, if, as you yourself admit, great power is a good thing?

POLUS: It is impossible.

SOCRATES: Then I was right in saying it is possible that a man who does what seems good to him in the state has no great power and does not do what he wills.

POLUS: Just as if you, Socrates, would not like to be at liberty to do whatever seemed good to you in the state rather than not, and are not jealous when you see a man killing or imprisoning or depriving of property as seems good to him!

SOCRATES: Do you mean justly or unjustly?

POLUS: Whichever way, is he not to be envied in either case? 469

SOCRATES: Hush, Polus!

POLUS: Why?

SOCRATES: Because we should not envy the unenviable and miserable, but pity them.

POLUS: What? Is that your impression of the men of whom I am speaking?

SOCRATES: Of course.

POLUS: Then you consider miserable and pitiable him who puts to death any man he pleases, and does so justly?

SOCRATES: No, not that, but he is not to be envied either.

POLUS: Did you not call him miserable just now?

SOCRATES: The man who puts to death unjustly, my friend, and he is pitiable too, but he who does so justly is not to be envied.

POLUS: Surely it is the man unjustly put to death who is pitiable and wretched.

SOCRATES: Less so than his slayer, Polus, and less than he who is put to death justly.

POLUS: How is that Socrates?

SOCRATES: In view of the fact that to do wrong is the greatest of evils.

POLUS: Is that the greatest? Is it not a greater to suffer wrong?

SOCRATES: Most certainly not.

POLUS: Then you would wish rather to suffer than to do wrong?

c SOCRATES: I would not wish either, but if I had either to do or to suffer wrong, I would choose rather to suffer than to do it.

POLUS: Then you would not be ready to become a tyrant?

SOCRATES: No, if by tyrant you mean what I do.

POLUS: I mean what I said just now, to be at liberty to do what I please in the state—to kill, to exile, and to follow my own pleasure in every act.

SOCRATES: Heavens, man! Let me have my say and then attack me with your argument. Supposing I should meet you in the  
d crowded market place with a dagger up my sleeve and say to you, Polus, I have just recently acquired a wondrous power, a tyranny. If I resolve that any of these people you see now should die, he will be dead in an instant. And if I decide that anyone should have his head broken, it will be broken at once, or that his cloak shall be torn, it will be torn. So great is my power in the city.

e If then you disbelieve me and I showed you the dagger, you would, I imagine, say on seeing it, Socrates, in this sense anybody might have great power, for in this way one might burn any house he pleased, yes, and the Athenian dockyards too and all the warships and any vessel public or private.

But after all merely to do what one pleases is not to possess great power, do you think so?

POLUS: Not in the circumstances mentioned.

470 SOCRATES: Can you tell me then what fault you find with such power?

POLUS: I can.

SOCRATES: What is it? Tell me.

POLUS: It is that a man who thus behaves must surely be punished.

SOCRATES: And is not punishment an evil?

POLUS: Certainly.

SOCRATES: Does it not seem to you on the contrary, my strange friend, that when a man does what he pleases, if his action is accompanied by advantage, it is a good thing and this apparently is the meaning of great power, but otherwise, it is an evil thing and implies  
b small power? Let us examine this point too. Do we not admit that sometimes it is better to do the things we have just mentioned, to kill men and banish and confiscate their property, and sometimes not?

POLUS: Certainly.

SOCRATES: On this point, then, it seems, both you and I are in agreement.

POLUS: Yes.

SOCRATES: Now when do you say it is better to do these things? Tell me what is your criterion?

POLUS: No, you answer that, Socrates.

SOCRATES: Then if you prefer to hear the answer from me, c I say it is better so to act, Polus, when it is a just action, worse when it is unjust.

POLUS: It is difficult indeed to refute you, Socrates! Why, even a child could prove you are wrong.

SOCRATES: Then I shall be very grateful to that child, and equally so to you, if you refute me and rid me of my nonsense. Be not weary of doing a kindness to a friend, but refute me.

POLUS: Well, there is no need to consult ancient history to refute you, for events that took place yesterday or the day before are sufficient to refute you and prove that many men who do wrong are d happy.

SOCRATES: What events are these?

POLUS: You see that Archelaus, son of Perdiccas, is ruler of Macedonia.

SOCRATES: If I do not see it, I at least hear it.

POLUS: Now do you consider him happy or wretched?

SOCRATES: I do not know, Polus. I have never met the man.

POLUS: What, must you have met him to know? Can you not e judge offhand that he is happy?

SOCRATES: No indeed, I cannot.

POLUS: Obviously then you will say that you do not know whether the Great King himself is happy.

SOCRATES: And I shall be telling the truth, for I do not know how he stands in education and justice.

POLUS: What? Does happiness rest entirely upon this?

SOCRATES: Yes, in my opinion, Polus, for the man and woman who are noble and good I call happy, but the evil and base I call wretched.

POLUS: Then according to you Archelaus is wretched.

471

SOCRATES: If, my friend, he is wicked.

POLUS: Wicked? Of course he is! He had no claim to the power he now enjoys, being the son of a woman who was a slave to Alcetas, the brother of Perdiccas, and by rights he was the slave of Alcetas. And if he had chosen to act justly, he would still have been his slave and, according to you, would have been happy, but now he has become monstrous unhappy, since he has done the greatest of wrongs. In the b first place he sent for this master and uncle of his, ostensibly to restore to him the power of which Perdiccas had deprived him, and then entertained the man and his son, Alexander, who was his own cousin and about his own age, and after making them drunk he flung them into a wagon, took them away by night, and made away with them by murder. And these crimes he committed without realizing that he was the most wretched of men, and felt no regrets. But a little later, so far from wishing to become happy by justly bringing up the c rightful heir to the throne, his own brother, the legitimate son of

Perdiccas, a child of about seven years, and restoring the throne to him, he threw him into a well and drowned him, and then told the child's mother, Cleopatra, that the boy had fallen in and killed himself while chasing a goose. And so now, after committing greater crimes than any in Macedonia, he is the most wretched, not the happiest, of all Macedonians, and I suppose there are other Athenians besides yourself who would prefer to be any Macedonian rather than Archelaus.

SOCRATES: At the very beginning of our discussion, Polus, I praised you for being in my opinion well trained in rhetoric, though you had neglected dialectic. And now is this the argument whereby even a child might refute me, and have I now, as you imagine, been refuted by it when I claim that the wrongdoer is not happy? How so, my good fellow? Indeed I do not admit a word of what you say.

e POLUS: You refuse to, though you really think as I do.

SOCRATES: My dear sir, you are trying to refute me orator-fashion, like those who fancy they are refuting in the law courts. For there one group imagines it is refuting the other when it produces many reputable witnesses to support its statements whereas the opposing party produces but one or none. But this method of proof is  
472 worthless toward discovering the truth, for at times a man may be the victim of false witness on the part of many people of repute. And now practically all men, Athenians and strangers alike, will support your statements, if you wish to produce them as witnesses that my view is false. If you choose, you may cite as witnesses Nicias, son of Niceratus, and his brothers, who dedicated the long line of tripods in the precinct of Dionysus; or, if you choose, Aristocrates, son of Scellias,  
b who made that splendid offering at the shrine of Apollo; or, if you choose, the whole household of Pericles or any other family you like to select in Athens. Yet I, who am but one, do not agree with you, for you cannot compel me to; you are merely producing many false witnesses against me in your endeavor to drive me out of my property, the truth. But if I cannot produce in you yourself a single witness in agreement with my views, I consider that I have accomplished nothing worth speaking of in the matter under debate; and the same, I  
c think, is true for you also, if I, one solitary witness, do not testify for you and if you do not leave all these others out of account. Now here is one form of refutation accepted by you and by many others, but there is also another, according to my opinion. Let us compare them, then, and consider whether there is any difference between them. For the questions in dispute are by no means trivial, but are, one might say, matters wherein knowledge is noblest and ignorance most shameful—the sum and substance of them being knowledge or ignorance of who is happy and who is not. For example, to take first  
d the subject of our present discussion, you think it possible for a man

to be happy though he is evil and acts wickedly, since you judge Archelaus wicked and yet happy. Are we to consider this is your opinion?

POLUS: Certainly.

SOCRATES: But I say it is impossible. That is one point in dispute. Well, the evildoer will be happy, will he not, if he meets with justice and punishment?

POLUS: Decidedly not. Under those conditions he would be most unhappy.

SOCRATES: Then according to you, if the evildoer is not punished, he will be happy.

POLUS: That is what I say.

SOCRATES: But according to my opinion, Polus, the wicked man and the doer of evil is in any case unhappy, but more unhappy if he does not meet with justice and suffer punishment, less unhappy if he pays the penalty and suffers punishment from gods and men.

POLUS: That is a preposterous theory you are attempting to uphold, Socrates. 473

SOCRATES: I shall try to make you share it with me, my friend, for I account you a friend. For the moment then, these are our points of difference—just consider for yourself. I said a short while ago that it was worse to do than to suffer wrong.

POLUS: Certainly.

SOCRATES: But you said it was worse to suffer it.

POLUS: Yes.

SOCRATES: And I said that evildoers are unhappy and was confuted by you.

POLUS: Yes, unquestionably.

SOCRATES: According to your opinion. b

POLUS: And my opinion is right.

SOCRATES: Possibly so. And you maintain evildoers are happy, if they escape punishment.

POLUS: Certainly.

SOCRATES: But I claim they are the unhappiest of all, and that those who are punished are less so. Do you want to refute that?

POLUS: That of course is more difficult to refute than your first point, Socrates.

SOCRATES: Not difficult, Polus, but impossible, for the truth is never refuted.

POLUS: What do you mean? If a man is caught in a criminal plot to make himself tyrant, and when caught is put to the rack and c mutilated and has his eyes burned out and after himself suffering and seeing his wife and children suffer many other signal outrages of various kinds is finally impaled or burned in a coat of pitch, will he be happier than if he escaped arrest, established himself as a tyrant,

and lived the rest of his life a sovereign in his state, doing what he pleased, an object of envy and felicitation among citizens and strangers alike? Is this what you say is impossible to refute?

SOCRATES: Now you are trying to make my flesh creep, my noble friend, instead of refuting me, and just now you were appealing to witnesses. However, refresh my memory a trifle. Did you say 'criminally plotting to make himself a tyrant'?

POLUS: I did.

SOCRATES: In that case neither one will be happier than the other, neither he who by evil means achieves a tyranny nor he who is punished—for of two miserable creatures one cannot be the happier—but he who escapes detection and becomes a tyrant is the more wretched. What is this, Polus? Do you laugh? Is this another form of rebutting, to laugh at a man when he speaks, instead of refuting him?

POLUS: Do you not consider yourself already refuted, Socrates, when you put forward views that nobody would accept? Why, ask anyone present!

SOCRATES: I am no politician, Polus, and last year when I became a member of the Council and my tribe was presiding and it was my duty to put the question to the vote, I raised a laugh because I did not know how to. And so do not on this occasion either bid me put the question to those present, but if you can contrive no better refutation than this, then leave it to me in my turn, as I suggested just now, and try out what I consider the proper form of refutation. For I know how to produce one witness to the truth of what I say, the man with whom I am debating, but the others I ignore. I know how to secure one man's vote, but with the many I will not even enter into discussion. Consider then whether you are willing in your turn to submit to the test by answering my questions. For I think that you and all other men as well as myself hold it worse to do than to suffer wrong and worse to escape than to suffer punishment.

POLUS: And I maintain that neither I nor any other man so believes. Why, would you rather suffer than do wrong?

SOCRATES: Yes, and so would you and everyone else.

POLUS: Far from it! Neither I nor you nor anyone.

SOCRATES: Will you answer then?

POLUS: Certainly, for I am anxious to know what you will say.

SOCRATES: If you wish to know then, answer me, as if I were beginning my questions to you. Which do you consider the worse, Polus, to do or to suffer wrong?

POLUS: I? To suffer wrong.

SOCRATES: Well, and is it more shameful to do or to suffer wrong?

POLUS: To do wrong.

SOCRATES: Is it not worse also, if more shameful?

POLUS: By no means.

SOCRATES: I see. Apparently you do not consider the good and a the fair to be the same, nor the evil and the shameful.

POLUS: I do not.

SOCRATES: And the next point. When you call things fair, such as bodies and colors and figures and sounds and institutions, you must do so surely with reference to some standard. For instance, in the first place do you not call bodies fair either in virtue of the service for which each one is useful, or the pleasure which the sight of them produces in the beholder? Is there any reason outside these which you can give for calling a body fair?

POLUS: I can give none.

SOCRATES: Do you not in the same way name all other things e also—figures perhaps or colors—fair either because of some pleasure or use they render or for both reasons together?

POLUS: I do.

SOCRATES: And similarly with sounds and all that is concerned with music?

POLUS: Yes.

SOCRATES: And further, with regard to laws and institutions—the fine ones, I mean—their beauty does not lie outside these limits of the pleasurable, the useful, or both?

POLUS: No, I do not think so.

SOCRATES: And it is the same with the beauty of forms of 475 learning.

POLUS: Certainly, and now you are offering a fine definition of the beautiful, Socrates, in defining it by pleasure and the good.

SOCRATES: Then you define the base by the opposites, pain and evil?

POLUS: Necessarily.

SOCRATES: Therefore when of two things that are fine one excels the other in beauty, that superior excellence is due to superior pleasure or usefulness or both?

POLUS: Certainly.

SOCRATES: And when of two things shameful one exceeds the other in baseness, this excess will be due to an excess either of pain or b of evil. Must it not be so?

POLUS: Yes.

SOCRATES: Well then, what was said just now about doing and suffering wrong? Did you not say it is worse to suffer wrong, but more shameful to inflict it?

POLUS: I said so.

SOCRATES: Then if it is more shameful to do than to suffer wrong, it is either more painful, and more shameful through excess of pain, or of evil, or of both. Must this not be so?

POLUS: Of course.

- c      SOCRATES: Now let us first consider whether the infliction of wrong exceeds the suffering of it in pain, and whether wrongdoers suffer more pain than their victims.

POLUS: That can never be, Socrates.

SOCRATES: Then the excess is not in pain?

POLUS: Surely not.

SOCRATES: And if not in pain, the excess could not be in both?

POLUS: Evidently not.

SOCRATES: Then only the other alternative is left?

POLUS: Yes.

SOCRATES: Namely, evil.

POLUS: So it appears.

SOCRATES: Then to inflict wrong is worse than to suffer it through an excess of evil.

POLUS: That is obvious.

- d      SOCRATES: Now were not you and the majority of men in agreement before that it is more shameful to do than to suffer wrong?

POLUS: Yes.

SOCRATES: And now it has been shown to be more evil.

POLUS: So it appears.

SOCRATES: And would you choose the more evil and shameful in preference to the less? Do not hesitate to answer, Polus, for it will do you no hurt, but submit nobly to the argument as you would to a doctor, and say either yes or no to my question.

- e      POLUS: No, I would not prefer it, Socrates.

SOCRATES: And would anyone else?

POLUS: Not according to this argument, I think.

SOCRATES: Then I spoke truth when I said that neither I nor you nor any man whatever would rather do than suffer wrong, for to do it is worse.

POLUS: Evidently.

- SOCRATES: You see then, Polus, that when our proofs are set side by side there is no resemblance. And though all other men except  
476 me agree with you, I require no witness to testify for me to save you alone, and putting you alone to the vote I ignore the rest. Well, so much for that. And now let us investigate the second point at issue between us, whether, as you thought, to be punished when guilty is the greatest of evils or, as I thought, it is a greater evil to escape punishment.

Let us consider it in the following way. Would you say that to suffer punishment is the same thing as to be justly chastised when guilty?

POLUS: I would.

- b      SOCRATES: Now can you deny that all just things are fine in so far as they are just? Think well before you answer.

POLUS: In my opinion they are, Socrates.

SOCRATES : Now consider this further point. When a man acts, must there not always be something acted upon by the agent?

POLUS : I think so.

SOCRATES : And does it not experience what the agent does, and is not the quality of the experience and the action the same? I mean, for example, if a man strikes, there must be something stricken.

POLUS : There must.

SOCRATES : And if the striker strikes hard or fast, the blow received by the stricken must be of like quality. c

POLUS : Yes.

SOCRATES : Then the experience of the stricken is of the same quality as the action of the striker?

POLUS : Certainly.

SOCRATES : And if a man burns, there must be a thing burned?

POLUS : Of course.

SOCRATES : And if he burns severely or painfully, the thing burned must be burned in the same way?

POLUS : Certainly.

SOCRATES : And the same reasoning applies if a man cuts; there is a thing cut.

POLUS : Yes.

SOCRATES : And if the cut be big or deep or painful, the object cut must be cut in the same way? d

POLUS : Evidently.

SOCRATES : Then consider whether you agree to what I said just now as a general rule in every case, namely, that the quality of the patient's experience corresponds to that of the agent's action.

POLUS : I agree.

SOCRATES : This being admitted, tell me whether to be punished is to suffer or to act.

POLUS : Necessarily, it is to suffer, Socrates.

SOCRATES : At the hands of some agent?

POLUS : Of course, the inflicter of the punishment.

SOCRATES : And he who rightly inflicts it punishes justly?

POLUS : Yes. e

SOCRATES : Acting justly or not?

POLUS : Justly.

SOCRATES : And so he who is punished suffers justly when he pays the just penalty?

POLUS : Evidently.

SOCRATES : And we have agreed that things just are fine or honorable.

POLUS : Certainly.

SOCRATES : Then of the two one does, the other, the punished, suffers, what is honorable?

POLUS : Yes.

477 SOCRATES : And if honorable, good, for the honorable is either pleasant or profitable.

POLUS : Assuredly.

SOCRATES : So he who is punished justly suffers what is good?

POLUS : Apparently.

SOCRATES : And is therefore benefited?

POLUS : Yes.

SOCRATES : Is it the kind of benefit that I imagine? Is his soul bettered if he is justly punished?

POLUS : It seems probable.

SOCRATES : Then he who is punished is rid of evil in the soul?

POLUS : Yes.

b SOCRATES : Is he not then freed from the greatest of evils? Look at it in this way. In the fabric of a man's material estate do you see any other evil than poverty?

POLUS : No, only poverty.

SOCRATES : And what about his bodily constitution? Would you say its evil is weakness and sickness and ugliness and such things?

POLUS : I would.

SOCRATES : And do you consider there is an evil condition of the soul?

POLUS : Certainly.

SOCRATES : And do you call this injustice and ignorance and cowardice and the like?

POLUS : Certainly.

c SOCRATES : Then for these three, material fortune, body, and soul, you have named three evils, poverty, disease, and injustice?

POLUS : Yes.

SOCRATES : Now which of these evils is the most shameful? Is it not injustice and the evil of the soul in general?

POLUS : Yes, by far.

SOCRATES : And if the most shameful, then also the worst?

POLUS : How do you mean, Socrates?

SOCRATES : I mean that what is most shameful is so, as we have already admitted, because it produces the greatest pain or harm or both.

POLUS : Certainly.

SOCRATES : And we have just now agreed that injustice and all evil of the soul is most shameful?

d POLUS : We have agreed.

SOCRATES : Then it is either most painful, and most shameful through an excess of pain, or else of harm, or of both?

POLUS : That is necessary.

SOCRATES: Now are injustice and intemperance and cowardice and ignorance more painful than poverty and sickness?

POLUS: That does not seem to result from our discussion, Socrates.

SOCRATES: Then if evil of the soul, by your verdict, does not exceed other evils in painfulness, its superlative shamefulness must be due to a harm and a viciousness immeasurably and surpassingly great.

POLUS: Evidently.

SOCRATES: But that which exceeds most in harm must be the greatest of all possible evils.

POLUS: Yes.

SOCRATES: Then injustice and intemperance and other vices of the soul are the greatest of all evils.

POLUS: Clearly.

SOCRATES: Now what art rids us of poverty? Is it not the art of making money?

POLUS: Yes.

SOCRATES: And what art frees us from sickness? Is it not medicine?

POLUS: It must be.

478

SOCRATES: And what art from vice and injustice? If this is not so clear to you, look at it like this. Where and to whom do we take the sick in body?

POLUS: To the doctors, Socrates.

SOCRATES: And the unjust and intemperate?

POLUS: To the judges, do you mean?

SOCRATES: To suffer punishment?

POLUS: Yes.

SOCRATES: And do not those who punish rightly do so with the aid of a certain justice?

POLUS: Obviously.

SOCRATES: Then money-making rids us of poverty, medicine of sickness, and justice of intemperance and injustice.

POLUS: Evidently.

SOCRATES: Then of these which is the finest?

POLUS: Of which do you mean?

SOCRATES: Of money-making, medicine, and justice?

POLUS: Justice is far superior, Socrates.

SOCRATES: Then if finest, must it not produce either the greatest pleasure or the greatest profit, or both?

POLUS: Yes.

SOCRATES: Is medical regimen a pleasant thing, and do patients enjoy it?

POLUS: Not in my opinion.

SOCRATES: But it is beneficial, is it not?

c POLUS: Yes.

SOCRATES: For the patient is freed from a great evil, so that it is profitable to submit to the pain and recover health.

POLUS: Of course.

SOCRATES: And would a man be happiest about his bodily state if he submitted to healing or if he were never sick at all?

POLUS: Obviously if he were never sick at all.

SOCRATES: For happiness, after all, it seems, consists not in a release from evil but in never having contracted it.

POLUS: That is so.

d SOCRATES: Again, of two who suffer evil either in body or in soul, which is the more wretched, the man who submits to treatment and gets rid of the evil, or he who is not treated but still retains it?

POLUS: Evidently the man who is not treated.

SOCRATES: And was not punishment admitted to be a release from the greatest of evils, namely wickedness?

POLUS: It was.

SOCRATES: Yes, because a just penalty disciplines us and makes us more just and cures us of evil.

POLUS: I agree.

SOCRATES: Then the happiest of men is he who has no evil in his soul, since this was shown to be the greatest of evils?

e POLUS: That is plain.

SOCRATES: And second in order surely is he who is delivered from it.

POLUS: Apparently.

SOCRATES: And we found this was the man who is admonished and rebuked and punished.

POLUS: Yes.

SOCRATES: Then his life is most unhappy who is afflicted with evil and does not get rid of it.

POLUS: Evidently.

479 SOCRATES: And is not this just the man who does the greatest wrong and indulges in the greatest injustice and yet contrives to escape admonition, correction, or punishment—the very condition you describe as achieved by Archelaus and other tyrants, orators, and potentates?

POLUS: It seems so.

SOCRATES: For what these have contrived, my good friend, is pretty much as if a man afflicted with the most grievous ailments should contrive not to pay to the doctors the penalty of his sins against his body by submitting to treatment, because he is afraid, like a  
b child, of the pain of cautery or surgery. Do you not agree?

POLUS: I do.

**SOCRATES:** He is evidently ignorant of the meaning of health and physical fitness. For apparently, as our recent admissions prove, those who escape punishment also act much in the same way, Polus. They see its painfulness but are blind to its benefit and know not how much more miserable than a union with an unhealthy body is a union with a soul that is not healthy but corrupt and impious and evil, and so they leave nothing undone to avoid being punished and c liberated from the greatest of ills, providing themselves with money and friends and the highest attainable powers of persuasive rhetoric. But if we have been right in our admissions, Polus, do you see the results of our argument, or shall we sum them up together?

**POLUS:** Yes, if you wish.

**SOCRATES:** Is not our conclusion then that injustice and the doing of wrong is the greatest of evils?

**POLUS:** Evidently.

**SOCRATES:** And it was shown that punishment rids us of this a evil?

**POLUS:** Apparently.

**SOCRATES:** And when punishment is evaded, the evil abides?

**POLUS:** Yes.

**SOCRATES:** Then wrongdoing itself holds the second place among evils, but first and greatest of all evils is to do wrong and escape punishment.

**POLUS:** So it seems.

**SOCRATES:** Now did we not differ, my friend, about this very point, when you maintained that Archelaus was happy because he remained unpunished despite the enormity of his crimes, whereas I e was of the contrary opinion—that Archelaus or any other man who escapes punishment for his misdeeds must be miserable far beyond all other men, and that invariably the doer of wrong is more wretched than his victim, and he who escapes punishment than he who is punished? Was not that what I was saying?

**POLUS:** Yes.

**SOCRATES:** And has it not been proved that it is true?

**POLUS:** Clearly.

**SOCRATES:** Well then, if this is true, Polus, what great use is 480 there in rhetoric? Our recent admissions show, do they not, that a man must take every precaution not to do wrong, since he would thereby suffer great harm?

**POLUS:** Certainly.

**SOCRATES:** But if he or anyone of those for whom he cares has done wrong, he ought to go of his own accord where he will most speedily be punished, to the judge as though to a doctor, in his eager- b ness to prevent the distemper of evil from becoming ingrained and producing a festering and incurable ulcer in his soul. Or what else

can we say, Polus, if our previous admissions hold good? Must it not be true that only in this, and in no other way, can our present views be in harmony with what we said before?

POLUS : What else indeed can we say, Socrates?

SOCRATES : Then for the purpose of defending one's own guilt or that of his parents or friends or children, or his country when  
 c guilty, Polus, rhetoric is of no use whatever—unless we should on the contrary assume that a man ought to accuse himself first and foremost, and then his kinsfolk and any friend who at any time is guilty of wrongdoing, and that he ought not to hide the evil away but bring it to light in order that the culprit may be punished and regain his health. And he should prevail upon himself and the others not to play the coward but to submit as a patient submits bravely with closed eyes to the knife or cautery of the surgeon, ever pursuing what is good and honorable and heeding not the pain, but if his guilty deeds be  
 d worthy of flogging, submitting to the lash; if of imprisonment, to bonds; if of a fine, to the payment thereof; if of exile, to exile; if of death, to death. He should be the first to accuse himself and his kinsmen, and should use rhetoric for the sole purpose of exposing his own misdeeds and ridding himself of the greatest of all evils, wickedness. Are we to accept this or not, Polus?

e POLUS : To me it seems fantastic, Socrates, but I suppose it is consistent with what was said before.

SOCRATES : Then surely we must disprove that, or else this view must follow.

POLUS : Yes, that is so.

SOCRATES : Then conversely again, if after all it is right to injure anybody, whether it be an enemy or whoever it be—always provided that you have not been yourself the victim of injury by him, for  
 this you must guard against—but if your enemy injures another, you should contrive by every possible means, both by word and by deed,  
 481 that he escape punishment and come not before the judge. But if he does appear, you must see to it that your enemy be not sentenced and punished, but that, if he has robbed others of a large sum of money, he shall not pay it back but shall keep it and squander it, in defiance of god and man, upon himself and his friends; and, if his crimes are worthy of death, that, if possible, he shall never die but live forever in his wickedness, or, if not this, shall at any rate live as long as possible in this character. Rhetoric is of service for such purposes  
 b in my opinion, Polus, but does not seem to be of much use for a man who does not intend to do wrong, if indeed it is of any use at all—and our previous discussion has revealed none.

CALLICLES : Tell me, Chaerephon, is Socrates in earnest or joking?

CHAEAPHON : In my opinion, Callicles, he is in deadly earnest, but there is nothing like asking him.

**CALLICLES:** By heaven, that is just what I am anxious to do. Tell me, Socrates, are we to consider you serious now or jesting? For if you are serious and what you say is true, then surely the life of us c mortals must be turned upside down and apparently we are everywhere doing the opposite of what we should.

**SOCRATES:** Callicles, if mankind did not share one common emotion which was the same though varying in its different manifestations, but some of us experienced peculiar feelings unshared by the rest, it would not be easy for one of us to reveal his feelings to another. This I say because I have observed that you and I have now d undergone much the same experience, for each one of us is in love with two objects—I with Alcibiades, son of Clinias, and philosophy, and you also with two, the Athenian demos and Demos, son of Pyrilampes. Now I notice on every occasion that, clever though you be, whatever your favorite says and however he describes things to be, you cannot contradict him, but constantly shift to and fro. In the As- e sembly, if any statement of yours is contradicted by the Athenian demos, you change about and say what it wishes, and you behave much the same toward the handsome young son of Pyrilampes. For you are incapable of resisting the words and designs of your favorite, with the result that if anyone should be astonished at the absurdities you utter again and again under their spell, you would probably say, if you were willing to tell the truth, that unless somebody stops your favorites from saying what they do, you yourself too will never stop 482 speaking thus. You must think yourself bound then to hear much the same things from me, and do not be astonished at my speaking thus, but stop my favorite, philosophy, from saying what she does. It is she, my friend, who says what you now hear from me, and she is far less unstable than my other favorite, for the son of Clinias is at the mercy now of one argument, now of another, but philosophy holds always to the same, and she says what now astonishes you, and you were here b when the words were spoken. You must either then prove against her, as I said just now, that to do wrong and evade punishment for wrongdoing is not the worst of all evils; or if you leave this unrefuted, then, by the dog that is god in Egypt, Callicles himself will not agree with you, Callicles, but will be at variance with you throughout your life. And yet I think it better, my good friend, that my lyre should be discordant and out of tune, and any chorus I might train, and that the majority of mankind should disagree with and oppose me, rather than c that I, who am but one man, should be out of tune with and contradict myself.

**CALLICLES:** Socrates, it seems to me that you run wild in your talk like a true mob orator, and now you are haranguing us in this way because Polus fell into the very error which he blamed Gorgias for being drawn into by you. Gorgias, he said, was asked by you whether, in case a prospective pupil of rhetoric came to him without a

- d knowledge of justice, he himself would teach him, and he was shamed into saying he would do so, because the general conventional view demanded it and men would be vexed if one refused. It was through this admission that he was forced to contradict himself, and that is just what you like. And Polus, in my opinion, was quite right in laughing at you at the time, but now he himself in turn has been caught in the same way. And I do not think much of Polus for the very reason that he agreed with you that it is more disgraceful to do than to suffer in-
- e justice, for it was as a result of this admission that he was caught in the toils of your argument and silenced, because he was ashamed to say what he thought. For, Socrates, though you claim to pursue the truth, you actually drag us into these tiresome popular fallacies, looking to what is fine and noble, not by nature, but by convention. Now, for the most part, these two, nature and convention, are antagonistic to each other. And so, if a man is ashamed and dares not say what he
- 483 thinks, he is compelled to contradict himself. And you have discovered this clever trick and do not play fair in your arguments, for if a man speaks on the basis of convention, you slyly question him on the basis of nature, but if he follows nature, you follow convention. For example, in our present discussion of doing and suffering wrong, when Polus spoke of what was conventionally the more shameful, you followed it up by appealing to nature. For by nature everything that is worse is more shameful, suffering wrong for instance, but by convention it is more shameful to do it. For to suffer wrong is not even fit for
- b a man but only for a slave, for whom it is better to be dead than alive, since when wronged and outraged he is unable to help himself or any other for whom he cares. But in my opinion those who framed the laws are the weaker folk, the majority. And accordingly they frame the laws for themselves and their own advantage, and so too with
- c their approval and censure, and to prevent the stronger who are able to overreach them from gaining the advantage over them, they frighten them by saying that to overreach others is shameful and evil, and injustice consists in seeking the advantage over others. For they are satisfied, I suppose, if being inferior they enjoy equality of status. That is the reason why seeking an advantage over the many is by convention said to be wrong and shameful, and they call it injustice. But in my view nature herself makes it plain that it is right for
- d the better to have the advantage over the worse, the more able over the less. And both among all animals and in entire states and races of mankind it is plain that this is the case—that right is recognized to be the sovereignty and advantage of the stronger over the weaker. For what justification had Xerxes in invading Greece or his father in invading Scythia? And there are countless other similar instances one
- e might mention. But I imagine that these men act in accordance with the true nature of right, yes and, by heaven, according to nature's own law, though not perhaps by the law we frame. We mold the best and

strongest among ourselves, catching them young like lion cubs, and by spells and incantations we make slaves of them, saying that they must be content with equality and that this is what is right and fair. But if a man arises endowed with a nature sufficiently strong, he will, I believe, shake off all these controls, burst his fetters, and break loose. And trampling upon our scraps of paper, our spells and incantations, and all our unnatural conventions, he rises up and reveals himself our master who was once our slave, and there shines forth nature's true justice. And it seems to me that Pindar expresses what I am saying in that ode in which he writes, 484

Law is the sovereign of all,  
Of mortals and immortals alike,

and it is law, he says, that

Carries all, justifying the most violent deed  
With victorious hand; this I prove  
By the deeds of Heracles, for without paying the price—<sup>1</sup>

it runs something like that—for I do not know the poem by heart—but it says that he drove off the oxen of Geryon which were neither given to him nor paid for, because this is natural justice, that the cattle and all other possessions of the inferior and weaker belong to the superior and stronger. c

This is the truth then, and you will realize it if you will now abandon philosophy and rise to greater things. For philosophy, you know, Socrates, is a pretty thing if you engage in it moderately in your youth; but if you continue in it longer than you should, it is the ruin of any man. For if a man is exceptionally gifted and yet pursues philosophy far on in life, he must prove entirely unacquainted with all the accomplishments requisite for a gentleman and a man of distinction. Such men know nothing of the laws in their cities, or of the language they should use in their business associations both public and private with other men, or of human pleasures and appetites, and in a word they are completely without experience of men's characters. And so when they enter upon any activity public or private they appear ridiculous, just as public men, I suppose, appear ridiculous when they take part in your discussions and arguments. For what Euripides says is true: d

All shine in that and eagerly pursue it—  
Giving the better part of the day thereto—  
In which they find themselves most excellent,<sup>2</sup>

but that in which they are inferior they shun and abuse, praising the other out of partiality to themselves, with the idea that they are thus praising themselves. But to my mind the right course is to partake of 485

<sup>1</sup> Pindar, fr. 169.

<sup>2</sup> *Antiope*, fr. 20.

- both. It is a good thing to engage in philosophy just so far as it is an aid to education, and it is no disgrace for a youth to study it, but when a man who is now growing older still studies philosophy, the situation
- b becomes ridiculous, Socrates, and I feel toward philosophers very much as I do toward those who lisp and play the child. When I see a little child, for whom it is still proper enough to speak in this way, lisping and playing, I like it and it seems to me pretty and ingenuous and appropriate to the child's age, and when I hear it talking with precision, it seems to me disagreeable and it vexes my ears and appears to me more fitting for a slave, but when one hears a grown man
- c lisping or sees him playing the child, it look ridiculous and unmanly and worthy of a beating. I feel exactly the same too about students of philosophy. When I see a youth engaged in it, I admire it and it seems to me natural and I consider such a man ingenuous, and the man who does not pursue it I regard as illiberal and one who will never aspire
- d to any fine or noble deed, but when I see an older man still studying philosophy and not deserting it, that man, Socrates, is actually asking for a whipping. For as I said just now, such a man, even if exceptionally gifted, is doomed to prove less than a man, shunning the city center and market place, in which the poet said that men win distinction, and living the rest of his life sunk in a corner and whispering with three or four boys, and incapable of any utterance that is free and
- e lofty and brilliant. Now I am quite friendly disposed toward you, Socrates, and I suppose I feel much as Zethus, whom I mentioned, felt toward Amphion in Euripides. For I am moved to say to you the same kind of thing as he said to his brother, 'You neglect, Socrates, what you most ought to care for, and pervert a naturally noble spirit
- 486 by putting on a childlike semblance, and you could neither contribute a useful word in the councils of justice nor seize upon what is plausible and convincing, nor offer any brilliant advice on another's behalf.' <sup>3</sup> And yet, my dear Socrates—and do not be angry with me, for I am saying this out of good will toward you—do you not consider it a disgrace to be in the condition I think you are in, you and the others who advance ever farther into philosophy? For now if anyone should seize you or any others like you and drag you off to prison, claiming you are guilty when you are not, you realize that you would not know
- b what to do, but you would reel to and fro and gape openmouthed, without a word to say, and when you came before the court, even with an utterly mean and rascally accuser, you would be put to death, if he chose to demand the death penalty. And yet what wisdom is there in this, Socrates, in 'an art which finds a man well-gifted and leaves him worse' <sup>4</sup>—able neither to help himself nor to save from the extremes of danger either himself or anybody else, but fated to be robbed by his
- c enemies of all his property and to live literally like one disfranchised

<sup>3</sup> *Antiope*, fr. 21.<sup>4</sup> *Antiope*, fr. 25.

in his own city? And such a man, if I may put it somewhat crudely, one may even box on the ears with impunity. But, my good fellow, 'cease your questioning, and practice the fairer music of affairs' and try something that will win you a name for good sense, and leave to others 'these dainty devices,' whether we should call them babblings or follies, 'which will set you to dwell in empty mansions.' You should not emulate those who investigate these trifling matters but those who enjoy a livelihood and a reputation and many other blessings. d

SOCRATES: If my soul were wrought of gold, Callicles, do you not think I should be delighted to find one of those stones wherewith they test gold—the best of them—which I could apply to it, and if it established that my soul had been well nurtured, I should be assured that I was in good condition and in need of no further test?

CALLICLES: What is your point in asking me this, Socrates? e

SOCRATES: I will tell you. I consider that in meeting you I have encountered such a godsend.

CALLICLES: Why?

SOCRATES: I am convinced that if you agree with the opinions held by my soul, then at last we have attained the actual truth. For I observe that anyone who is to test adequately a human soul for good 48' or evil living must possess three qualifications, all of which you possess, namely knowledge, good will, and frankness. Now I encounter many who cannot test me because they are not wise like you, and others are wise but are unwilling to tell the truth because they do not care for me as you do, and our two guests here, Gorgias and Polus, while they are wise men and friends of mine, are more deficient than they ought to be in outspokenness and somewhat too bashful. How b could it be otherwise, when their bashfulness is so great that out of sheer timidity each of them ventures to contradict himself in the presence of many people, and that too about matters of supreme importance? But you possess all the qualifications lacking in the others. You have received a good education, as many Athenians would agree, and you are well disposed toward me. What evidence have I of this? I will c tell you. I know that you, Callicles, and three others are partners in wisdom—you, and Tisander of Aphidnae, Andron, the son of Andro- tion, and Nausicydes of Cholargeis—and I once overheard you discussing up to what point one should study philosophy. And I know that some such opinion as this prevailed among you, that we should not be zealous to pursue it in the nicest detail, but you advised each other to beware of becoming wiser than you should, for fear of un- d knowingly becoming corrupted by it. And so when I hear you giving me the same advice as you gave your closest companions, that to me is sufficient proof that you really are well disposed toward me. Moreover, that you are inclined to be frank and not bashful is borne out by your own statement and confirmed by the speech you made a short

time ago. Evidently, then, the case at the moment is this. If at any point in our discussion you agree with me, that matter will already  
 e have been adequately tested both by you and by me, and there will no longer be any need to refer it to any other touchstone. For you would never have agreed with me through lack of wisdom or excess of modesty, nor again would you agree with me with intent to deceive, for you are my friend, as you yourself claim. In fact, then, any agreement between you and me will have attained the consummation of the truth. And of all inquiries, Callicles, the noblest is that which concerns the very matter with which you have reproached me—namely, what a man should be, and what he should practice and to what extent,  
 488 both when older and when young. As for me, if I act wrongly at all in the conduct of my life, you may be assured that my error is not voluntary but due to my ignorance. Now that you have begun to admonish me, therefore, do not give it up, but reveal to me clearly what course I must follow and how I may achieve it; and if you catch me agreeing with you now but later not doing what I agreed to, you may consider me an utter dolt and refuse to admonish me any more as a  
 b worthless creature. But please take up the question again from the beginning and tell me what ‘natural justice’ is according to you and Pindar—that the more powerful carries off by force the property of the weaker, the better rules over the worse, and the nobler takes more than the meaner? Have you any other conception of justice than this, or is my memory right?

CALLICLES: No, that is what I said then and still hold to.

SOCRATES: And is it the same man whom you call better and more powerful? I could not grasp at the time, you know, just what you  
 c meant. Is it the physically stronger that you call more powerful, and must the weaker obey the stronger—as, for example, you seemed to indicate at the time by saying that great cities assail small ones in accordance with natural justice, because they are more powerful and stronger, the more powerful and stronger and better being one and the same thing—or is it possible to be better but weaker and less powerful, or more powerful but more evil? Or have you the same definition for the better and the more powerful? Please make your distinction clear, whether you consider the more powerful, the better, and the stronger as the same thing or different.

CALLICLES: Well, I can plainly assure you that they are the same.

SOCRATES: Are not the many more powerful by nature than the one? And it is these who, as you yourself said just now, frame their laws to restrain the one.

CALLICLES: Of course.

SOCRATES: Then the ordinances of the many are those of the more powerful?

CALLICLES : Certainly.

SOCRATES : And of the better also? For the more powerful are e  
far better, according to you.

CALLICLES : Yes.

SOCRATES : Then their ordinances are naturally noble, since  
they are those of the more powerful.

CALLICLES : I agree.

SOCRATES : Now do the many hold the opinion, as you just  
now stated, that justice means equal shares and that it is more shameful  
to do than to suffer wrong? Is this true or not? And mind that you 489  
yourself are not caught this time a victim of modesty. Is it the view  
of the many, or not, that justice means equal shares, not excess, and  
that it is more shameful to do than to suffer wrong? Do not grudge me  
my answer, Callicles; then, if you agree with me, I may now confirm  
the truth by the admission of one fully competent to decide.

CALLICLES : Well, that is the view of the majority.

SOCRATES : Then it is not by convention only, but also by na-  
ture that it is more shameful to do than to suffer wrong and true jus- b  
tice to share equally; so apparently what you said previously was not  
true and you were mistaken in attacking me when you said that con-  
vention and nature are opposed and that I have recognized this and  
do not play fairly in debate, but invoke convention if a man refers to  
nature, or nature, when he refers to convention.

CALLICLES : Will this fellow never stop driveling? Tell me, Soc-  
rates, are you not ashamed to be captious about words at your age,  
considering it a godsend if one makes a slip in an expression? Do you c  
imagine that by the more powerful I mean anything else but the  
better? Did I not tell you long ago that I identify the better and the  
more powerful? Do you think I mean that, if a rabble of slaves and  
nondescripts who are of no earthly use except for their bodily  
strength are gathered together and make some pronouncement, this is  
law?

SOCRATES : Well, most sage Callicles, is this what you have to  
say?

CALLICLES : Most certainly.

SOCRATES : Well, my strange friend, I myself guessed long d  
since that you meant something like this by 'the more powerful,' and  
I repeat my questions only because I am eager to understand clearly  
what you mean. For surely you do not consider that two are better  
than one or that your slaves are better than you because they are  
stronger. But start once again and tell me what you mean by 'the bet-  
ter,' since you do not mean the stronger, and, my admirable friend,  
lead me on the path of knowledge more gently, that I may not run  
away from your school.

CALLICLES : You are ironical, Socrates.

SOCRATES: No indeed, Callicles, by that very Zethus of whom you made use just now to heap your irony upon me, but come, tell me, whom do you mean by 'the better'?

CALLICLES: I mean the nobler.

SOCRATES: You see then that you yourself are playing with words but revealing nothing. Will you not tell me whether by 'the better' and 'the more powerful' you mean the wiser or some other class?

CALLICLES: By heaven, I do mean those, and most emphatically.

490 SOCRATES: Then according to your account one sensible man is often more powerful than ten thousand fools and it is right that he should rule and they be subjects and that the ruler should have more than his subjects; that, I think, is what you mean to say—and I am not trapping you with words—if the one is more powerful than ten thousand.

CALLICLES: That is what I mean, for natural justice I consider to be this, that the better and wiser man should rule over and have more than the inferior.

b SOCRATES: Hold there a moment! What is it you mean this time? If many of us are gathered together, as now, in the same place, with plenty of food and drink in common, and if we are of various kinds, some strong, some weak, and one of us, being a doctor, is wiser in these matters and, as is likely, is stronger than some, weaker than others, then surely, being wiser than we are, he will be better and more powerful in this field.

CALLICLES: Certainly.

c SOCRATES: Then must he have a larger portion of the food than we do, because he is better, or in virtue of his authority should he do all the distributing, but in the use and expenditure of it ought he to seek no excessive portion for his own body, if he is not to suffer for it, but to receive more than some and less than others? And if he happens to be the weakest of all, then must not the best man get the smallest share of all, Callicles? Is it not so, my good friend?

CALLICLES: You keep talking about food and drink and doctors  
d and nonsense. I am not speaking of these things.

SOCRATES: Do you not say the wiser man is the better? Yes or no?

CALLICLES: I do.

SOCRATES: But should not the better have a larger share?

CALLICLES: Not of food or drink.

SOCRATES: I see. Of clothes perhaps, and the most expert weaver should have the largest cloak and should go around clad in the most numerous and handsome garments?

CALLICLES: Garments indeed!

SOCRATES: Well then, the best and wisest expert in shoes

should obviously have the advantage in them. The cobbler, I suppose, e should have the largest and most numerous shoes in which to walk around.

CALLICLES : Shoes! You keep talking nonsense.

SOCRATES : Well, if that is not what you mean, here it is perhaps. A farmer for instance who is an expert with good sound knowledge about the soil should have a larger share of seed and use the most seed possible on his own land.

CALLICLES : How you keep saying the same things, Socrates!

SOCRATES : Not only that, Callicles, but about the same matters.

CALLICLES : By heaven, you literally never stop talking about 491 cobblers and fullers and cooks and doctors, as if we were discussing them.

SOCRATES : Then will you not yourself say in what matters a superiority in wisdom and power justly entitles a man to a larger share? Or will you neither put up with my suggestions nor tell me yourself?

CALLICLES : But I have been telling you for a long time. First of all I mean by the more powerful, not cobblers or cooks, but those who are wise in affairs of the state and the best methods of adminis- b tering it, and not only wise but courageous, being competent to accomplish their intentions and not flagging through weakness of soul.

SOCRATES : You see, my good Callicles, that you do not find the same fault with me as I with you. For you claim that I keep saying the same things, and reproach me with it, but I make the opposite statement of you, that you never say the same things about the same subjects. Previously you defined the better and more powerful as the stronger, and next as the wiser, and now you come forward with some- c thing else; the better and the more powerful are now described by you as the more courageous. But, my good sir, tell me and have done with it, whom you mean by the better and more powerful, and what is their sphere of action.

CALLICLES : But I told you—those who are wise in the affairs of the state and courageous. It is proper that these should govern states, and this is the meaning of justice, that these should have more d than the others, the rulers than the subjects.

SOCRATES : Tell me, my friend, what is their relation to themselves? Are they rulers or subjects?

CALLICLES : What do you mean?

SOCRATES : I mean that every man is his own master, or is there no need for him to govern himself but only to govern others?

CALLICLES : What do you mean by governing himself?

SOCRATES : Nothing very subtle, but merely the popular notion of being temperate and in control of oneself, and mastering one's own pleasures and appetites. e

**CALLICLES:** What charming innocence! By temperate you mean simpletons.

**SOCRATES:** How could I? Everybody must realize that that is not my meaning.

**CALLICLES:** Most certainly it is, Socrates. Why, how could a man be happy when a slave to anybody at all? No, but the naturally noble and just is what I now describe to you with all frankness—namely that anyone who is to live aright should suffer his appetites to grow to the greatest extent and not check them, and through courage  
 492 and intelligence should be competent to minister to them at their greatest and to satisfy every appetite with what it craves. But this, I imagine, is impossible for the many; hence they blame such men through a sense of shame to conceal their own impotence, and, as I remarked before, they claim that intemperance is shameful and they make slaves of those who are naturally better. And because they themselves are unable to procure satisfaction for their pleasures, they  
 b are led by their own cowardice to praise temperance and justice. For to those whose lot it has been from the beginning to be the sons of kings or whose natural gifts enable them to acquire some office or tyranny or supreme power, what in truth could be worse and more shameful than temperance and justice? For though at liberty without any hindrance to enjoy their blessings, they would themselves invite the laws, the talk, and the censure of the many to be masters over  
 c them. And surely this noble justice and temperance of theirs would make miserable wretches of them, if they could bestow no more upon their friends than on their enemies, and that too when they were rulers in their own states. But the truth, Socrates, which you profess to follow, is this. Luxury and intemperance and license, when they have sufficient backing, are virtue and happiness, and all the rest is tinsel, the unnatural catchwords of mankind, mere nonsense and of no account.

**SOCRATES:** You make a brave attack, Callicles, with so frank an outburst, for clearly you are now saying what others may think but are reluctant to express. I entreat you therefore on no account to weaken, in order that it may really be made plain how life should be lived. And tell me. You say we should not curb our appetites, if we are to be what we should be, but should allow them the fullest possible  
 e growth and procure satisfaction for them from whatever source, and this, you say, is virtue.

**CALLICLES:** That is what I say.

**SOCRATES:** Then those who are in need of nothing are not rightly called happy.

**CALLICLES:** No, in that case stones and corpses would be supremely happy.

**SOCRATES:** Well, life as you describe it is a strange affair. I

should not be surprised, you know, if Euripides was right when he said, 'Who knows, if life be death, and death be life?' <sup>5</sup> And perhaps we 493 are actually dead, for I once heard one of our wise men say that we are now dead, and that our body is a tomb, and that that part of the soul in which dwell the desires is of a nature to be swayed and to shift to and fro. And so some clever fellow, a Sicilian perhaps or Italian, writing in allegory, by a slight perversion of language named this part of the soul a jar, because it can be swayed and easily persuaded, and the foolish he called the uninitiate, and that part of the soul in foolish people where the desires reside—the uncontrolled and nonretentive part—he likened to a leaky jar, because it can never be filled. And in opposition to you, Callicles, he shows that of those in Hades—the unseen world he means—these uninitiate must be the most unhappy, for they will carry water to pour into a perforated jar in a similarly perforated sieve. And by the sieve, my informant told me, he means the c soul, and the soul of the foolish he compared to a sieve, because it is perforated and through lack of belief and forgetfulness unable to hold anything. These ideas may naturally seem somewhat absurd, but they reveal what I want to put before you, to persuade you, if I can, to retract your view and to choose in place of an insatiable and uncontrolled life the life of order that is satisfied with what at any time it possesses. But do I persuade you to change and admit that orderly folk are happier than the undisciplined, or even if I offer many other such d allegories, will you not withdraw an inch?

CALLICLES: That is more like the truth.

SOCRATES: Come then, let me offer you another image from the same school as the last. Consider whether you would say this of each type of life, the temperate and the undisciplined. Imagine that each of the two men has several jars, in the one case in sound condition and filled, one with wine, another with honey, another with milk, and many others with a variety of liquids, but that the sources of these liquids are scanty and hard to come by, procured only with much hard labor. Imagine then that the one after filling his vessels does not trouble himself to draw in further supplies but as far as the jars are concerned is free from worry; in the case of the other man the sources, as in the first instance are procurable but difficult to come by, but his vessels are perforated and unsound and he is ever compelled to spend day and night in replenishing them, if he is not to suffer the greatest 494 agony. If this is the character of each of the lives, do you still insist that the life of the uncontrolled man is happier than that of the orderly? Do I or do I not persuade you with this image that the disciplined life is better than the intemperate?

CALLICLES: You do not, Socrates. The man who has filled his vessels can no longer find any pleasure, but this is what I just now

<sup>5</sup> *Polyidus*, fr. 7.

described as living the life of a stone. Once the vessels are filled, there is neither pleasure nor pain any more. But a life of pleasure demands the largest possible influx.

SOCRATES: Then if there is a big influx, must there not also be a great outflow, and must not the holes for the outflow be large?

CALLICLES: Certainly.

SOCRATES: It is the life of a plover you mean, not that of a corpse or a stone. And now tell me. You are thinking of some such thing as being hungry and, when hungry, eating?

CALLICLES: I am.

SOCRATES: And being thirsty and, when thirsty, drinking?

CALLICLES: Yes, and experiencing all the other appetites and being able to satisfy them and living happily in the enjoyment of them.

SOCRATES: Good, my worthy friend, just continue as you began, and mind you do not falter through shame. And I too, it seems, must throw all shame aside. First of all then, tell me whether one who suffers from the itch and longs to scratch himself, if he can scratch himself to his heart's content and continue scratching all his life, can be said to live happily.

CALLICLES: How absurd you are, Socrates, a regular mob orator!

SOCRATES: That, Callicles, is why I frightened Polus and Gorgias and put them to shame, but you surely will not be dismayed or abashed, for you have courage. Only give me your answer.

CALLICLES: Well then, I say that even one who scratches himself would live pleasantly.

SOCRATES: And if pleasantly, happily?

CALLICLES: Certainly.

SOCRATES: If it was only his head that he wanted to scratch—or can I push the question further? Think what you will answer, Callicles, if anyone should ask all the questions that naturally follow. And as a climax of all such cases, the life of a catamite—is not that shocking and shameful and miserable? Will you dare to say that such people are happy, if they have what they desire in abundance?

CALLICLES: Are you not ashamed, Socrates, to drag our discussion into such topics?

SOCRATES: Is it I who do this, my noble friend, or the man who says so unequivocally that pleasure, whatever its nature, is the key to happiness, and does not distinguish between pleasures good and evil? But enlighten me further as to whether you say that the pleasant and the good are identical, or that there are some pleasures which are not good.

CALLICLES: To avoid inconsistency if I say they are different, I assert they are the same.

SOCRATES: Then you ruin your earlier statement, Callicles,

and you can no longer properly investigate the truth with me, if you speak contrary to your opinions.

CALLICLES : You are doing just the same, Socrates. b

SOCRATES : Then I am not acting rightly, if I am so doing, nor are you. But my good sir, consider whether pleasures so indiscriminate can after all be the good. For if it is so, then the many shocking things we just now hinted at must evidently result, and many others too.

CALLICLES : So *you* think, Socrates.

SOCRATES : But do you really maintain this, Callicles?

CALLICLES : I do.

SOCRATES : Then we are to take up the argument in the belief c  
that you are serious?

CALLICLES : Most assuredly.

SOCRATES : Well then, since that is agreed, resolve this point for me. Does something exist that you call knowledge?

CALLICLES : Yes.

SOCRATES : Did you not speak just now of a certain courage which accompanies knowledge.

CALLICLES : I did.

SOCRATES : And you spoke of them as two things because courage is different from knowledge?

CALLICLES : Certainly.

SOCRATES : Again, are pleasure and knowledge the same thing, or different?

CALLICLES : Different, I suppose, O paragon of wisdom. d

SOCRATES : And courage is also different from pleasure?

CALLICLES : Of course.

SOCRATES : Let us remember this then, that Callicles of Acharnae says pleasure and the good are the same, but that knowledge and courage are different from each other and from the good.

CALLICLES : But Socrates of Alopecce does not agree with this. Or does he?

SOCRATES : He does not, and I think Callicles will not either e  
when he comes to know himself aright. Tell me, do you not think that those who fare well experience the opposite of those who fare ill?

CALLICLES : I do.

SOCRATES : Then if these things are opposites, the same must hold true of them as of health and sickness. A man cannot be both in health and sick at the same time, nor be rid of both conditions at the same time.

CALLICLES : How do you mean?

SOCRATES : Take, for example, any part of the body separately and consider it. A man perhaps has trouble with his eyes, which is 496  
called ophthalmia.

CALLICLES : Of course.

SOCRATES : Then his eyes are not at the same time sound.

CALLICLES : By no means.

SOCRATES : And what of when he is rid of ophthalmia? Does he then get rid of the health of his eyes, and is he finally quit of both conditions?

CALLICLES : Certainly not.

b SOCRATES : For that would be miraculous and irrational, would it not?

CALLICLES : Very much so.

SOCRATES : But, I suppose, he acquires and gets rid of each in turn.

CALLICLES : I agree.

SOCRATES : And is it not the same with strength and weakness?

CALLICLES : Yes.

SOCRATES : And swiftness and slowness?

CALLICLES : Certainly.

SOCRATES : And good things and happiness, and their opposites, evils and wretchedness—does he possess and get rid of each of these in turn?

CALLICLES : Assuredly, I think.

c SOCRATES : Then if we discover certain things which a man possesses and gets rid of simultaneously, it is obvious that these cannot be the good and the evil. Do we agree on this? Do not answer until you have considered it carefully.

CALLICLES : I am in the most complete possible accord.

SOCRATES : Back then to our previous admissions. Did you say hunger was pleasant or painful? Actual hunger, I mean.

CALLICLES : Painful, but to satisfy hunger by eating is pleasant.

d SOCRATES : I understand. But hunger itself at least is painful, is it not?

CALLICLES : I agree.

SOCRATES : And thirst too?

CALLICLES : Most certainly.

SOCRATES : Am I to ask any further then, or do you admit that every deficiency and desire is painful?

CALLICLES : I admit it; you need not ask.

SOCRATES : Very well then, but to drink when thirsty you say is pleasant?

CALLICLES : I do.

SOCRATES : Now in this statement the word 'thirsty' implies pain, I presume.

e CALLICLES : Yes.

SOCRATES : And drinking is a satisfaction of the deficiency and a pleasure?

CALLICLES : Yes.

SOCRATES : Then you say that in drinking there is pleasure?

CALLICLES : Certainly.

SOCRATES : When one is thirsty?

CALLICLES : I agree.

SOCRATES : That is, when in pain?

CALLICLES : Yes.

SOCRATES : Then do you realize the result—that you say a man enjoys pleasure simultaneously with pain, when you say that he drinks when thirsty? Does not this happen at the same time and the same place, whether in body or soul? For I fancy it makes no difference. Is this so or not?

CALLICLES : It is.

SOCRATES : Yes, but you say also that when one is faring well it is impossible for him at the same time to fare ill.

CALLICLES : I do.

497

SOCRATES : But you have agreed it is possible to experience pleasure at the same time as pain.

CALLICLES : Apparently.

SOCRATES : Then pleasure is not the same as faring well, nor pain as faring ill, and so the pleasant is different from the good.

CALLICLES : I do not understand what your quibbles mean, Socrates.

SOCRATES : You understand, Callicles, but you are playing coy. But push on a little further, that you may realize how cunning you are, you who admonish me. Does not each one of us cease at the same time from thirsting and from his pleasure in drinking?

CALLICLES : I do not know what you mean.

GORGIAS : Do not behave so, Callicles, but answer for our sakes too, that the arguments may be concluded.

CALLICLES : But Socrates is always the same, Gorgias. He asks these trivial and useless questions and then refutes.

GORGIAS : What difference does that make to you? In any case you do not have to pay the price, Callicles, but suffer Socrates to cross-examine you as he will.

CALLICLES : Well then, ask these petty little questions, since Gorgias so wishes.

SOCRATES : You are lucky, Callicles, in having been initiated in the Great Mysteries before the Little; I did not think it was permitted. Answer then from where you left off, whether thirst and the pleasure of drinking do not cease for each of us at the same time.

CALLICLES : I agree.

SOCRATES : And does not one cease from hunger and other desires, and from pleasures at the same time?

CALLICLES : That is so.

SOCRATES : Does he not then cease from pains and pleasures at the same time?

CALLICLES : Yes.

SOCRATES: Yes, but he does not cease from experiencing the good and the ill simultaneously, as you yourself agreed. Do you not agree now?

CALLICLES: I do. What of it?

SOCRATES: Only this, that the good is not the same as the pleasant, my friend, nor the evil as the painful. For we cease from the one pair at the same time, but not from the other, because they are distinct. How then could the pleasant be the same as the good, or the painful as the evil? Let us look at it in a different way, if you like, for I think that even here you do not agree. But just consider. Do you not call good people by that name because of the presence in them of things good, just as you call beautiful those in whom beauty is present.

CALLICLES: I do.

SOCRATES: Again, do you call fools or cowards good men? You did not just now, but it was the brave and the wise, or do you not call these good?

CALLICLES: Certainly I do.

SOCRATES: And have you ever seen a silly child enjoying pleasure?

CALLICLES: I have.

SOCRATES: And never seen a silly man enjoying pleasure?

CALLICLES: Yes, I suppose so, but what of it?

498 SOCRATES: Nothing, just answer.

CALLICLES: I have seen.

SOCRATES: And a sensible man experiencing pain or pleasure?

CALLICLES: I have.

SOCRATES: And which feels more pain or pleasure, the sensible or the fool?

CALLICLES: I do not think there is much difference.

SOCRATES: That is quite enough. And have you ever seen a coward in battle?

CALLICLES: Of course.

SOCRATES: Well, which of the two seemed more to rejoice, when the enemy retreated, the cowards or the brave?

b CALLICLES: Both equally, I think, or if not, pretty much so.

SOCRATES: It makes no difference. At least cowards too feel pleasure?

CALLICLES: Most certainly.

SOCRATES: And fools too, it appears.

CALLICLES: Yes.

SOCRATES: And is it cowards only or the brave too that feel pain at the enemy's approach?

CALLICLES: Both.

SOCRATES: To a like degree?

CALLICLES: Cowards, perhaps, more.

SOCRATES: And they rejoice more at the enemy's retreat?

CALLICLES: Perhaps.

SOCRATES: Then fools and wise, cowards and brave feel pain and pleasure to a like degree, as you say, but the coward more so than the brave?

CALLICLES: I agree.

SOCRATES: But the wise and the brave are good, cowards and fools bad.

CALLICLES: Yes.

SOCRATES: Then the good and the bad feel pleasure and pain to a like degree.

CALLICLES: I agree.

SOCRATES: Now are the good and the bad good and evil to a similar degree? Or are the bad even better than the good?

CALLICLES: Good heavens, I do not understand what you mean.

SOCRATES: Do you not understand that according to you the good are good through the presence of good things, and the bad, of evil things, and that—according to you—pleasures are good things, and pains evil?

CALLICLES: I do.

SOCRATES: Then good things, that is, pleasures, are present to those who rejoice, if they rejoice.

CALLICLES: Of course.

SOCRATES: And is it not through the presence of good things that those who rejoice are good?

CALLICLES: Yes.

SOCRATES: Again, evil things, namely pains, are present for those who suffer pain.

CALLICLES: They are present.

SOCRATES: And it is through the presence of evil things that you claim the evil are evil. Or do you no longer hold to that?

CALLICLES: I do.

SOCRATES: Then those who feel pleasure are good, those who feel pain, bad.

CALLICLES: Certainly.

SOCRATES: More, less, or equally good or bad, according as they feel these things more, less, or equally?

CALLICLES: Yes.

SOCRATES: Now do you not say that the wise and the fool, the brave and the coward feel pleasure and pain to a like degree, or the coward even to a greater degree?

CALLICLES: I do.

SOCRATES: Then reckon up along with me what is the result of our admissions, for they say that it is good to repeat and examine twice and once again what is good. We say the wise and the brave man is good, do we not?

CALLICLES: Yes.

SOCRATES: And the fool and coward is bad?

CALLICLES: Certainly.

SOCRATES: And he who enjoys pleasure is good?

CALLICLES: Yes.

SOCRATES: And he who suffers pain is bad?

CALLICLES: Necessarily so.

SOCRATES: And the good and the bad experience pain and pleasure to a like degree, though perhaps the bad even more so.

CALLICLES: Yes.

SOCRATES: Then the evil man becomes just as bad and good as  
b the good man, or even more good. Is not this the result, along with what we said before, if anyone identifies the pleasant and the good? Must not this be so, Callicles?

CALLICLES: I have been listening to you for a long time, Socrates, and agreeing with you, as I reflected that, if one concedes something to you even in play, you gladly seize hold of it like a child. Just as if you really think that I or anyone else does not hold some pleasures to be better and others worse!

SOCRATES: Ho, ho, Callicles! What a rascal you are, treating  
c me like a child and deceiving me by saying the same things are now thus, now different. And yet I did not think at the beginning that you would willingly deceive me, since you are my friend. But now I have been misled, and apparently, as the old proverb goes, I must make the best of the circumstances and take just what you give me. What you now say, it seems, is that some pleasures are good, and some bad. Is it not so?

d CALLICLES: Yes.

SOCRATES: And are the good ones the profitable, the bad ones the harmful?

CALLICLES: Certainly.

SOCRATES: And the profitable are those that do some good, the harmful some evil?

CALLICLES: I agree.

SOCRATES: Now is this what you mean? Of the bodily pleasures of eating and drinking, for instance, that we mentioned just now, are those that produce health in the body or strength or any other bodily excellence, good pleasures, and those that produce the opposite effects bad?

e CALLICLES: Certainly.

SOCRATES: And similarly with pains, some are good, some bad?

CALLICLES: Of course.

SOCRATES: Now should we not choose and practice good pleasures and pains?

CALLICLES: Certainly.

SOCRATES: And not the bad?

CALLICLES: Obviously.

SOCRATES: Yes, because Polus and I agreed, if you remember, that all our actions should be for the sake of the good. Do you too share our opinion, that the good is the end of all actions and that everything else should be done for its sake, not the good for the sake of everything else? Do you of the third part add your vote to ours?

500

CALLICLES: I do.

SOCRATES: Then the pleasant as well as everything else should be done for the sake of the good, not the good for the sake of the pleasant.

CALLICLES: Certainly.

SOCRATES: Now can any and every man choose which pleasures are good and which bad, or do we need an expert in each case?

CALLICLES: We need an expert.

SOCRATES: Let us recapitulate then what I was saying to Polus and Gorgias. I said, if you remember, that there are certain processes aiming at pleasure which secure pleasure alone but know nothing of the better and the worse, and others that know what is good and evil. And among those concerned with pleasures I named cookery, which is a routine, not an art, and among those concerned with the good the medical art. And, by the god of friendship, Callicles, do not fancy that you should play with me, and give me no haphazard answers contrary to your opinion. And do not either take what I say as if I were merely playing, for you see the subject of our discussion—and on what subject should even a man of slight intelligence be more serious?—namely, what kind of life one should live, the life to which you invite me, that of a 'real man,' speaking in the Assembly and practicing rhetoric and playing the politician according to your present fashion, or the life spent in philosophy, and how the one differs from the other. Perhaps then it is best for us, as I endeavored to do just now, to distinguish between them, and after distinguishing and coming to an agreement together, then, if there are two such lives distinct, to consider in what way they differ from one another and which one should be lived. Now perhaps you do not yet understand what I mean.

CALLICLES: Indeed I do not.

SOCRATES: Well, I will tell you more clearly. Since you and I have agreed that there is a good and there is a pleasant, and that the pleasant is different from the good, and that there is a method of studying and contriving to acquire each of them, one method for pursuing pleasure, another for pursuing the good—but first of all you must either agree with or reject this statement. Do you agree?

e

CALLICLES: It is as you state.

SOCRATES: Then come, tell me that you agree also with what I said to Gorgias and Polus, if you think that after all I spoke the truth then. I said, I believe, that in my opinion cookery differed from medicine in being, not an art, but a routine, pointing out that the other, that is, medicine, has investigated the nature of the subject it treats

501

and the cause of its actions and can give a rational account of each of them, whereas its counterpart, which is exclusively devoted to cultivating pleasure, approaches it in a thoroughly unscientific way, without once having investigated the nature of pleasure or its cause; and without any pretense whatever to reason and practically no effort to classify, it preserves by mere experience and routine a memory of

- b what usually happens, thereby securing its pleasures. Consider then first of all whether you are satisfied with this statement and whether you believe that there are certain other occupations relating to the soul also—some of them in the nature of arts, exercising forethought for what is best for the soul, others neglecting this but, as in the case of the body, preoccupied entirely with the soul's pleasure, and how it may be achieved—but as to which pleasures are better or worse, this they have never considered, their sole concern being to gratify these
- c pleasures, whether for better or for worse. For I believe, Callicles, that there are such processes, and behavior of this kind I call flattery, whether it concerns the body or the soul or whatever the object to whose pleasure it ministers without paying any heed to what is better or worse. Do you subscribe to the same opinion with me, or oppose it?

CALLICLES: Oh, not I. I agree, in order that the argument may be finished, and to gratify Gorgias here.

- d SOCRATES: And is this true about one soul, but not about two or many?

CALLICLES: No, it is true also of two or many.

SOCRATES: Is it not possible to gratify large numbers collectively without any consideration for what is best?

CALLICLES: I suppose it is.

- SOCRATES: Can you tell me then which are the occupations that do this? Or rather, if you prefer it, I will ask and wherever an occupation seems to you to belong to this type, say so, wherever it does
- e not, say no. And first let us look at flute playing. Do you not think, Callicles, that it conforms to this type, pursuing our pleasure only, with no thought for anything else?

CALLICLES: I think so.

SOCRATES: And is it not the same with all such occupations, as for example playing the lyre at contests?

CALLICLES: Yes.

- SOCRATES: And what about the training of choruses and dithyrambic poetry? Do you not think it similar in character? Do you imagine that Cinesias, son of Meles, is in the slightest concerned with saying anything likely to improve his hearers, or merely what will
- 502 gratify the mob of spectators?

CALLICLES: That is quite obvious, Socrates, at least in the case of Cinesias.

SOCRATES: And what about his father, Meles? Do you think he looked to what is for the best, when he sang to his lyre? He did not

even look to what is most pleasant, for his audience found his songs most tiresome. But think it over. Do you not consider that all music for the lyre and dithyrambic poetry were invented to give pleasure?

CALLICLES: I do.

SOCRATES: And what is the aim of that stately and marvelous b creature, tragic drama? Is it her endeavor and ambition, in your opinion, merely to gratify the spectators; or, if there be anything pleasant and charming, but evil, to struggle against uttering it, but to declaim and sing anything that is unwelcome but beneficial, whether they like it or not? For which of these two aims do you think tragic poetry is equipped?

CALLICLES: It is indeed quite evident, Socrates, that her impulse is rather toward pleasure and the gratification of the spectators. c

SOCRATES: And did we not just now describe such an activity as flattery?

CALLICLES: Certainly.

SOCRATES: Well now, if you should strip from all poetry its music, rhythm, and meter, the residue would be nothing else but speech?

CALLICLES: That must be so.

SOCRATES: And these speeches are addressed to a huge mob of people?

CALLICLES: I agree.

SOCRATES: Then poetry is a kind of public address?

CALLICLES: Evidently. d

SOCRATES: Must it not be a rhetorical public address? Do you not consider that the poets engage in rhetoric in the theaters?

CALLICLES: I do.

SOCRATES: Then we have now discovered a form of rhetoric addressed to a people composed alike of children and women and men, slaves and free—a form which we cannot much admire, for we describe it as a kind of flattery.

CALLICLES: Certainly.

SOCRATES: Well, but what of the rhetoric addressed to the Athenian people and other free peoples in various cities—what does that mean to us? Do the orators seem to you always to speak with an e eye to what is best, their sole aim being to render the citizens as perfect as possible by their speeches, or is their impulse also to gratify the citizens, and do they neglect the common good for their personal interest and treat the people like children, attempting only to please them, with no concern whatever whether such conduct makes them better or worse?

503

CALLICLES: This is not a single question you are asking, for some say what they say in the interest of the citizens, but there are others such as you describe.

SOCRATES: That is sufficient for me, for even if there are two

sides to this, yet one part of it, I suppose, would be flattery and shameful mob appeal, while the other is something fine—the effort to perfect as far as possible the souls of the citizens and the struggle to say always what is best, whether it be welcome or unwelcome to the hearers. But you yourself have never seen rhetoric of this kind, or if you  
b can mention any such orator, why do you not tell me his name at once?

CALLICLES: Well, by heaven, I cannot give you the names of any such orators living today.

SOCRATES: Why then, can you name any one of the orators of old, from the time of whose first appearance to address the public, the citizens, who had previously been worse, are said to have been improved? I do not know of any such man.

c CALLICLES: What, have you never been told that Themistocles was a good man, and Cimon and Miltiades, and Pericles who died recently, and whom you have heard speak yourself?

SOCRATES: Yes, if what you previously spoke of as virtue is truly so, namely to satisfy to the full your own appetites and those of others, but if this is not so, but, as in our later argument we were compelled to admit, only those desires, the satisfaction of which  
d makes man better, should be indulged, not those which make us worse, and if for this there is a special art—I cannot admit that any of those mentioned satisfied these demands.

CALLICLES: Well, if you make good search, you will find one.

SOCRATES: Then let us just quietly consider whether any of them had this quality. Well now, the good man who speaks for the best surely will not say what he says at random but with some purpose in view, just as all other craftsmen do not each choose and apply  
e materials to their work at random, but with the view that each of their productions should have a certain form. Look, for example, if you will, at painters, builders, shipwrights, and all other craftsmen—any of them you choose—and see how each one disposes each element he contributes in a fixed order, and compels one to fit and harmonize  
504 with the other until he has combined the whole into something well ordered and regulated. Other craftsmen in general and those we were speaking of just now, who have to do with the body, physical trainers and doctors, give order, I think, and discipline to the body. Do we admit the truth of this or not?

CALLICLES: Let it be granted.

SOCRATES: Then harmony and order will make a building good, but disorder bad.

CALLICLES: I agree.

SOCRATES: Is it not the same too with a ship?

b CALLICLES: Yes.

SOCRATES: And with our bodies also, we say?

CALLICLES: Certainly.

**SOCRATES** : And what about the soul? Will it be good if disordered, or rather if it achieves a certain order and discipline?

**CALLICLES** : Here too our previous argument demands that we agree.

**SOCRATES** : Now what is the name of that bodily quality resulting from order and discipline?

**CALLICLES** : Health and strength, I suppose you mean.

**SOCRATES** : I do. And the effect of order and discipline in the soul? Try to discover and name it, as in the other case.

**CALLICLES** : Why do you not name it yourself, Socrates?

**SOCRATES** : Well, if you prefer that, I will do so, and do you, if you think I am right, agree; if not, refute me and do not let me escape. It seems to me that the word healthy is applied to all regularity in the body, and from this come health and general bodily excellence. Is it so or not?

**CALLICLES** : It is.

**SOCRATES** : And the words lawfulness and law are applied to all order and regularity of the soul, whence men become orderly and law-abiding, and this means justice and temperance. Yes or no?

**CALLICLES** : So be it.

**SOCRATES** : And is it not with his eye on these things that our orator, the good and true artist, will bring to bear upon our souls the words he utters and all his actions too, and give any gift he gives, or take away what he takes—his mind always occupied with one thought, how justice may be implanted in the souls of the citizens and injustice banished, and how temperance may be implanted and indiscipline banished, and how goodness in general may be engendered and wickedness depart? Do you agree or not?

**CALLICLES** : I agree.

**SOCRATES** : For what benefit is there, Callicles, when a body is sick and distempered, in giving it abundant food and the most delicious drinks or other such things, which, so far from profiting it, will on the contrary, if the truth be told, do it more harm? Is this true?

**CALLICLES** : So be it.

505

**SOCRATES** : For it is not worth while in my opinion for a man to live with a diseased body; in that case he must live a diseased life. Is it not so?

**CALLICLES** : Yes.

**SOCRATES** : Now when a man is well, do not the doctors generally allow him to satisfy his appetites, eating as much as he wishes when hungry or drinking when thirsty, but when he is sick, practically never allow him to take his fill of what he craves? Do you and I agree upon this?

**CALLICLES** : I agree.

**SOCRATES** : And is it not the same, my good friend, with the

soul? So long as it is evil, senseless and undisciplined and unjust and impious, it should be restrained from its desires and suffered to do nothing but what will improve it. Do you agree or not?

CALLICLES: I agree.

SOCRATES: For thus, I suppose, it will be better for the soul itself.

CALLICLES: Certainly.

SOCRATES: And to restrain it from its desires is to discipline it?

CALLICLES: Yes.

SOCRATES: Then to be disciplined is better for the soul than indiscipline, which you preferred just now.

c CALLICLES: I do not know what you are talking about, Socrates; ask someone else.

SOCRATES: This fellow will not put up with being improved and experiencing the very treatment now under discussion, the process of discipline.

CALLICLES: No, for I have not the slightest interest in what you are saying. I answered you only to gratify Gorgias.

SOCRATES: Well, what shall we do then? Break off our discussion in the middle?

CALLICLES: You may decide for yourself.

d SOCRATES: Well, they say it is not right to leave even tales unfinished, but we should fit a head on them, that they may not go about headless. Give us the rest of the answers then, that our discussion may acquire a head.

CALLICLES: How importunate you are, Socrates; if you will listen to me, you will bid good-by to this argument, or else debate with somebody else.

SOCRATES: Then who else is willing? You know, we must not leave the discussion incomplete.

CALLICLES: Could you not carry it through alone, either speaking on your own or answering your own questions?

e 506 SOCRATES: Just to fulfill the saying of Epicharmus—and prove competent alone for what 'ere now two men said'? But it seems as if it must be done that way. However, if we are to do this, I think we should all be contentiously eager to know what is true and what false in the subject under discussion, for it is a common benefit that this be revealed to all alike. I will then carry the argument through in accordance with my own ideas, and if any of you believe that what I admit to myself is not the truth, you must break in upon it and refute me. For I do not speak with any pretense to knowledge, but am searching along with you, and so if there appears to be anything in what my opponent says, I shall be the first to yield to him. But I say this only if you think the debate should be carried through to the end. If you do not wish it, let us drop it now and take our departure.

GORGAS: Well, I do not think, Socrates, that we ought yet to

depart, but you should carry through the discussion, and I think the others too agree with me. I myself am anxious to hear you go through what remains.

SOCRATES : I myself too, Gorgias, would have liked to continue the argument with Callicles here, until I had paid him back with the speech of Amphion in reply to that of Zethus. But since you are unwilling, Callicles, to help me finish the argument, you can at least listen and interrupt if at any point you think I am wrong. And if you refute me, I shall not be vexed with you as you are with me, but you shall be enrolled as the greatest of my benefactors.

CALLICLES : Go on alone, my dear sir, and finish the argument.

SOCRATES : Then listen, but first let me recapitulate the argument from the beginning.

Are the pleasant and the good identical? They are not, as Callicles and I agreed. Should the pleasant be done for the sake of the good, or the good for the sake of the pleasant? The pleasant for the sake of the good. And is the pleasant that at whose presence we are pleased, the good that whose presence makes us good? Certainly. But the goodness of ourselves and of all other good things is due to the presence of some excellence? That seems necessarily true, Callicles. But surely the goodness of anything, whether implement or body or soul or any living thing, does not best come to it merely by haphazard, but through a certain rightness and order and through the art that is assigned to each of them. Is this so? I certainly agree. Then the goodness of anything is due to order and arrangement? I should agree. It is then the presence in each thing of the order appropriate to it that makes everything good? So it appears to me. The soul then that has its own appropriate order is better than that which has none? Necessarily. But further, the soul possessed of order is orderly? Of course. And the orderly is the temperate? Most necessarily. Then the temperate soul is the good. I myself can offer no objection to this, my dear Callicles, but if you can, please instruct me.

CALLICLES : Go on, my good sir.

SOCRATES : I assert then that, if the temperate soul is good, then the soul in the opposite condition to the temperate is evil, and this, we saw, was the foolish and undisciplined. Certainly. Moreover the sound-minded man would do his duty by gods and men, for he would not be sound of mind if he did what was unfitting. That must necessarily be so. And doing his duty by men, he would be acting justly, and doing it by the gods, piously, and the doer of just and pious deeds must be just and pious. That is so. And further, he must be brave, for it is not the part of a man of sound mind to pursue or avoid what he should not, but to pursue or avoid what he should, whether it be things, or people, or pleasures, or pains, and to stand his ground, where duty bids, and remain steadfast. So there is every necessity, Callicles, that the sound-minded and temperate man, being, as we

have demonstrated, just and brave and pious, must be completely good, and the good man must do well and finely whatever he does, and he who does well must be happy and blessed, while the evil man who does ill must be wretched, and he would be the opposite of the temperate man, the undisciplined creature of whom you approve.

This then is the position I take, and I affirm it to be true, and if it is true, then the man who wishes to be happy must, it seems, pursue  
 d and practice temperance, and each of us must flee from indiscipline with all the speed in his power and contrive, preferably to have no need of being disciplined, but if he or any of his friends, whether individual or city, has need of it, then he must suffer punishment and be disciplined, if he is to be happy. This I consider to be the mark to which a man should look throughout his life, and all his own endeavors and those of his city he should devote to the single purpose of  
 e so acting that justice and temperance shall dwell in him who is to be truly blessed. He should not suffer his appetites to be undisciplined and endeavor to satisfy them by leading the life of a brigand—a mischief without end. For such a man could be dear neither to any other man nor to God, since he is incapable of fellowship, and where there is no fellowship, friendship cannot be. Wise men, Callicles, say that  
 508 the heavens and the earth, gods and men, are bound together by fellowship and friendship, and order and temperance and justice, and for this reason they call the sum of things the 'ordered' universe, my friend, not the world of disorder or riot. But it seems to me that you pay no attention to these things in spite of your wisdom, but you are unaware that geometric equality is of great importance among gods and men alike, and you think we should practice overreaching others, for you neglect geometry. Well, either we must refute this argument and prove that happiness does not come to the happy through the pos-  
 b session of justice and temperance, nor does misery come through the possession of wickedness, or, if my argument is true, we must consider the consequences. And the consequences are all those previously mentioned, about which you asked me, Callicles, if I was speaking seriously when I said that a man should accuse himself and his son and his friend, if guilty of any wrong deed, and should employ rhetoric for this purpose, and what you thought Polus admitted through a sense of shame is true after all—that it is as much more evil  
 c as it is more shameful to do than to suffer wrong, and he who is to become a rhetorician in the right way must after all be a just man with a knowledge of what is just—an admission which Gorgias in turn made, according to Polus, through a sense of shame.

This being so, let us consider whether or not you spoke aright in your reproaches to me, when you said that I am not able to help myself or any of my friends and relations, or to save them from the  
 d gravest perils, but like outlawed men am at the mercy of anyone, whether he wishes to box my ears, as you so forcefully expressed it,

or rob me of my money, or drive me out of the city, or, worst of all, put me to death, and, according to your view, to be in this plight is of all things the most shameful. But as to my own view, though it has often been expressed already, there is no harm in my expressing it once more. I maintain, Callicles, that it is not the most shameful of things to be wrongfully boxed on the ears, nor again to have either my purse or my person cut, but it is both more disgraceful and more wicked to strike or to cut me or what is mine wrongfully, and, further, theft and kidnaping and burglary and in a word any wrong done to me and mine is at once more shameful and worse for the wrongdoer than for me the sufferer. These facts, which were shown to be as I state them some time earlier in our previous discussion, are buckled fast and clamped together—to put it somewhat crudely—by arguments of steel and adamant—at least so it would appear as matters stand. And unless you or one still more enterprising than yourself can undo them, it is impossible to speak aright except as I am now speaking. For what I say is always the same—that I know not the truth in these affairs, but I do know that of all whom I have ever met either before or now no one who put forward another view has failed to appear ridiculous. And so once more I hold these things to be so, and if they are, and if injustice is the greatest of evils to the wrongdoer and, greatest though it be, it is an even greater evil, if that be possible, to escape punishment when one does wrong, what is that help, the failure to avail himself of which makes a man in very truth ridiculous? Is it not that which will avert from us the greatest harm? This must surely be the help which it is most shameful to be unable to render to oneself and one's friends and relations, and next to this the second most shameful, and after that the third and so with the rest; as is the magnitude of the evil in each case, so too will be the beauty of being able to help oneself to meet such evil and the shame of being unable. Am I right or wrong, Callicles?

CALLICLES: You are right.

SOCRATES: Of these two then, inflicting and suffering wrong, we say it is a greater evil to inflict it, a lesser to suffer it. Now what provision should a man make for helping himself, so as to achieve both these benefits, that of doing and that of suffering no wrong? Is it a matter of power or of will? What I mean is this. Can a man avoid being wronged if it be his will to avoid it, or only if he acquire power to avoid it?

CALLICLES: That is quite evident; he must acquire the power.

SOCRATES: And what about doing wrong? Is it quite enough if he does not choose to do wrong—for then he will not do it—or must he equip himself here also with a certain power and an art on the ground that, if he does not learn and practice this, he will do wrong? Why will you not answer me this very question, Callicles—whether you think that Polus and I were or were not rightly compelled in our

previous argument to agree in admitting that no one voluntarily does wrong, but that all who do wrong do so against their own will?

510 CALLICLES: Let it be so, Socrates, that you may conclude the argument.

SOCRATES: Then it is also for the purpose of avoiding wrongdoing that we must equip ourselves with a certain power and art.

CALLICLES: Certainly.

SOCRATES: Now what is the art of contriving to suffer no wrong or as little as possible? See whether you agree with my opinion, which is this. You must either be yourself the ruling power or even a tyrant in your city, or else a partisan of the government in power.

CALLICLES: You see, Socrates, that I am ready to applaud you,  
b if you speak aright, and now I think you have said something really excellent.

SOCRATES: Well, consider whether you think I am right in this point too. The closest friendships, I believe, exist, as the sages of old tell us, between like and like. Do you not agree?

CALLICLES: I do.

SOCRATES: Now where a tyrant is in power who is savage and illiterate, if there should be anyone in his city far better than himself, the tyrant, I presume, would be afraid of him, and the man could  
c never in his heart of hearts be the tyrant's true friend.

CALLICLES: That is so.

SOCRATES: Nor could one who was much the tyrant's inferior, for the tyrant would despise him and would never feel for him the warmth of a friend.

CALLICLES: That also is true.

SOCRATES: There remains then only one person as a friend worth reckoning to such a man, namely one of the same character, who agrees with his tastes and dislikes, and is willing to be subject and subservient to the ruler. And he will have great power in the  
d state, and no one will wrong him with impunity. Is it not so?

CALLICLES: Yes.

SOCRATES: Then if any of the young men in this city should ponder how he might win great power and none could wrong him, this, it seems, is the path for him, to accustom himself from childhood to feel pleasure and annoyance at the same things as his master, and to contrive to be as like him as possible. Is it not so?

CALLICLES: Yes.

SOCRATES: Now according to your theory he will thus have  
e contrived to suffer no wrong and to possess great power in the state.

CALLICLES: Certainly.

SOCRATES: And to do no wrong as well? Or is this far from being the case, if he is to resemble a master who is evil and to possess great influence with him? No, I think that, quite the contrary, he will

thus prepare himself to be able to do the greatest possible wrong and to escape punishment for doing it. Will he not?

CALLICLES: Evidently.

SOCRATES: Then the greatest possible evil will dwell in him, for 511 he will be deprived of soul and ruined through his imitation of his master, and through his power.

CALLICLES: Somehow or other you keep twisting our arguments this way and that, Socrates. Do you not realize that this imitator of the tyrant will, if he so wishes, put to death the man who refuses to imitate him, or will deprive him of his property?

SOCRATES: I know, my good sir, if I am not deaf, for I have b heard it often enough from you and Polus recently. and from practically everyone else in the city. But I tell you in turn that though he may kill the other, if he wishes, it will be a villain murdering a good and worthy man.

CALLICLES: Is not this the very feature that fills one with indignation?

SOCRATES: Not if you are a sensible person, as the argument proves. Or do you imagine that one should bend his efforts to living as long as possible and practice those arts that constantly save us from dangers, such as the rhetoric you bid me practice, which preserves one's life in the law courts? c

CALLICLES: Yes, by heaven, and it was good advice too.

SOCRATES: What now, my good friend? Do you consider the art of swimming to be something particularly wonderful?

CALLICLES: No indeed, not I.

SOCRATES: And yet even that art saves men from death whenever they fall into some situation where such knowledge is needed. But if this seems to you insignificant, I can tell you of one greater than d this, the pilot's art which, like rhetoric, saves not only our lives but also our bodies and our goods from the gravest dangers. And this art is unpretentious and orderly, and does not put on airs or make believe that its accomplishments are astonishing. But, in return for the same results as those achieved by the advocate, if it brings you here safely from Aegina, it asks but two obols, and if from Egypt or the Black Sea, for this mighty service of bringing home safely all that I mentioned just now, oneself and children and goods and womenfolk e and disembarking them in the harbor, it asks two drachmas at the most, and the man who possesses this art and achieves these results goes ashore and walks alongside his ship with modest bearing. For I suppose he is capable of reflecting that it is uncertain which of his passengers he has benefited and which he has harmed by not suffering them to be drowned, knowing as he does that those he has landed 512 are in no way better than when they embarked, either in body or in soul. He knows that if anyone afflicted in the body with serious and

incurable diseases has escaped drowning the man is wretched for not having died and has received no benefit from him; he therefore reckons that if any man suffers many incurable diseases in the soul, which is so much more precious than the body, for such a man life is not worth while and it will be no benefit to him if he, the pilot, saves  
 b him from the sea or from the law court or from any other risk. For he knows it is not better for an evil man to live, for he must needs live ill.

This is why the pilot is not accustomed to give himself airs, even though he saves us; no, my strange friend, nor the engineer either, who at times has no less power to save life than the general or anyone else, not to mention the pilot, for at times he preserves entire cities. Do you place him in the same class as the advocate? And yet if he were inclined to speak as you people do, Callicles, making much of his services, he would bury us under the weight of his arguments, urging  
 c and exhorting us on the necessity of becoming engineers, since all other professions are valueless, for he can make a good case for himself. But you disdain him and his craft nonetheless, and would call him 'engineer' as a term of reproach, and you would never be willing to give your daughter to his son or to take his daughter yourself. And yet if we look at the reasons for which you praise your own accomplishments, what just cause have you for disdaining the engineer and  
 d the others I mentioned just now? I know you would say you are a better man and of better family. But if by 'better' you do not mean what I do, but goodness consists merely in saving oneself and one's property, whatever one's character, it is ridiculous to find fault with the engineer and the doctor and the other crafts devised for the purpose of giving safety. But, my good sir, just reflect whether what is good and noble is not something more than saving and being  
 e saved. Perhaps the true man should ignore this question of living for a certain span of years and should not be so enamored of life, but should leave these things to God and, trusting the womenfolk who say that no man whatever could escape his destiny, should consider the ensuing question—in what way one can best live the life that is to be his, whether by assimilating himself to the type of government under which he lives—so that now, after all, you must become as like  
 513 as possible to the Athenian people, if you are to be dear to them and wield great power in the city. Consider, my good friend, whether this is of benefit to you and to me, so that we may not suffer what they say is the fate of the Thessalian witches who draw down the moon from heaven, and find that our choice of such power in the city means the sacrifice of what is dearest to us. But if you imagine that anyone in the world will deliver to you an art which will win you great power in  
 b the city, unless either for better or for worse you resemble its government, then in my opinion you are mistaken, Callicles. You must not be a mere imitator, but must bear a natural resemblance, if you are to effect a genuine friendship with the Athenian demos, yes, and, by

heaven, the Demos of Pylilampes as well. So whoever makes you most resemble these, will make of you the kind of statesman and rhetorician you desire to be, for each takes pleasure in the words that appeal to his own character, but dislikes those that appeal to another's—unless you have any objections to offer, dear heart. What do you say in answer to this, Callicles?

CALLICLES: It seems to me, I know not how, that you are right, Socrates, but I feel as the many do. I am not quite convinced by you.

SOCRATES: That is because the love of demos dwells in your soul, Callicles, and resists me, but if perchance we investigate these same problems better, you will be persuaded. Remember at least that we said there were two processes that aim in each case at tending body and soul, one that makes pleasure the end of its association, the other, what is best, this latter not indulging in pleasure but battling against it. Are not these the distinctions we made at the time?

CALLICLES: Certainly.

SOCRATES: Now the one of these, that aims at pleasure, is ignoble and just nothing but flattery, is it not so?

CALLICLES: So be it, if you wish.

SOCRATES: But the aim of the other is that what we tend, whether it happen to be body or soul, shall be as perfect as possible.

CALLICLES: Certainly.

SOCRATES: Should we not then take in hand the tending of the city and its citizens with the aim of making the citizens themselves as good as possible? For, as we discovered previously, without this there is no use in rendering any other kindly service, unless, that is to say, the thoughts of those who are to obtain much money and sovereignty or any other power whatever are good and noble. Are we to say my view is right?

CALLICLES: Certainly, if it pleases you.

SOCRATES: If then when we contemplated some public undertaking for the state, we were to enlist each other's aid in a task of building, the construction perhaps of important buildings such as walls or dockyards or temples, ought we not to look to ourselves and examine ourselves, to discover first of all whether or not we are experts in the art of building, and from whom we learned it? Ought we to or not?

CALLICLES: Certainly.

SOCRATES: And then again, secondly, whether we have ever erected a building previously for one of our friends or for ourselves, and whether this building is beautiful or ugly, and if on review we discovered that we had had good and distinguished teachers and that with these teachers we had erected many fine buildings, and then also many on our own account when we had finished with our teachers—if this were our position, we might, as sensible men, aspire to public works, but if we had no master to point to, and either no buildings

whatever or many worthless ones, then it would surely be folly to undertake public works and to invite each other thereto. Shall we admit  
d that this is true or not?

CALLICLES : Certainly.

SOCRATES : So too in every other case. If, for example, we had aspired to public practice and encouraged each other thereto as competent physicians, we would surely have made mutual investigation of each other, and you would have asked, Let me see, in heaven's name, how about Socrates himself in the matter of bodily health? Or has anybody else, slave or free, ever been cured of sickness by Socrates?

And I, too, I fancy, should have made the same inquiries about you, and if we could find no one, whether citizen or stranger, man or  
e woman, whose bodily health has been improved by our means, then surely, Callicles, it would be ridiculous for anyone, before practicing in private often with indifferent results, and often with success, and achieving sufficient experience in the profession, to begin, as the saying goes, his apprenticeship in pottery upon a large vessel, to aspire himself to public practice, and encourage others to do the same. Do you not consider such behavior folly?

CALLICLES : I do.

515 SOCRATES : And now, my best of friends, since you are just beginning to enter public life and invite me also and reproach me for not doing so, shall we not examine each other and ask, Come now, has Callicles ever yet improved any of the citizens? Is there any man who previously was evil, unjust, undisciplined, and senseless, and through Callicles has become an upright and worthy man, be he stranger or citizen, slave or free?

Tell me, if anyone should examine you on these points, Callicles,  
b what will you say? What man will you claim to have improved by your company? Do not hesitate, before you aspire to a public career, to answer if you can point to any such achievement of yours as a private citizen.

CALLICLES : You are contentious, Socrates.

SOCRATES : It is not contentiousness that makes me ask, but a true desire to know what you consider the right standard of public life in our city. Or when you embark upon a public career, pray will  
c you concern yourself with anything else than how we citizens can be made as good as possible? Have we not many times already agreed that this should be the task of a statesman? Have we acknowledged it or not? Answer me. We have; I shall answer on your behalf. If then the good man ought to contrive this for his own city, carry your mind back to those men of whom you spoke a little earlier, and tell me whether you still think they proved themselves good citizens—  
d Pericles and Cimon and Miltiades and Themistocles.

CALLICLES : I do.

SOCRATES : Then if they were good, obviously each of them

made better citizens of those who were worse before. Did he do this or not?

CALLICLES : Yes.

SOCRATES : So when Pericles began to speak before the people, the Athenians were worse than when he spoke for the last time?

CALLICLES : Perhaps.

SOCRATES : There can be no 'perhaps' about it, my good friend; it must be so from what we have admitted, if he was really a good citizen.

CALLICLES : Well, what then?

SOCRATES : Nothing, but tell me next whether the Athenians are said to have been improved by means of Pericles or, quite the contrary, to have been corrupted by him. For I am told that Pericles made the Athenians idle and cowardly and talkative and covetous, because he was the first to establish pay for service among them.

CALLICLES : You hear this, Socrates, from the gentlemen with battered ears.

SOCRATES : Well, this at least is not a matter of hearsay, but you know it as well as I do, that Pericles enjoyed a good reputation at first and was never convicted on any disgraceful charge by the Athenians, when they were worse. But when he had made good and worthy citizens of them, at the end of his life, he was convicted of theft by them and narrowly escaped a death sentence, obviously because they held him an evil man. 516

CALLICLES : Well, what about it? Does that make Pericles a villain?

SOCRATES : At any rate one who tended asses or horses or cattle would be considered bad if he showed a similar character—if when he assumed charge they did not kick or butt or bite him, but he made them wild enough to do all these things. Or do you not consider any man a poor trainer of any animal whatever, if they are tame when he takes them over, but he makes them wilder than when he assumed charge? Do you agree or not? b

CALLICLES : Certainly, to please you.

SOCRATES : Then please me still further by answering this. Is a man a member of the animal kingdom or not?

CALLICLES : Of course he is.

SOCRATES : And was it not men of whom Pericles assumed charge?

CALLICLES : Yes.

SOCRATES : Then ought he not, as we agreed just now, to have made them more just rather than more unjust, if indeed he was a good statesman when he was in charge of them? c

CALLICLES : Certainly.

SOCRATES : Now just men are gentle according to Homer. But what do you say? Is it not so?

CALLICLES : Yes.

SOCRATES : But Pericles made them wilder than when he assumed charge of them, and toward himself too, the last person he would have wished to suffer.

CALLICLES : Do you want me to agree with you?

SOCRATES : If you think I am telling the truth.

CALLICLES : Then let it be granted.

SOCRATES : And if wilder, more unjust and worse?

d CALLICLES : Granted.

SOCRATES : Then Pericles was no good statesman by this account.

CALLICLES : So you say.

SOCRATES : Yes, and by what you yourself admit. Tell me about Cimon too in turn. Did not those whom he served ostracize him, that they might not hear his voice for ten years? And Themistocles they treated in the same way and in addition punished him by banishment. And Miltiades, the victor of Marathon, they voted to throw into the pit, and he would have suffered this fate but for the president of the  
e Council. And yet if, as you say, these had been good men, they would never have been so treated. It is not true at any rate that, while good charioteers are not thrown from their chariots in their first contests, they are thrown later, when they have trained their horses and have themselves become better drivers. This is not the case in chariot racing or in any other activity, or do you think it is?

CALLICLES : No, not I.

SOCRATES : Then, after all, it seems, our previous statement was true, that we do not know of any man who has proved a good  
517 statesman in this city. You admitted that there are none of the present day, but claimed some of days gone by, and chose the men just now mentioned, but they have proved to be on a level with those of our time, and so, if they were orators, they did not employ the true rhetoric—else they would not have been driven out—nor the rhetoric of flattery either.

CALLICLES : But, Socrates, men of our day are far indeed from  
b having achieved what was accomplished by any you like to name among those others.

SOCRATES : My good friend, I too find no fault with them, at least as servants of the city; in fact I consider they were more successful servants than those of today and better able to provide the city with what she desired. But as to giving those desires a different direction instead of allowing them free scope, by persuading and compelling citizens to adopt courses that would improve them—why,  
c therein they were practically in no way superior to the statesmen of today, though this is the only true office of a good citizen. I too agree with you that they were more clever than their successors in providing ships and walls and dockyards and many other such things.

Now you and I are behaving absurdly in this discussion, for throughout the time of our argument we have never ceased returning in circles to the same point in a constant failure to understand each other's meaning. I at least consider you have admitted time and again and realize that we are concerned with a twofold activity related to both d body and soul, and that one of these is menial and by it can be provided food, if our bodies are hungry; drink, if they are thirsty; and if they are cold, clothing, bedding, shoes, or anything else that our bodies come to desire—I purposely use the same images, that you may the more quickly understand. For it is no wonder that a purveyor of these things, whether huckster, merchant, or manufacturer of any of e them—baker or cook or weaver or cobbler or tanner—should because of his character appear both to himself and to others a true minister to the body—to everyone, that is, who does not know that there is above and beyond all these an art of gymnastics and of medicine, which is the genuine ministry to the body and should properly control all these crafts and employ their products, because it alone knows, while all the others know not, what food or drink is good or bad for the health of the body. And for this reason, while these other 518 crafts are servile and menial and illiberal in their concern with the body, gymnastics and medicine are by rights their masters. Now when I tell you that the same holds good of the soul, at one time you appear to understand, and you agree as though you grasped my meaning, but a little later you proceed to say that there have been upright and worthy citizens in our state. And when I ask you their names, you b seem to put forward the same types in the field of politics as if, when I asked you who in the realm of gymnastics had been or now were good trainers of the body, you should answer with the utmost seriousness, Thearion, the baker, and Mithaecus, who wrote the Sicilian cookery book, and Sarambus, the tavern keeper—for these have proved of wonderful service to the body, the one providing bread, the second dainties, the third wine of marvelous quality. Now perhaps you c would be annoyed if I said to you, Fellow, you know nothing about gymnastics. You talk to me of servants who cater to our desires but have no fine or sound views about them, men who, if it so chances, will gorge and fatten men's bodies and win their praises for it, but will finally rob them of what flesh they had before. And their victims in turn, in their ignorance, will not blame for their maladies and for the loss of their original flesh those who feasted them, but any who may happen at the time to be present and give them any advice when the surfeit of the past has some time later brought sickness upon them, because it disregarded the rules of health—these they will blame and abuse and injure, if they can, while they praise the others who were responsible for their troubles. d

And you are now doing much the same thing as this, Callicles. e  
You praise those who have banqueted our citizens with all the dainties

- they desire. And men say it is these who have made our city great, never realizing that it is swollen and festering through these statesmen of old. For they have paid no heed to discipline and justice, but
- 519 have filled our city with harbors and dockyards and walls and revenues and similar rubbish, and so, when the crisis of her infirmity comes, they will hold their present advisers responsible and will sing the praises of Themistocles and Cimon and Pericles, who caused their misfortunes. And if you are not on your guard, they may perhaps lay hands on you and on my friend Alcibiades, when they have lost what
- b they once owned in addition to what they have since acquired, though you are not the authors, but perhaps the collaborators, in their troubles. And yet there is a ridiculous thing that I see taking place to-day and hear took place with regard to their statesmen of old. I notice that, whenever the city treats any of its statesmen as wrongdoers, they are indignant and violently protest that they are shockingly treated; so, after doing the city many services, they are now being unjustly ruined by her, according to their story. But all this is a fabri-
- c cation. For there is never a ruler of a city who would unjustly be ruined by the very city he ruled. Conditions, it seems, are much the same for those who pretend to be statesmen and for Sophists. Your Sophists, wise as they are in other matters, are in one point guilty of absurd behavior, for they claim to be teachers of goodness, yet they often accuse their pupils of wronging them by withholding their fees and showing no gratitude either for benefits received from them.
- d And what could be more illogical than this claim that men who have become good and just, men who have been stripped of injustice by their teacher and have acquired righteousness, should act unjustly by means of an injustice which does not dwell in them? Does not this seem absurd to you, my friend? You really have compelled me to play the orator, Callicles, by refusing to answer.

CALLICLES: You could not speak, I suppose, if there were not somebody to answer you.

- e SOCRATES: Apparently I can; at least I am making quite lengthy speeches, since you will not reply to me. But, my good sir, in friendship's name, tell me, does it not seem ridiculous, when you claim to have made a man good, to find fault with him because, though you have made him good and he still is, yet he remains wicked?

CALLICLES: It seems so to me.

SOCRATES: But do you not hear such language from those who claim to educate men in goodness?

- 520 CALLICLES: I do, but why speak about worthless people?

SOCRATES: But what would you say about those who pretend to govern the city and see to it that she be as good as possible, and then, when occasion serves, accuse her of being most evil? Do you think they are in any way different from those others? Sophist and orator, my good sir, are the same thing, or pretty nearly so, as I said to

Polus. But you through ignorance consider the one thing, rhetoric, to be something very fine, and despise the other. In actual fact sophistic is better than rhetoric to the extent that legislation is finer than the administration of justice or gymnastics than medicine. But I always thought myself that political orators and Sophists alone were not entitled to find fault with what received their training for wicked behavior toward them; otherwise the very words they utter are at the same time a condemnation of themselves for having done no good to those whom they claim to benefit. Is it not so?

CALLICLES: Certainly.

SOCRATES: And further, if their claims were true, they alone, it seems, were at liberty to give their good services freely without pay. For a man who received any other benefit—swiftness of foot, for instance, through a trainer—might perhaps deny the trainer his due recompense, if he had given him instruction freely without any agreement that he should receive his fee as nearly as possible at the time when he had taught his pupil to be swift-footed. For acts of injustice are due, I suppose, not to slowness of foot, but to injustice. Is it not so?

CALLICLES: Yes.

SOCRATES: Then if an instructor eliminates this one quality of injustice, there is no danger of his suffering from it, but for him alone is it safe to bestow this kind of service, if in reality a man could make others good. Is this not true?

CALLICLES: I agree.

SOCRATES: For this reason then, there is no disgrace in taking money for giving other advice, about building, for instance, and the other arts.

CALLICLES: So it seems, at least.

SOCRATES: But when it is a question of how one may become as good as possible and best administer his own home or his city, it is considered disgraceful to refuse advice unless one is paid for it. Is it not so?

CALLICLES: Yes.

SOCRATES: The reason obviously is that this is the only kind of service which makes its recipient eager to make a like return, so that it is thought to be a good sign when one who has rendered such a kindness receives a like return; but if he does not, it is not so. Is this the truth of the matter?

CALLICLES: It is.

SOCRATES: Then distinguish for me what kind of care for the city you recommend to me, that of doing battle with the Athenians, like a doctor, to make them as good as possible, or to serve and minister to their pleasures? Tell me the truth, Callicles, for it is only fair that, as you spoke your mind frankly to me at first, you should continue to say what you think. And so speak up truly and bravely now.

CALLICLES : I say then, to serve and minister.

b SOCRATES : Then you invite me, my noble friend, to play the flatterer?

CALLICLES : Yes, if you prefer the most offensive term, for if you do not . . .

c SOCRATES : Please do not say what you have said so often—that anyone who wishes will slay me, only for me to repeat in turn that then a villain will slay a good man, nor that anyone will rob me of anything I possess, only for me to repeat that, once he has robbed me, he will not know what to do with his spoil, but even as he robbed me unjustly, so too he will make an unjust use of it, and if unjust, shameful, and if shameful, wicked.

CALLICLES : How confident you seem, Socrates, that you can never experience any of these troubles whatever, as if you dwelt apart and could never be haled into court by, it may be, some utterly mean and vile creature.

d SOCRATES : Then I must indeed be a senseless person, Callicles, if I do not think that in this city anything whatever may happen to anybody. But this at least I know well, that if I am brought into court to face any such danger as you mention, it will be an evil man who prosecutes me—for no good man would drag a guiltless person into court—and it would not be surprising if I were put to death. Would you like me to tell you why I expect this?

CALLICLES : Certainly.

e SOCRATES : I think that I am one of very few Athenians, not to say the only one, engaged in the true political art, and that of the men of today I alone practice statesmanship. Since therefore when I speak on any occasion it is not with a view to winning favor, but I aim at what is best, not what is most pleasant, and since I am unwilling to engage in those 'dainty devices' that you recommend, I shall have nothing to say for myself when in court. And the same figure occurs to me that I used to Polus. My trial will be like that of a doctor prosecuted by a cook before a jury of children. Just consider what kind of defense such a man could offer in such a predicament, if the plaintiff should accuse him in these terms: Children of the jury, this fellow has done all of you abundant harm, and the youngest among you he is ruining  
522 by surgery and cautery, and he bewilders you by starving and choking you, giving you bitter draughts and compelling you to hunger and thirst, whereas I used to feast you with plenty of sweetmeats of every kind.

What do you think a doctor could find to say in such a desperate situation? If he spoke the truth and said, All this I did, children, in the interests of health, what a shout do you think such a jury would utter? Would it not be a loud one?

CALLICLES : Perhaps; one must suppose so.

SOCRATES : Do you not think he would be utterly baffled as to what to say?

CALLICLES : Certainly.

SOCRATES : Well, I too know that my experience would be similar, if I were brought into court. For I shall not be able to tell them of pleasures that I have purveyed—pleasures which *they* hold to be benefits and services, but I can envy neither those who purvey them nor those for whom they are provided. And if anyone claims either that I corrupt the young by bewildering them or that I abuse the older in bitter terms either in private or public, I shall neither be able to tell the truth and claim that I am right in saying all that I do and that it is your interests I am serving in this, gentlemen of the jury, nor shall I be able to say anything else, and so perhaps anything whatever may happen to me.

CALLICLES : Do you think then, Socrates, that all is well with a man who is in this plight and is unable to help himself in his own country?

SOCRATES : Yes, if he should possess that one means of help which you have so often acknowledged; if he has helped himself by doing no wrong in word or deed either to gods or to men, for this we have often admitted to be the best of all aids to oneself. Now if anyone should convict me of being unable to render this aid to myself or another, I should feel ashamed, whether I was convicted before many or few or man to man, and I should be vexed if I had to die through lack of such power as this. But if I should meet my death owing to a deficiency of flattering rhetoric, I am confident you would find me taking my death calmly. For no one who is not utterly irrational and cowardly is afraid of the mere act of dying; it is evil-doing that he fears. For to arrive in the other world with a soul surcharged with many wicked deeds is the worst of all evils. And if you like, I am ready to tell you a tale which will prove that this is so.

CALLICLES : Well, since you have finished all else, you may finish this too.

SOCRATES : Give ear then, as they say, to a very fine story, 523 which you, I suppose, will consider fiction, but I consider fact, for what I am going to tell you I shall recount as the actual truth. As Homer says, Zeus and Poseidon and Pluto divided their kingdom among themselves after inheriting it from their father. Now in the days of Cronus there was this law about mankind, which from then till now has prevailed among the gods, that the man who has led a godly and righteous life departs after death to the Isles of the Blessed and there lives in all happiness exempt from ill, but the godless and unrighteous man departs to the prison of vengeance and punishment which they call Tartarus. And in the days of Cronus and even when Zeus was but lately come to power, living men rendered

judgment on the living, pronouncing sentence on the very day on which these were to die, and so the verdicts were not well given. Accordingly, Pluto and the stewards from the Isles of the Blessed came and told Zeus that the wrong people were going to both places. Then Zeus said, 'Well, I will put a stop to that. Cases are judged badly now,' said he, 'because those who are tried come to judgment with their clothes on, for they are still alive when judged. And therefore many,' said he, 'who possessed evil souls are invested with fine bodies and lineage and wealth, and when the trial takes place, many witnesses come forward to testify that they have lived righteous lives. So the judges are dazzled by these, and at the same time they are clothed themselves when they give sentence, their eyes, their ears, and their whole bodies acting as a screen before their souls. They have all these hindrances before them, both their own clothing and that of those on trial. First of all then,' said he, 'men must be stopped from foreknowing their deaths, for now they have knowledge beforehand. Prometheus has already been told to stop this foreknowledge. Next they must be stripped naked of all these things before trial, for they must be judged after death. And the judge must be naked too and dead, scanning with his soul itself the souls of all immediately after death, deprived of all his kinsmen and with all that fine attire of his left on earth, that his verdict may be just. Now I had realized all this before you, and I have appointed sons of mine as judges, two from Asia, Minos and Rhadamanthus, and one, Aeacus, from Europe. And when these are dead, they will hold court in the meadow, at the crossroads from which two paths lead, one to the Isles of the Blessed, the other to Tartarus. And Rhadamanthus will judge those who come from Asia, Aeacus those from Europe, and to Minos I will grant the privileges of court of appeal, if the other two are in doubt, so that the judgment about which path men take may be as just as possible.'

This is what I have heard, Callicles, and I believe it to be true, and from this story I infer the following conclusion. Death, in my opinion, is nothing else but the separation from each other of two things, soul and body, and when therefore they are separated from one another, each of them retains pretty much the same condition as when the man was alive, the body retaining its own nature, with all the marks of treatment or experience plainly visible. For instance if a man's body was large either by nature or through diet or through both causes while he was alive, after death too his corpse will be large, and if fat when living then fat too after death, and so on, and if again he habitually wore his hair long, his corpse too will be long-haired. And further if a man was a jailbird and bore traces of the blows he received when living, in the form of scars on his body inflicted by the lash or from other wounds, you may see the same marks on his body after death too, or if any of his limbs were broken or distorted in his lifetime, the same things are evident in death. And, in a word, of the

physical characteristics acquired in life all or the greater part are visible for some time after death. And so I believe that the same thing is true of the soul, Callicles; once it has been stripped of the body, everything in the soul is manifest—its natural characteristics and the experiences which a man's soul has encountered through occupations of various kinds. When therefore they arrive before their judge—those from Asia before Rhadamanthus—he halts them and scans the soul of each, quite unaware whose it is, but he will often lay hold of the Great King or any other king or potentate and see that there is no sign of health in his soul but that it is torn to ribbons by the scourge and full of scars due to perjuries and crime—the marks branded on the soul by every evil deed—and that everything is crooked through falsehood and imposture, and nothing straight because it has been reared a stranger to truth. And he sees that owing to the license and luxury and presumption and incontinence of its actions the soul is surcharged with disproportion and ugliness, and seeing this he sends it away in ignominy straight to the prison house, where it is doomed on its arrival to endure the sufferings proper to it. And it is proper for everyone who suffers a punishment rightly inflicted by another that he should either be improved and benefited thereby or become a warning to the rest, in order that they may be afraid when they see him suffering what he does and may become better men. Now, those who are benefited through suffering punishment by gods and men are beings whose evil deeds are curable; nevertheless it is from pain and agony that they derive their benefit both here and in the other world, for it is impossible to be rid of evil otherwise. But those who have been guilty of the most heinous crimes and whose misdeeds are past cure—of these warnings are made, and they are no longer capable themselves of receiving any benefit, because they are incurable—but others are benefited who behold them suffering throughout eternity the greatest and most excruciating and terrifying tortures because of their misdeeds, literally suspended as examples there in the prison house in Hades, a spectacle and a warning to any evildoers who from time to time arrive. And one of these, I maintain, is Archelaus, if Polus tells us the truth, and any other tyrant too of like character, and I think that most of these warning examples are chosen from tyrants and kings and potentates and politicians, for these, owing to the license they enjoy, are guilty of the greatest and most impious crimes.

Now Homer bears me out in this, for he has represented as those who suffer eternal punishment in Hades kings and princes, Tantalus and Sisyphus and Tityus, but Thersites or any other private person who did wrong has by no one been represented as afflicted with cruel punishment because incurable, for I suppose he had not the power, and therefore was happier than those who had. But, Callicles, it is among the most powerful that you find the superlatively wicked. Still there is nothing to prevent good men from finding a place even among

the powerful, and those who do so are deserving of special admiration, for it is difficult, Callicles, and most praiseworthy to pass through life in righteousness when you have every license to do wrong. But men of this kind are few, though both in Athens and elsewhere there have been and, I fancy, will yet be honorable men and true, who possess the  
 b virtue of managing justly whatever is entrusted to them, and one of these won great renown even among the rest of the Greeks, Aristides, son of Lysimachus, but most of those in power, my good friend, prove evil.

As I said then, whenever Rhadamanthus receives one of these, he knows nothing else about him, his name or origin, only that he is evil, and when he perceives this, he dispatches him straight to Tartarus after first setting a seal upon him to show whether he appears to him curable or incurable, and on arrival there he undergoes the  
 c appropriate punishment. But sometimes he sees another soul, that has lived in piety and truth, that of a private citizen or any other—but in especial, I maintain, Callicles, the soul of a philosopher who has applied himself to his own business and not played the busybody in his life—and he is filled with admiration and sends him forthwith to the Isles of the Blessed. And Aeacus behaves in exactly the same way—each of the two gives sentence staff in hand—and Minos sits as judge of appeal, and he alone bears a scepter of gold, even as Odysseus  
 d in Homer says he saw him, 'holding a scepter of gold, rendering laws to the dead.'<sup>6</sup>

Now I have been convinced by these stories, Callicles, and I am considering how I may present to my judge the healthiest possible soul, and so I renounce the honors sought by most men, and pursuing the truth I shall really endeavor both to live and, when death comes,  
 e to die, as good a man as I possibly can be. And I exhort all other men thereto to the best of my power, and you above all I invite in return to share this life and to enlist in this contest which I maintain excels all other contests, and I reproach you in your turn because you will not be able to help yourself when the trial and judgment takes place of which I spoke just now. But when you come before your judge, the  
 527 son of Aegina, and he seizes hold of you, you will gape and reel to and fro there, no less than I do here, and perhaps someone will humiliate you by boxing your ears and will do you every kind of outrage.

Now perhaps all this seems to you like an old wife's tale and you despise it, and there would be nothing strange in despising it if our searches could discover anywhere a better and truer account, but as it is you see that you three, who are the wisest Greeks of the day, you and Polus and Gorgias, cannot demonstrate that we should live  
 b any other life than this, which is plainly of benefit also in the other world. But amid all these arguments, while others were refuted, this

<sup>6</sup> *Odyssey* 11.569.

alone stands steadfast, that we should be more on our guard against doing than suffering wrong, and that before all things a man should study not to seem but to be good, whether in private or in public life, and that if anyone proves evil in any way, he should be chastised, and next to being good the second-best thing is to become good and to make amends by punishment, and that we should avoid every form of c flattery, whether to ourselves or to others, whether to few or to many, and that rhetoric and every other activity should ever so be employed, to attain justice. If you will listen to me then, you will follow me where on your arrival you will win happiness both in life and after death, as our account reveals. And you may let anyone despise you as a fool and do you outrage, if he wishes, yes, and you may cheerfully let him strike you with that humiliating blow, for you will suffer no harm thereby if you really are a good man and an honorable, and pursue d virtue. And after such training in common together, then at last, if we think fit, we may enter public life, or we may take counsel together on whatever course suggests itself, when we are better able to take counsel than now. For it seems to me shameful that, being what apparently at this moment we are, we should consider ourselves to be fine fellows, when we can never hold to the same views about the same questions—and those too the most vital of all—so deplorably uneducated are we! Then let us follow the guidance of the argument e now made manifest, which reveals to us that this is the best way of life—to live and die in the pursuit of righteousness and all other virtues. Let us follow this, I say, inviting others to join us, not that which you believe in and commend to me, for it is worthless, dear Callicles.

# PROTAGORAS

*The reader who is interested only in Plato's philosophy would do well to pass over the first part of the Protagoras, the first three-quarters of it, in fact, up to the discussion about pleasure and pain when Socrates begins to speak in earnest. In this the familiar Platonic doctrine is brought out that no man does evil voluntarily, that is, thinking it to be evil, and the conclusion is reached—not only Platonic, but essentially and peculiarly Greek—that virtue is one with wisdom and that wickedness has its roots in ignorance.*

*To the general reader, however, the dialogue is second to none in giving a picture of Greek life, above all, of the intensity of interest the Athenians took in the purely intellectual. The eager lad who wakes Socrates before daybreak begging to be introduced to the great teacher Protagoras, just arrived in Athens, has many counterparts in the large company he and Socrates find when they enter the house where the man of wisdom is staying. All want to learn from him and they finally persuade him to take on an argument with Socrates which, most understandably, he is reluctant to do. The result, however, is not what one would expect, Protagoras' complete defeat. Far from that, he is shown to have the better reason a number of times and Socrates not only appears as occasionally advocating the worse, but even now and then splitting hairs and being tiresome.*

*The dialogue is a little comedy. Plato is amusing himself, laughing at everyone, including his beloved master, showing up, but very pleasantly, good old Protagoras' amiable vanity, taking a sly dig at a distinguished teacher's passion for finicky verbal distinctions, and giving gravely another's advice to Socrates to pay some attention to talking elegantly, not merely briefly and accurately. A final delightful picture of the Athenians emerges, their charming manners, never affected by the hottest argument, their love of fair play, and, when it is settled that there shall be a discussion, how all of them felt great delight "at the prospect of listening to wise men."*

FRIEND: Where have you come from, Socrates? No doubt from pursuit of the captivating Alcibiades. Certainly when I saw him only a day or two ago, he seemed to be still a handsome man, but between ourselves, Socrates, 'man' is the word. He's actually growing a beard. 309

SOCRATES: What of it? Aren't you an enthusiast for Homer, who says that the most charming age is that of the youth with his first beard, just the age of Alcibiades now? b

FRIEND: Well what's the news? Have you just left the young man, and how is he disposed toward you?

SOCRATES: Very well, I think, particularly today, since he came to my assistance and spoke up for me at some length. For as you guessed, I have only just left him. But I will tell you a surprising thing. Although he was present, I had no thought for him, and often forgot him altogether.

FRIEND: Why, what can have happened between you and him to make such a difference? You surely can't have met someone more handsome—not in Athens at least? c

SOCRATES: Yes, much more.

FRIEND: Really? An Athenian or a foreigner?

SOCRATES: A foreigner.

FRIEND: Where from?

SOCRATES: Abdera.

FRIEND: And this stranger struck you as such a handsome person that you put him above the son of Clinias in that respect?

SOCRATES: Yes. Must not perfect wisdom take the palm for handsomeness?

FRIEND: You mean you have just been meeting some wise man?

SOCRATES: Say rather the wisest man now living, if you agree that that description fits Protagoras. d

FRIEND: What? Protagoras is in Athens?

SOCRATES: And has been for two days.

FRIEND: And you have just now come from seeing him?

SOCRATES: Yes, we had a long talk together.

310

FRIEND: Then lose no time in telling me about your conversation, if you are free. Sit down here; the slave will make room for you.

SOCRATES: Certainly I shall, and be grateful to you for listening.

FRIEND: And I to you for your story.

SOCRATES: That means a favor on both sides. Listen then.

Last night, a little before daybreak, Hippocrates, son of Apollodorus, Phason's brother, knocked violently on my door with his stick, and when it was opened, came straight in in a great hurry and shouted out, Socrates, are you awake or asleep? b

---

From *Protagoras and Meno*, translated and with an introduction by W. K. C. Guthrie (Penguin Classics, Harmondsworth, Middlesex, 1956).

I recognized his voice and said, That will be Hippocrates. No bad news I hope?

Nothing but good, he replied.

I'm glad to hear it, said I. What is it then, and what brings you here at such an hour?

Protagoras has arrived, he said, taking his stand beside me.

The day before yesterday. Have you only just found out?

Only last evening.

- c As he said this he felt for the bed and sat by my feet, adding, Yes, yesterday evening, when I got back late from Oenoe. My slave Satyrus had run away from me. I meant to let you know that I was going after him, but something put it out of my head. When I got back and we had had dinner and were just going to bed, my brother mentioned to me that Protagoras had come. Late as it was, I nearly  
d came to see you straightaway; then I decided it was really too far into the night, but as soon as I had slept off my tiredness, I got up at once and came here as you see.

I recognized his determination and the state of excitement he was in, and asked him, What is your concern in this? Has Protagoras done you any harm?

Of course he has, Socrates, replied Hippocrates laughing. He keeps his wisdom to himself instead of sharing it with me.

Not at all, said I. If you pay him sufficient to persuade him, he will make you wise too.

- e If it were only a question of that! he said despairingly. I shouldn't keep back a penny of my own money, or my friends' money either. But this is just the reason why I have come to you, to persuade you to speak to him on my behalf. For one thing I am too young, and for another I have never seen nor heard Protagoras. Last time he came to Athens I was still a child. But you know, Socrates, everyone is singing his praises and saying that he is the cleverest of speakers. Do let's  
311 pay him a visit at once, to make sure of finding him in. He's staying, so I'm told, with Callias, son of Hipponicus. Come on.

My dear Hippocrates, I said, we can't go there at this early hour. Let's come out here into the courtyard and walk around it to pass the time until it gets light. Then we can go. Protagoras spends most of his time indoors, so don't worry; we are pretty sure to catch him there.

- So then we got up and walked about in the courtyard, and to try  
b Hippocrates' mettle I began to examine and question him. Tell me this, Hippocrates, I said. It is your present intention to go to Protagoras and pay him money as a fee on your behalf. Now whom do you think you are going to, and what will he make of you? Suppose for instance you had it in mind to go to your namesake Hippocrates of Cos, the doctor, and pay him a fee on your own behalf, and someone  
c asked you in what capacity you thought of Hippocrates with the intention of paying him, what would you answer?

I should say, in his capacity as a doctor.

And what would you hope to become?

A doctor.

And suppose your idea was to go to Polyclitus of Argos or Phidias of Athens and pay them fees for your own benefit, and someone asked you in what capacity you thought of paying this money to them, what would you answer?

I should say, in their capacity as sculptors.

To make you what?

A sculptor, obviously.

Right, said I. Now here are you and I going to Protagoras prepared to pay him money as a fee for you—our own if it is enough to satisfy him, or if not, our friends' resources thrown in as well. If then, seeing us so full of enthusiasm, someone should ask, Tell me, Socrates and Hippocrates, what do you suppose Protagoras is, that you intend to pay him money? what should we answer him? What particular name do we hear attached to Protagoras in the sort of way that Phidias is called a sculptor and Homer a poet?

Well, Sophist, I suppose, Socrates, is the name generally given to him.

Then it is as a Sophist that we will go to him and pay him?

Yes.

And if you had to face the further question, What do you yourself hope to become by your association with Protagoras?

312

He blushed at this—there was already a streak of daylight to betray him—and replied, If this is like the other cases, I must say 'to become a Sophist.'

But wouldn't a man like you be ashamed, said I, to face your fellow countrymen as a Sophist?

If I am to speak my real mind, I certainly should.

Perhaps then this is not the kind of instruction you expect to get from Protagoras, but rather the kind you got from the schoolmasters who taught you letters and music and gymnastics. You didn't learn these for professional purposes, to become a practitioner, but in the way of liberal education, as a layman and a gentleman should.

That exactly describes, said he, the sort of instruction I expect from Protagoras.

Well then, I went on, do you understand what you are now going to do, or not?

In what respect?

I mean that you are going to entrust the care of your soul to a man who is, in your own words, a Sophist, though I should be surprised if you know just what a Sophist is. And yet if you don't know that, you don't know to whom you are entrusting your soul, nor whether he represents something good or bad.

I think I know, said he.

Tell me then, what do you think a Sophist is?

I suppose, as the name implies, one who has knowledge of wise things.

One could say the same, said I, of painters and builders, that they are those who have knowledge of wise things. But if we were asked what sort of wisdom painters understand, we should reply, wisdom concerned with the making of likenesses, and so on with the others. If then we were asked what sort of wise things the Sophist has knowledge of, what should we answer? Of what is he the master?

The only answer we could give is that he is master of the art of making clever speakers.

Well, our answer might be true, but would hardly be sufficient. It invites the further question, On what matter does the Sophist make one a clever speaker? For example, the teacher of lyre playing I suppose makes people clever at speaking on his own subject, namely lyre playing, doesn't he?

Yes.

Well, on what subject does the Sophist make clever speakers?

Obviously on the subject of which he imparts knowledge.

Very probably. And what is this subject on which the Sophist is both an expert himself and can make his pupil expert?

313 I give up, he said. I can't tell you.

Well then, I continued, do you realize the sort of danger to which you are going to expose your soul? If it were a case of putting your body into the hands of someone and risking the treatment's turning out beneficial or the reverse, you would ponder deeply whether to entrust it to him or not, and would spend many days over the question, calling on the counsel of your friends and relations. But when it comes to something which you value more highly than your body, namely your soul—something on whose beneficial or harmful treatment your whole welfare depends—you have not consulted either your father or your brother or any of us who are your friends on the question whether or not to entrust your soul to this stranger who has arrived among us. On the contrary, having heard the news in the evening, so you tell me, here you come at dawn, not to discuss or consult me on this question of whether or not to entrust yourself to Protagoras, but ready to spend both your own money and that of your friends as if you had already made up your mind that you must at all costs associate with this man—whom you say you do not know and have never spoken to, but call a Sophist, and then turn out not to know what a Sophist is though you intend to put yourself into his hands.

When he heard this he said, It looks like it, Socrates, from what you say.

Can we say then, Hippocrates, that a Sophist is really a merchant

or peddler of the goods by which a soul is nourished? To me he appears to be something like that.

But what is it that nourishes a soul?

What it learns, presumably, I said. And we must see that the Sophist in commending his wares does not deceive us, like the wholesaler and the retailer who deal in food for the body. These people do not know themselves which of the wares they offer is good or bad for the body, but in selling them praise all alike, and those who buy from them don't know either, unless one of them happens to be a trainer or a doctor. So too those who take the various subjects of knowledge from city to city, and offer them for sale retail to whoever wants them, commend everything that they have for sale, but it may be, my dear Hippocrates, that some of these men also are ignorant of the beneficial or harmful effects on the soul of what they have for sale, and so too are those who buy from them, unless one of them happens to be a physician of the soul. If then you chance to be an expert in discerning which of them is good or bad, it is safe for you to buy knowledge from Protagoras or anyone else, but if not, take care you don't find yourself gambling dangerously with all of you that is dearest to you. Indeed the risk you run in purchasing knowledge is much greater than that in buying provisions. When you buy food and drink, you can carry it away from the shop or warehouse in a receptacle, and before you receive it into your body by eating or drinking you can store it away at home and take the advice of an expert as to what you should eat and drink and what not, and how much you should consume and when; so there is not much risk in the actual purchase. But knowledge cannot be taken away in a parcel. When you have paid for it you must receive it straight into the soul. You go away having learned it and are benefited or harmed accordingly. So I suggest we give this matter some thought, not only by ourselves, but also with those who are older than we, for we are still rather young to examine such a large problem. However, now let us carry out our plan to go and hear the man, and when we have heard him we can bring others into our consultations also, for Protagoras is not here by himself. There is Hippias of Elis, and I think Prodicus of Ceos too, and many other wise men.

Having agreed on this we started out. When we found ourselves in the doorway, we stood there and continued a discussion which had arisen between us on the way. So that we might not leave it unfinished, but have it out before we went in, we were standing in the doorway talking until we should reach agreement. I believe the porter, a eunuch, overheard us, and it seems likely that the crowd of Sophists had put him in a bad temper with visitors. At any rate when we knocked at the door he opened it, saw us and said, Ha, Sophists! He's busy. And thereupon he slammed the door as hard as he could with

both hands. We knocked again, and he answered through the closed door, Didn't you hear me say he's busy?

- e My good man, I said, we have not come to see Callias and we are not Sophists. Cheer up. It is Protagoras we want to see, so announce us. So at last the fellow reluctantly opened the door to us.

When we were inside, we came upon Protagoras walking in the portico, and walking with him in a long line were, on one side Callias, son of Hipponicus; his stepbrother Paralus, the son of Pericles; and  
 315 Charmides, son of Glaucon; and on the other side Pericles' other son, Xanthippus; Philippides, son of Philomelus; and Antimoerus of Mende, the most eminent of Protagoras' pupils, who is studying professionally, to become a Sophist. Those who followed behind listening to their conversation seemed to be for the most part foreigners—Protagoras draws them from every city that he passes through, charming them with his voice like Orpheus, and they follow spellbound  
 b —but there were some Athenians in the band as well. As I looked at the party I was delighted to notice what special care they took never to get in front or to be in Protagoras' way. When he and those with him turned round, the listeners divided this way and that in perfect order, and executing a circular movement took their places each time in the rear. It was beautiful.

- 'After that I recognized,'<sup>1</sup> as Homer says, Hippias of Elis, sitting  
 c on a seat of honor in the opposite portico, and around him were seated on benches Eryximachus, son of Acumenus, and Phaedrus of Myrrhinus and Andron, son of Androtion, with some fellow citizens of his and other foreigners. They appeared to be asking him questions on natural science, particularly astronomy, while he gave each his explanation ex cathedra and held forth on their problems.

- d 'And there too spied I Tantalus'<sup>2</sup>—for Prodicus of Ceos was also in town, and was occupying a room which Hipponicus used to use for storage, but now owing to the number of people staying in the house Callias had cleared it out and made it into a guest room. Prodicus was still in bed, wrapped up in rugs and blankets, and plenty of them, as far as one could see, and beside him on the neighboring couches sat Pausanias from Cerameis and with him someone who was still a young boy—a lad of fine character I think, and certainly very good-looking.  
 e I think I heard that his name is Agathon, and I shouldn't be surprised if Pausanias is particularly attached to him. Well there was this boy and the two Adimantuses—the son of Cepis and the son of Leucolophides—and a few others. But what they were talking about I couldn't discover from outside, although I was very keen to hear  
 316 Prodicus, whom I regard as a man of inspired genius. You see, he has such a deep voice that there was a kind of booming noise in the room which drowned the words. Just after we had come in, there entered

<sup>1</sup> *Odyssey* II.601.

<sup>2</sup> *Odyssey* II.582.

close on our heels the handsome Alcibiades as you call him—and I quite agree—and Critias, son of Callaeschrus.

When we entered, then, we paused for a few moments to drink b in the scene and then approached Protagoras, and I said, Protagoras, this is Hippocrates, and it is you that we have come to see.

Do you wish to speak to me alone, he asked, or with the others?

It is all the same to us, I replied. Hear what we have come for and then decide for yourself.

And what have you come for?

Hippocrates here is one of our citizens, son of Apollodorus. He comes of a great and prosperous family, and is considered the equal of any of his contemporaries in natural gifts. I think he is anxious to c make a name for himself in the city, and he believes that the most likely way to success is to become a pupil of yours. So now it is for you to decide whether you think this calls for a conversation between ourselves or with others.

I appreciate your forethought on my behalf, Socrates. A man has to be careful when he visits powerful cities as a foreigner, and induces their most promising young men to forsake the company of others, relatives or acquaintances, older or younger, and consort with him on the grounds that his conversation will improve them. Such conduct d arouses no small resentment and various forms of hostility and intrigue. Personally I hold that the Sophist's art is an ancient one, but that those who put their hand to it in former times, fearing the odium which it brings, adopted a disguise and worked under cover. Some used poetry as a screen, for instance Homer and Hesiod and Simonides; others religious rites and prophecy, like Orpheus and Musaeus and their school; some even—so I have noticed—physical training, like Iccus of Tarentum and in our own day Herodicus of Selymbria, the former Megarian, as great a Sophist as any. Music was e used as cover by your own Agathocles, a great Sophist, and Pythoclides of Ceos and many others. All of them, as I say, used these arts as a screen to escape malice. I myself, however, am not of their mind in 317 this. I don't believe they accomplished their purpose, for they did not pass unobserved by the men who held the reins of power in their cities, though it is on their account that these disguises are adopted; the mass of people notice nothing, but simply echo what the leaders tell them. Now to run away and fail to escape, but be discovered instead, turns the attempt into sheer folly, and cannot fail to arouse even greater hostility, for people think that the man who behaves like this b is in addition to his other faults an unprincipled rogue. I therefore have always gone the opposite way to my predecessors'. I admit to being a Sophist and an educator, and I consider this a better precaution than the other—admission rather than denial. I have devised other precautions as well, so that, if heaven will forgive the boast, I come to no harm through being a confessed Sophist, though I have c

been many years in the profession. Indeed I am getting on in life now—so far as age goes I might be the father of any one of you—so if there is anything you want of me, I should much prefer to say my say in front of the whole company.

Thereupon, suspecting that he wanted to display his skill to Prodicus and Hippias and get some glory from the fact that we had come as his professed admirers, I remarked, Then why should we not  
 d call Prodicus and Hippias, and the people who are with them, to listen to us?

By all means, said Protagoras.

Would you like to make a regular circle, said Callias, so that you can talk sitting down?

Everyone agreed that this was the thing to do, and at the prospect of listening to wise men we all eagerly took hold of the benches and couches with our own hands and arranged them beside Hippias,  
 e where the benches were. Meanwhile Callias and Alcibiades got Prodicus out of bed and fetched him along with his companions.

When we were all seated, Protagoras began, Now that these gentlemen are present, Socrates, perhaps you will say something about the matter you mentioned to me just now on this young man's  
 318 behalf.

I can only begin as I did before, by telling you of our purpose in coming. Hippocrates has a feeling that he would like to become one of your followers. He says therefore that he would be glad to be told what effect it will have on him. That is all we have to say.

Then Protagoras replied, Young man, if you come to me, your gain will be this. The very day you join me, you will go home a better man, and the same the next day. Each day you will make progress toward a better state.

b On hearing this I said, Protagoras, what you say is not at all surprising, but very natural. Even you, for all your years and wisdom, would become better, if someone were to teach you something that you didn't happen to know. Please don't answer like this, but give us the kind of reply that Hippocrates would get if he suddenly changed his mind and took a fancy to study with that young man who has just lately come to live at Athens, Zeuxippus of Heraclea. Suppose he went to him, just as he has come to you, and heard him say the same thing,  
 c that each day he spent with him he would get better and make progress, and asked him the further question, 'What shall I get better at, and where shall I make progress?' Zeuxippus would say, 'In painting.' Or if he were with Orthagoras of Thebes, and having heard the same reply as he got from you, went on to ask in what respect he would get daily better by being with him, Orthagoras would say, 'In playing the flute.' Now give a similar answer to the lad and to me who am putting  
 d the question for him. Hippocrates, by becoming a pupil of Protagoras, will, on the very day he joins him, go home a better man, and on each

successive day will make similar progress—toward what, Protagoras, and better at what?

Protagoras heard me out and said, You put your questions well, and I enjoy answering good questioners. When he comes to me, Hippocrates will not be put through the same things that another Sophist would inflict on him. The others treat their pupils badly; these young men, who have deliberately turned their backs on specialization, e they take and plunge into special studies again, teaching them arithmetic and astronomy and geometry and music—here he glanced at Hippias—but from me he will learn only what he has come to learn. What is that subject? The proper care of his personal affairs, so that he may best manage his own household, and also of the state's affairs, so as to become a real power in the city, both as speaker and man of 319 action.

Do I follow you? said I. I take you to be describing the art of politics, and promising to make men good citizens.

That, said he, is exactly what I profess to do.

Then it is a truly splendid accomplishment that you have mastered, said I, if indeed you have mastered it. I warn you that you will hear nothing from me but my real mind. The fact is, I did not think b this was something that could be taught, though when you say otherwise I cannot doubt your word. But it is up to me to say why I believe it cannot be taught nor furnished by one man to another. I hold that the Athenians, like the rest of the Hellenes, are sensible people. Now when we meet in the Assembly, then if the state is faced with some building project, I observe that the architects are sent for and consulted about the proposed structures, and when it is a matter of ship-building, the naval designers, and so on with everything which the Assembly regards as a subject for learning and teaching. If anyone c else tries to give advice, whom they do not consider an expert, however handsome or wealthy or nobly born he may be, it makes no difference; the members reject him noisily and with contempt, until either he is shouted down and desists, or else he is dragged off or ejected by the police on the orders of the presiding magistrates. That is how they behave over subjects they consider technical. But when it is something to do with the government of the country that is to be debated, d the man who gets up to advise them may be a builder or equally well a blacksmith or a shoemaker, merchant or shipowner, rich or poor, of good family or none. No one brings it up against any of these, as against those I have just mentioned, that here is a man who without any technical qualifications, unable to point to anybody as his teacher, is yet trying to give advice. The reason must be that they do not think this is a subject that can be taught.

And you must not suppose that this is true only of the community at large. Individually also the wisest and best of our countrymen are e unable to hand on to others the virtue which they possess. Pericles, for

instance, the father of these two boys, gave them the very best education in everything that depends on teaching, but in his own special  
 320 kind of wisdom he neither trains them himself nor hands them over to any other instructor; they simply browse around on their own like sacred cattle, on the chance of picking up virtue automatically. To take a different example, Clinias, the younger brother of Alcibiades here, is a ward of that same Pericles, who for fear that Alcibiades would corrupt him, took him away and tried to give him a better upbringing by placing him in the household of Aripbron. Before six months were out, Aripbron gave him back; he could make nothing of  
 b him. I could mention plenty of others too, excellent men themselves, who never made anyone else better, either their own relatives or others.

With these facts in mind, Protagoras, I do not believe that virtue can be taught. But when I hear you speaking as I do, my skepticism is shaken and I suppose there is truth in what you say, for I regard you as a man of wide experience, deep learning, and original thought. If then you can demonstrate more plainly to us that virtue  
 c is something that can be taught, please don't hoard your wisdom but explain.

I shall not be a miser, Socrates, he replied. Now shall I, as an old man speaking to his juniors, put my explanation in the form of a story, or give it as a reasoned argument?

Many of the audience answered that he should relate it in whichever form he pleased.

Then I think, he said, it will be pleasanter to tell you a story.

Once upon a time, there existed gods but no mortal creatures.  
 a When the appointed time came for these also to be born, the gods formed them within the earth out of a mixture of earth and fire and the substances which are compounded from earth and fire. And when they were ready to bring them to the light, they charged Prometheus and Epimetheus with the task of equipping them and allotting suitable powers to each kind. Now Epimetheus begged Prometheus to allow him to do the distribution himself—'and when I have done it,' he said, 'you can review it.' So he persuaded him and set to work. In his allotment he gave to some creatures strength without speed, and  
 e equipped the weaker kinds with speed. Some he armed with weapons, while to the unarmed he gave some other faculty and so contrived means for their preservation. To those that he endowed with smallness, he granted winged flight or a dwelling underground; to those which he increased in stature, their size itself was a protection. Thus  
 321 he made his whole distribution on a principle of compensation, being careful by these devices that no species should be destroyed.

When he had sufficiently provided means of escape from mutual slaughter, he contrived their comfort against the seasons sent from Zeus, clothing them with thick hair or hard skins sufficient to ward

off the winter's cold, and effective also against heat, and he planned that when they went to bed, the same coverings should serve as proper and natural bedclothes for each species. He shod them also, some with hoofs, others with hard and bloodless skin.

Next he appointed different sorts of food for them—to some the grass of the earth, to others the fruit of trees, to others roots. Some he allowed to gain their nourishment by devouring other animals, and these he made less prolific, while he bestowed fertility on their victims, and so preserved the species.

Now Epimetheus was not a particularly clever person, and before he realized it he had used up all the available powers on the brute beasts, and being left with the human race on his hands unprovided for, did not know what to do with them. While he was puzzling about this, Prometheus came to inspect the work, and found the other animals well off for everything, but man naked, unshod, unbedded, and unarmed, and already the appointed day had come, when man too was to emerge from within the earth into the daylight. Prometheus therefore, being at a loss to provide any means of salvation for man, stole from Hephaestus and Athena the gift of skill in the arts, together with fire—for without fire it was impossible for anyone to possess or use this skill—and bestowed it on man. In this way man acquired sufficient resources to keep himself alive, but had no political wisdom. This was in the keeping of Zeus, and Prometheus no longer had the right of entry to the citadel where Zeus dwelt; moreover the sentinels of Zeus were terrible. But into the dwelling shared by Athena and Hephaestus, in which they practiced their art, he penetrated by stealth, and carrying off Hephaestus' art of working with fire, and the art of Athena as well, he gave them to man. Through this gift man had the means of life, but Prometheus, so the story says, thanks to Epimetheus, had later on to stand his trial for theft.

Since, then, man had a share in the portion of the gods, in the first place because of his divine kinship he alone among living creatures believed in gods, and set to work to erect altars and images of them. Secondly, by the art which they possessed, men soon discovered articulate speech and names, and invented houses and clothes and shoes and bedding and got food from the earth.

Thus provided for, they lived at first in scattered groups; there were no cities. Consequently they were devoured by wild beasts, since they were in every respect the weaker, and their technical skill, though a sufficient aid to their nurture, did not extend to making war on the beasts, for they had not the art of politics, of which the art of war is a part. They sought therefore to save themselves by coming together and founding fortified cities, but when they gathered in communities they injured one another for want of political skill, and so scattered again and continued to be devoured. Zeus therefore, fearing the total destruction of our race, sent Hermes to impart to men the

qualities of respect for others and a sense of justice, so as to bring order into our cities and create a bond of friendship and union.

Hermes asked Zeus in what manner he was to bestow these gifts on men. 'Shall I distribute them as the arts were distributed—that is, on the principle that one trained doctor suffices for many laymen, and so with the other experts? Shall I distribute justice and respect for their fellows in this way, or to all alike?'

d 'To all,' said Zeus. 'Let all have their share. There could never be cities if only a few shared in these virtues, as in the arts. Moreover, you must lay it down as my law that if anyone is incapable of acquiring his share of these two virtues he shall be put to death as a plague to the city.'

Thus it is, Socrates, and from this cause, that in a debate involving skill in building, or in any other craft, the Athenians, like other  
e men, believe that few are capable of giving advice, and if someone outside those few volunteers to advise them, then as you say, they do  
323 not tolerate it—rightly so, in my submission. But when the subject of their counsel involves political wisdom, which must always follow the path of justice and moderation, they listen to every man's opinion, for they think that everyone must share in this kind of virtue; otherwise the state could not exist. That, Socrates, is the reason for this.

Here is another proof that I am not deceiving you in saying that all men do in fact believe that everyone shares a sense of justice and civic virtue. In specialized skills, as you say, if a man claims to be good at the flute or at some other art when he is not, people either  
b laugh at him or are annoyed, and his family restrain him as if he were crazy. But when it comes to justice and civic virtue as a whole, even if someone is known to be wicked, yet if he publicly tells the truth about himself, his truthfulness, which in the other case was counted a virtue, is here considered madness. Everyone, it is said, ought to say he is good, whether he is or not, and whoever does not make such a claim is out of his mind, for a man cannot be without some share in  
c justice, or he would not be human.

So much then for the point that men rightly take all alike into their counsels concerning virtue of this sort, because they believe that all have a share in it. I shall next try to demonstrate to you that they do not regard it as innate or automatic, but as acquired by instruction and taking thought. No one is angered by the faults which  
d are believed to be due to nature or chance, nor do people rebuke or teach or punish those who exhibit them, in the hope of curing them; they simply pity them. Who would be so foolish as to treat in that way the ugly or dwarfish or weak? Everyone knows that it is nature or chance which gives this kind of characteristics to a man, both the good and the bad. But it is otherwise with the good qualities which are thought to be acquired through care and practice and instruction. It  
e is the absence of these, surely, and the presence of the corresponding

vices, that call forth indignation and punishment and admonition. Among these faults are to be put injustice and irreligion and in general everything that is contrary to civic virtue. In this field indignation and admonition are universal, evidently because of a belief that such virtue can be acquired by taking thought or by instruction. Just consider the function of punishment, Socrates, in relation to the wrongdoer. That will be enough to show you that men believe it possible to impart goodness. In punishing wrongdoers, no one concentrates on the fact that a man has done wrong in the past, or punishes him on that account, unless taking blind vengeance like a beast. No, punishment is not inflicted by a rational man for the sake of the crime that has been committed—after all one cannot undo what is past—but for the sake of the future, to prevent either the same man or, by the spectacle of his punishment, someone else, from doing wrong again. But to hold such a view amounts to holding that virtue can be instilled by education; at all events the punishment is inflicted as a deterrent. This then is the view held by all who inflict it whether privately or publicly. And your fellow countrymen, the Athenians, certainly do inflict punishment and correction on supposed wrongdoers, as do others also. This argument therefore shows that they too think it possible to impart and teach goodness.

I think that I have now sufficiently demonstrated to you, first that your countrymen act reasonably in accepting the advice of smith and shoemaker on political matters, and secondly, that they do believe goodness to be something imparted by teaching. There remains the question which troubles you about good men—why it is that whereas they teach their sons the subjects that depend on instruction, and make them expert in these things, yet in their own brand of goodness they do not make them any better than others. On this, Socrates, I will offer you a plain argument rather than a parable as I did before. Think of it like this. Is there or is there not some one thing in which all citizens must share, if a state is to exist at all? In the answer to this question, if anywhere, lies the solution of your difficulty. If there is, and this one essential is not the art of building or forging or pottery but justice and moderation and holiness of life, or to concentrate it into a single whole, manly virtue—if, I say, it is this in which all must share and which must enter into every man's actions whatever other occupation he chooses to learn and practice; if the one who lacks it, man, woman, or child, must be instructed and corrected until by punishment he is reformed, and whoever does not respond to punishment and instruction must be expelled from the state or put to death as incurable—if all this is true, and in these circumstances our good men teach their sons other accomplishments but not this one thing, then think what extraordinary people good men must be! We have already shown that they believe it can be taught, both publicly and privately. But although virtue can be taught and cultivated, yet it

seems they have their sons instructed in other arts, ignorance of which is no matter for capital punishment, but although if they are left ignorant of virtue and morally uncultivated they may be punished  
 c by death or exile—and not only death but alienation of property and in a word the ruin of their estates—are we to suppose that they neglect this side of their education? Don't they rather bestow every care and attention upon it? Of course they do, Socrates. They teach and admonish them from earliest childhood and throughout their lives. As soon as a child can understand what is said to him, nurse, mother,  
 d tutor, and the father himself vie with each other to make him as good as possible, instructing him through everything he does or says, pointing out, 'This is right and that is wrong, this honorable and that disgraceful, this holy, that impious; do this, don't do that.' If he is obedient, well and good. If not, they straighten him with threats and beatings, like a warped and twisted plank.

Later on when they send the children to school, their instructions to the masters lay much more emphasis on good behavior than  
 e on letters or music. The teachers take good care of this, and when boys have learned their letters and are ready to understand the written  
 326 word as formerly the spoken, they set the works of good poets before them on their desks to read and make them learn them by heart, poems containing much admonition and many stories, eulogies, and panegyrics of the good men of old, so that the child may be inspired to imitate them and long to be like them.

The music masters by analogous methods instill self-control and deter the young from evil-doing. And when they have learned to play the lyre, they teach them the works of good poets of another sort,  
 b namely the lyrical, which they accompany on the lyre, familiarizing the minds of the children with the rhythms and melodies. By this means they become more civilized, more balanced, and better adjusted in themselves and so more capable in whatever they say or do, for rhythm and harmonious adjustment are essential to the whole of human life.

Over and above this, they are sent to a trainer, so that a good mind may have a good body to serve it, and no one be forced by physical  
 c weakness to play the coward in war and other ordeals.

All this is done by those best able to do it—that is, by the wealthy—and it is their sons who start their education at the earliest age and continue it the longest. When they have finished with teachers, the state compels them to learn the laws and use them as a pattern for their life, lest left to themselves they should drift aimlessly. You know how, when children are not yet good at writing, the writing  
 d master traces outlines with the pencil before giving them the slate, and makes them follow the lines as a guide in their own writing; well, similarly the state sets up the laws, which are inventions of good lawgivers of ancient times, and compels the citizens to rule and be ruled

in accordance with them. Whoever strays outside the lines, it punishes, and the name given to this punishment both among yourselves e and in many other places is correction, intimating that the penalty corrects or guides.

Seeing then that all this care is taken over virtue, both individually and by the state, are you surprised that virtue should be teachable, and puzzled to know whether it is? There is nothing to be surprised at. The wonder would be if it were not teachable.

Why then, you ask, do many sons of good men turn out worthless? I will tell you this too. It is nothing surprising, if what I said earlier was true, that this faculty, virtue, is something in which no one 327 may be a layman if a state is to exist at all. If it is as I say—and most assuredly it is—consider the matter with the substitution of any art you like. Suppose a state could not exist unless we were all flute players to the best of our ability, and everyone taught everyone else that art both privately and publicly, and scolded the bad flute player, and no one held back on this subject any more than anyone b now begrudges information on what is right and lawful or makes a secret of it as of certain other techniques. After all, it is to our advantage that our neighbor should be just and virtuous, and therefore everyone gladly talks about it to everyone else and instructs him in justice and the law. If then, as I say, it were so with flute playing, and we all showed equal eagerness and willingness to teach one another, do you think, Socrates, that the sons of good players would become good players in their turn any more than the sons of bad ones? Not so, I think, but whoever had a son with the greatest natural talent for the flute, his son would rise to fame, and a son without this talent would c remain in obscurity. The son of a good performer would often be a poor one, and vice versa, but at any rate all would be good enough in comparison with someone who knew nothing of flute playing at all.

Now apply this analogy to our present condition. The man who in a civilized and humane society appears to you the most wicked must be thought just—a practitioner, as one might say, of justice—if one has to judge him in comparison with men who have neither edu- d cation nor courts of justice nor laws nor any constraint compelling them to be continually heedful of virtue—savages in fact like those whom the playwright Pherecrates brought onto the stage at last year's Lenaea. If you found yourself among such people—people like the man-haters of his chorus—you would be only too glad to meet a Eurypatus and a Phrynonidas, and would bitterly regret the very depravity of our own society. But as it is you are spoiled, Socrates, e in that all are teachers of virtue to the best of their ability, and so you think that no one is. In the same way if you asked who teaches the 328 Greek language you would not find anyone, and again if you looked for a teacher of the sons of our artisans in the craft which they have in fact learned from their father to the best of their ability, and from his

friends in the same trade, there again I don't think it would be easy to point to a master, though in the case of a complete tyro it would be easy enough. Thus it is with virtue and everything else, so that if we can find someone only a little better than the others at advancing us on the road to virtue, we must be content.

- b My claim is that I am one of these, rather better than anyone else at helping a man to acquire a good and noble character, worthy indeed of the fee which I charge and even more, as my pupils themselves agree. On this account I have adopted the following method of assessing my payment. Anyone who comes to learn from me may either  
c pay the fee I ask for or, if he prefers, go to a temple, state on oath what he believes to be the worth of my instruction, and deposit that amount.

- There, Socrates, you have both the parable and the argument by which I have sought to show that virtue is teachable and that the Athenians believe it to be so, and that at the same time it is quite natural for the sons of good fathers to turn out good for nothing, and vice versa. Why, even the sons of Polyclitus, who are contemporaries of Paralus and Xanthippus here, cannot hold a candle to their father, nor can the sons of many other craftsmen. But it is too early to bring  
d such a charge against these two; they are young, and there is still promise in them.

- Here Protagoras brought to an end his long and magnificent display of eloquence. For a long time I gazed at him spellbound, eager to catch any further word that he might utter. When I saw that he had really finished, I collected myself with an effort and said, turning to Hippocrates: Son of Apollodorus, how grateful I am to you for inducing  
e me to come here. To have heard what Protagoras has just said is something I value very highly. I used to think that it was by no human diligence that good men acquired their goodness, but now I am convinced. There is just one small thing holding me back, which Protagoras I know will easily explain, now that he has instructed us on  
329 so many points. It is true that if a man talked on these matters with any of our popular orators, he might possibly hear similar discourses from Pericles or some other proficient speaker, but if one asks any of them an additional question, like books they cannot either answer or ask a question on their own account. Ask them the smallest thing supplementary to what they have said, and like a gong which booms out when you strike it and goes on until you lay a hand on it, so  
b our orators at a tiny question spin out a regular Marathon of speech. Protagoras on the other hand, though he is perfectly capable of long and splendid speeches as we have seen, has also the faculty of answering a question briefly, and when he asks one himself, of waiting and listening to the answer—a rare accomplishment.

Now then, Protagoras, there is just one small question left, your answer to which will give me all I want. You say that virtue is teach-

able, and there is no one I would believe sooner than you. But there is one thing which took me by surprise in your speech, and I should like you to fill this gap in my mind. You said that Zeus bestowed on men justice and respect for their fellows, and again at several points in your discourse justice and self-control and holiness and the rest were mentioned as if together they made up one thing, virtue. This is the point I want you to state for me with more precision. Is virtue a single whole, and are justice and self-control and holiness parts of it, or are these latter all names for one and the same thing? That is what I still want to know.

Well, that is easy to answer, said he. Virtue is one, and the qualities you ask about are parts of it.

Do you mean, said I, as the parts of a face are parts—mouth, nose, eyes, and ears—or like the parts of a piece of gold, which do not differ from one another or from the whole except in size?

In the first way, I should say—that is, they are in the relation of the parts of a face to the whole.

Then do men so share in these parts of virtue that some have one and some another, or must a man who possesses one of them possess them all?

By no means. Many men are brave but unjust, and others are just but not wise.

Are these also parts of virtue? said I. Wisdom, I mean, and courage?

Most emphatically. Wisdom indeed is the greatest of the parts. And each of them is different from the others?

Yes.

Has each also its own function? In a face, the eye is not like the ear nor has it the same function. Nor do the other parts resemble one another in function any more than in other respects. Is this how the parts of virtue differ, both in themselves and in their function? It must be so, I suppose, if the parallel holds good.

Yes it is so, Socrates.

Then no other part of virtue resembles knowledge or justice or courage or temperance or holiness.

He agreed.

Now let us consider together what sort of thing each is. First of all, is there such a thing as justice or not? I think there is.

So do I, he said.

Well, if someone asked you and me, 'Tell me, you two, this thing that you mentioned a moment ago—justice—is it itself just or unjust?' I myself should answer that it was just. Which way would you vote?

The same as you, he said.

Then we would both answer that justice is of such a nature as to be just?

d He agreed.

If he next asked, 'You say that there is also such a thing as holiness?' we should agree I suppose?

Yes.

'Meaning that holiness too is a thing?' We should still assent?

He agreed again.

'Do you then say that this thing is of a nature to be holy or unholy?' Personally I should be annoyed at this, and say, 'What a blasphemous question! Nothing else could well be holy if we won't allow holiness itself to be so.' What about you? Wouldn't that be your answer?

Certainly, he said.

Suppose now he went on to ask us, 'But what did you say a few minutes ago? Didn't I hear you rightly? I thought you said that the parts of virtue are so related that one does not resemble the other.' For my part I should reply, 'You have got most of it right, but your ears deceived you if you think I said that myself. It was Protagoras' answer to a question I put.' Now if he asks you, 'Is this true, Protagoras? Is it you who say that one part of virtue does not resemble another? Is this your statement?'—what would you answer?

I should have to admit it, he said.

Then having agreed about this, what shall we say if he goes on to ask, 'Then it is not the nature of holiness to be something just, nor of justice to be holy; it will be not-holy, and holiness will be not-just—that is, unjust, and justice unholy?' What shall we answer? I should say on my own behalf that justice is holy and holiness just, and on your behalf, if you would allow me, I should make the same reply, that justice is either the same thing as holiness or very like it, and that justice unquestionably resembles holiness and holiness justice. Are you going to prevent me from making this answer, or do you agree with me?

I don't think it is quite so simple, Socrates. I can't really admit that justice is holy and holiness just; I think there is some difference there. However, he said, what does it matter? If you like, let us assume that justice is holy and holiness just.

Excuse me, I said. It isn't this 'if you like' and 'if that's what you think' that I want us to examine, but you and me ourselves. What I mean is, I think the argument will be most fairly tested, if we take the 'if' out of it.

Well of course, he replied, justice does have some resemblance to holiness. After all, everything resembles everything else up to a point. There is a sense in which white resembles black, and hard soft, and so on with all other things that present the most contrary appearances. Even the parts of the face, which we described earlier as having different functions and not being like each other, have a certain resemblance and are like each other in some way. So by your

method you can prove, if you want to, that they too all resemble one another. But it is not right to call things similar because they have e some one point of similarity, even when the resemblance is very slight, any more than to call things dissimilar that have some point of dissimilarity.

At this I said in some surprise, And is this how you suppose justice to be related to holiness, that there is only a slight resemblance between them?

Not quite that, but not on the other hand in the way that you seem to believe.

Well, said I, this line of argument doesn't seem to be agreeable to 332 you, so let us drop it and look at something else that you said. You recognize the existence of folly?

Yes.

Is not wisdom altogether contrary to it?

Yes.

And when men act rightly and advantageously, do you regard them as acting temperately or not?

Temperately.

That is to say with temperance?

Of course.

And those who act wrongly act foolishly, and in doing so do not behave temperately? b

He agreed.

Then foolish behavior is the opposite of temperate?

Yes.

And foolish behavior is the outcome of folly, and temperate of temperance?

Yes.

If something is done with strength, it is done strongly, and if with weakness weakly, if with speed quickly, and if with slowness slowly?

Yes.

What is done in the same manner is done by the same agency, c and if contrariwise, by the contrary?

He agreed.

Again, said I, you recognize the existence of the fair?

He did.

Has it any contrary except the foul?

No.

And the good too you recognize?

Yes.

Has it any contrary except the bad?

No.

And also high pitch in sound? And has it any other contrary but low?

No.

In short, said I, to everything that admits of a contrary there is one contrary and no more.

He conceded the point.

- d Now, said I, let us recapitulate our points of agreement. We agreed that each thing has one contrary and no more, that what is done in a contrary manner is done by a contrary agency, that a foolish action is contrary to a temperate one, and that a temperate action is performed with temperance and a foolish one with folly.

- e He admitted all this.

If then what is done in a contrary manner is done by a contrary agency, and one action is performed with temperance and the other with folly—in a contrary manner and so by contrary agencies—then folly is the contrary of temperance.

It seems so.

Now you remember our earlier agreement that folly was the contrary of wisdom?

Yes.

And that one thing has one contrary?

Certainly.

- 333 Then which statement are we to give up? The dictum 'one thing one contrary' or the statement that wisdom is a distinct thing from temperance, both being parts of virtue, and that in addition to each being distinct they are dissimilar both in themselves and in their functions, like the parts of a face? Which shall we renounce? The two statements are not very harmonious. They don't chime well together or fit in with each other. How could they, if one thing can have only one opposite, and yet though folly is only one thing, temperance as well as wisdom appears to be contrary to it? Isn't that the way of it, Protagoras?

He agreed, though most reluctantly.

Then must not temperance and wisdom be the same, just as earlier justice and holiness turned out to be much the same? Come now, Protagoras, we must not falter, but complete our inquiry. Do you think that a man who commits an injustice acts temperately in committing it?

c For my part I should be ashamed to agree to that, he replied. Of course many people do.

Well, shall I direct my argument against them or against you?

If you wish, he said, argue first against the proposition of the many.

It is all the same to me, said I, provided you make the replies, whether it is your own opinion or not. It is the argument itself that I wish to probe, though it may turn out that both I who question and you who answer are equally under scrutiny.

- d At first Protagoras began to make difficulties, alleging that it

would be hard to conduct a discussion on these terms, but in the end he agreed to answer.

Good, said I. Now let us start from the beginning. You believe that some people show temperance in doing wrong?

We will suppose so, he said.

And to show temperance is to show good sense?

Yes.

Which means that in doing wrong they have planned well?

So be it.

If their wrongdoing is successful or unsuccessful?

If it is successful.

You agree that some things are good?

Yes.

And do you mean by good those things which are beneficial to men?

Not only those, he said. Even if they are not beneficial to me, I e still call them good.

At this point I thought Protagoras was beginning to bristle, ready for a quarrel and preparing to do battle with his answers. Seeing this I became more cautious and proceeded gently with my questioning: Do you mean things which are beneficial to no human being, or things 334 that are not beneficial at all? Do you call them good also?

Of course not, he said. But I know plenty of things—foods, drinks, drugs, and many others—which are harmful to men, and others which are beneficial, and others again which, so far as men are concerned, are neither, but are harmful or beneficial to horses, and others only to cattle or dogs. Some have no effect on animals, but only on trees, and some again are good for the roots of trees but injurious to the young growths. Manure, for instance, is good for all plants b when applied to their roots, but utterly destructive if put on the shoots or young branches. Or take olive oil. It is very bad for plants, and most inimical to the hair of all animals except man, whereas men find it of service both to the hair and to the rest of the body. So diverse and multiform is goodness that even with us the same thing is good when applied externally but deadly when taken internally. Thus all c doctors forbid the sick to use oil in preparing their food, except in the very smallest quantities, just enough to counteract the disagreeable smell which food and sauces may have for them.

The audience vigorously applauded this speech. Then said I, I'm a forgetful sort of man, Protagoras, and if someone speaks at length, I lose the thread of the argument. If I were a little deaf, you would d recognize the necessity of raising your voice if you wanted to talk to me; so now since you find me forgetful, cut down your answers and make them shorter if I am to follow you.

What do you mean by 'make my answers short'? Am I to make them shorter than the subject demands?

Of course not.

As long as is necessary then?

e Yes.

As long a reply as *I* think necessary, or *you*?

What they told me, I answered, is that you have the gift both of speaking yourself and of teaching others to speak, just as you prefer—either at length, so that you never run dry, or so shortly that no one  
335 could beat you for brevity. If then you are going to talk to me, please use the second method and be brief.

Frankly, Socrates, said he, I have fought many a contest of words, and if I had done as you bid me, that is, adopted the method chosen by my opponent, I should have proved no better than anyone else, nor would the name of Protagoras have been heard of in Greece.

I saw that he was dissatisfied with his own performance in the answers he had given, and would not of his own free will continue in  
b the role of answerer, and it seemed to me that it was not my business to remain any longer in the discussions. Well, I said, I have no wish myself to insist on continuing our conversation in a way that you don't approve. I will talk with you another time, when you are willing to converse so that I can follow. You for your part, as others say and you say for yourself, can carry on a discussion both in long and short  
c speeches, for you are a gifted man. I on the other hand cannot manage these long speeches—I wish I could. It was for you, who can do both, to indulge me and so make our discussion possible. But since you would rather not, and I have something to do and could not stay while you spin out your long speeches, I will leave you. I really ought to be going. Otherwise I should probably be glad to hear them.

With these words I got up to leave. As I did so Callias caught my  
d hand with his right hand, and with his left took hold of this old coat of mine and said, We shan't let you go, Socrates. Our talk won't be the same without you. Please stay with us. There is nothing that I would rather listen to than a conversation between you and Protagoras. You will be doing us all a kindness.

I was already standing up to go, and answered, Son of Hipponicus, I have always admired your enthusiasm for wisdom. Believe  
e me, I praise and love you for it now, and would gladly do what you wish, if your request were within my power to fulfill. But it's as if you were to ask me to keep up with Crison, the runner from Himera, when he was in his prime, or to run a race against some three-miler or  
336 Marathon champion. I would say that to run with them would please me even more than it would please you, but I can't do it. If you want to see me and Crison running together, you must ask him to lower his standards, for I can't run fast, but he can run slowly. So if you want to hear Protagoras and me, ask him to go on answering me as he did at first, briefly and keeping to the point of my questions. How can

we have a discussion otherwise? Personally I thought that companionable talk was one thing, and public speaking another. b

But don't you see, Socrates? he said. Protagoras is surely right in thinking that he is entitled to talk in the way that suits him, just as much as you are.

Here Alcibiades broke in. No, no, Callias, he said. Socrates admits frankly that long speeches are beyond him and that Protagoras has the better of him there, but in discussion and the intelligent give-and-take of arguments I doubt if he would give any man best. If Protagoras in his turn admits that Socrates beats him in discussion, Socrates will be satisfied. But if he maintains his claim, let him continue the discussion with question and answer, not meeting every question with a long oration, eluding the arguments and refusing to meet them properly, spinning it out until most of his hearers have forgotten what the question was about—not that Socrates will be the one to forget it. I'll guarantee that, in spite of his little joke about being forgetful. I hold then that what Socrates proposes is the more reasonable, and I suppose it's right for each of us to say what he thinks. d

After Alcibiades, so far as I remember, it was Critias who spoke, addressing his remarks to Prodicus and Hippias. Callias, he said, seems to me to be very much on the side of Protagoras, and Alcibiades is always out to win when he takes up a cause. But it is not for us to be partisans either of Socrates or of Protagoras. Let us implore them both alike not to break up the discussion in mid-career. e

Hearing this, Prodicus began, You are quite right, Critias. Those who are present at discussions of this kind must divide their attention between the speakers impartially, but not equally. The two things are not the same. They must hear both alike, but not give equal weight to each. More should be given to the wiser, and less to the other. I add my plea, Protagoras and Socrates, that you should be reconciled. Let your conversation be a discussion, not a dispute. A discussion is carried on among friends with good will, but a dispute is between rivals and enemies. In this way our meeting will be best conducted. You, the speakers, will be esteemed by us—esteemed, I say, not praised, for esteem is a genuine feeling in the hearts of the audience, whereas praise is often on the lips of men belying their true conviction—and we who listen will experience enjoyment rather than pleasure. Enjoyment can result from learning and partaking in the intellectual activity of the mind alone, but pleasure arises rather from eating or other forms of physical indulgence. 337

So said Prodicus, and a large number of those present expressed agreement. After him the wise Hippias spoke up. Gentlemen, he said, I count you all my kinsmen and family and fellow citizens—by nature, not by convention. By nature like is kin to like, but custom, the tyrant of mankind, does much violence to nature. For us then who d

understand the nature of things, who are the intellectual leaders of Greece and in virtue of that very fact are now assembled in Athens, the center and shrine of Greek wisdom, and in this the finest house of that city, it would be a disgrace if we produced nothing worthy of our fame but fell to bickering like the lowest of mankind.

And so my request and my advice to you, Protagoras and Socrates, is to be reconciled, allowing us to act as mediators and bring you together in a compromise. Socrates should not insist on the strict forms of discussion, carried on through the briefest of exchanges, if it is unwelcome to Protagoras, but should give way and slacken the reins of his discourse, so that it may wear for us a more dignified and elegant air, and Protagoras should refrain from shaking out every reef and running before the wind, launching out on a sea of words till he is out of sight of land. Let both take a middle course. Do this, take my advice, and appoint an arbitrator, referee, or president to preserve a moderate length in the speeches of both of you.

This counsel won general consent and a round of applause. Callias refused to let me go and they told us to choose an overseer. But I said that it would be unfitting to choose an arbitrator over our words. If he were a man of lesser attainments, it would be wrong to set him over his betters, and if he were someone like ourselves it would still not be proper, for in resembling us he would act like us, and his appointment would be superfluous.

Well then, you will say, we will choose someone superior. But the fact is, in my opinion, that it would be impossible for you to choose anyone wiser than Protagoras, and if you choose some lesser man and pretend he is better, this again would be to insult him, appointing someone over him as if he were a nobody. For myself I am indifferent.

I have another proposal to enable our discussion to proceed as you wish it to. If Protagoras is unwilling to give replies, let him be the questioner and I will answer, and at the same time try to show him how, in my submission, the respondent should speak. When I have answered as many questions as he likes to put, let him in return render similar account to me. Then if he does not seem to wish to answer a question as put, you and I will appeal to him jointly, as you did to me, not to spoil the discussion. For this purpose we have no need of a single arbitrator; you will all keep watch on us together.

Everyone thought this was the right way to proceed. Protagoras was most unwilling, but he had to agree to be the questioner, and then when he had questioned me sufficiently, to submit himself to me in turn and make brief replies.

He began his questions something like this. In my view, Socrates, the most important part of a man's education is to become an authority on poetry. This means being able to criticize the good and bad points of a poem with understanding, to know how to distinguish them, and give one's reasons when asked. My question to you therefore

will concern the subject of our present discussion, namely virtue, but transferred to the realm of poetry. That will be the only difference. Simonides in one of his poems says to Scopas, son of Creon of Thessaly,

Hard is it on the one hand to become b  
A good man truly, hands and feet and mind  
Foursquare, wrought without blame.

Do you know the piece, or should I recite it all to you?

There is no need, I said. I know it and have given it quite a lot of study.

Good. Now do you think it a beautiful and well-written poem?

Yes, both beautiful and well written.

And do you think a poem beautifully written if the poet contradicts himself?

No.

Then look at it more closely.

But really I have given it enough thought. c

Then you must know that as the poem proceeds he says:

Nor do I count as sure the oft-quoted word  
Of Pittacus, though wise indeed he was  
Who spoke it. To be noble, said the sage,  
Is hard.

You understand that this is the same poet as wrote the previous lines?

Yes.

Then you think the two passages are consistent?

For my part I do, said I, though not without a fear that he might be right. Don't you?

How can a man be thought consistent when he says both these d things? First he lays it down himself that it is hard for a man to become truly good; then when he is a little further on in the poem he forgets. He finds fault with Pittacus, who said the same thing as he did himself, that it is hard to be noble, and refuses to accept it from him; but in censuring the man who said the same as he does, he obviously censures himself. Either his first or his second statement is wrong.

This sally evoked praise and applause from many of the audience, and at first I was like a man who has been hit by a good boxer; at e his words and the applause things went dark and I felt giddy. Then I turned to Prodicus—and to tell you the truth, this was a move to gain time to consider what the poet meant—and appealed to him by name. Prodicus, I said, Simonides is of course your fellow citizen; you ought to come to his aid. I think I will call on you as the river 340 Scamander in Homer called on the Simois when hard pressed by Achilles, with the words:

Dear brother, let us both together stem the hero's might.<sup>3</sup>

So I appeal to you lest our Simonides be sacked by Protagoras like another Troy, since truly to justify Simonides calls for that art of yours  
b whereby you discern the difference between 'wish' and 'desire' and make all those other elegant distinctions which we heard just now. So see whether you agree with me. I don't believe Simonides contradicts himself. Now let us have your opinion first. Do you think 'to become' and 'to be' are the same, or different?

Different, most certainly, said Prodicus.

Well, at the beginning Simonides gave his own view, that it is  
c difficult to become a good man, didn't he?

True, said Prodicus.

But as for Pittacus, he censures him not, as Protagoras thinks, for saying the same thing, but something different. According to Pittacus, the difficulty is not to *become* noble, as Simonides said it was, but to *be*. As Prodicus says, Protagoras, to be and to become are not the same; and if to be is not the same as to become, Simonides is not contradicting himself. I shouldn't be surprised if Prodicus and many others  
d would agree with Hesiod that it is difficult to *become* good—he says, you remember,

The gods have put sweat on the path to virtue,  
but when

The summit's reached,  
Hard though it was, thenceforth the task is light  
To keep it.<sup>4</sup>

Prodicus commended my explanation, but Protagoras said, Your justification, Socrates, involves a greater error than the one it sets out to defend.

It seems then, said I, that I have done harm, and am a contemptible  
e physician, whose cure inflames the disease.

Well, it is so.

Explain, said I.

The poet must be very stupid, if he says that it is such a light matter to hold on to virtue, when everyone agrees that there is nothing more difficult.

To this I rejoined, It's a remarkably lucky thing that our friend Prodicus happens to be present at this discussion. I have a notion that  
341 his branch of wisdom is an old and god-given one, beginning perhaps with Simonides or going even further back. Your learning covers many things but not, it appears, this. You are not acquainted with it as I have become through being a pupil of Prodicus. So now I don't think you understand that Simonides may not have taken this word

<sup>3</sup> *Iliad* 21.308.

<sup>4</sup> *Works and Days* 289.

'hard' as you do. It may be like the word 'terrible' which Prodicus is always scolding me about, when in praising you or someone else I say, 'Protagoras is a terribly clever person.' He asks me if I'm not ashamed to call good things terrible. What is terrible, he says, is bad. No one speaks of 'terrible wealth' or 'terrible peace,' but rather of 'a terrible disease,' 'a terrible war,' 'terrible poverty.' Perhaps then the Cean and Simonides understand 'hard' as connoting something bad, or something else which you don't know. Let's ask Prodicus, for he is the right man to ask about the dialect of Simonides. Prodicus, what does Simonides mean by 'hard'?

Bad, he replied.

Then that is why he blames Pittacus for saying, 'It is hard to be noble,' just as if he had heard him saying that it was bad to be noble.

What else do you suppose Simonides means? said Prodicus. He is reproaching Pittacus with not knowing how to distinguish meanings properly, being a Lesbian and brought up in a barbarous dialect.

Do you hear that, Protagoras? said I. Have you anything to say to it?

It is not at all like that, said Protagoras. I know very well that by 'hard' Simonides meant what the rest of us mean—not 'bad,' but what is not easy, only accomplished with much effort.

I believe myself that that is what Simonides meant, said I, and I am sure Prodicus knew it. He is joking, and wants to test your ability to stand up for your own opinion. Actually the very next words provide ample proof that Simonides did not equate 'hard' with 'bad.' He goes on,

A god alone can have this privilege,

and presumably he does not first say 'it is bad to be noble' and then add that only a god could achieve it, and allot it as a privilege entirely divine. That would mean that Prodicus is calling Simonides quite unprincipled and no true Cean. However, I am ready to tell you my own opinion of Simonides' meaning in this song, if you wish to test my skill in poetry, as you call it, but if you prefer it I will listen to you.

Please speak if you will, said Protagoras when he heard this, and Prodicus, Hippias, and the others urged me strongly.

Well then, said I, I will try to expound to you the view that I take. The most ancient and fertile homes of philosophy among the Greeks are Crete and Sparta, where are to be found more Sophists than anywhere on earth. But they conceal their wisdom like the Sophists Protagoras spoke of, and pretend to be fools, so that their superiority over the rest of Greece may not be known to lie in wisdom, but seem to consist in fighting and courage. Their idea is that if their real excellence became known, everyone would set to work to become wise. By this disguise they have taken in the pro-Spartans in other

cities, who to emulate them go about with bruised ears, bind their  
 c hands with thongs, take to physical training, and wear short cloaks,  
 under the impression that these are the practices which have made  
 the Spartans a great power in Greece; whereas the Spartans, when  
 they want to resort freely to their wise men and are tired of meeting  
 them in secret, expel all resident aliens, whether they be sympathizers  
 with the Spartan way of life or not, and converse with the Sophists  
 d unbeknown to any foreigners. Conversely they don't allow any of  
 their youths to go abroad, for fear they should forget what they have  
 learned at home. No more do the Cretans. And in these states there  
 are not only men but also women who are proud of their intel-  
 lectual culture.

Now this is how you may know that I am telling the truth and  
 that the Spartans are the best educated in philosophy and speak-  
 ing. If you talk to the most ordinary Spartan, you will find that for  
 e most of the time he shows himself a quite unimpressive speaker. But  
 then, at some chance point in the conversation, like a brilliant marks-  
 man he shoots in a telling phrase, brief and taut, showing up who-  
 ever is talking to him to be as helpless as a child.

Now there are some, both at the present day and in the past, who  
 have tumbled to this fact, namely that to be Spartan implies a taste  
 for intellectual rather than physical exercise, for they realize that to  
 343 frame such utterances is a mark of the highest culture. Of these were  
 Thales of Miletus, Pittacus of Mytilene, Bias of Priene, our own Solon,  
 Cleobulus of Lindus, and Myson of Chen, and the seventh of their  
 company, we are told, was a Spartan, Chilon. All these were emulators,  
 admirers, and disciples of Spartan culture, and their wisdom may be  
 recognized as belonging to the same category, consisting of pithy and  
 b memorable dicta uttered by each. Moreover they met together and  
 dedicated the first fruits of their wisdom to Apollo in his temple at  
 Delphi, inscribing those words which are on everyone's lips, 'Know  
 thyself' and 'Nothing too much.'

I mention these facts to make the point that, among the ancients,  
 this Laconic brevity was the characteristic expression of philosophy.  
 In particular this saying of Pittacus, 'Hard is it to be noble,' got into  
 circulation privately and earned the approval of the wise. It occurred  
 c therefore to Simonides, with his philosophical ambitions, that if he  
 could floor this favorite maxim with a triumphant knockout, he would  
 become the favorite of his own day. In my judgment he wrote the  
 whole poem against the saying of Pittacus and on its account, in a de-  
 liberate effort to damage its fame.

Now let us all examine it together, to see whether I am right. At  
 the very beginning of the poem, it seems crazy, if he wished to say  
 a that it is hard to become a good man, that he should then insert 'on the  
 one hand.' The insertion seems to make no sense, except on the sup-  
 position that Simonides is speaking polemically against the saying of

Pittacus. Pittacus said, 'Hard is it to be noble,' and Simonides replied, disputing the point, 'No, to *become* a good man is hard truly'—not, by the way, 'to become truly good'—he does not refer the 'truly' to that, as if some men were truly good and others good but not truly so. That would strike people as silly and unlike Simonides. We must transpose the word 'truly' in the poem, thus as it were implying the saying of Pittacus before it, as if he spoke first and Simonides were answering his words. Thus, 'O men, hard is it to be noble,' and Simonides replies, 344 'That is not true, Pittacus; not to *be* but to *become* a good man, four-square in hands and feet and mind, wrought without blame, that is hard truly.'

On this view we find that 'on the one hand' comes in reasonably, and that 'truly' finds its proper place at the end. Everything that follows bears out my opinion that this is the sense. Much could be said about each phrase in the poem to testify to the excellence of its composition—it is indeed an elegant and well-thought-out production—but to go through it in such detail would take too long. Nevertheless let us review its general character and intention, which is undoubtedly to constitute, throughout its length, a refutation of the saying of Pittacus.

A little further on Simonides says, as if he were developing an argument, that although to become a good man is truly difficult, yet it is possible, for a while at least, 'but having become good, to remain in this state and *be* a good man—which is what you were speaking of, Pittacus—is impossible and superhuman. This is the privilege of a god alone, whereas

He cannot but be bad, whom once  
Misfortune irredeemable casts down.'

Now who is cast down by irredeemable misfortune in the management of a ship? Clearly not the passenger, for he has *been* down all the time. You cannot knock down a man who is lying on the ground; you can only knock him down if he is standing, and put him on the ground. In the same way irredeemable misfortune may cast down the resourceful, but not the man who is helpless all the time. The steersman may be reduced to helplessness by the onset of a great storm, the farmer by a bad season, and the doctor from some analogous misfortune. For the good may become bad, as another poet has testified in the line,

The good are sometimes bad and sometimes noble,

but the bad man cannot become bad, but *is* so of necessity. So it is that the resourceful and wise and good, when irredeemable disaster brings him to nought, cannot but be bad.

You say, Pittacus, 'Hard is it to be noble,' whereas to *become* noble is hard, though possible, but to *be* so is impossible,

For when he fares well every man is good,  
But in ill faring, evil.

- 345 Now what is faring well in letters, and what makes a man good at them? Clearly the learning of them. And what is the faring well that makes a good doctor? Clearly it is learning how to heal the sick. 'But in ill faring, evil.' Who is it who becomes a bad doctor? Clearly a man who is both a doctor and a good doctor; he might become a bad doctor also. But we who are laymen in medicine could never by faring ill become doctors or builders or any other kind of technician, and he who  
b cannot by faring badly become a doctor cannot, obviously, become a bad doctor. Even so the good man may as easily be made bad, by lapse of time or fatigue or illness or some other accident, seeing that this is the only real ill faring, to be deprived of knowledge. But the bad man cannot be made bad, for he is so all the time. If he is to *become* bad, he  
c must first become good. Thus this part of the poem also teaches the same lesson, that to be a good man—continuing good—is not possible, but a man may *become* good, and the same man bad, and those are best for the longest time whom the gods love.

All this, then, is aimed at Pittacus, and the next bit even more plainly so, for he goes on,

Then never shall I vainly cast away  
In hopeless search my little share of life,  
Seeking a thing impossible to be,  
A man all blameless, among those who reap  
The fruit of the broad earth. But should I find him  
I'll send you word.

- d See how violently, throughout the poem, he attacks the saying of Pittacus—

But all who do no baseness willingly  
I praise and love. The gods themselves strive not  
Against necessity.

- This is all to the same purpose. Simonides was not so ignorant as to say that he praised all who did no evil voluntarily, as if there were any  
e who did evil voluntarily. For myself I am fairly certain that no wise man believes anyone sins willingly or willingly perpetrates any evil or base act. They know very well that all evil or base action is involuntary. So here Simonides is not saying that he praises whoever does no evil willingly. The word 'willingly' applies to himself. His view was  
346 that a good man often forces himself into love and praise, as when someone's mother or father or native land is unsympathetic to him. The less worthy, when they find themselves in such a position, seem to accept it happily and expose the unworthiness of parents or country with reproaches and denunciations, so that they may neglect their duty toward them without thereby incurring the blame or reproaches of

others. They even exaggerate their censure and add gratuitous hostility to that which cannot be helped. Good men on the other hand conceal such faults and are constrained to praise, and if they feel anger at some wrong done to them by parents or country, they calm themselves and seek reconciliation, compelling themselves to love and praise their own kin. No doubt Simonides had in mind that he himself had often eulogized a tyrant or someone of that stamp not of his own free will but under compulsion.

This then is addressed to Pittacus in particular, as if to say, My reason for blaming you, Pittacus, is not that I am a faultfinder, for c

to me that man suffices  
Who is not bad nor overweak, but sound  
In heart and knowing righteousness, the weal  
Of nations. I shall find no fault with him—

I am not, he says, a censorious man—

For beyond number is the tribe of fools.

So, he implies, if anyone takes pleasure in faultfinding, he may have his fill in censuring them.

All is fair that is unmixed with foul.

He does not say this in the sense in which he might say, 'all is white d that is unmixed with black'—that would be ridiculous on many counts—but meaning that for his part he accepts without censure the middle state. I do not seek, he has said,

A man all blameless, among those who reap  
The fruit of the broad earth. But should I find him  
I'll send you word.

If I wait for perfection I shall praise no one. For me it is enough if he reach the mean and do no evil, since

I praise and love all—

note that he uses the Lesbian dialect here because he is addressing Pittacus— e

I praise and love all willingly

—this is where the pause is to be made in speaking it, at 'willingly'—

Who do no baseness,

though there are those whom I praise and love against my will. If then you spoke with an even moderate degree of reasonableness and truth, Pittacus, I should never blame you. But as it is you have made an utterly false statement about something of the highest import, and it passes for true. For that I do blame you. 347

That, gentlemen, I concluded, is my interpretation of the mind of Simonides in writing this poem.

This exposition of yours, said Hippias, seems to me highly meritorious. However, I also have an interesting thesis on the poem, which I will expound to you if you wish.

Yes, another time, Hippias, said Alcibiades. But at present Socrates and Protagoras must carry out their agreement. Let Socrates reply if Protagoras wants to ask further questions, or if he prefers to answer Socrates, then let Socrates do the questioning.

Then, said I, I leave it to Protagoras to do whichever pleases him.

c But if he is agreeable, I suggest we leave the subject of songs and poems, for I should be glad to reach a conclusion, Protagoras, in a joint investigation with you, on the matters about which I asked you at the beginning. Conversation about poetry reminds me too much of the wine parties of second-rate and commonplace people. Such men, being too uneducated to entertain themselves as they drink by using  
d their own voices and conversational resources, put up the price of female musicians, paying well for the hire of an extraneous voice—that of the pipe—and find their entertainment in its warblings. But where the drinkers are men of worth and culture, you will find no girls piping or dancing or harping. They are quite capable of enjoying their own company without such frivolous nonsense, using their own voices in sober discussion and each taking his turn to speak or listen—even  
e if the drinking is really heavy. In the same way gatherings like our own, if they consist of men such as most of us claim to be, call for no extraneous voices—not even of poets. No one can interrogate poets about what they say, and most often when they are introduced into the discussion some say the poet's meaning is one thing and some another, for the topic is one on which nobody can produce a conclusive argument. The best people avoid such discussions, and entertain each  
348 other from their own resources, testing one another's mettle in what they have to say themselves. These are the people, in my opinion, whom you and I should follow, setting the poets aside and conducting the conversation on the basis of our own ideas. It is the truth, and our own minds, that we should be testing. If you want to go on with your questions, I am ready to offer myself as an answerer, or, if you prefer, be my respondent, to bring to its conclusion the discussion which we broke off in the middle.

b When I said this, and more to the same effect, Protagoras gave no clear indication of which he would do. Alcibiades then glanced at Callias and said, Do you still approve of what Protagoras is doing, refusing to say whether or not he will be the answerer? I don't. Let him either continue the discussion or tell us that he is unwilling, so that we may know where we are with him, and Socrates can talk to someone else, or any of the rest of us start a conversation.

These words of Alcibiades, and requests from Callias and almost c all those present, made Protagoras feel ashamed, or so I thought, and induced him to return reluctantly to the discussion. He said therefore that he would answer and told me to put my questions.

Protagoras, I began, please don't think that I have any other purpose in this discussion than to investigate questions which continually baffle me. I believe Homer hit a nail on the head when he said, 'If two go together, one perceives before the other.'<sup>5</sup> Somehow we all feel a better fortified in this way for any action or speech or thought. But to continue the quotation, 'If one alone perceive'—why he goes off at once looking for someone to whom he can show his idea and with whom he can confirm it, and will not rest till he finds him. That is why I would rather talk to you than to anyone else, because I think you are the most capable of elucidating the kind of questions that a good man gives his mind to, and in particular the question of virtue. After e all, whom else should I look for? Not only are you, as you believe, an excellent member of society yourself—there are some men very good in themselves who cannot pass on their good qualities to others—but you have also the ability to make others good, and with such confidence that although some have made a secret of their art you openly 349 announce yourself to the Greeks by the name of Sophist and set up as a teacher of culture and virtue, the first to claim payment for this service. Naturally I must call on you for assistance in pondering these subjects and enlist you with me by asking you questions. It could not be otherwise.

I want then to go back to the beginning, to my first questions to you on this subject. Some things I want you to remind me of, and others I want to investigate with your help. The question, if I am not mistaken, was this. Wisdom, temperance, courage, justice, and holiness b are five terms. Do they stand for a single reality, or has each term a particular entity underlying it, a reality with its own separate function, each different from the other? Your answer was that they are not names for the same thing, but that each of these terms applies to its c own separate reality, and that all these things are parts of virtue, not like the parts of a lump of gold all homogeneous with each other and with the whole of which they are parts, but like the parts of a face, resembling neither the whole nor each other and each having a separate function. If you are still of the same mind, say so, but if not, then declare yourself. I certainly shall not hold you to your words if you now express yourself differently. Very likely you spoke as you did to test me.

No, he said. My view is that all these are parts of virtue, and that d four of them resemble each other fairly closely, but courage is very

<sup>5</sup> *Iliad* 10.224.

different from all the rest. The proof of what I say is that you can find many men who are quite unjust, unholy, intemperate, and ignorant, yet outstandingly courageous.

- e Stop, said I. What you say merits investigation. Do you qualify the courageous as confident, or in any other way?

As confident, yes, and keen to meet dangers from which most men shrink in fear.

Then again, you consider virtue an honorable thing, and it is on the assumption that it is honorable that you offer to teach it?

Unless I am quite mad, it is the most honorable of all things.

Part base and part honorable, I asked, or all honorable?

All honorable, as honorable as can be.

- 350 Now do you know which men plunge fearlessly into tanks?

Yes, divers.

Is that because they know their job or for some other reason?

Because they know their job.

And what men feel confidence in a cavalry engagement—trained or untrained riders?

Trained.

And in fighting with the light shield—peltasts or nonpeltasts?

- Peltasts. And this holds good generally, if that is what you are after. Those with the relevant knowledge have more confidence than  
b those without it, and more when they have learned the job than they themselves had before.

But, said I, have you ever seen men with no understanding of any of these dangerous occupations who yet plunge into them with confidence?

Indeed yes, with only too much confidence.

Then does not their confidence involve courage too?

No, for if so, courage would be something to be ashamed of. Such men are mad.

How then do you define the courageous? Did you not say they were the confident?

Yes, I still maintain it.

- c Well, those who are thus ignorantly confident show themselves not courageous but mad, and conversely, in the other case it is the wisest that are also most confident, and therefore most courageous? On this argument it is their knowledge that must be courage.

- No, Socrates, he said. You have not remembered rightly what I said in my reply. When you asked me whether the courageous are confident, I agreed, but I was not asked whether the confident are also courageous—if you had asked me that at the time, I should have said  
d ‘not all of them’—and you have nowhere disproved my admission by showing that the courageous are not confident. Further, when you argue that those who have knowledge are more confident than they were before, and also than others who are ignorant, and thereupon con-

clude that courage and wisdom are the same thing, you might as well go on and conclude that physical strength is knowledge. First of all you would proceed to ask me whether the strong are powerful, and I should agree. Next, whether those who know how to wrestle are more powerful than those who do not, and more powerful after they have learned than before; again I should agree, and it would then be open to you to say, adducing the same proofs, that on my own admission wisdom is physical strength. But here again I nowhere admit that the powerful are strong, only that the strong are powerful. Power and strength are not the same. Power can result from knowledge, and also from madness or passion, whereas strength is a matter of natural constitution and bodily nurture. Similarly in our present discussion, I deny that confidence and courage are the same, and it follows that the courageous are confident but not all the confident are courageous. Confidence, like power, may be born of skill, or equally of madness or passion, but courage is a matter of nature and the proper nurture of the soul.

Well, said I, you speak of some men living well, and others badly? He agreed.

Do you think then that a man would be living well who passed his life in pain and vexation?

No.

But if he lived it out to the end with enjoyment, you would count him as having lived well?

Yes.

Then to live pleasantly is good, to live painfully bad?

Yes, if one's pleasure is in what is honorable.

What's this, Protagoras? Surely you don't follow the common opinion that some pleasures are bad and some pains good? I mean to say, in so far as they are pleasant, are they not also good, leaving aside any consequence that they may entail? And in the same way pains, in so far as they are painful, are bad?

I'm not sure Socrates, he said, whether I ought to give an answer as unqualified as your question suggests, and say that everything pleasant is good, and everything painful evil. But with a view not only to my present answer but to the whole of the rest of my life, I believe it is safest to reply that there are some pleasures which are not good, and some pains which are not evil, others on the other hand which are, and a third class which are neither evil nor good.

Meaning by pleasures, said I, what partakes of pleasure or gives it?

Certainly.

My question then is, whether they are not, qua pleasant, good. I am asking in fact whether pleasure itself is not a good thing.

Let us, he replied, as you are so fond of saying yourself, investigate the question; then if the proposition we are examining seems

reasonable, and pleasant and good appear identical, we shall agree on it. If not, that will be the time to differ.

Good, said I. Will you lead the inquiry or should I?

It is for you to take the lead, since you introduced the subject.

- 352 I wonder then, said I, if we can make it clear to ourselves like this. If a man were trying to judge, by external appearance, of another's health or some particular physical function, he might look at his face and hands and then say, 'Let me see your chest and back too, so that I may make a more satisfactory examination.' Something like this is what I want for our present inquiry. Observing that your attitude to the good and the pleasant is what you say, I want to go on something like this. Now uncover another part of your mind, Protagoras. What is your attitude to knowledge? Do you share the common view about that also? Most people think, in general terms, that it is nothing strong, no leading or ruling element. They don't see it like that. They hold that it is not the knowledge that a man possesses which governs him, but something else—now passion, now pleasure, now pain, sometimes love, and frequently fear. They just think of knowledge as a slave, pushed around by all the other affections. Is this your view too, or would you rather say that knowledge is a fine thing quite capable of ruling a man, and that if he can distinguish good from evil, nothing will force him to act otherwise than as knowledge dictates, since wisdom is all the reinforcement he needs?

- d Not only is this my view, replied Protagoras, but I above all men should think it shame to speak of wisdom and knowledge as anything but the most powerful elements in human life.

- Well and truly answered, said I. But I expect you know that most men don't believe us. They maintain that there are many who recognize the best but are unwilling to act on it. It may be open to them, but they do otherwise. Whenever I ask what can be the reason for this, e they answer that those who act in this way are overcome by pleasure or pain or some other of the things I mentioned just now.

Well, Socrates, it's by no means uncommon for people to say what is not correct.

- Then come with me and try to convince them, and show what really happens when they speak of being overcome by pleasure and 353 therefore, though recognizing what is best, failing to do it. If we simply declare, 'You are wrong, and what you say is false,' they will ask us, 'If it is not being overcome by pleasure, what can it be? What do you two say it is? Tell us.'

But why must we look into the opinions of the common man, who says whatever comes into his head?

- b I believe, I replied, that it will help us to find out how courage is related to the other parts of virtue. So if you are content to keep to our decision, that I should lead the way in whatever direction I think we

shall best see the light, then follow me. Otherwise, if you wish, I shall give it up.

No, you are right, he said. Carry on as you have begun.

To return then, If they should ask us, 'What is your name for c what we called being worsted by pleasure?' I should reply, 'Listen. Protagoras and I will try to explain it to you. We take it that you say this happens to you when, for example, you are overcome by the desire of food or drink or sex—which are pleasant things—and though you recognize them as evil, nevertheless indulge in them.' They would agree. Then we should ask them, 'In what respect do you call them evil? Is it because for the moment each of them provides its pleasure and is pleasant, or because they lay up for the future disease or poverty or suchlike? If they led to none of these things, but produced pure enjoyment, would they nevertheless be evils—no matter why or how they give enjoyment?' Can we expect any other answer than this, that they are not evil on account of the actual momentary pleasure which they produce, but on account of their consequences, disease and the rest?

I believe that would be their answer, said Protagoras.

'Well, to cause disease and poverty is to cause pain.' They would agree, I think?

He nodded.

'So the only reason why these pleasures seem to you to be evil is, we suggest, that they result in pains and deprive us of future pleasures.' Would they agree?

We both thought they would.

354

Now suppose we asked them the converse question. 'You say also that pains may be good. You mean, I take it, such things as physical training, military campaigns, doctors' treatment involving cautery or the knife or drugs or starvation diet? These, you say, are good but painful?' Would they agree?

They would.

'Do you then call them good in virtue of the fact that at the time b they cause extreme pain and agony, or because in the future there result from them health, bodily well-being, the safety of one's country, dominion over others, wealth?' The latter, I think they would agree.

Protagoras thought so too.

'And are they good for any other reason than that their outcome is pleasure and the cessation or prevention of pain? Can you say that you have any other end in mind, when you call them good, than pleasures or pains?' I think they would say no.

I too, said he.

'So you pursue pleasure as being good, and shun pain as evil?'

He agreed.

'Then your idea of evil is pain, and of good is pleasure. Even

enjoying yourself you call evil whenever it leads to the loss of a pleasure greater than its own, or lays up pains that outweigh its pleasures.

- d If it is in any other sense, or without anything else in mind, that you call enjoyment evil, no doubt you could tell us what it is, but you cannot.'

I agree that they cannot, said Protagoras.

'Isn't it the same when we turn back to pain? To suffer pain you call good when it either rids us of greater pains than its own or leads to pleasures that outweigh them. If you have anything else in mind

- e when you call the actual suffering of pain a good thing, you could tell us what it is, but you cannot.'

True, said Protagoras.

'Now my good people,' I went on, 'if you ask me what is the point of all this rigmarole, I beg your indulgence. It isn't easy to explain the real meaning of what you call being overcome by pleasure, and any explanation is bound up with this point. You may still change your  
355 minds, if you can say that the good is anything other than pleasure, or evil other than pain. Is it sufficient for you to live life through with pleasure and without pain? If so, and you can mention no good or evil which cannot in the last resort be reduced to these, then listen to my next point.

- 'This position makes your argument ridiculous. You say that a man often recognizes evil actions as evil, yet commits them, under no  
b compulsion, because he is led on and distracted by pleasure, and on the other hand that, recognizing the good, he refrains from following it because he is overcome by the pleasures of the moment. The absurdity of this will become evident if we stop using all these names together—pleasant, painful, good, and evil—and since they have turned out to be only two, call them by only two names—first of all good and evil, and only at a different stage pleasure and pain. Having  
c agreed on this, suppose we now say that a man does evil though he recognizes it as evil. Why? Because he is overcome. By what? We can no longer say by pleasure, because it has changed its name to good. Overcome, we say. By what, we are asked. By the good, I suppose we shall say. I fear that if our questioner is ill-mannered, he will laugh  
d and retort, What ridiculous nonsense, for a man to do evil, knowing it is evil and that he ought not to do it, because he is overcome by good. Am I to suppose that the good in you is or is not a match for the evil? Clearly we shall reply that the good is not a match; otherwise the man whom we speak of as being overcome by pleasure would not have done wrong. And in what way, he may say, does good fail to be a match for evil, or evil for good? Is it not by being greater or smaller, more or  
e less than the other? We shall have to agree. Then by being overcome you must mean taking greater evil in exchange for lesser good.

'Having noted this result, suppose we reinstate the names pleasant and painful for the same phenomena, thus: A man does—*evil* we

said before, but now we shall say *painful* actions, knowing them to be painful, because overcome by pleasures—pleasures, obviously, which were not a match for the pains. And what meaning can we attach to the phrase *not a match for*, when used of pleasure in relation to pain, 356 except the excess or deficiency of one as compared with the other? It depends on whether one is greater or smaller, more or less intense than the other. If anyone objects that there is a great difference between present pleasure and pleasure or pain in the future, I shall reply that the difference cannot be one of anything else but pleasure and pain. So like an expert in weighing, put the pleasures and the pains to- b  
gether, set both the near and distant in the balance, and say which is the greater quantity. In weighing pleasures against pleasures, one must always choose the greater and the more; in weighing pains against pains, the smaller and the less; whereas in weighing pleasures against pains, if the pleasures exceed the pains, whether the distant, the near, or vice versa, one must take the course which brings those pleasures; but if the pains outweigh the pleasures, avoid it. Is this not c  
so, good people? I should say, and I am sure they could not deny it.

Protagoras agreed.

'That being so then, answer me this,' I shall go on. 'The same magnitudes seem greater to the eye from near at hand than they do from a distance. This is true of thickness and also of number, and sounds of equal loudness seem greater near at hand than at a distance. If now our happiness consisted in doing, I mean in choosing, greater d  
lengths and avoiding smaller, where would lie salvation? In the art of measurement or in the impression made by appearances? Haven't we seen that the appearance leads us astray and throws us into confusion so that in our actions and our choices between great and small we are constantly accepting and rejecting the same things, whereas the metric art would have canceled the effect of the impression, and by re- e  
vealing the true state of affairs would have caused the soul to live in peace and quiet and abide in the truth, thus saving our life?' Faced with these considerations, would people agree that our salvation would lie in the art of measurement?

He agreed that they would.

'Again, what if our welfare lay in the choice of odd and even numbers, in knowing when the greater number must rightly be chosen and when the less, whether each sort in relation to itself or one in relation to the other, and whether they were near or distant? What would assure us a good life then? Surely knowledge, and specifically 357  
a science of measurement, since the required skill lies in the estimation of excess and defect—or to be more precise, arithmetic, since it deals with odd and even numbers.' Would people agree with us?

Protagoras thought they would.

'Well then,' I shall say, 'since our salvation in life has turned out to lie in the correct choice of pleasure and pain—more or less, greater

- b or smaller, nearer or more distant—is it not in the first place a question of measurement, consisting as it does in a consideration of relative excess, defect, or equality?’

It must be.

‘And if so, it must be a special skill or branch of knowledge.’

Yes, they will agree.

- ‘What skill, or what branch of knowledge it is, we shall leave till later; the fact itself is enough for the purposes of the explanation
- c which you have asked for from Protagoras and me. To remind you of your question, it arose because we two agreed that there was nothing more powerful than knowledge, but that wherever it is found it always has the mastery over pleasure and everything else. You on the other hand, who maintain that pleasure often masters even the man who knows, asked us to say what this experience really is, if it is not being
- d mastered by pleasure. If we had answered you straight off that it is ignorance, you would have laughed at us, but if you laugh at us now, you will be laughing at yourselves as well, for you have agreed that when people make a wrong choice of pleasures and pains—that is, of good and evil—the cause of their mistake is lack of knowledge. We can go further, and call it, as you have already agreed, a science of
- e measurement, and you know yourselves that a wrong action which is done without knowledge is done in ignorance. So that is what being mastered by pleasure really is—ignorance, and most serious ignorance, the fault which Protagoras, Prodicus, and Hippias profess to cure. You on the other hand, because you believe it to be something else, neither go nor send your children to these Sophists, who are the experts in such matters. Holding that it is nothing that can be taught, you are careful with your money and withhold it from them—a bad policy both for yourselves and for the community.’

- That then is the answer we should make to the ordinary run of
- 358 people, and I ask you—Hippias and Prodicus as well as Protagoras, for I want you to share our discussion—whether you think what I say is true.

They all agreed most emphatically that it was true.

- You agree then, said I, that the pleasant is good and the painful bad. I ask exemption from Prodicus’ precise verbal distinctions. Whether you call it pleasant, agreeable, or enjoyable, my dear Prodicus, or whatever name you like to apply to it, please answer in the
- b sense of my request.

Prodicus laughed and assented, and so did the others.

Well, here is another point, I continued. All actions aimed at this end, namely a pleasant and painless life, must be fine actions, that is, good and beneficial.

They agreed.

Then if the pleasant is the good, no one who either knows or be-

believes that there is another possible course of action, better than the one he is following, will ever continue on his present course when he might choose the better. To 'act beneath yourself' is the result of pure ignorance; to 'be your own master' is wisdom.

All agreed.

And may we define ignorance as having a false opinion and being mistaken on matters of great moment?

They approved this too.

Then it must follow that no one willingly goes to meet evil or what he thinks to be evil. To make for what one believes to be evil, instead of making for the good, is not, it seems, in human nature, and when faced with the choice of two evils no one will choose the greater when he might choose the less.

General agreement again.

Now you recognize the emotion of fear or terror. I wonder if you conceive it as I do? I say this to you, Prodicus. Whether you call it fear or terror, I define it as expectation of evil.

Protagoras and Hippias thought this covered both fear and terror, but Prodicus said it applied to fear but not to terror.

Well, Prodicus, said I, it makes no difference. This is the point. If what I have said is true, will anyone be willing to go to meet what he fears, when it is open to him to go in the opposite direction? Do not our agreed conclusions make this impossible? It is admitted that what he fears he regards as evil, and that no one willingly meets or accepts what he thinks evil.

They all assented.

359

On this agreed basis, I went on, let Protagoras make his defense and show us how his original answer can be right. I don't mean what he said at the very beginning, when he maintained that there were five parts of virtue none of which resembled any other, and that each had its separate function, but what he said later, that four of them are fairly similar, but one, namely courage, is quite different from the rest. This, he said, the following evidence would show me: 'You will find, Socrates, men who are utterly impious, unjust, licentious, and ignorant, yet very brave, which will show you that courage is quite different from the other parts of virtue.' I was much surprised by this answer at the time, and now that we have had this discussion it surprises me even more. Anyway, I asked him if he described the brave as confident, and he replied, 'Yes, and eager.' Do you remember saying this, Protagoras?

He admitted it.

Tell me then, said I, in what direction are the brave eager to go? Toward the same things as cowards?

No.

Toward something else then?

Yes.

Is it that cowards go to meet what inspires confidence, and brave men to what is terrible?

So men say, Socrates.

I know they do, but that was not my question. What do *you* say  
 a brave men go eagerly to meet? Is it what is terrible, knowing it to be terrible?

Your own argument has shown that to be impossible.

True again, so that if my argument was sound, no one goes to meet what he believes to be terrible, since not being one's own master was shown to be due to ignorance.

He admitted this.

But as for what inspires confidence, everyone makes for that, cowards and brave men alike, and thus cowards and brave men make  
 e for the same things.

Whatever you say, he replied. What the coward makes for is precisely the opposite of what the brave man makes for. For instance, the brave are willing to enter battle; the others are not.

Is this willingness an honorable thing, or disgraceful?

Honorable, said he.

Then if honorable, we agreed earlier that it is good, for we agreed  
 that all honorable actions are good.

That is true, and I still think so.

Quite rightly too, said I. But which class did you say were unwilling  
 360 to enter battle although that is a fine and good thing to do?

The cowards, he replied.

Well, if it is honorable and good, it is also pleasant.

We certainly agreed to that.

Then do the cowards act with knowledge when they refuse to approach what is the more honorable and better and pleasanter thing?

If we say so, he replied, we shall confound our former conclusions.

Now take the brave man. He makes for what is more honorable, better, and pleasanter?

I cannot deny it.

And in general when the brave feel fear, there is no disgrace in  
 b their fears, nor in their confidence when they are confident?

True.

So both are honorable, and if honorable then good?

Yes.

Cowards on the other hand, and likewise the rash and the mad, feel fears or confidence which are discreditable, and can they exhibit discreditable fear or confidence from any other cause than ignorance?

No.

Well then, is it cowardice or courage that makes a man a coward?  
 c Cowardice.

Yet we have seen that it is ignorance of what is to be feared that makes them cowards; and if this ignorance makes them cowards, and you agree that what makes them cowards is cowardice, ignorance of what is and is not to be feared must be cowardice.

He nodded.

Well, courage is the opposite of cowardice.

He agreed.

And knowledge of what is and is not to be feared is the opposite of ignorance of these things.

He nodded again.

Which is cowardice.

Here he assented with great reluctance.

Therefore knowledge of what is and is not to be feared is courage.

At this point he could no longer bring himself to assent, but was silent; so I said, What, Protagoras, won't you say either yes or no to my questions?

Finish it yourself, said he.

Just one more question first, I replied. Do you still believe, as you did at first, that men can be utterly ignorant yet very brave?

You seem to be bent on having your own way, Socrates, and getting me to give the answers; so to humor you, I will say that on our agreed assumptions it seems to be impossible.

I assure you, said I, that in asking all these questions I have nothing else in view but my desire to learn the truth about virtue and what it is in itself. I know that if we could be clear about that, it would throw the fullest light on the question over which you and I have spun such a coil of argument, I maintaining that virtue was not teachable and you that it was. It seems to me that the present outcome of our talk is pointing at us, like a human adversary, the finger of accusation and scorn. If it had a voice it would say, 'What an absurd pair you are, Socrates and Protagoras. One of you, having said at the beginning that virtue is not teachable, now is bent upon contradicting himself by trying to demonstrate that everything is knowledge—justice, temperance, and courage alike—which is the best way to prove that virtue is teachable. If virtue were something other than knowledge, as Protagoras tried to prove, obviously it could not be taught. But if it turns out to be, as a single whole, knowledge—which is what you are urging, Socrates—then it will be most surprising if it cannot be taught. Protagoras on the other hand, who at the beginning supposed it to be teachable, now on the contrary seems to be bent on showing that it is almost anything rather than knowledge, and this would make it least likely to be teachable.'

For my part, Protagoras, when I see the subject in such utter confusion I feel the liveliest desire to clear it up. I should like to follow up our present talk with a determined attack on virtue itself and its essential nature. Then we could return to the question whether or

not it can be taught, thus guarding against the possibility that your  
 d Epimetheus might trip us up and cheat us in our inquiry, just as according to the story he overlooked us in the distribution. I liked Prometheus in the myth better than Epimetheus; so I follow his lead and spend my time on all these matters as a means of taking forethought for my whole life. If you should be willing, then as I said at the beginning, you are the one with whom I would most gladly share the inquiry.

I congratulate you on your keenness, Socrates, responded Protagoras, and your skill in exposition. I hope I am not too bad a character, and I am the last man to be jealous. I have told a great many  
 e people that I never met anyone I admire nearly as much as you, certainly not among your contemporaries, and I say now that I should not be surprised if you became one of our leading philosophers. Well, we will talk of these matters at some future meeting, whenever you like, but now it is time to turn to other things.

362 So be it, said I, if that is your wish. Indeed I ought long ago to have kept the appointment I mentioned. I only stayed as a concession to the blandishments of Callias.

That was the end of the conversation, and we went away.

# MENO

---

*Can virtue be taught? asks Meno. Socrates replies that he certainly cannot do it for he does not know what virtue is. Meno does and can tell him and gives him forthwith a list of various virtuous qualities, only to be caught up by Socrates, who points out that, as people say in jest when a person breaks something, he has merely made a singular into a plural. Can Meno state what virtue is while leaving it whole and not broken into such pieces as justice, temperance, and so on? Meno finally comes out with the statement that it is the desire of the good. But, Socrates says, everyone desires the good, no one ever desires evil. "For what else is unhappiness but desiring evil things and getting them?"*

*The two agree to try seriously to find out what virtue is in its essential nature. Socrates thinks this can be done because people who are inspired like poets and priests believe that we are born not in entire forgetfulness nor yet in utter nakedness, but that "the soul of man is immortal. At one time it comes to an end and at another is born again, but is never finally exterminated." We can recollect if we try hard enough what our souls knew in former lives. He gives a proof of this by making one of Meno's slaves, a completely uneducated lad, reason out facts about squares and triangles all by himself without the slightest help from anyone. He was able to do so, Socrates says, because truths his soul knew before birth still existed in it and could with a great effort be recalled. Meno and he can try like the slave to recollect the knowledge they once had in another existence.*

*The last part of the dialogue is taken up with Socrates' demonstration and Meno's reluctant agreement that virtue is not taught anywhere so that it is not knowledge which can be and is taught. No further definition is attempted, but Socrates' conclusion, characteristically Greek, is that if ever there could be a man who in addition to being virtuous knew what virtue was and could teach it, he would be among other men like a reality among flitting shades.*

*The third speaker, Anytus, who comes in toward the end, is generally considered to be the Anytus who proposed at Socrates' trial that he should be put to death, and his contribution to the argument here is at all points consistent with this view.*

70       MENO: Can you tell me, Socrates—is virtue something that can be taught? Or does it come by practice? Or is it neither teaching nor practice that gives it to a man but natural aptitude or something else?

          SOCRATES: Well, Meno, in the old days the Thessalians had a great reputation among the Greeks for their wealth and their horse-  
b       manship. Now it seems they are philosophers as well—especially the men of Larissa, where your friend Aristippus comes from. It is Gorgias who has done it. He went to that city and captured the hearts of the foremost of the Aleuadae for his wisdom—among them your own admirer Aristippus—not to speak of other leading Thessalians. In par-  
c       ticular he got you into the habit of answering any question you might be asked, with the confidence and dignity appropriate to those who know the answers, just as he himself invites questions of every kind from anyone in the Greek world who wishes to ask, and never fails to answer them. But here at Athens, my dear Meno, it is just the reverse. There is a dearth of wisdom, and it looks as if it had migrated from  
71       our part of the country to yours. At any rate if you put your question to any of our people, they will all alike laugh and say, You must think I am singularly fortunate, to know whether virtue can be taught or how it is acquired. The fact is that far from knowing whether it can be taught, I have no idea what virtue itself is.

b       That is my own case. I share the poverty of my fellow countrymen in this respect, and confess to my shame that I have no knowledge about virtue at all. And how can I know a property of something when I don't even know what it is? Do you suppose that somebody entirely ignorant who Meno is could say whether he is handsome and rich and wellborn or the reverse? Is that possible, do you think?

          MENO: No. But is this true about yourself, Socrates, that you  
c       don't even know what virtue is? Is this the report that we are to take home about you?

          SOCRATES: Not only that, you may say also that, to the best of my belief, I have never yet met anyone who did know.

          MENO: What! Didn't you meet Gorgias when he was here?

          SOCRATES: Yes.

          MENO: And you still didn't think he knew?

          SOCRATES: I'm a forgetful sort of person, and I can't say just now what I thought at the time. Probably he did know, and I expect  
d       you know what he used to say about it. So remind me what it was, or tell me yourself if you will. No doubt you agree with him.

          MENO: Yes, I do.

          SOCRATES: Then let's leave him out of it, since after all he isn't here. What do you yourself say virtue is? I do ask you in all earnestness not to refuse me, but to speak out. I shall be only too happy to be

proved wrong if you and Gorgias turn out to know this, although I said I had never met anyone who did.

MENO: But there is no difficulty about it. First of all, if it is e  
manly virtue you are after, it is easy to see that the virtue of a man  
consists in managing the city's affairs capably, and so that he will help  
his friends and injure his foes while taking care to come to no harm  
himself. Or if you want a woman's virtue, that is easily described. She  
must be a good housewife, careful with her stores and obedient to her  
husband. Then there is another virtue for a child, male or female,  
and another for an old man, free or slave as you like, and a great many  
more kinds of virtue, so that no one need be at a loss to say what it is. 72  
For every act and every time of life, with reference to each separate  
function, there is a virtue for each one of us, and similarly, I should  
say, a vice.

SOCRATES: I seem to be in luck. I wanted one virtue and I find  
that you have a whole swarm of virtues to offer. But seriously, to carry  
on this metaphor of the swarm, suppose I asked you what a bee is, b  
what is its essential nature, and you replied that bees were of many  
different kinds. What would you say if I went on to ask, And is it in  
being bees that they are many and various and different from one an-  
other? Or would you agree that it is not in this respect that they  
differ, but in something else, some other quality like size or beauty?

MENO: I should say that in so far as they are bees, they don't dif-  
fer from one another at all.

SOCRATES: Suppose I then continued, Well, this is just what I c  
want you to tell me. What is that character in respect of which they  
don't differ at all, but are all the same? I presume you would have  
something to say?

MENO: I should.

SOCRATES: Then do the same with the virtues. Even if they are  
many and various, yet at least they all have some common character  
which makes them virtues. That is what ought to be kept in view by  
anyone who answers the question, What is virtue? Do you follow me? d

MENO: I think I do, but I don't yet really grasp the question as I  
should wish.

SOCRATES: Well, does this apply in your mind only to virtue,  
that there is a different one for a man and a woman and the rest? Is it  
the same with health and size and strength, or has health the same  
character everywhere, if it is health, whether it be in a man or any  
other creature? e

MENO: I agree that health is the same in a man or in a woman.

SOCRATES: And what about size and strength? If a woman is  
strong, will it be the same thing, the same strength, that makes her  
strong? My meaning is that in its character as strength, it is no dif-  
ferent, whether it be in a man or in a woman. Or do you think it is?

MENO: No.

73 SOCRAATES: And will virtue differ, in its character as virtue, whether it be in a child or an old man, a woman or a man?

MENO: I somehow feel that this is not on the same level as the other cases.

SOCRAATES: Well then, didn't you say that a man's virtue lay in directing the city well, and a woman's in directing her household well?

MENO: Yes.

b SOCRAATES: And is it possible to direct anything well—city or household or anything else—if not temperately and justly?

MENO: Certainly not.

SOCRAATES: And that means with temperance and justice?

MENO: Of course.

SOCRAATES: Then both man and woman need the same qualities, justice and temperance, if they are going to be good.

MENO: It looks like it.

SOCRAATES: And what about your child and old man? Could they be good if they were incontinent and unjust?

MENO: Of course not.

SOCRAATES: They must be temperate and just?

MENO: Yes.

c SOCRAATES: So everyone is good in the same way, since they become good by possessing the same qualities.

MENO: So it seems.

SOCRAATES: And if they did not share the same virtue, they would not be good in the same way.

MENO: No.

SOCRAATES: Seeing then that they all have the same virtue, try to remember and tell me what Gorgias and you, who share his opinion, say it is.

d MENO: It must be simply the capacity to govern men, if you are looking for one quality to cover all the instances.

SOCRAATES: Indeed I am. But does this virtue apply to a child or a slave? Should a slave be capable of governing his master, and if he does, is he still a slave?

MENO: I hardly think so.

SOCRAATES: It certainly doesn't sound likely. And here is another point. You speak of 'capacity to govern.' Shall we not add, 'justly but not otherwise'?

MENO: I think we should, for justice is virtue.

e SOCRAATES: Virtue, do you say, or *a* virtue?

MENO: What do you mean?

SOCRAATES: Something quite general. Take roundness, for instance. I should say that it is a shape, not simply that it is shape, my reason being that there are other shapes as well.

MENO: I see your point, and I agree that there are other virtues besides justice.

SOCRATES: Tell me what they are. Just as I could name other shapes if you told me to, in the same way mention some other virtues. 74

MENO: In my opinion then courage is a virtue and temperance and wisdom and dignity and many other things.

SOCRATES: This puts us back where we were. In a different way we have discovered a number of virtues when we were looking for one only. This single virtue, which permeates each of them, we cannot find.

MENO: No, I cannot yet grasp it as you want, a single virtue covering them all, as I do in other instances. b

SOCRATES: I'm not surprised, but I shall do my best to get us a bit further if I can. You understand, I expect, that the question applies to everything. If someone took the example I mentioned just now, and asked you, 'What is shape?' and you replied that roundness is shape, and he then asked you as I did, 'Do you mean it is shape or a shape?' you would reply of course that it is *a* shape.

MENO: Certainly.

SOCRATES: Your reason being that there are other shapes as c well.

MENO: Yes.

SOCRATES: And if he went on to ask you what they were, you would tell him.

MENO: Yes.

SOCRATES: And the same with color—if he asked you what it is, and on your replying, 'White,' took you up with, 'Is white color or a color?' you would say that it is *a* color, because there are other colors as well.

MENO: I should.

SOCRATES: And if he asked you to, you would mention other colors which are just as much colors as white is. d

MENO: Yes.

SOCRATES: Suppose then he pursued the question as I did, and objected, 'We always arrive at a plurality, but that is not the kind of answer I want. Seeing that you call these many particulars by one and the same name, and say that every one of them is a shape, even though they are the contrary of each other, tell me what this is which embraces round as well as straight, and what you mean by shape when you say that straightness is a shape as much as roundness. You e do say that?'

MENO: Yes.

SOCRATES: 'And in saying it, do you mean that roundness is no more round than straight, and straightness no more straight than round?'

MENO: Of course not.

SOCRATES: 'Yet you do say that roundness is no more a shape than straightness, and the other way about.'

MENO: Quite true.

SOCRATES: 'Then what is this thing which is called "shape"?' 75

- Try to tell me.' If when asked this question either about shape or color you said, 'But I don't understand what you want, or what you mean,' your questioner would perhaps be surprised and say, 'Don't you see that I am looking for what is the same in all of them?' Would you even so be unable to reply, if the question was, 'What is it that is common to roundness and straightness and the other things which you call shapes?' Do your best to answer, as practice for the question about virtue.

- b MENO: No, you do it, Socrates.

SOCRATES: Do you want me to give in to you?

MENO: Yes.

SOCRATES: And will you in your turn give me an answer about virtue?

MENO: I will.

SOCRATES: In that case I must do my best. It's in a good cause.

MENO: Certainly.

SOCRATES: Well now, let's try to tell you what shape is. See if you accept this definition. Let us define it as the only thing which always accompanies color. Does that satisfy you, or do you want it in some other way? I should be content if your definition of virtue were

- c on similar lines.

MENO: But that's a naïve sort of definition, Socrates.

SOCRATES: How?

MENO: Shape, if I understand what you say, is what always accompanies color. Well and good—but if somebody says that he doesn't know what color is, but is no better off with it than he is with shape, what sort of answer have you given him, do you think?

- SOCRATES: A true one, and if my questioner were one of the clever, disputatious, and quarrelsome kind, I should say to him, 'You d have heard my answer. If it is wrong, it is for you to take up the argument and refute it.' However, when friendly people, like you and me, want to converse with each other, one's reply must be milder and more conducive to discussion. By that I mean that it must not only be true, but must employ terms with which the questioner admits he is familiar. So I will try to answer you like that. Tell me, therefore, e whether you recognize the term 'end'; I mean limit or boundary—all these words I use in the same sense. Prodicus might perhaps quarrel with us, but I assume you speak of something being bounded or coming to an end. That is all I mean, nothing subtle.

MENO: I admit the notion, and believe I understand your meaning.

SOCRATES: And again, you recognize 'surface' and 'solid,' as 76 they are used in geometry?

MENO: Yes.

SOCRATES: Then with these you should by this time understand my definition of shape. To cover all its instances, I say that shape is that in which a solid terminates, or more briefly, it is the limit of a solid.

MENO: And how do you define color?

SOCRATES: What a shameless fellow you are, Meno. You keep bothering an old man to answer, but refuse to exercise your memory and tell me what was Gorgias' definition of virtue. b

MENO: I will, Socrates, as soon as you tell me this.

SOCRATES: Anyone talking to you could tell blindfold that you are a handsome man and still have your admirers.

MENO: Why so?

SOCRATES: Because you are forever laying down the law as spoiled boys do, who act the tyrant as long as their youth lasts. No doubt you have discovered that I can never resist good looks. Well, I c will give in and let you have your answer.

MENO: Do by all means.

SOCRATES: Would you like an answer à la Gorgias, such as you would most readily follow?

MENO: Of course I should.

SOCRATES: You and he believe in Empedocles' theory of effluences, do you not?

MENO: Wholeheartedly.

SOCRATES: And passages to which and through which the effluences make their way?

MENO: Yes.

SOCRATES: Some of the effluences fit into some of the passages, d whereas others are too coarse or too fine.

MENO: That is right.

SOCRATES: Now you recognize the term 'sight'?

MENO: Yes.

SOCRATES: From these notions, then, 'grasp what I would tell,'<sup>1</sup> as Pindar says. Color is an effluence from shapes commensurate with sight and perceptible by it.

MENO: That seems to me an excellent answer.

SOCRATES: No doubt it is the sort you are used to. And you probably see that it provides a way to define sound and smell and many similar things. e

MENO: So it does.

SOCRATES: Yes, it's a high-sounding answer, so you like it better than the one on shape.

<sup>1</sup> Pindar, fr. 82.

MENO: I do.

SOCRATES: Nevertheless, son of Alexidemus, I am convinced that the other is better, and I believe you would agree with me if you had not, as you told me yesterday, to leave before the Mysteries, but could stay and be initiated.

77 MENO: I would stay, Socrates, if you gave me more answers like this.

SOCRATES: You may be sure I shan't be lacking in keenness to do so, both for your sake and mine, but I'm afraid I may not be able to do it often. However, now it is your turn to do as you promised, and try to tell me the general nature of virtue. Stop making many out of one, as the humorists say when somebody breaks a plate. Just leave virtue whole and sound and tell me what it is, as in the examples I have  
b given you.

MENO: It seems to me then, Socrates, that virtue is, in the words of the poet, 'to rejoice in the fine and have power,' and I define it as desiring fine things and being able to acquire them.

SOCRATES: When you speak of a man desiring fine things, do you mean it is good things he desires?

MENO: Certainly.

SOCRATES: Then do you think some men desire evil and others  
c good? Doesn't everyone, in your opinion, desire good things?

MENO: No.

SOCRATES: And would you say that the others suppose evils to be good, or do they still desire them although they recognize them as evil?

MENO: Both, I should say.

SOCRATES: What? Do you really think that anyone who recognizes evils for what they are, nevertheless desires them?

MENO: Yes.

SOCRATES: Desires in what way? To possess them?

MENO: Of course.

d SOCRATES: In the belief that evil things bring advantage to their possessor, or harm?

MENO: Some in the first belief, but some also in the second.

SOCRATES: And do you believe that those who suppose evil things bring advantage understand that they are evil?

MENO: No, that I can't really believe.

e SOCRATES: Isn't it clear then that this class, who don't recognize evils for what they are, don't desire evil but what they think is good, though in fact it is evil; those who through ignorance mistake bad things for good obviously desire the good?

MENO: For them I suppose that is true.

SOCRATES: Now as for those whom you speak of as desiring evils in the belief that they do harm to their possessor, these presumably know that they will be injured by them?

MENO: They must.

SOCRATES: And don't they believe that whoever is injured is, in so far as he is injured, unhappy?

MENO: That too they must believe.

SOCRATES: And unfortunate?

78

MENO: Yes.

SOCRATES: Well, does anybody want to be unhappy and unfortunate?

MENO: I suppose not.

SOCRATES: Then if not, nobody desires what is evil, for what else is unhappiness but desiring evil things and getting them?

MENO: It looks as if you are right, Socrates, and nobody desires what is evil.

SOCRATES: Now you have just said that virtue consists in a wish for good things plus the power to acquire them. In this definition the wish is common to everyone, and in that respect no one is better than his neighbor.

MENO: So it appears.

SOCRATES: So if one man is better than another, it must evidently be in respect of the power, and virtue, according to your account, is the power of acquiring good things.

MENO: Yes, my opinion is exactly as you now express it.

c

SOCRATES: Let us see whether you have hit the truth this time. You may well be right. The power of acquiring good things, you say, is virtue?

MENO: Yes.

SOCRATES: And by good do you mean such things as health and wealth?

MENO: I include the gaining both of gold and silver and of high and honorable office in the state.

SOCRATES: Are these the only classes of goods that you recognize?

MENO: Yes, I mean everything of that sort.

d

SOCRATES: Right. In the definition of Meno, hereditary guest-friend of the Great King, the acquisition of gold and silver is virtue. Do you add 'just and righteous' to the word 'acquisition,' or doesn't it make any difference to you? Do you call it virtue all the same even if they are unjustly acquired?

MENO: Certainly not.

SOCRATES: Vice then?

MENO: Most certainly.

SOCRATES: So it seems that justice or temperance or piety, or some other part of virtue, must attach to the acquisition. Otherwise, although it is a means to good things, it will not be virtue.

MENO: No, how could you have virtue without these?

SOCRATES: In fact lack of gold and silver, if it results from

e

failure to acquire it—either for oneself or another—in circumstances which would have made its acquisition unjust, is itself virtue.

MENO: It would seem so.

79 SOCRATES: Then to have such goods is no more virtue than to lack them. Rather we may say that whatever is accompanied by justice is virtue, whatever is without qualities of that sort is vice.

MENO: I agree that your conclusion seems inescapable.

SOCRATES: But a few minutes ago we called each of these—justice, temperance, and the rest—a part of virtue?

MENO: Yes, we did.

SOCRATES: So it seems you are making a fool of me.

MENO: How so, Socrates?

SOCRATES: I have just asked you not to break virtue up into fragments, and given you models of the type of answer I wanted, but taking no notice of this you tell me that virtue consists in the acquisition of good things with justice, and justice, you agree, is a part of virtue.

MENO: True.

SOCRATES: So it follows from your own statements that to act with a part of virtue is virtue, if you call justice and all the rest parts of virtue. The point I want to make is that whereas I asked you to give me an account of virtue as a whole, far from telling me what it is itself you say that every action is virtue which exhibits a part of virtue, c as if you had already told me what the whole is, so that I should recognize it even if you chop it up into bits. It seems to me that we must put the same old question to you, my dear Meno—the question, What is virtue?—if every act becomes virtue when combined with a part of virtue. That is, after all, what it means to say that every act performed with justice is virtue. Don't you agree that the same question needs to be put? Does anyone know what a part of virtue is, without knowing the whole?

MENO: I suppose not.

d SOCRATES: No, and if you remember, when I replied to you about shape just now, I believe we rejected the type of answer that employs terms which are still in question and not yet agreed upon.

MENO: We did, and rightly.

SOCRATES: Then please do the same. While the nature of virtue as a whole is still under question, don't suppose that you can explain it to anyone in terms of its parts, or by any similar type of explanation. Understand rather that the same question remains to be answered; e you say this and that about virtue, but what is it? Does this seem nonsense to you?

MENO: No, to me it seems right enough.

SOCRATES: Then go back to the beginning and answer my question. What do you and your friend say that virtue is?

MENO: Socrates, even before I met you they told me that in plain truth you are a perplexed man yourself and reduce others to 80 perplexity. At this moment I feel you are exercising magic and witchcraft upon me and positively laying me under your spell until I am just a mass of helplessness. If I may be flippant, I think that not only in outward appearance but in other respects as well you are exactly like the flat sting ray that one meets in the sea. Whenever anyone comes into contact with it, it numbs him, and that is the sort of thing that you seem to be doing to me now. My mind and my lips are literally numb, and I have nothing to reply to you. Yet I have spoken b about virtue hundreds of times, held forth often on the subject in front of large audiences, and very well too, or so I thought. Now I can't even say what it is. In my opinion you are well advised not to leave Athens and live abroad. If you behaved like this as a foreigner in another country, you would most likely be arrested as a wizard.

SOCRATES: You're a real rascal, Meno. You nearly took me in.

MENO: Just what do you mean?

SOCRATES: I see why you used a simile about me. c

MENO: Why do you think?

SOCRATES: To be compared to something in return. All good-looking people, I know perfectly well, enjoy a game of comparisons. They get the best of it, for naturally handsome folk provoke handsome similes. But I'm not going to oblige you. As for myself, if the sting ray paralyzes others only through being paralyzed itself, then the comparison is just, but not otherwise. It isn't that, knowing the answers myself, I perplex other people. The truth is rather that I infect them also with the perplexity I feel myself. So with virtue now. I don't know what it is. You may have known before you came into contact with d me, but now you look as if you don't. Nevertheless I am ready to carry out, together with you, a joint investigation and inquiry into what it is.

MENO: But how will you look for something when you don't in the least know what it is? How on earth are you going to set up something you don't know as the object of your search? To put it another way, even if you come right up against it, how will you know that what you have found is the thing you didn't know?

SOCRATES: I know what you mean. Do you realize that what e you are bringing up is the trick argument that a man cannot try to discover either what he knows or what he does not know? He would not seek what he knows, for since he knows it there is no need of the inquiry, nor what he does not know, for in that case he does not even know what he is to look for.

MENO: Well, do you think it a good argument? 81

SOCRATES: No.

MENO: Can you explain how it fails?

SOCRATES: I can. I have heard from men and women who understand the truths of religion . . .

MENO: What did they say?

SOCRATES: Something true, I thought, and fine.

MENO: What was it, and who were they?

SOCRATES: Those who tell it are priests and priestesses of the sort who make it their business to be able to account for the functions  
b which they perform. Pindar speaks of it too, and many another of the poets who are divinely inspired. What they say is this—see whether you think they are speaking the truth. They say that the soul of man is immortal. At one time it comes to an end—that which is called death—and at another is born again, but is never finally exterminated. On these grounds a man must live all his days as righteously as possible. For those from whom

Persephone receives requital for ancient doom,  
In the ninth year she restores again  
Their souls to the sun above.

From whom rise noble kings  
c And the swift in strength and greatest in wisdom,  
And for the rest of time  
They are called heroes and sanctified by men.<sup>2</sup>

Thus the soul, since it is immortal and has been born many times, and has seen all things both here and in the other world, has learned everything that is. So we need not be surprised if it can recall the knowledge of virtue or anything else which, as we see, it once pos-  
a sessed. All nature is akin, and the soul has learned everything, so that when a man has recalled a single piece of knowledge—*learned* it, in ordinary language—there is no reason why he should not find out all the rest, if he keeps a stout heart and does not grow weary of the search, for seeking and learning are in fact nothing but recollection.

We ought not then to be led astray by the contentious argument you quoted. It would make us lazy, and is music in the ears of  
e weaklings. The other doctrine produces energetic seekers after knowledge, and being convinced of its truth, I am ready, with your help, to inquire into the nature of virtue.

MENO: I see, Socrates. But what do you mean when you say that we don't learn anything, but that what we call learning is recollection? Can you teach me that it is so?

SOCRATES: I have just said that you're a rascal, and now you  
82 ask me if I can teach you, when I say there is no such thing as teaching, only recollection. Evidently you want to catch me contradicting myself straightaway.

MENO: No, honestly, Socrates, I wasn't thinking of that. It was just habit. If you can in any way make clear to me that what you say is true, please do.

SOCRATES: It isn't an easy thing, but still I should like to do

<sup>2</sup> Pindar, fr. 133.

what I can since you ask me. I see you have a large number of retainers b here. Call one of them, anyone you like, and I will use him to demonstrate it to you.

MENO: Certainly. [*To a slave boy.*] Come here.

SOCRATES: He is a Greek and speaks our language?

MENO: Indeed yes—born and bred in the house.

SOCRATES: Listen carefully then, and see whether it seems to you that he is learning from me or simply being reminded.

MENO: I will.

SOCRATES: Now boy, you know that a square is a figure like this?

(*Socrates begins to draw figures in the sand at his feet. He points to the square ABCD.*)

BOY: Yes.

SOCRATES: It has all these four sides equal?

c

BOY: Yes.

SOCRATES: And these lines which go through the middle of it are also equal? [EF, GH.]

BOY: Yes.

SOCRATES: Such a figure could be either larger or smaller, could it not?

BOY: Yes.

SOCRATES: Now if this side is two feet long, and this side the same, how many feet will the whole be? Put it this way. If it were two feet in this direction and only one in that, must not the area be two feet taken once?

BOY: Yes.

SOCRATES: But since it is two feet this way also, does it not become twice two feet?

BOY: Yes.

SOCRATES: And how many feet is twice two? Work it out and tell me.

BOY: Four.

SOCRATES: Now could one draw another figure double the size of this, but similar, that is, with all its sides equal like this one?

BOY: Yes.

SOCRATES: How many feet will its area be?

BOY: Eight.

SOCRATES: Now then, try to tell me how long each of its sides will be. The present figure has a side of two feet. What will be the side of the double-sized one?

BOY: It will be double, Socrates, obviously.

SOCRATES: You see, Meno, that I am not teaching him anything, only asking. Now he thinks he knows the length of the side of the eight-foot square.

MENO: Yes.

SOCRATES: But does he?

MENO: Certainly not.

SOCRATES: He thinks it is twice the length of the other.

MENO: Yes.

SOCRATES: Now watch how he recollects things in order—the proper way to recollect.

83 You say that the side of double length produces the double-sized figure? Like this I mean, not long this way and short that. It must be equal on all sides like the first figure, only twice its size, that is, eight feet. Think a moment whether you still expect to get it from doubling the side.

BOY: Yes, I do.

SOCRATES: Well now, shall we have a line double the length of this [AB] if we add another the same length at this end [BJ]?

BOY: Yes.

SOCRATES: It is on this line then, according to you, that we shall make the eight-foot square, by taking four of the same length?

b BOY: Yes.

SOCRATES: Let us draw in four equal lines [*i.e.*, counting AJ and adding JK, KL, and LA made complete by drawing in its second half LD], using the first as a base. Does this not give us what you call the eight-foot figure?

BOY: Certainly.

SOCRATES: But does it contain these four squares, each equal to the original four-foot one?

(*Socrates has drawn in the lines CM, CN to complete the squares that he wishes to point out.*)

BOY: Yes.

SOCRATES: How big is it then? Won't it be four times as big?

BOY: Of course.

SOCRATES: And is four times the same as twice?

BOY: Of course not.

SOCRATES: So doubling the side has given us not a double but a fourfold figure?

BOY: True.

SOCRATES: And four times four are sixteen, are they not?

BOY: Yes.

SOCRATES: Then how big is the side of the eight-foot figure? This one has given us four times the original area, hasn't it?

BOY: Yes.

SOCRATES: And a side half the length gave us a square of four feet?

BOY: Yes.

SOCRATES: Good. And isn't a square of eight feet double this one and half that?

BOY: Yes.

SOCRATES: Will it not have a side greater than this one but less than that?

BOY: I think it will.

SOCRATES: Right. Always answer what you think. Now tell me. Was not this side two feet long, and this one four?

BOY: Yes.

SOCRATES: Then the side of the eight-foot figure must be longer than two feet but shorter than four?

BOY: It must.

SOCRATES: Try to say how long you think it is.

BOY: Three feet.

SOCRATES: If so, shall we add half of this bit [BO, half of BJ] and make it three feet? Here are two, and this is one, and on this side similarly we have two plus one, and here is the figure you want.

(*Socrates completes the square AOPQ.*)

BOY: Yes.

SOCRATES: If it is three feet this way and three that, will the whole area be three times three feet?

BOY: It looks like it.

SOCRATES: And that is how many?

BOY: Nine.

SOCRATES: Whereas the square double our first square had to be how many?

BOY: Eight.

SOCRATES: But we haven't yet got the square of eight feet even from a three-foot side?

BOY: No.

SOCRATES: Then what length will give it? Try to tell us exactly.

84 If you don't want to count it up, just show us on the diagram.

BOY: It's no use, Socrates, I just don't know.

SOCRATES: Observe, Meno, the stage he has reached on the path of recollection. At the beginning he did not know the side of the square of eight feet. Nor indeed does he know it now, but then he thought he knew it and answered boldly, as was appropriate—he felt no perplexity. Now however he does feel perplexed. Not only does he  
b not know the answer; he doesn't even think he knows.

MENO: Quite true.

SOCRATES: Isn't he in a better position now in relation to what he didn't know?

MENO: I admit that too.

SOCRATES: So in perplexing him and numbing him like the sting ray, have we done him any harm?

MENO: I think not.

SOCRATES: In fact we have helped him to some extent toward finding out the right answer, for now not only is he ignorant of it but he will be quite glad to look for it. Up to now, he thought he could speak well and fluently, on many occasions and before large audi-  
c ences, on the subject of a square double the size of a given square, maintaining that it must have a side of double the length.

MENO: No doubt.

SOCRATES: Do you suppose then that he would have attempted to look for, or learn, what he thought he knew, though he did not, before he was thrown into perplexity, became aware of his ignorance, and felt a desire to know?

MENO: No.

SOCRATES: Then the numbing process was good for him?

MENO: I agree.

SOCRATES: Now notice what, starting from this state of perplexity, he will discover by seeking the truth in company with me,  
d though I simply ask him questions without teaching him. Be ready to catch me if I give him any instruction or explanation instead of simply interrogating him on his own opinions.

(Socrates here rubs out the previous figures and starts again.)

Tell me, boy, is not this our square of four feet? [ABCD.] You understand?

BOY: Yes.

SOCRATES: Now we can add another equal to it like this?

[BCEF.]

BOY: Yes.

SOCRATES: And a third here, equal to each of the others?

[CEGH.]

BOY: Yes.

SOCRATES: And then we can fill in this one in the corner?

[DCHJ.]

BOY: Yes.

SOCRATES: Then here we have four equal squares?

BOY: Yes.

SOCRATES: And how many times the size of the first square is the whole? e

BOY: Four times.

SOCRATES: And we want one double the size. You remember?

BOY: Yes.

SOCRATES: Now does this line going from corner to corner cut each of these squares in half? 85

BOY: Yes.

SOCRATES: And these are four equal lines enclosing this area?

[BEHD.]

BOY: They are.

SOCRATES: Now think. How big is this area?

BOY: I don't understand.

SOCRATES: Here are four squares. Has not each line cut off the inner half of each of them?

BOY: Yes.

SOCRATES: And how many such halves are there in this figure?

[BEHD.]

BOY: Four.

SOCRATES: And how many in this one? [ABCD.]

BOY: Two.

SOCRATES: And what is the relation of four to two?

BOY: Double.

SOCRATES: How big is this figure then?

BOY: Eight feet.

SOCRATES: On what base?

BOY: This one.

SOCRATES: The line which goes from corner to corner of the square of four feet?

BOY: Yes.

SOCRATES: The technical name for it is 'diagonal'; so if we use that name, it is your personal opinion that the square on the diagonal of the original square is double its area.

BOY: That is so, Socrates.

SOCRATES: What do you think, Meno? Has he answered with any opinions that were not his own?

MENO: No, they were all his.

SOCRATES: Yet he did not know, as we agreed a few minutes ago.

MENO: True.

SOCRATES: But these opinions were somewhere in him, were they not?

MENO: Yes.

SOCRATES: So a man who does not know has in himself true opinions on a subject without having knowledge.

MENO: It would appear so.

SOCRATES: At present these opinions, being newly aroused, have a dreamlike quality. But if the same questions are put to him on many occasions and in different ways, you can see that in the end he will have a knowledge on the subject as accurate as anybody's.

MENO: Probably.

SOCRATES: This knowledge will not come from teaching but from questioning. He will recover it for himself.

MENO: Yes.

SOCRATES: And the spontaneous recovery of knowledge that is in him is recollection, isn't it?

MENO: Yes.

SOCRATES: Either then he has at some time acquired the knowledge which he now has, or he has always possessed it. If he always possessed it, he must always have known; if on the other hand he acquired it at some previous time, it cannot have been in this life, unless somebody has taught him geometry. He will behave in the same way with all geometric knowledge, and every other subject. Has anyone taught him all these? You ought to know, especially as he has been brought up in your household.

MENO: Yes, I know that no one ever taught him.

SOCRATES: And has he these opinions, or hasn't he?

MENO: It seems we can't deny it.

SOCRATES: Then if he did not acquire them in this life, isn't it immediately clear that he possessed and had learned them during 86 some other period?

MENO: It seems so.

SOCRATES: When he was not in human shape?

MENO: Yes.

SOCRATES: If then there are going to exist in him, both while he is and while he is not a man, true opinions which can be aroused by questioning and turned into knowledge, may we say that his soul has been forever in a state of knowledge? Clearly he always either is or is not a man.

MENO: Clearly.

SOCRATES: And if the truth about reality is always in our soul, b the soul must be immortal, and one must take courage and try to discover—that is, to recollect—what one doesn't happen to know, or, more correctly, remember, at the moment.

MENO: Somehow or other I believe you are right.

SOCRATES: I think I am. I shouldn't like to take my oath on the whole story, but one thing I am ready to fight for as long as I can, in word and act—that is, that we shall be better, braver, and more active men if we believe it right to look for what we don't know than if we believe there is no point in looking because what we don't know we c can never discover.

MENO: There too I am sure you are right.

SOCRATES: Then since we are agreed that it is right to inquire into something that one does not know, are you ready to face with me the question, 'What is virtue?'

MENO: Quite ready. All the same, I would rather consider the question as I put it at the beginning, and hear your views on it—that is, are we to pursue virtue as something that can be taught, or do men d have it as a gift of nature or how?

SOCRATES: If I were your master as well as my own, Meno, we should not have inquired whether or not virtue can be taught until we had first asked the main question—what it is. But not only do you make no attempt to govern your own actions—you prize your freedom, I suppose—but you attempt to govern mine. And you succeed too, so I shall let you have your way. There's nothing else for it, and it seems we must inquire into a single property of something about whose essential nature we are still in the dark. Just grant me one small relaxation of your sway, and allow me, in considering whether or not it can be taught, to make use of a hypothesis—the sort of thing, I mean, that geometers often use in their inquiries. When they are asked, for example, about a given area, whether it is possible for this area to be inscribed as a triangle in a given circle, they will probably reply, 'I don't e know yet whether it fulfills the conditions, but I think I have a 87

hypothesis which will help us in the matter. It is this. If the area is such that, when one has applied it [sc. as a rectangle] to the given line [i.e., the diameter] of the circle, it is deficient by another rectangle similar to the one which is applied, then, I should say, one result follows; if not, the result is different. If you ask me, then, about  
 b the inscription of the figure in the circle—whether it is possible or not—I am ready to answer you in this hypothetical way.'

Let us do the same about virtue. Since we don't know what it is or what it resembles, let us use a hypothesis in investigating whether it is teachable or not. We shall say, 'What attribute of the soul must virtue be, if it is to be teachable or otherwise?' Well, in the first place, if it is anything else but knowledge, is there a possibility of anyone teaching  
 c it—or, in the language we used just now, reminding someone of it? We needn't worry about which name we are to give to the process, but simply ask, Will it be teachable? Isn't it plain to everyone that a man is not taught anything except knowledge?

MENO: That would be my view.

SOCRATES: If on the other hand virtue is some sort of knowledge, clearly it could be taught.

MENO: Certainly.

SOCRATES: So that question is easily settled—I mean, on what condition virtue would be teachable.

MENO: Yes.

SOCRATES: The next point then, I suppose, is to find out whether virtue is knowledge or something different.

d MENO: That is the next question, I agree.

SOCRATES: Well then, do we assert that virtue is something good? Is that assumption a firm one for us?

MENO: Undoubtedly.

SOCRATES: That being so, if there exists any good thing different from, and not associated with, knowledge, virtue will not necessarily be any form of knowledge. If on the other hand knowledge embraces everything that is good, we shall be right to suspect that virtue is knowledge.

MENO: Agreed.

e SOCRATES: First then, is it virtue which makes us good?

MENO: Yes.

SOCRATES: And if good, then advantageous. All good things are advantageous, are they not?

MENO: Yes.

SOCRATES: So virtue itself must be something advantageous?

MENO: That follows also.

SOCRATES: Now suppose we consider what are the sorts of things that profit us. Take them in a list. Health, we may say, and strength and good looks, and wealth—these and their like we call advantageous, you agree?

MENO: Yes.

SOCRATES: Yet we also speak of these things as sometimes doing harm. Would you object to that statement?

MENO: No, it is so.

SOCRATES: Now look here. What is the controlling factor which determines whether each of these is advantageous or harmful? Isn't it right use which makes them advantageous, and lack of it, harmful?

MENO: Certainly.

SOCRATES: We must also take spiritual qualities into consideration. You recognize such things as temperance, justice, courage, quickness of mind, memory, nobility of character, and others?

MENO: Yes, of course I do.

SOCRATES: Then take any such qualities which in your view are not knowledge but something different. Don't you think they may be harmful as well as advantageous? Courage, for instance, if it is something thoughtless, just a sort of confidence. Isn't it true that to be confident without reason does a man harm, whereas a reasoned confidence profits him?

MENO: Yes.

SOCRATES: Temperance and quickness of mind are no different. Learning and discipline are profitable in conjunction with wisdom, but without it harmful.

MENO: That is emphatically true.

SOCRATES: In short, everything that the human spirit undertakes or suffers will lead to happiness when it is guided by wisdom, but to the opposite, when guided by folly.

MENO: A reasonable conclusion.

SOCRATES: If then virtue is an attribute of the spirit, and one which cannot fail to be beneficial, it must be wisdom, for all spiritual qualities in and by themselves are neither advantageous nor harmful, but become advantageous or harmful by the presence with them of wisdom or folly. If we accept this argument, then virtue, to be something advantageous, must be a sort of wisdom.

MENO: I agree.

SOCRATES: To go back to the other class of things, wealth and the like, of which we said just now that they are sometimes good and sometimes harmful, isn't it the same with them? Just as wisdom when it governs our other psychological impulses turns them to advantage, and folly turns them to harm, so the mind by its right use and control of these material assets makes them profitable, and by wrong use renders them harmful.

MENO: Certainly.

SOCRATES: And the right user is the mind of the wise man, the wrong user the mind of the foolish.

MENO: That is so.

**SOCRATES:** So we may say in general that the goodness of non-spiritual assets depends on our spiritual character, and the goodness of that on wisdom. This argument shows that the advantageous element must be wisdom, and virtue, we agree, is advantageous; so that amounts to saying that virtue, either in whole or in part, is wisdom.

**MENO:** The argument seems to me fair enough.

**SOCRATES:** If so, good men cannot be good by nature.

**MENO:** I suppose not.

**SOCRATES:** There is another point. If they were, there would probably be experts among us who could recognize the naturally good at an early stage. They would point them out to us and we should take them and shut them away safely in the Acropolis, sealing them up more carefully than bullion to protect them from corruption and ensure that when they came to maturity they would be of use to the state.

**MENO:** It would be likely enough.

**SOCRATES:** Since then goodness does not come by nature, is it got by learning?

**MENO:** I don't see how we can escape the conclusion. Indeed it is obvious on our assumption that, if virtue is knowledge, it is teachable.

**SOCRATES:** I suppose so. But I wonder if we were right to bind ourselves to that.

**MENO:** Well, it seemed all right just now.

**SOCRATES:** Yes, but to be sound it has got to seem all right not only 'just now' but at this moment and in the future.

**MENO:** Of course. But what has occurred to you to make you turn against it and suspect that virtue may not be knowledge?

**SOCRATES:** I'll tell you. I don't withdraw from the position that if it is knowledge, it must be teachable, but as for its being knowledge, see whether you think my doubts on this point are well founded. If anything—not virtue only—is a possible subject of instruction, must there not be teachers and students of it?

**MENO:** Surely.

**SOCRATES:** And what of the converse, that if there are neither teachers nor students of a subject, we may safely infer that it cannot be taught?

**MENO:** That is true. But don't you think there are teachers of virtue?

**SOCRATES:** All I can say is that I have often looked to see if there are any, and in spite of all my efforts I cannot find them, though I have had plenty of fellow searchers, the kind of men especially whom I believe to have most experience in such matters. But look, Meno, here's a piece of luck. Anytus has just sat down beside us. We couldn't do better than make him a partner in our inquiry. In the first place he

is the son of Anthemion, a man of property and good sense, who didn't get his money out of the blue or as a gift—like Ismenias of Thebes who has just come into the fortune of a Croesus—but earned it by his own brains and hard work. Besides this he shows himself a decent, modest citizen with no arrogance or bombast or offensiveness about him. Also he brought up his son well and had him properly educated, as the Athenian people appreciate. Look how they elect him into the highest offices in the state. This is certainly the right sort of man with whom to inquire whether there are any teachers of virtue, and if so who they are. b

Please help us, Anytus—Meno, who is a friend of your family, and myself—to find out who may be the teachers of this subject. Look at it like this. If we wanted Meno to become a good doctor, shouldn't we send him to the doctors to be taught? c

ANYTUS: Of course.

SOCRATES: And if we wanted him to become a shoemaker, to the shoemakers?

ANYTUS: Yes.

SOCRATES: And so on with other trades?

ANYTUS: Yes.

SOCRATES: Now another relevant question. When we say that to make Meno a doctor we should be right in sending him to the doctors, have we in mind that the sensible thing is to send him to those who profess the subject rather than to those who don't, men who charge a fee as professionals, having announced that they are prepared to teach whoever likes to come and learn? d

ANYTUS: Yes.

SOCRATES: The same is surely true of flute playing and other accomplishments. If you want to make someone a performer on the flute it would be very foolish to refuse to send him to those who undertake to teach the art and are paid for it, but to go and bother other people instead and have him try to learn from them—people who don't set up to be teachers or take any pupils in the subject which we want our young man to learn. Doesn't that sound very unreasonable?

ANYTUS: Sheer stupidity, I should say.

SOCRATES: I agree. And now we can both consult together about our visitor Meno. He has been telling me all this while that he longs to acquire the kind of wisdom and virtue which fits men to manage an estate or govern a city, to look after their parents, and to entertain and send off guests in proper style, both their own countrymen and foreigners. With this in mind, to whom would it be right to send him? What we have just said seems to show that the right people are those who profess to be teachers of virtue and offer their services freely to any Greek who wishes to learn, charging a fixed fee for their instruction. e1

ANYTUS: Whom do you mean by that, Socrates?

SOCRATES: Surely you know yourself that they are the men called Sophists.

c ANYTUS: Good heavens, what a thing to say! I hope no relative of mine or any of my friends, Athenian or foreign, would be so mad as to go and let himself be ruined by those people. That's what they are, the manifest ruin and corruption of anyone who comes into contact with them.

SOCRATES: What, Anytus? Can they be so different from other claimants to useful knowledge that they not only don't do good, like the rest, to the material that one puts in their charge, but on the contrary spoil it—and have the effrontery to take money for doing  
d so? I for one find it difficult to believe you. I know that one of them alone, Protagoras, earned more money from being a Sophist than an outstandingly fine craftsman like Phidias and ten other sculptors put together. A man who mends old shoes or restores coats couldn't get  
e away with it for a month if he gave them back in worse condition than he received them; he would soon find himself starving. Surely it is incredible that Protagoras took in the whole of Greece, corrupting his pupils and sending them away worse than when they came to him, for more than forty years. I believe he was nearly seventy when he died, and had been practicing for forty years, and all that time—indeed to this very day—his reputation has been consistently high, and there are plenty of others besides Protagoras, some before his time  
92 and others still alive. Are we to suppose from your remark that they consciously deceive and ruin young men, or are they unaware of it themselves? Can these remarkably clever men—as some regard them—be mad enough for that?

ANYTUS: Far from it, Socrates. It isn't they who are mad, but rather the young men who hand over their money, and those re-  
b sponsible for them, who let them get into the Sophists' hands, are even worse. Worst of all are the cities who allow them in, or don't expel them, whether it be a foreigner or one of themselves who tries that sort of game.

SOCRATES: Has one of the Sophists done you a personal injury, or why are you so hard on them?

ANYTUS: Heavens, no! I've never in my life had anything to do with a single one of them, nor would I hear of any of my family doing so.

SOCRATES: So you've had no experience of them at all?

ANYTUS: And don't want any either.

c SOCRATES: You surprise me. How can you know what is good or bad in something when you have no experience of it?

ANYTUS: Quite easily. At any rate I know *their* kind, whether I've had experience or not.

SOCRATES: It must be second sight, I suppose, for how else you

know about them, judging from what you tell me yourself, I can't imagine. However, we are not asking whose instruction it is that would ruin Meno's character. Let us say that those are the Sophists, if you d like, and tell us instead about the ones we want. You can do a good turn to a friend of your father's house if you will let him know to whom in our great city he should apply for proficiency in the kind of virtue I have just described.

ANYTUS: Why not tell him yourself?

SOCRATES: Well, I did mention the men who in my opinion teach these things, but apparently I was talking nonsense. So you say, and you may well be right. Now it is your turn to direct him; mention the name of any Athenian you like.

ANYTUS: But why mention a particular individual? Any decent Athenian gentleman whom he happens to meet, if he follows his advice, will make him a better man than the Sophists would.

SOCRATES: And did these gentlemen get their fine qualities spontaneously—self-taught, as it were, and yet able to teach this un-  
taught virtue to others? 93

ANYTUS: I suppose they in their turn learned it from forebears who were gentlemen like themselves. Would you deny that there have been many good men in our city?

SOCRATES: On the contrary, there are plenty of good statesmen here in Athens and have been as good in the past. The question is, have they also been good teachers of their own virtue? That is the point we are discussing now—not whether or not there are good men in Athens or whether there have been in past times, but whether virtue b can be taught. It amounts to the question whether the good men of this and former times have known how to hand on to someone else the goodness that was in themselves, or whether on the contrary it is not something that can be handed over, or that one man can receive from another. That is what Meno and I have long been puzzling over. Look at it from your own point of view. You would say that Themistocles was a good man? c

ANYTUS: Yes, none better.

SOCRATES: And that he, if anyone, must have been a good teacher of his own virtue?

ANYTUS: I suppose so, if he wanted to be.

SOCRATES: But don't you think he must have wanted others to become worthy men—above all, surely, his own son? Do you suppose he grudged him this and purposely didn't pass on his own virtue to him? You must have heard that he had his son Cleophantus so well d trained in horsemanship that he could stand upright on horseback and throw a javelin from that position, and many other wonderful accomplishments the young man had, for his father had him taught and made expert in every skill that a good instructor could impart. You must have heard this from older people?

ANYTUS: Yes.

SOCRATES: No one, then, could say that there was anything wrong with the boy's natural powers?

e ANYTUS: Perhaps not.

SOCRATES: But have you ever heard anyone, young or old, say that Cleophantus, the son of Themistocles, was a good and wise man in the way that his father was?

ANYTUS: Certainly not.

SOCRATES: Must we conclude then that Themistocles' aim was to educate his son in other accomplishments, but not to make him any better than his neighbors in his own type of wisdom—that is, supposing that virtue could be taught?

ANYTUS: I hardly think we can.

SOCRATES: So much then for Themistocles as a teacher of virtue, whom you yourself agree to have been one of the best men of  
94 former times. Take another example, Aristides, son of Lysimachus. You accept him as a good man?

ANYTUS: Surely.

SOCRATES: He too gave his son Lysimachus the best education in Athens, in all subjects where a teacher could help, but did he make him a better man than his neighbor? You know him, I think, and can say what he is like. Or again there is Pericles, that great and  
b wise man. He brought up two sons, Paralus and Xanthippus, and had them taught riding, music, athletics, and all the other skilled pursuits till they were as good as any in Athens. Did he then not want to make them good men? Yes, he wanted that, no doubt, but I am afraid it is something that cannot be done by teaching. And in case  
c you should think that only very few, and those the most insignificant, lacked this power, consider that Thucydides also had two sons, Melesias and Stephanus, to whom he gave an excellent education. Among other things they were the best wrestlers in Athens, for he gave one to Xanthias to train and the other to Eudoxus—the two who, I understand, were considered the finest wrestlers of their time. You remember?

ANYTUS: I have heard of them.

SOCRATES: Surely then he would never have had his children  
d taught these expensive pursuits and yet refused to teach them to be good men—which would have cost nothing at all—if virtue could have been taught? You are not going to tell me that Thucydides was a man of no account, or that he had not plenty of friends both at Athens and among the allies? He came of an influential family and was a great power both here and in the rest of Greece. If virtue could have been taught, he would have found the man to make his sons good,  
e either among our own citizens or abroad, supposing his political duties left him no time to do it himself. No, my dear Anytus, it looks as if it cannot be taught.

ANYTUS: You seem to me, Socrates, to be too ready to run people down. My advice to you, if you will listen to it, is to be careful. I dare say that in all cities it is easier to do a man harm than good, and it is certainly so here, as I expect you know yourself.

95

SOCRATES: Anytus seems angry, Meno, and I am not surprised. He thinks I am slandering our statesmen, and moreover he believes himself to be one of them. He doesn't know what slander really is; if he ever finds out he will forgive me.

However, tell me this yourself. Are there not similar fine characters in your country?

MENO: Yes, certainly.

SOCRATES: Do they come forward of their own accord to teach the young? Do they agree that they are teachers and that virtue can be taught?

MENO: No indeed, they don't agree on it at all. Sometimes you will hear them say that it can be taught, sometimes that it cannot.

SOCRATES: Ought we then to class as teachers of it men who are not even agreed that it can be taught?

MENO: Hardly, I think.

SOCRATES: And what about the Sophists, the only people who profess to teach it? Do you think they do?

MENO: The thing I particularly admire about Gorgias, Socrates, is that you will never hear him make this claim; indeed he laughs at the others when he hears them do so. In his view his job is to make clever speakers.

SOCRATES: So you too don't think the Sophists are teachers?

MENO: I really can't say. Like most people I waver—sometimes I think they are and sometimes I think they are not.

SOCRATES: Has it ever occurred to you that you and our statesmen are not alone in this? The poet Theognis likewise says in one place that virtue is teachable and in another that it is not.

d

MENO: Really? Where?

SOCRATES: In the elegiacs in which he writes:

Eat, drink, and sit with men of power and weight,  
Nor scorn to gain the favor of the great.  
For fine men's teaching to fine ways will win thee;  
Low company destroys what wit is in thee.<sup>3</sup>

e

There he speaks as if virtue can be taught, doesn't he?

MENO: Clearly.

SOCRATES: But elsewhere he changes his ground a little.

Were mind by art created and instilled  
Immense rewards had soon the pockets filled

of the people who could do this. Moreover,

<sup>3</sup> Theognis 33 sq.

- 96                   No good man's son would ever worthless be,  
                       Taught by wise counsel. But no teacher's skill  
                       Can turn to good what is created ill.<sup>4</sup>

Do you see how he contradicts himself?

MENO: Plainly.

- SOCRATES: Can you name any other subject, in which the professed teachers are not only not recognized as teachers of others, but are thought to have no understanding of it themselves, and to be no  
 b good at the very subject they profess to teach, whereas those who are acknowledged to be the best at it are in two minds whether it can be taught or not? When people are so confused about a subject, can you say that they are in a true sense teachers?

MENO: Certainly not.

SOCRATES: Well, if neither the Sophists nor those who display fine qualities themselves are teachers of virtue, I am sure no one else can be, and if there are no teachers, there can be no students either.

MENO: I quite agree.

- c       SOCRATES: And we have also agreed that a subject of which there were neither teachers nor students was not one which could be taught.

MENO: That is so.

SOCRATES: Now there turn out to be neither teachers nor students of virtue, so it would appear that virtue cannot be taught.

- d       MENO: So it seems, if we have made no mistake, and it makes me wonder, Socrates, whether there are in fact no good men at all, or how they are produced when they do appear.

- SOCRATES: I have a suspicion, Meno, that you and I are not much good. Our masters Gorgias and Prodicus have not trained us properly. We must certainly take ourselves in hand, and try to find  
 e someone who will improve us by hook or by crook. I say this with our recent discussion in mind, for absurdly enough we failed to perceive that it is not only under the guidance of knowledge that human action is well and rightly conducted. I believe that may be what prevents us from seeing how it is that men are made good.

MENO: What do you mean?

- 97       SOCRATES: This. We were correct, were we not, in agreeing that good men must be profitable or useful? It cannot be otherwise, can it?

MENO: No.

SOCRATES: And again that they will be of some use if they conduct our affairs aright—that also was correct?

MENO: Yes.

SOCRATES: But in insisting that knowledge was a *sine qua non* for right leadership, we look like being mistaken.

<sup>4</sup> Theognis 435 sq.

MENO: How so?

SOCRATES: Let me explain. If someone knows the way to Larissa, or anywhere else you like, then when he goes there and takes others with him he will be a good and capable guide, you would agree?

MENO: Of course.

SOCRATES: But if a man judges correctly which is the road, b though he has never been there and doesn't know it, will he not also guide others aright?

MENO: Yes, he will.

SOCRATES: And as long as he has a correct opinion on the points about which the other has knowledge, he will be just as good a guide, believing the truth but not knowing it.

MENO: Just as good.

SOCRATES: Therefore true opinion is as good a guide as knowledge for the purpose of acting rightly. That is what we left out just now in our discussion of the nature of virtue, when we said that knowledge is the only guide to right action. There was also, it seems, c true opinion.

MENO: It seems so.

SOCRATES: So right opinion is something no less useful than knowledge.

MENO: Except that the man with knowledge will always be successful, and the man with right opinion only sometimes.

SOCRATES: What? Will he not always be successful so long as he has the right opinion?

MENO: That must be so, I suppose. In that case, I wonder why knowledge should be so much more prized than right opinion, and indeed how there is any difference between them. d

SOCRATES: Shall I tell you the reason for your surprise, or do you know it?

MENO: No, tell me.

SOCRATES: It is because you have not observed the statues of Daedalus. Perhaps you don't have them in your country.

MENO: What makes you say that?

SOCRATES: They too, if no one ties them down, run away and escape. If tied, they stay where they are put.

MENO: What of it? e

SOCRATES: If you have one of his works untethered, it is not worth much; it gives you the slip like a runaway slave. But a tethered specimen is very valuable, for they are magnificent creations. And that, I may say, has a bearing on the matter of true opinions. True opinions are a fine thing and do all sorts of good so long as they stay in their place, but they will not stay long. They run away from a man's mind; so they are not worth much until you tether them by working out the reason. That process, my dear Meno, is recollection, as we agreed earlier. Once they are tied down, they become knowledge, 98

and are stable. That is why knowledge is something more valuable than right opinion. What distinguishes one from the other is the tether.

MENO: It does seem something like that, certainly.

- b     SOCRATES: Well of course, I have only been using an analogy myself, not knowledge. But it is not, I am sure, a mere guess to say that right opinion and knowledge are different. There are few things that I should claim to know, but that at least is among them, whatever else is.

MENO: You are quite right.

SOCRATES: And is this right too, that true opinion when it governs any course of action produces as good a result as knowledge?

MENO: Yes, that too is right, I think.

- c     SOCRATES: So that for practical purposes right opinion is no less useful than knowledge, and the man who has it is no less useful than the one who knows.

MENO: That is so.

SOCRATES: Now we have agreed that the good man is useful.

MENO: Yes.

- d     SOCRATES: To recapitulate then, assuming that there are men good and useful to the community, it is not only knowledge that makes them so, but also right opinion, and neither of these comes by nature but both are acquired—or do you think either of them is natural?

MENO: No.

SOCRATES: So if both are acquired, good men themselves are not good by nature.

MENO: No.

SOCRATES: That being so, the next thing we inquired was whether their goodness was a matter of teaching, and we decided that it would be, if virtue were knowledge, and conversely, that if it could be taught, it would be knowledge.

MENO: Yes.

- e     SOCRATES: Next, that if there were teachers of it, it could be taught, but not if there were none.

MENO: That was so.

SOCRATES: But we have agreed that there are no teachers of it, and so that it cannot be taught and is not knowledge.

MENO: We did.

SOCRATES: At the same time we agreed that it is something good, and that to be useful and good consists in giving right guidance.

MENO: Yes.

- 99    SOCRATES: And that these two, true opinion and knowledge, are the only things which direct us aright and the possession of which makes a man a true guide. We may except chance, because what turns out right by chance is not due to human direction, and say that where human control leads to right ends, these two principles are directive, true opinion and knowledge.

MENO: Yes, I agree.

SOCRATES: Now since virtue cannot be taught, we can no longer believe it to be knowledge, so that one of our two good and useful principles is excluded, and knowledge is not the guide in public life.

MENO: No.

SOCRATES: It is not then by the possession of any wisdom that such men as Themistocles, and the others whom Anytus mentioned just now, became leaders in their cities. This fact, that they do not owe their eminence to knowledge, will explain why they are unable to make others like themselves.

MENO: No doubt it is as you say.

SOCRATES: That leaves us with the other alternative, that it is well-aimed conjecture which statesmen employ in upholding their countries' welfare. Their position in relation to knowledge is no different from that of prophets and tellers of oracles, who under divine inspiration utter many truths, but have no knowledge of what they are saying.

MENO: It must be something like that.

SOCRATES: And ought we not to reckon those men divine who with no conscious thought are repeatedly and outstandingly successful in what they do or say?

MENO: Certainly.

SOCRATES: We are right therefore to give this title to the oracular priests and the prophets that I mentioned, and to poets of every description. Statesmen too, when by their speeches they get great things done yet know nothing of what they are saying, are to be considered as acting no less under divine influence, inspired and possessed by the divinity.

MENO: Certainly.

SOCRATES: Women, you know, Meno, do call good men 'divine,' and the Spartans too, when they are singing a good man's praises, say, 'He is divine.'

MENO: And it looks as if they are right—though our friend Anytus may be annoyed with you for saying so.

SOCRATES: I can't help that. We will talk to him some other time. If all we have said in this discussion, and the questions we have asked, have been right, virtue will be acquired neither by nature nor by teaching. Whoever has it gets it by divine dispensation without taking thought, unless he be the kind of statesman who can create another like himself. Should there be such a man, he would be among the living practically what Homer said Tiresias was among the dead, when he described him as the only one in the underworld who kept his wits—the others are mere flitting shades.<sup>5</sup> Where virtue is concerned such a man would be just like that, a solid reality among shadows.

<sup>5</sup> *Odyssey* 10.494.

b MENO: That is finely put, Socrates.

SOCRATES: On our present reasoning then, whoever has virtue gets it by divine dispensation. But we shall not understand the truth of the matter until, before asking how men get virtue, we try to discover what virtue is in and by itself. Now it is time for me to go, and my request to you is that you will allay the anger of your friend Anytus  
c by convincing him that what you now believe is true. If you succeed, the Athenians may have cause to thank you.

# EUTHYDEMUS

---

*This is perhaps of all the dialogues the one that makes the Athens of Socrates and Plato seem farthest removed from us. We are taken back to a time when language had begun to be of great importance in itself and reasoning was largely verbal. A pun or a double meaning might decide a serious discussion. Here Socrates confronts Euthydemus and his brother who are both so-called eristics, or fighters with words, and in their fight with Socrates, who professes to be only their pupil, this sort of verbal trickery occurs constantly and becomes extremely tiresome. For instance, when Socrates asks the sense of a phrase used by Dionysodorus, he is in turn asked, "Is there soul in things which have sense, when they have sense? Or have also the soulless things sense?" Socrates answers, "Only the things with soul." He is then triumphantly refuted, "Then do you know any phrase which has soul?" And to Socrates' answer he replies, "Then why did you ask me just now what sense my phrase had?" This is acknowledged by the large audience gathered around them to be a knockout blow.*

*Plato, of course, is holding up to ridicule all that sort of talk, but he is also concerned to point out how hard it is to put an idea into words. A Russian poet with all the resources of modern dictionaries at his disposal has said, "A thought when spoken is a lie." Something like that must often have been in Plato's mind as he sought not only to know the truth, but to discover a way to express it. He had to devise his own language, the language all philosophy would henceforth use, at a time when it was becoming the fashion to use words without regard to sense. The Euthydemus shows vividly what Plato had to contend with.*

271 CRITO: Who was it, Socrates, you were talking to yesterday in the Lyceum? There was such a great crowd about you people that I myself, wanting to hear, could not get any nearer or hear anything clearly; however I stretched up and had a look over, and I thought it was a stranger you were talking to. Who was it?

SOCRATES: Which do you mean, Crito? There were two of them, not one.

CRITO: The one I mean was sitting third from you on your  
b right, and between you was Axiochus' boy. I thought he had grown quite a lot, Socrates, almost as big as our own Critobulus; but Critobulus is thinnish, and this boy is well-grown and handsome and good-looking.

SOCRATES: Euthydemus is the man you ask about, Crito, and the one sitting on my left next to me was his brother Dionysodorus. This man is a partner in the talks.

CRITO: I don't know either of them, Socrates. These are new men again, I suppose Sophists. Where do they come from? And what  
c is their line?

SOCRATES: They come from somewhere in these parts, I think, from Chios, and went away and joined the colony at Thurii, but they were turned out and they have spent a good many years since then in this part of the world. You ask their line—it will surprise you, Crito—they simply take every line, they are regular know-alls. I never knew till now what all-round athletes were! These two are quite all-champions! They surpass the two Acarnanian brothers, those all-round athletes, for those could do nothing but fight with  
a their bodies. But these! First of all they are first-rate in fighting with their bodies and battling with all comers—they are themselves masters at fighting in armor, and can make anyone else expert who  
272 would pay their fee. Next, in the battle of the law courts they are champions; they can compete themselves and teach others to speak, and they can compose speeches suitable to deliver in court. Well, hitherto this was all they were clever at, but now they have put the finishing touch on their all-round virtuosity, for they have now mastered the only battle left to them, so that no one will dare so much as to put up his hands against them—they have become so skillful in wordy warfare that they can confute with equal success anything  
b which anyone says, whether false or true! So now, my dear Crito, I have it in mind to become their pupil, for they say that in quite a short time they would make anyone else as skillful as they are.

CRITO: I say, Socrates! Aren't you afraid, at your time of life, that you are too old?

SOCRATES: Not the least, my dear Crito, I have proof and encouragement enough to make me quite fearless. The two men themselves were what you might call old men before they started at this science, disputation, which I want to acquire; last year or the year before they had not yet got it. The only thing I really do fear is that I c may bring discredit on the two strangers, as on poor Connus, Metrobius' son the harpist, who is now still trying to teach me to play the harp; the boys, my schoolfellows, look on and laugh at me and call Connus 'old Gaffer-Teacher'! Someone may taunt the two strangers with the same nickname, and quite likely they might refuse me as a pupil for fear of it. But anyhow, my dear Crito, I have persuaded a few other ancients to come with me to learn at Connus', and I will d try to do the same here. What about you—will you be my school-fellow? We will bring your sons with us as a bait. I am sure they will teach us too, because they will want the boys.

CRITO: I'm willing, Socrates, if you wish it. But tell me first what their science is, and then I shall know what we are to learn.

SOCRATES: I can do that at once. I can't pretend that I did not pay attention for I certainly did, and I remember it well and will try to tell you the whole story from the beginning.

I happened providentially to be sitting in the place where you saw me, alone in the undressing room, and had just thought it was time to e get up; but as I was getting up, I had my usual divine presentiment. So I sat down again, and soon after in came these two, Euthydemus 273 and Dionysodorus, and others with them—a number of pupils I think. The two men came in, and walked round in the cloisters. They had hardly gone round two or three times when Clinias also came in, the one you say has grown so much, and you are quite right; behind him were a great many of his admirers, and among them Ctesippus, from Paeania, a fine handsome young man but rather wild as young men are. Clinias saw me from the entrance, sitting alone, so he came b straight to me and sat beside me on my right, just as you say. When Dionysodorus and Euthydemus caught sight of him, first they stood and talked to each other for a time, throwing glance after glance at us—for I watched them carefully—then they came up, and one, Euthydemus, sat down beside the boy, the other by me on my left, and the rest as each happened.

I said good day to the two, as it was some time since I had seen c them; after that I said to Clinias, These two men, Clinias, Euthydemus and Dionysodorus, are men of wisdom, and no small wisdom indeed. They know everything about war, as much as is needed for becoming a general, all about tactics, and how to lead an army, and how to fight in full armor, and moreover they can make a man able to defend himself in the law courts if he is wronged.

They turned up their noses at this; they looked at each other and d laughed, and Euthydemus said, We don't trouble about those things now, Socrates, we treat them just as side shows.

That surprised me, and I replied, Your main show must be a fine one, if such great subjects as those have come to be side shows. Tell me what this fine show is, in heaven's name!

Virtue, Socrates! We believe we can impart it—no one in the world so well or so quickly!

- e O God! said I. What an achievement! Where did you find this godsend? As I said just now, I thought of you two especially as skillful at fighting in full armor, and that is what I said of you; for when you first stayed in this town, I remember this was what you professed. Well, if you now truly have this knowledge, O be gracious!—for I humbly address you as gods, and I pray your pardon for what I said  
274 before. But do think, Euthydemus and Dionysodorus—are you quite sure this is the truth? One cannot help feeling doubtful at such a portentous announcement.

Be assured, Socrates, they said, that this is true.

Then I felicitate you on your possession, much more than I would congratulate the Great King on his empire! Let me ask you if you have it in mind to demonstrate this wisdom? Or what do you mean to do?

- b That's the very reason why we are here, Socrates, to demonstrate and to teach, if anyone is willing to learn.

- I will go bail that all those who have not got it will be willing! First myself, then Clinias here, and no doubt Ctesippus and these others, I said, pointing at the admirers of Clinias—they were all standing around us by this time. For Ctesippus was sitting, so I thought, a good way off from Clinias, but what happened was that  
c Euthydemus as he talked to me, leaning forward, hid Clinias, who was between us, from Ctesippus; so Ctesippus wishing to watch his dear boy and also greedy to hear, had jumped up and came and stood right in front of us; the others seeing him did the same and gathered round us, both the admirers of Clinias and the companions of Euthydemus and Dionysodorus. These I pointed to when I said all  
d were ready to learn, and Ctesippus eagerly said yes and so did the others, and they all asked the two brothers to demonstrate the power of their wisdom to all the company.

- So I said, My friends Euthydemus and Dionysodorus, I beg you, do all you can to oblige these people, and for my sake also do demonstrate. A great task, if you take it as a complete whole. But please tell me one thing—can you make a man a good man only if he is already  
e convinced that he must learn from you, or can you do it also to one who is not yet convinced, through doubting that the thing, virtue, can be learned at all or that you two can teach it? If you please, for a man in that condition, is it the work of the same art to convince him both that virtue is teachable and that you here are the people from whom one could best learn it? Or are these two different arts?

No, said Dionysodorus, no, Socrates, it is the same art—our art.

So you, Dionysodorus, I said, would be the best people in the

world to incline a man toward philosophy and the practice of virtue? 275

Yes, Socrates, we think so.

Very well, said I, leave the rest of the demonstration for another time, and just demonstrate this one thing. Persuade this young man that he must love wisdom and practice virtue, and you will oblige me and all these. For the truth about this boy is that both I myself and all these anxiously desire that he should become as good as a man can be. This is the son of Axiochus and the grandson of the famous Alcibiades, and cousin of the present Alcibiades; his name is Clinias. b He is young, and we are afraid for him, as for other young men, that someone may get in first and turn his mind in some other direction, and ruin him. You have come, then, most fortunately. If you do not mind, please make trial of the lad, and talk with him before us.

When I had spoken, almost in these very words, Euthydemus answered bravely and boldly, Oh, we don't mind, Socrates, if the young man is only willing to answer. c

Why, he is quite used to that, I said. These people here are always coming and talking with him and asking all sorts of questions, so he is not at all shy in answering.

What followed, Crito, how could I describe properly? It is not a small business to recall and repeat wisdom ineffably great! So I must begin my description as the poets do, by invoking the Muses and Memory herself!

Well, Euthydemus began something like this, I think. d

Now Clinias, which of mankind are the learners, the wise or the ignorant?

This was a large question; so the boy blushed, and looked at me in doubt. Seeing that he was troubled I said, My dear Clinias, cheer up and answer like a man, whichever you think, for perhaps it will do e you a deal of good.

Just then, Dionysodorus leaned over me, and whispered in my ear, smiling all over his face, Now look here, Socrates, I prophesy that whichever the lad answers, he will be refuted!

While he spoke, Clinias made his answer, so I had no chance to warn the boy to take care, and he answered that the wise were the 276 learners.

And Euthydemus said, There are people you call teachers, aren't there?

He agreed.

The teachers are teachers of the learners; for example, the music master and the grammar master were teachers of you and the other boys, and you were learners?

He said yes.

Of course at the time when you were learning, you did not yet know the things you were learning?

No, he said.

- b Then you were wise when you did not know these things?  
 Certainly not, said he.  
 If not wise, then ignorant?  
 Yes.

So you boys, while learning what you did not know, were ignorant and were learning?

The boy nodded.

So the ignorant learn, my dear Clinias, not the wise as you suppose.

- c When he said this, it was like conductor and chorus—he signaled, and they all cheered and laughed, I mean Dionysodorus and Euthydemus and their followers. Then before the boy could take one good breath, Dionysodorus took over and said, What happened, my dear Clinias, when the grammar man dictated to you? Which of the boys learned the things dictated, wise or ignorant?

The wise ones, said Clinias.

Then the wise ones learn and not the ignorant, and you answered wrong just now to my brother.

- d Then indeed the two men's admirers laughed loud and long, applauding their wisdom, but all the rest of us were dumb-struck and had nothing to say. Euthydemus noticed that we were dumb-struck and wanted us to admire him more; so he would not let the boy alone, but went on asking, doubling and twisting around the same question like a clever dancer. He said, Do the learners learn what they know, or what they don't know?

- e And Dionysodorus whispered softly to me again, Here's another, Socrates, just like the first.

Good heavens, I said, really I thought that first one of yours a fine question!

All our questions are like that, Socrates—no escape!

Now, I said, I can see why you have such a reputation among your pupils!

- Meanwhile Clinias answered Euthydemus that the learners learned what they did not know, and he went on in the same way as  
 277 before: Very well; do you not know your letters?

Yes, said Clinias.

All of them, eh?

He agreed.

And when a teacher dictates anything, does he not dictate letters?

He agreed.

Then he dictates a bit of what you know, if you know them all?

He agreed to this too.

Very well, said he, *you* do not learn what someone dictates, but only the one who does not know letters learns them? Eh?

No, no, he said, I do learn them.

Then you learn what you know, since you know all the letters.  
He agreed. b

Then you did not answer right, said Euthydemus.

The word had scarcely come out of his mouth, when Dionysodorus caught it like a ball and aimed it again at the boy, saying, Euthydemus is cheating you, my dear Clinias. Just tell me, is not learning getting knowledge of whatever one learns?

Clinias agreed.

But to know, he went on, is surely to have knowledge of something already?

He said yes.

Then not to know is not yet to have knowledge?

He agreed with this. c

Well, are those who get anything, those who have it already, or those who have not?

Those who have not.

Have you not agreed that those who do not know belong also to this class, those who have not?

He nodded.

And the learners are of the class who get, not those who have?

He said yes.

Then those who do not know, learn, not those who do.

Now Euthydemus was getting ready to give the young man the third fall in this wrestling match, but I saw the boy was out of his depth, and hoped to give him time to rest that he might not let us down; so I said, to encourage him, My dear Clinias, do not be surprised if the arguments appear strange to you. Perhaps you do not understand what our visitors are doing with you. They are doing the same as the Corybantes do in their initiations, when the one to be initiated is being enthroned. There is dancing and play there also, as you know if you have been initiated; and now these are only dancing round you in play, meaning to initiate you afterward. So consider e now that you are hearing the beginnings of the sophistic ritual. For you must learn first of all, as Prodicus says, the right use of words; and this is just what the two visitors are showing to you, because you did not know that people use the word *learn* in two senses—first, when one has no knowledge at the beginning about something, and 278 then afterward gets the knowledge, and second, when one already having the knowledge uses this knowledge to examine this same thing done or spoken. The second is called understanding rather than learning, but sometimes it is also called learning. But you missed this, as these show it; they hold the same word as applying to people in opposite senses, to one who knows and one who does not. It was much the same in the second question, in which they asked you b whether people learn what they know or what they don't. Well, all this is just a little game of learning, and so I say they are playing

with you; I call it a game, because if one learned many such things or even all of them, one would be no nearer knowing what the things really are, but would be able to play with people because of the different sense of the words, tripping them up and turning them upside down, just as someone pulls a stool away when someone else is going to sit down, and then people roar with joy when they see him c lying on his back. So you must consider that all this was a game on the part of these gentlemen, but I feel sure, Clinias, that from now on this distinguished pair will show you serious things, and I will give them a lead as to what they promised me to provide. You remember they said they would demonstrate their skill in drawing you on, but so far I suppose they thought it better to begin by playing with you.

d Then, my dear Euthydemus and Dionysodorus, let your play end here—perhaps we have had enough—but now please demonstrate by attracting the boy and showing him how he must practice wisdom and virtue.

But first I will show to you what my notion of it is, and the sort of thing I should like to hear. If you think I am clumsy and ridiculous in doing this, don't laugh at me; I am only eager to listen to your wisdom, and so I will be daring enough to make a rough sketch before e you. Put up with me then, and listen without laughing, both you and your pupils. And as for you, Master Clinias, answer.

Do we all wish to do well in the world? Or perhaps this is one of the questions which I feared you might laugh at, for it is foolish, no doubt, even to ask such things. Who in the world does not wish to do well?

Not a single one, said Clinias.

279 Very well, said I. Next then, since we all wish to do well, how could we do well? If we had plenty of good things, eh? Perhaps that is a sillier question than the other. For it is clear, I suppose, that that is true?

He agreed.

Very well, which shall we say are good for us, of all the things there are? This is an easy question, I think; it needs no solemn person to supply an answer, for everyone would tell us that to be rich is good. What do you say?

Yes indeed, he said.

b Also to be healthy, and to be handsome, and to have enough of all the other bodily blessings.

He thought so too.

Again, good birth and power and honor in your own country, these are clearly good?

He agreed.

Then what good things are left to us? What is it to be temperate and upright and brave? What do you think, in heaven's name, Clinias

—if we put these among the good things, shall we be right, or not? For perhaps someone might quarrel with this. What do *you* think?

They are good, said Clinias.

Very well, said I, where shall we put wisdom in our parade? c  
Among the good things, or where do you say?

Among the good things.

Take care now that we leave out none of the good things worth mentioning.

Oh no, said Clinias, I think there is nothing left out.

Suddenly I remembered one, and said, Upon my word, we are nearly leaving out the greatest good of all!

What is that? he asked.

Good fortune, Clinias, which everyone says is the greatest good of all; even the commonest fools say that.

Quite true, said he.

Then I thought again for a moment, and said, We have almost d  
made ourselves ridiculous before these visitors, you and I, my dear young gentleman!

What's the matter now? he asked.

Because we put good fortune among the first lot, and now here we are talking about the same again!

Well, what is the matter then?

It is ridiculous, I suppose, when something has been lying before us all this time, to lay it before us again and to say the same things twice!

How do you mean? he asked.

I said, Wisdom, I suppose, is good fortune; even a child would know that.

He was astonished, so young and simple he still is. Seeing him wondering I said, Why, Clinias, consider for example doing well with e  
pipe music, don't you think the pipers have the best fortune?

He said yes.

And in the writing and reading of letters, I said, the grammar men?

Certainly.

Consider the dangers of the sea. Surely you don't think that anyone has better fortune than wise pilots, as a general rule?

Of course not.

Well then, on a campaign, which would you like better to share danger and fortune with, a wise captain or an ignorant one?

A wise one.

And if you were ill, which would you prefer to run risks with, a wise physician or an ignorant one?

A wise one.

Don't you think, then, I said, that it would be better fortune to do 280  
anything along with a wise man, than with an ignorant one?

He agreed.

Then wisdom everywhere makes men to have good fortune. For wisdom, I suppose, could never make a mistake, but must always do right and have right fortune, or else it would not be wisdom any longer.

- b We came to an agreement in the end somehow or other, to sum up thus: when wisdom is present, whoever has it needs no more good fortune than that. And when we had come to this agreement, I asked him how our former admissions would stand now. We agreed, I said, that if we had plenty of good things, we should be happy and do well.

He said yes.

Then should we be happy because of the good things we had, if they gave us benefit, or if they did not?

- c If they gave us benefit, he said.

And would a thing give benefit, if we only had it but did not use it? For example, if we had plenty of food, but ate nothing, and plenty of drink, but drank nothing, should we get any benefit?

No, none, he said.

And all the craftsmen, now, if each of them had everything ready that was necessary for his work, but used nothing, would these do well just because of having, because they had all the things which the craftsman must have? A carpenter, for instance, if he had provided all his tools and wood enough but did no carpentering, would he get any benefit from just having?

- d None at all, said he.

Again, if a man were possessed of wealth and all the good things we named lately, but if he did not use them, would he be happy just because he possessed the good things?

Not at all.

Then it is necessary, I said, as it seems, that the one who is to be happy must not only get possession of such good things, but also must use them, or else there is no benefit from having them.

Quite true.

- e Very well then, Clinias, is that enough now to make a man happy, both to possess the good things and to use them?

I think so.

Is that if he uses them aright, or is it the same if he uses them wrongly?

If he uses them right.

Quite so, said I. It is more harmful, I should think, if one uses anything wrongly than if one leaves it alone—the first is bad; the second is neither bad nor good. Don't you agree?

He did.

- 281 Very well, in the working and the use of woodwork, that which produces the right use is just simply knowledge of carpentry, don't you think so?

It is just that.

Moreover knowledge, I suppose, is what produces right use of equipment?

He agreed.

Well then, I said, what about the use of the good things which we mentioned at first—wealth and health and good looks—for using all such things right, was knowledge the guide which directed the action, or was it something else? b

Knowledge, he said.

Then not only good fortune but good doing, as it seems, is provided by knowledge for mankind in every getting and doing.

He agreed.

Then in God's name, said I, does any benefit come from the other possessions, without intelligence and wisdom? Could a man get benefit, possessing plenty and doing much, if he had no sense—would he not benefit more by doing little with sense? Just consider. If he did less he would make fewer mistakes, if he made fewer mistakes he would do less badly, if he did less badly he would be less miserable? c

Certainly, he said.

Which would be more likely to do less, a poor man or a rich man?

A poor man, he said.

A weak man or a strong man?

A weak man.

A man in high place or in low place?

Low place.

Would a brave and temperate man do less, or a coward?

A coward.

So also an idle rather than an active man?

He agreed.

And a slow man rather than a quick one, shortsighted and hard of hearing rather than sharp?

In all such comparisons we agreed. d

Then to sum up, my dear Clinias, I said, the truth is that in all those things which we said at first were good, the question is not how they are in themselves naturally good, but this is the point, it seems. If ignorance leads them, they are greater evils than their opposites, inasmuch as they are more able to serve the leader which is evil; but if intelligence leads, and wisdom, they are greater goods, while in themselves neither kind is worth anything at all.

It seems to be so, as you say, he said. e

Then what follows from what has been said? That none of the things is either good or bad, except these two, and of these wisdom is good, and ignorance bad.

He agreed.

Then let us consider what remains, I said. Since we all desire to be happy, and we have been shown to be happy by using things and using them aright, and rightness and good fortune were provided by 282

knowledge, what seems to be necessary, you see, is that every man in every way shall try to become as wise as possible. Is not that correct?

Yes, he said.

- b And I suppose we think that he should get this from his father much rather than wealth, and from guardians and friends and especially from those who profess to be lovers, native or foreign; he should beg and beseech them to give him some wisdom. For wisdom's sake, Clinias, there is no disgrace, no reproach, in being servant and slave to a lover and to anyone, for a man willing to give honorable service in the passion to become wise. Don't you think so? I said.

I think you are quite right, he replied.

- c Yes, Clinias, I said, if only wisdom can be taught, if only it is not something that comes to men of itself—for that is a point we have not considered, that has not yet been agreed between me and you.

Well, Socrates, he said, I think wisdom can be taught.

- I was delighted, and replied, Well said, admirable boy! I am much obliged to you for sparing me from a long inquiry on just that question, whether wisdom can or cannot be taught. Now, then, since you think it can, and that wisdom alone in the wide world makes a  
d man happy and fortunate, don't you say it is necessary to love wisdom, and don't you mean to do it yourself?

That I do, Socrates, he said, as hard as ever I can!

- I was glad to hear it. And I said, There's my specimen, my dear Dionysodorus and Euthydemus, of the sort of thing I wish words of attraction to be; it is clumsy perhaps, and too long, and tedious. Now then let either of you who wishes demonstrate the same thing for us,  
e doing it neatly like an artist. Or if you do not care to do that, then begin where I left off, and show the boy in due order whether he must get every knowledge, or if there is one single knowledge which he must get to be happy and a good man, and what this is. For as I said at the beginning, it would really mean a great deal to us that this young man should become wise and good.

- 283 That is what I said, Crito, and I paid particular attention to what should follow, and I watched how they would tackle the argument, and where they would begin, in trying to encourage the young man to practice wisdom and virtue. So Dionysodorus, the elder brother, began first, and we all watched him expecting to hear something wonderful there and then. As indeed we did, Crito, for it was a wonderful  
b argument which the man was beginning, and it is worth your while to hear what sort of encouragement to virtue it was.

Tell me, Socrates, he said, and all you gentlemen here who say you desire that this young man should become wise, whether you are jesting in saying this, or do you truly and seriously desire it?

This made me suppose that they thought we were jesting before, when we asked them to converse with the young man, and that this

was the reason why they jested and did not take it seriously. So I told c them still more earnestly that we were really serious about it.

Then Dionysodorus said, Take care, Socrates; you may have to deny what you say now.

I have taken care, I replied. I shall never deny it.

Very well, he said. You say you want him to become wise.

Most certainly.

But now, said he, is Clinias wise or not?

He says, not yet, said I. He's no boaster, you know.

And you people, said Dionysodorus, want him to become wise, and not to be a dunce?

We agreed.

Then you wish him to become one that he is not, and no longer d to be one that he is.

I was troubled when I heard this, and he, seeing me troubled, took me up: One further word. Since you want him no longer to be one that he is now, you want him to be destroyed, it seems! Indeed, precious friends and lovers they must be who would give a great deal to have their darlings done away with!

Ctesippus flew into a rage for his pet when he heard this, and e said, Mr. Thurian Visitor, if it weren't too rude I would say, Same be done to you! How could you let yourself tell such a lie about me and the rest of us, something to my mind not decent to repeat, that I would wish this young gentleman to be done away with!

My dear Ctesippus, said Euthydemus, do you really think it is possible to tell a lie?

Yes, by heaven, or else I am out of my senses.

In making the statement objected to, or not in making it?

In making it, he replied.

284

In that case, *if* he states it, is he not telling another of the facts, differing from what he actually says?

How could he? said Ctesippus.

Clearly what he tells is an extra one of the facts, distinct from his other facts.

*Quite* so!

Therefore in stating *that*, he said, he is stating the extra fact?

Yes.

Now then, he who states this fact and the other facts is telling the truth; so Dionysodorus, since he states the facts, tells the truth and tells no lie about you.

Yes, said Ctesippus, but he that makes *these* statements, Euthy- b demus, is not stating the facts—is not saying the things that are.

Then Euthydemus went on, Surely the things that are not, are not?

They are not.

Surely the things that are not can only be nowhere?

Nowhere.

Is it possible then that anyone, I don't care who he is, could *do* something about these things that are not, so as to *make* them to be the things that are nowhere?

I don't think so, said Ctesippus.

Very well. When the orators speak in public, do they do nothing?

Oh yes, they do something.

Then if they do, they also make?

Yes.

c Then to speak is both to do and to make?

He agreed.

Then, said he, no one ever says the things that are not—for he would at once make them something, and you have admitted that no one can make that which is not—so according to what you say, no one tells lies, but since Dionysodorus says it, he says the truth and the things that are.

Right, on my word, said Ctesippus, only he says the things that are in a certain way, but not as they really are.

d What, Ctesippus! broke in Dionysodorus. Are there indeed people who say things as they are?

Certainly there are, he replied, all gentlemen and those who *speak the truth*.

Very well, said Dionysodorus, are not good things well, and bad things ill?

He agreed.

You agree that gentlemen speak as things are?

I do.

Then, Ctesippus, gentlemen speak ill of things ill, since they speak as things are.

e Yes, upon my word, said he, very much so at least of rude men; you will take care not to be one yourself, if you will listen to me, or the good men may speak ill of *you*. You can be sure that the good speak ill of the ill!

And do they speak bigly of the big, said Euthydemus, and hotly of the hot?

That they do, said Ctesippus, at least they speak flatly of the flat, like your discussion.

Vulgar abuse, Ctesippus, said Dionysodorus, vulgar abuse.

285 Not a bit of it, Dionysodorus, said he, since I am fond of you, but I am warning you as a friend, and I am trying to persuade you never to say, so rudely to my face, that I want these to be done away with, whom I value most!

As I saw they were getting rather wild with each other, I began to make game of Ctesippus and said, My dear Ctesippus, I think we ought to accept from our visitors what they tell us, if they are kind

enough to do us this favor, and we should not quarrel over a word. If they understand how to destroy men so as to make good and sensible ones out of bad and foolish ones, whether this be their own invention, or they learned from someone else a kind of death or destruction, such that they can destroy a bad one and produce a good one instead: if they understand this—and it is clear they do understand it; at least they said that their art newly discovered was to make good men out of bad—let us give them leave; let them destroy the lad and make him sensible, and all the rest of us too! But if you young ones are afraid, make the experiment on me, as your Carian slave; I am only an old man, so I am ready to run the risk, and I deliver myself to Dionysodorus here as if he were Medea of Colchis. Let him destroy me, boil me too if he likes, only let him turn me out good.

Then Ctesippus said, I'm quite ready, myself, Socrates, to let our visitors take me on, and if they like they may flay me even worse than they do now, so long as my skin shall not end as a leather bottle, like that of Marsyas, but in virtue. You see Dionysodorus here thinks I am angry with him; but I'm not angry, I am only speaking against what I think he is not speaking nicely to me. Look here, Dionysodorus, be generous, don't say that to speak against you is vulgar abuse; that is something quite different, vulgar abuse!

Dionysodorus answered, Do you think there is such a thing as 'speaking against' one, Ctesippus, when you say that?

Why yes, of course, he said, very much so; do you think there is not, my dear Dionysodorus?

Anyway, he replied, you could not show that you had ever heard anyone 'speaking against' anyone else.

Indeed? said Ctesippus, On the contrary, let us hear now whether I can show you Ctesippus speaking against Dionysodorus.

And would you undertake to prove that?

Certainly, he said.

Well then, said Dionysodorus, are there words describing each of the things that are?

Certainly.

As each thing is, then, or as it is not?

As it is.

Yes, for if you remember, Ctesippus, he said, we showed just now that no one speaks of anything as it is not, for it was made clear that no one speaks what is not.

Well, what then? said Ctesippus. Are you and I speaking against each other any the less?

Then should we be speaking against each other when we both spoke describing the same thing, or should we not in that case be saying the same things?

He admitted it.

- b But when neither of us speaks the word describing the thing, he said, should we then be speaking against each other? Surely in this case neither of us would be thinking of the thing at all?

He admitted this too.

On the other hand, he said, when I speak the word describing the thing, and you describing something else, are we speaking against each other then? Or am I describing the thing, and you saying nothing about it at all? And how could he that says nothing be speaking against him that is speaking?

- c Ctesippus was silent, but I was astonished at the whole argument, and said, What do you mean, Dionysodorus? I confess that I have heard this argument from many, and however often I hear it I am always astonished; even Protagoras and his people used it with vigor, and others before them. It was always a wonder to me how it confounded everyone else, and indeed confounded itself—however, I think I shall hear the truth of it best from you. Is it really impossible to tell a lie? For this is what the argument means. Is it? Come, must one tell the truth or say nothing?

He agreed.

- d Then is it impossible to tell a lie, but possible to have a false opinion?

Not even that, he said.

Then there is no such thing at all as a false opinion, I said.

No, he said.

And no ignorance, or ignorant people? Would not ignorance, if it did exist, be this—being deceived about things?

Certainly, he said.

But that is not possible, I said.

No, said he.

Are you speaking just for the sake of speaking, Dionysodorus, I said, only to say something odd and strange, or do you really think that no one in the world is ignorant?

- e Just you refute me, said he.

Is there such a thing as refute, to use your own argument, if no one speaks falsely?

There is not, said Euthydemus.

And so, it seems Dionysodorus did not this mōment bid me refute? I said.

No, for how could anyone bid what is not? he replied. Do you?

- My dear Euthydemus, I said, I fear I do not quite understand these clever things and admirable things but my mind is somewhat dense about them, so perhaps I am going to speak like a common or vulgar man, but please forgive me. Look here, if it is impossible to  
287 be false, or to think falsely, or to be ignorant, then is it not impossible to make a mistake when one does anything? For in doing, one cannot  
a mistake in what one does—is not that what you say?

Certainly, he answered.

Then here is my common or vulgar question, I said. For if we make no mistake either in doing or in speaking or in thinking, then what in God's name do you come here to teach, if that is so? Did you not say just now that you could impart virtue better than all the world to one who wanted to learn? b

Here Dionysodorus broke in, Are you such an old dotard, Socrates, that you remind us now what we said at first, and if I said something last year you will remember that now, but you don't know what to do with what is being said at the present moment?

Because what is being said now is very difficult—naturally, since it is said by very wise men—indeed this last thing is wholly difficult to deal with, as you say. For what do you mean, Dionysodorus, when you say I don't know what to do with it? Isn't it clear you mean that I can't refute it? Just tell me, what else is the sense of the phrase, 'I don't know what to do' with what is said?

But as to what *you* say, that is not very difficult to do with, he said. Just answer me.

Before *you* answer *me*? I said.

Won't you answer? he said.

Is that fair?

Quite fair, he said.

On what reasoning? said I. Is not this your reasoning—that you visit us as one all-wise about words, and you know when you are bound to answer and when not, and now you will not answer anything d since you perceive that you are not bound?

You just chatter, he said, without troubling to answer. Come, my good man, do as I say and answer, since you yourself admit that I am wise.

Then I must do as you say, said I, and I can't help it, as it seems, for you are master. Ask away.

Is there soul in things which have sense, when they have sense? Or have also the soulless things sense?

Only the things with soul.

Then do you know any phrase which has soul?

No indeed.

Then why did you ask me just now what sense my phrase had? e

Oh, I said, it was simply a mistake I made through my stupidity—or perhaps it was not a mistake, and I was right in saying that phrases have sense. Do you say it was a mistake or not? For if it was not a mistake, then you will not refute me although you are wise, and you do not know what to do with my saying; and if it was a mistake, then you do not say right when you declare it is impossible to make 288 a mistake. I am not now speaking of things you said last year. It seems really, I said, my dear Dionysodorus and Euthydemus, that our present talk is getting us no further, and is still so to speak the old

'knockdown and tumble down,' and even your skill has not yet found out how to keep it from that, wonderful though it is for exactitude in speaking.

Then Ctesippus said, Truly amazing things you do say, honorable gentlemen of Thurii or Chios, or whence or however you like to get  
b your names—you don't seem to mind what nonsense you babble!

I was afraid of another bout of rudeness and tried again to calm Ctesippus by saying, My dear Ctesippus, what I said to Clinias a moment ago I say now to you, that you do not know how astonishing is the depth of our visitors' wisdom, only they are not willing to demonstrate it in earnest; they are doing conjuring tricks with us like Proteus, the Egyptian Sophist. So let us follow the example of  
c Menelaus, and not let go of the men until they make clear to us their real serious shape, for I believe that something very fine will appear when they begin to be in earnest. Come, let us pray and beseech them to show themselves. I really think the best thing is for me once more to give them a lead myself, and show them in what shape I beg them to reveal themselves. I will proceed from where I formerly left off, and I will try to follow up what comes next as well as I can, in the  
d hope that I may bring them out, and they may pity my earnest attempt and be themselves in earnest.

Now then, Clinias, I said, it is your turn. Remind me where we left off. I think it was hereabout. We agreed in the end, didn't we, that one must love wisdom? What do you say?

Yes, he said.

And to love wisdom is to get knowledge? Is that right?

Yes, he said.

What knowledge then should we do right to get? Is not the answer simply the knowledge that shall benefit us?

e Certainly, he said.

Would it benefit us at all, if we knew how to go about the country and recognize where in the earth the greatest quantity of gold is buried?

Perhaps, he said.

But before that, I said, we had proved that we should gain nothing, even if we got all the gold offhand without digging; so that even if  
289 we knew how to turn all the stones into gold, the knowledge would be worth nothing to us; for unless we know also how to use the gold, we saw there was no benefit in it. Don't you remember? said I.

Oh yes, I remember, he said.

In the same way, it seems, there is no benefit in any other knowledge, of business or of physic for example, or anything else which knows how to make something but not how to use what it makes. Is not that so?

He said yes.

b Even if there is a knowledge how to make men immortal, with-

out the knowledge how to use immortality even this seems to bring no benefit, if we are to judge from our former admissions.

We both agreed about that.

Then, my charming boy, I said, we need such a knowledge as combines both how to make something and how to use what is made.

It appears so, he said.

Then we must be nothing at all like those who make harps, for instance; we do not want to become masters of knowledge like that; for there the making art is one thing, the using art quite another, <sup>c</sup> and each art deals separately with the harp. For the arts of harp making and harp playing are very different. Is not that so?

He said yes.

Nor do we want pipe making, clearly; this is another like that.

He agreed.

Well, said I, if we should learn the art of speechmaking, tell me in heaven's name, is this the art which when got will make us happy?

No, I don't think so, answered Clinias.

What's your evidence? I asked.

<sup>d</sup>

He replied, I see certain speechmakers who do not know how to use the speeches which they make themselves, like harp makers with their harps; but here also there are others able to use the speeches which the others have made, some who are themselves unable to make the speeches. It is clear then that, in speeches also, making is one art and using another.

I think you give proof enough, I said, that the art of the speechmakers is not that which if anyone gets he would be happy. However, I did think that somewhere about here would appear the knowledge <sup>e</sup> which we have been seeking so long. For indeed the men who make the speeches, when I meet them, do seem to me to be superwise, Clinias, and their very art seems to be something divine and lofty. However, that is nothing to wonder at, for it is a portion of the art of enchanters, but falls short a little. For the enchanter's art is the <sup>290</sup> charming of adders and tarantulas and scorpions and other vermin and pests, but this is really the charming and persuasion of juries and parliaments and any sort of crowds. Don't you think it is like that?

Yes, clearly that is just what it is like, he said.

Then where are we to turn to now? I said. What art is there?

I'm sure I can't say, he replied.

Why! said I. I think I have found it myself!

What art? said Clinias.

The general's art! I said. That seems to be most certainly the art, <sup>b</sup> which he who gets will be happy!

I do not think so.

Why not? I said.

This art seems to me a sort of hunting men.

What then? said I.

No art of hunting, he said, goes further than to hunt and to capture; but when they have captured what they hunted, they cannot use it; huntsmen and fishermen hand over to the cooks. Geometers and  
 c astronomers and calculators—for these are a sort of hunters too, since they are not mere makers of diagrams, but they try to find out the real meanings—so because they do not know how to use them, but only how to hunt, they hand over their discoveries, I take it, to the dialecticians to use up, at least all of them hand over who are not quite without sense.

Good, good, I said. O Clinias, most beautiful boy, most wise reasoner! Is that really so?

d Certainly it is so! he replied. And the same with the generals. As soon as they have hunted a city or an army, they hand it over to the politicians—for they do not know themselves how to use their captures—just as quail hunters hand over to the quail keepers. If, therefore, went on Clinias, we need that art, which will itself know how to use what it got by making or hunting, and will be such as to make us  
 e blessed, then we must seek some other art, instead of the general's.

CRITO: What do you say, Socrates? That young boy said all that?

SOCRATES: Don't you think so, Crito?

CRITO: Not a bit of it! I think that if he said it, he did not need Euthydemus or anyone else to educate him!

SOCRATES: Heaven preserve us, my dear man, I wonder if Ctesippus was the one who said it! That memory of mine!

291 CRITO: Ctesippus? Surely not!

SOCRATES: Well, I am sure of one thing, it was neither Euthydemus nor Dionysodorus who said that. Good God, Crito! Can it be that some higher power was there and uttered the words! I heard them, I am sure of it.

CRITO: Oh yes, oh yes, Socrates, it was some higher power. That's what I think, no doubt about it. But after this, did you go on looking for the art? Did you find what you wanted, or didn't you?

b SOCRATES: Find it, good heavens! No, you would have laughed at us—we were like children after larks, always thought we were going to catch each knowledge by the tail, and the knowledge always got away. Why make a long story of it? We came to the art of kings, and examined that to see if that provided and manufactured happiness. Then it seemed like falling into a labyrinth; we thought we were at the finish, but our way bent round and we found ourselves as it were back at the beginning, and just as far from that which we were  
 c seeking at first.

CRITO: How did this happen to you, Socrates?

SOCRATES: I will tell you. We thought the art of politics and the art of kings were the same.

CRITO: And what next?

SOCRATES: To this art the generals and the rest gave over the control of the works of their own trades, as being the only art knowing how to use them. Thus it seemed clear to us that this was the art we sought, and the cause of doing right in the state, exactly as the verse of Aeschylus describes it, sitting alone at the helm of state, steering all and ruling all, and making all useful.

CRITO: And you thought this a good notion, Socrates?

SOCRATES: You shall judge of that, Crito, if you will hear what happened to us next. You see we went on looking at it like this. Pray does this royal art, ruling all, make anything for us, or not? Certainly it does, we said to each other. Wouldn't you say the same, Crito? e

CRITO: Yes, I should.

SOCRATES: Then what would you say it makes? Put it in this way. If I should ask you whether the physician's art, ruling all that it rules, makes anything for us, would you not say it makes health?

CRITO: Yes, I should.

SOCRATES: And what of your art of agriculture? Ruling all which it rules, what does it make? Wouldn't you say it produces for 292 us the food from the earth?

CRITO: Yes.

SOCRATES: Then what of the art of kings, ruling all which it rules? What does it make? Perhaps you cannot say exactly.

CRITO: No indeed, I cannot.

SOCRATES: Nor could we, my dear Crito. But I know one thing, that if it is the art we seek, it must be helpful.

CRITO: Certainly.

SOCRATES: Then surely it must provide something good for us?

CRITO: Obviously, Socrates.

SOCRATES: But good, as Clinias and I agreed together, is nothing but some kind of knowledge. b

CRITO: Yes, you said so.

SOCRATES: Again, all the other 'works of politics' as one might call them—and there are many, for example, to make the people rich and free and without party spirit—all these things turned out to be neither good nor bad, but the necessary thing was to make them wise and to give them a share of knowledge, since knowledge was to be that which profited them and made them happy. c

CRITO: That is true, that is what you agreed, according to your report of what was said.

SOCRATES: Then does the art of kings make the people wise and good?

CRITO: Why not, Socrates?

SOCRATES: But does it make all of them good, and good in all respects? Does it impart every knowledge, shoemaking and carpentry and all the others?

CRITO: I do not think so, Socrates.

d       SOCRATES: But what knowledge does it teach? And what are we to do with it? For it must not be a contriver of any of those products which are neither good nor bad; it must impart no knowledge but itself alone. Can we say then what it is, and what we are to do with it? Would you like us to say it is the one by which we shall make other men good?

CRITO: Yes, certainly.

SOCRATES: And what shall these be good for, and how useful to us? Shall we say, to make others the same, and they to make others, e and so on and on? And good at what? We cannot see, since we have despised what are generally said to be the works of statecraft, and as the proverb goes, it is always 'Corinthus, son of Zeus.' We are just as far from knowing, or farther, what is that knowledge which will make us happy.

CRITO: Yes, indeed, Socrates, it seems you got yourselves into a nice mess.

SOCRATES: Well all I could do, my dear man, since I found my-  
293 self in this mess, was to cry and clamor, praying to the two visitors like a second pair of savior gods [Castor and Polydeuces], to save us, me and the boy, from this tempest of logic, and to play no more but to be serious, and show to us which is the knowledge which once gained would bring us well through the rest of our life.

CRITO: What then? Was Euthydemus willing to show you?

SOCRATES: Why, of course! And he began, my good friend, in this magnificent fashion.

b       Which do you prefer, then, my dear Socrates? Shall I teach you this knowledge which has been puzzling you for so long, or shall I show that you have it?

Heaven bless us, my dear man! said I. Can you do that?

That I can, said he.

Then show that I have it, I do beseech you, said I, for that is much easier than learning for an old man like me.

Very well, he said, just answer. Is there anything you do know?

Oh yes, I said, plenty of things, but only small ones.

Quite enough, said he. Then do you think it is possible for anything whatever of the things which are, not to be what it is?

c       Why no, I don't, said I.

You know something then? said he.

I do.

Then you are knowing, since you know?

Certainly, in that same something.

That makes no difference, he said. Isn't it necessary that you know everything since you are knowing?

Why, no indeed, I said. There are many other things I do not know.

Then if you do not know something, you are not knowing.

Not knowing that, my friend, said I.

Are you any the less not knowing? But just now you said you were knowing, and so you are really this very same you, and again not the same, in relation to the same things at the same time! d

All right, Euthydemus! I said. As the proverb goes, 'You never say a word amiss, it's always either that or this!' And what then is my understanding of that knowledge we were looking for? I suppose it is this. It is impossible for the same thing both to be and not to be. If I know one thing I know all things, for I could not be knowing and not knowing at the same time. And so since I know everything, I have *that* knowledge too! There you are—isn't that what you tell us, isn't that your word of wisdom?

Look here, said he, you are refuting *yourself*, Socrates! e

Well, but what about you, Euthydemus? I said. Weren't *you* in this same difficulty? Anyway, so long as I keep with you and with dear old Dionysodorus, I shall not feel at all vexed at any difficulty we get into! Tell me, don't you two know some of the things which are, and not know others of them?

By no means, said Dionysodorus.

What's that! said I. Don't you know anything?

Oh yes, we do, he said.

Then you know everything, I asked, since you know something? 294

Everything, he answered, and so do you. If you know one thing, you know all things.

O God! I said. Here's a wonder and a manifest miracle! Can it be that all the other men in the world know everything, or nothing?

Surely, he said, they cannot know some things and not others, or they would be at once knowing and not knowing.

Knowing what? I said.

Everyone, said he, knows everything, if he knows one thing.

Good heavens! I said. Good heavens, Dionysodorus! I see now b  
you are both in earnest, and what a job I had to persuade you to take us in earnest! Do you both really and truly know everything? Carpentry and shoemaking, for instance?

Certainly, he said.

So you are able to stitch leather?

Yes, and to do cobbling too, he said.

And do you know things like these, the number of the stars, and the sand?

Certainly, he said. Do you think we would not admit that too?

Then Ctesippus broke in. Show me a proof, Dionysodorus, for God's sake, by which I may know that you two are telling the truth. c

What shall I show you? he said.

Do you know how many teeth Euthydemus has, and does he know how many you have?

Is it not enough for you, he said, to be told that we know everything?

Not that, please, said Ctesippus. Just tell us this one thing more

and show you are speaking the truth; if you each say how many teeth the other has, and if we count them and prove that you know, we will at once believe all the rest.

- d They thought he was making fun, so they were unwilling, but they kept on saying they knew everything, as Ctesippus asked them one question after another without the smallest restraint. And he left out nothing, not even the ugliest, but asked them if they knew that. They faced up boldly against every question maintaining that they did know, like wild boars charging against the spear thrust, so that I also became quite incredulous, Crito, and at last I myself was driven to ask if Dionysodorus knew how to dance.

- e He said, Oh yes!

Well, I said, I suppose you can't do a sword dance, and roll about on a wheel, at your age? Have you got that far in skill?

There's nothing I can't do, he said.

And do you know everything only now, I asked, or have you known it always?

Always, he said.

Even when you were children, and as soon as you were born, did you know everything?

Yes, they said, both together.

- 295 This seemed incredible to us, and Euthydemus asked, Do you not believe it, Socrates?

I can only say, I replied, that you must be a wise pair.

But if you will answer me, he said, I will prove that you also admit these surprising things.

Oh, well, I said, I shall be very glad to be shown up like that. For if I have been wise without knowing it myself, and if you will show that I know everything and always did, what greater piece of luck could I have in all my life!

Answer then, he said.

- b All right, ask away. I will answer.

Tell me then, Socrates, he said, are you knowing in something or not?

I am.

Then do you know by that by which you are knowing, or by something else?

By that by which I am knowing. I suppose you mean the soul, or do you not mean this?

Aren't you ashamed, Socrates? he said. When you are asked one question, do you ask another?

Oh dear, I said, what am I to do? I will do just as you tell me. When I am not clear what you are asking, do you tell me to answer all the same, and not to ask anything myself?

- c I suppose you conceive some notion in what I say?

Yes, I do, was my reply.

Then answer according to the notion which you conceive.

Well, I said, what if you mean it in one way when you ask, and I conceive my notion in another way, and then I answer according to my notion—is it enough for you if I answer not at all to the point?

Enough for me, he said, but however, not enough for you, as I take it.

Then, Euthydemus, I won't answer, I tell you that, said I, before I find out.

You will not answer, he said, according to your notion in each case, because you are more of an old fool than you need be, and *will* go on talking drivel.

Now I saw he was angry with me for picking holes in the phrases d used, because he was trying to catch me in his net of words. So I remembered that Connus also is angry whenever I will not give way to him, and now he takes less trouble about me because he thinks me ignorant. And since I had the notion to be a pupil of this other one, I thought I ought to give way to him, or he might think me stupid and refuse to accept me. So I said, Well, Euthydemus, if you think it e proper to do like this, so be it. For anyway you know dialectic far better than I do, who have only the skill of an outsider. Then ask again from the beginning.

Very well then, he said, answer again. Do you know what you know by something or not?

Yes, I said, by the soul.

There he goes again, said he, answering more than he is asked! I 296 did not ask by what, but whether by something.

Oh well, I answered too much, I said, from want of education. Do forgive me; I will from now on answer simply—I know what I know by something.

Is it by this same thing always, he asked, or by this thing one time, and by another thing another time?

Always, I said, when I do know, it is by this thing.

Oh, do stop putting things in! he said.

But I don't want this 'always' to trip us up!

It will not trip us up, he said, but *you*, if anybody. But answer. Do b you know always by this?

Always, I said, since I must take out the when.

Then you know always by this. But knowing always, do you know some things by this and other things by something else, or everything by this?

By this all things—all which I know, I replied.

Here we are again! he said. The old addition!

Well, I said, I take away that 'which I know.'

Oh, don't take away a single thing, he said. I don't ask of you any favors. But answer me. Could you know all things, if you did not c know everything?

That would be a miracle! I said.

He said then, Go on, add what you like, you admit that you know all things.

It seems like it, I said, since the words 'which I know' have been made powerless, and it seems I know everything.

Then also you have admitted that you know always by this thing by which you know, whether 'when you do know' or however you like, for you have admitted that you know always, and at the same time everything. It is clear therefore that you knew as a child, and when  
 d you were born, and when you were begotten, and that before you came into being, and before heaven and earth came into being, you knew all things, since you always know. And by God, he said, you yourself always will know, and all things, if I choose.

Oh, do choose! I said. O my precious friend Euthydemus, if you are really and truly telling the truth. Only I don't quite believe you can, unless your brother Dionysodorus here would choose too; if so, it may be all right. But tell me, both of you, I said, I would not dare to  
 e dispute with men of such miraculous genius and say that I do not know everything when you both say I do, but there are some things which, how can I say that I know, Euthydemus, such as that good men are unjust? If you please, do I know that or not?

You know it sure enough, said he.

What? I said.

That good men are not unjust.

Oh yes, I said, I knew that long ago, but that is not my question.  
 297 But where did I learn that good men *are* unjust?

Nowhere, said Dionysodorus.

Then I don't know this, I said.

Euthydemus said to his brother, You are spoiling the argument, and it will be shown up that this man does not know, and he will be at the same time knowing and not knowing.

Dionysodorus flushed red, and I said, But you, what do you mean,  
 b Euthydemus? Do you think your brother who knows everything was not right?

Dionysodorus quickly broke in with, Am I brother to Euthydemus?

I said, Let me be, my good man, until Euthydemus has taught me that I know that good men are unjust. Don't grudge me the lesson.

You are running away, Socrates, said Dionysodorus, and don't want to answer.

Naturally, I replied. I am not a match for either of you, so it is  
 c very likely I should run from the two! I am much weaker of course than Heracles, and he was not able to fight it out with the Hydra, a high-brow clever enough to produce many heads of argument instead of one if somebody cut one off, because another high-brow, just arrived from foreign parts I should think, came ashore out of the sea in

the shape of a crab, and kept causing much pain to the hero by talking and biting at him on his left. So Heracles called in his nephew Iolaus to his help, and Iolaus helped him effectively. But if my Iolaus were to come, he would do more harm than good. d

Answer now, said Dionysodorus, when you have done this incantation. Was Iolaus any more the nephew of Heracles than he was yours?

Well, the best thing for me is to answer you, Dionysodorus, I said. For you will never have done with your questions, I am pretty well sure of that, envious and interfering, to keep Euthydemus from teaching me that bit of wisdom.

Answer now, said he.

I answer now, said I, that Iolaus was the nephew of Heracles, but mine, I think, not one little bit. For my brother Patrocles was not his father, but one with a name something like that, Iphicles, was the brother of Heracles. e

And Patrocles was yours? said he.

Yes, I said, we had one mother but not one father.

Then he is your brother and not your brother.

Not on the father's side, my dear man, I said, for his father was Chaeredemus, and mine Sophroniscus.

But Sophroniscus was father and Chaeredemus father?

Certainly, I said, one mine, and one his.

Then, said he, Chaeredemus was other than the father? 298

Than mine, I said.

Then was a father being other than a father? Are you the same as the stone?

I'm afraid you may prove me so, I said, but I don't think I am.

Then you are other than the stone? said he.

Other to be sure, said I.

Then being other than a stone, said he, you are not a stone? And being other than gold, you are not gold?

That is all true.

So then Chaeredemus, he said, being other than a father, would not be a father.

It seems, I said, that he is not a father.

Euthydemus now chimed in: I suppose if Chaeredemus is a father, Sophroniscus again being other than a father is not a father, so that you, Socrates, are fatherless. b

Ctesippus took it on now, and said, But is not the father of you two in the same case? He is other than my father.

Not at all, said Euthydemus.

What! said he. Is he the same?

The same to be sure.

I hope not. But, Euthydemus, is he only my father or the father of everyone in the world? c

Father of the others too, he said. Or do you think the same man being a father is not a father?

I did not think so, said Ctesippus.

Eh, and that being gold a thing is not gold, or being a man one is not a man?

The two threads don't match, as the proverb goes, Euthydemus, said Ctesippus. You tell a strange thing, if your father is father of all.

But he is.

Of men and horses and all the other animals?

All, replied Euthydemus.

d And is your mother mother of all?

My mother too.

Of the sea urchins then, he said, since your mother is mother of the sea animals!

So is yours, he said.

Then you are brother of gudgeons and puppy dogs and little pigs! said Ctesippus.

So are you, said Euthydemus.

And a boar is your papa, and a dog!

Your papa too, he said.

Yes, and in a moment, if you would answer me, said Dionysodorus, you will admit these things yourself, Ctesippus. Just tell me, have you a dog?

Yes, and a very bad one, said Ctesippus.

Has he got puppies?

e Very much so, he said, as bad as he is.

Then the dog is their father?

I have seen him myself, he said, on the job with the bitch.

Very well, isn't the dog yours?

Certainly, he said.

Then being a father he is yours, so the dog becomes your father and you the puppies' brother.

Dionysodorus quickly broke in again, that Ctesippus might not get in his retort first. One more little question. Do you beat this dog?

Ctesippus said with a laugh, No mistake, I do, for I can't beat you!

299 Well then, you beat your own father, the other said.

Well certainly, said Ctesippus, there would be much better reason for me to beat *your* father. What can have induced him to beget two such clever sons, Euthydemus? I wonder if much good has come from that cleverness of yours, for your father—and the puppy dogs' father—to enjoy!

But he does not want a lot of good, Ctesippus, neither he nor you. Nor you yourself, Euthydemus?

Nor anyone else in the world. Tell me, Ctesippus, do you think it  
b good for a sick man to drink medicine, or not good, when he needs it?  
Or that when he goes to war, he had better be armed than unarmed?

I certainly do, he replied, but I think a bit of your pretty wit is coming!

You will soon find out, said he. Just answer. You admitted that medicine is good for a man to drink, when necessary; then surely he needs to drink this good thing as much as he can, and it will have an excellent effect if someone will grind up and mix him a cartload of hellebore!

Ctesippus said, Very good indeed, Euthydemus, provided your drinker is as big as the statue in Delphi!

And then again in war, it's good to carry arms; so you must carry as many spears and shields as you can, since it is a good thing!

I suppose it is, he said, but I doubt if you think so, Euthydemus. Don't you prefer one shield and one spear?

Yes, I do.

Then what about Geryon, said Ctesippus, and old hundred-hand Briareus—would you arm them with only one each? I thought you knew more about it than that, you the heavy-armed fighter, and your comrade too!

Euthydemus fell silent, but Dionysodorus went back to the earlier answer of Ctesippus, and asked him, Gold too—don't you think it good to have gold?

Yes indeed, he replied, and a lot of it!

Very well then, don't you think we ought to have good things always and everywhere?

As much as possible! he said.

And you admit gold also to be good?

Oh yes, he said, I have admitted that.

Then one ought always to have it everywhere, especially in oneself! And wouldn't a man be happiest if he had three talents of gold in his belly, and a talent in his skull, and a golden stater in each eye?

Well, they do say, Euthydemus, said Ctesippus, that those are happiest among the Scythians, and the best men, who have a whole lot of gold in their 'own' skulls—as you spoke of 'own-ing' that father dog—and more astonishing still, that they even drink out of their own gilded skulls, holding each his own head in his hands, and can see the gold inside!

They see, yes, said Euthydemus, and do they see, whether Scythians or anybody else, things possible to see, or things impossible?

Possible, I suppose.

Then do you too? said he.

Yes, I do too.

You see our clothes then?

Yes.

Then these clothes are able to see!

Marvelous! said Ctesippus.

And what do they see? he asked.

They see nothing, replied Ctesippus. But perhaps you don't think

they do see? You sweet simple soul! Well then, Euthydemus, I think you are sleeping wide awake, and if it is possible to speak saying nothing, you are doing that!

Isn't a speaking of the silent possible? said Dionysodorus.

Quite impossible, said Ctesippus.

Or a silence of the speaking?

Still less, he said.

Well, when you speak of pieces of stone and wood and iron, do you not speak of the silent?

I don't if I walk through a smithy; on the contrary the irons there talk with great clangs and booms if anyone handles them; so for this question your wisdom stopped you from noticing that you were saying nothing. Still, go on and demonstrate to me the other thing, how there is a silence of the speaking.

I thought Ctesippus was showing off because of his favorite.

When you are silent, said Euthydemus, are you not silent in everything?

Yes, he said.

Then you are silent in the speaking things also, for those are part of all things.

What? said Ctesippus. Is not everything silent?

I suppose not, said Euthydemus.

Then, my dear sir, is everything speaking?

The speaking things, I suppose.

But I do not ask that, he said. I ask whether everything is silent or speaking.

Dionysodorus now rushed in. Neither, and both! he said. I am sure you will not know what to do with that answer!

Ctesippus burst into a great guffaw, as usual, and said, My dear Euthydemus, your brother has 'beothed' away your argument; it is beaten and done for!

And Clinias was delighted and laughed; so Ctesippus swelled bigger than ten Ctesippuses. But I think that rogue Ctesippus had picked up his skill from these men themselves, for such cleverness could not come nowadays from anyone else in the world.

Then I said, Why do you laugh, Clinias, at things so serious and beautiful?

What about you, Socrates, said Dionysodorus, have you ever seen a beautiful thing?

Yes, I have, said I, and many of them, Dionysodorus.

Were they different from the beautiful, he asked, or the same as  
301 the beautiful?

Here I was really in a fix, and I thought I deserved it for my grumbling; however, I said they were different from the beautiful itself, but each of them had some beauty with it.

Then, he said, if you have an ox with you, you are an ox, and because I am with you now, you are Dionysodorus?

Oh stop, don't say that! I said.

But how can it be, he said, that when a different thing is with a different thing, the different thing should be different?

Does that worry you? I asked—I was already trying to imitate the two men's wisdom, which I longed to have.

How can I help being worried, he said, both I and everybody else on earth, about that which is not?

What do you mean, Dionysodorus? I said. Is not the beautiful beautiful, and the ugly ugly?

If I think so, said he.

And don't you think so?

Certainly, he said.

Then is not the same the same, and the different different? For I suppose the different is not the same, and I should think even a child would not be worried about this and think the different is not different. But, my dear Dionysodorus, you passed over that on purpose, for I think you two work out your dialectic perfectly, as good craftsmen do with their jobs proper to each.

Then do you know, he said, what job is proper to each kind of craftsmen? First, who is it whose proper job is to work metal, do you know?

Yes, the smith.

And to make pottery?

The potter.

Well, to slaughter and skin and cut up meat small and then boil and roast it?

The cook, said I.

And if anyone does his proper job, he will do right?

Especially so.

You say that cutting up and skinning is proper for the cook? Did you admit that or not?

I did, said I, but spare me please.

It is clear, then, he said, that if someone butchers the cook and cuts him up and boils and roasts him, he will be doing his proper job, and anyone who forges the smith and pots the potter, he does the proper job too.

O Poseidon! I said. Now you put the finishing touch to your wisdom! Ah, will this never be with me for my very own!

Could you recognize it as your very own, Socrates, he said, if it became yours?

Clearly I could, I said, if *you* choose.

Well, said he, do you believe that you can recognize your own things?

Unless you tell me that I can't, for I must begin from you, and finish up at Euthydemus here.

Very well, then, said he, do you think those things are yours, which you are master of and you can use as you will—an ox and a

sheep, for example, you would think are yours, if you are free to sell and give and sacrifice them to any god you like? But things are not yours, if you cannot use them so?

I knew that something beautiful was going to emerge out of their questions, and besides I wanted to hear it as soon as possible; so I said, Certainly that is right; only such things are mine.

Well, he said, you call animals those which have life?

Yes, I said.

b You admit, then, that of the animals those only are yours which you have liberty to deal with as I said just now?

I admit that.

He made a mysterious pause with the air of pondering some mighty problem, and said, Socrates, have you a family Zeus?

Suspecting that the speech was going to lead to the end which it came to finally, I made a desperate twist to escape, and at once I was like a fish caught wriggling in a net. I said, No, Dionysodorus, I have not.

c You must be some wretched outcast then and no Athenian at all, a man without family gods and sacrifices or anything else good and beautiful.

That will do Dionysodorus, I said. Hush now, and don't preach me an unkind sermon. I have my own altars and my own religion and family prayers and all that sort of thing, as much as any other Athenian.

Then the other Athenians have no family Zeus? he asked.

d I said, None of the Ionians give him that title, neither ourselves nor any of the colonials from the city; ours is family Apollo because of Ion's parentage. Our Zeus is not called family god, but courtyard god and clan god, and Athena is our clan goddess.

Oh, that's quite enough, said Dionysodorus. For it seems you have both Apollo and Zeus, and Athena.

Yes, I said.

Then these would be your gods? he said.

Ancestors, I said, and masters.

Yours, anyway, he said. Did you not admit they were yours?

I did, said I, for how could I help it?

e Then, said he, are not these gods also animals? For you admitted that whatever has life is an animal. Have not these gods life?

They have, said I.

Then they are also animals?

Yes, animals, I said.

But you have admitted that of the animals those are yours which you are free to give and sell, and sacrifice to any god you will.

I have admitted that, I said, for there is no way out for me, Euthydemus.

Tell me then straight, said Euthydemus, since you admit that

Zeus is yours, and those other gods, are you free to sell them or give them or do what you will with them just as with the other animals? 303

Well, Crito, I was, so to speak, knocked out now by the argument, and lying speechless. But Ctesippus came to my help, and shouted, Bravo! O Heracles! What a fine speech!

And Dionysodorus said, Is Heracles a bravo or is the bravo Heracles?

Then Ctesippus said, O Poseidon, terribly clever speeches! I give in, the two men are invincible.

Then indeed, my dear Crito, all those present without exception b praised them to the skies, the two men and their speech, laughing and clapping and cheering till they nearly wore themselves out. Hitherto there had been a real good noise at each point they made, but only from the admirers of Euthydemus, but now almost the very pillars in the Lyceum resounded with pleasure at the two men. I was ready myself to admit that I had never before in my life seen people so clever; I was altogether enslaved by their skill, and I began to praise and congratulate them myself, saying, O happy pair, blessed are you for your wonderful genius, to have perfected so great a work so quickly and so soon! c Your speeches are full of fine things, Euthydemus and Dionysodorus; but most magnificent of all is this, that you do not concern yourselves with the multitude of men, nor men of solemn looks or great reputation, but only with those like yourselves. For I am quite sure that there d are very few men like you who would appreciate these arguments, and all the rest know so little of them that they would feel more ashamed to refute others by such ways of speech than to be refuted themselves. Here is another thing in your way of speaking that shows public spirit and kindness. When you say that nothing is beautiful and good, or white or so forth, and there are no differences at all, really and truly e you sew up the mouths of people, just as you profess to do; since however you not only sew up other people's mouths, but seem to sew up your own also, you do a most graceful thing which takes all offense from your words. Chief of all, you have everything so neat and thought out with such art, that in a very short time any man alive can learn it; I myself carefully watched Ctesippus, and I noticed that he too was quickly able to copy you on the spot. One thing about your system—it is excellent for putting over quickly, but it is not suitable to exhibit in 304 public. If I dare advise you, take care not to speak before a crowd, or they may learn it quickly and forget to thank you. The best thing would be for you two to argue against each other in private; or if there must be another then let it be one who will give you a fee. Give the same advice to your pupils, if you are prudent, never to argue with anybody else b but with you or themselves. What is rare, is dear, Euthydemus; but water, which is best, as Pindar said, is cheapest. If you please, I said, accept me and Clinias here as your pupils.

After this talk, Crito, and a little more, we parted. You must be

- c sure to come with us to be schooled by the two men; they declared, you know, that they were able to teach anyone who would pay the fee, no age and no brains barred—all welcome, all would easily learn their clever system—and it is proper to add, for your benefit especially, they said it did not in any way hinder a man from making money.

- d CRITO: Oh well, Socrates, I am curious to hear, and always glad to learn something. But the truth is I am one of those not like Euthydemus, one of the others you mentioned yourself, who would prefer to be refuted by such talk rather than to refute. Now it is ridiculous for me to advise you, but I do however wish to report something I heard just now. I must tell you that someone came away from your crowd and met me walking about; he thinks himself to be a man of ability, one of those who are clever at making speeches for the law courts, and he said, Hullo, Crito, don't you sit at the feet of these wise men?

My word, no, said I. I tried to stand close but I could not hear for the crowd.

Well, it was worth hearing, he said.

What was it? I asked

- e You might have heard men using dialectic who are the cleverest men alive of those engaged in such speaking.

Then I said, What did you think of them?

Think of them? What anyone would think who heard such people talking nonsense and making an unworthy fuss about matters worth nothing at all.

That is how he put it, word for word. I said then, However, philosophy is a charming thing.

- 305 Pooh, pooh, he said, charming, bless you! Worth nothing, I tell you! But if you had been there just now, I feel sure you would have been ashamed of your own familiar friend; he was such a fool as to want to put himself in the hands of men who just grapple with every phrase and don't care what they say. And these, as I said, are among the most powerful men of the day. Indeed, Crito, the whole system and the men engaged in the system are contemptible and ridiculous.

- b In my opinion, Socrates, he was not right in blaming the system nor would anyone else be right, but as to being willing to argue with such men before a whole crowd of people, I thought he was right to disapprove of that.

SOCRATES: My dear Crito, such men are amazing. But I do not know as yet what I am to say. Which class did the man belong to who came to you and found fault with philosophy? Was he one of those skilled in contesting cases in court, an orator, or one of those who send such people in, who compose the speeches which the orators deliver?

- c CRITO: Not an orator, no indeed; I don't think he ever went up into a court of law. But I assure you they say he understands the business—a clever man, composes clever speeches.

SOCRATES: Ah, now I know. Those were the ones I was just going to speak of. Those are the men, my dear Crito, whom Prodicus

called the frontiersmen between philosophy and politics. They think they themselves are the wisest of men, and that they not only are, but also are thought such by very many, so that the only rivals in the way of their universal fame are the students of philosophy, none else. They believe therefore that if they can reduce the reputation of these, and make them of no account, they will at once win the prize of undisputed victory in public opinion as men of wisdom; they believe they are truly the most wise, but that in informal conversation, whenever they lag behind, they are being cut short by the Euthydemus group. It is quite reasonable if they think themselves wise; they know they are moderately well up in philosophy, and moderately well up in politics, quite reasonably, for they have as much as was wanted in both, and they keep clear of both danger and conflict, while they enjoy the fruits of wisdom.

CRITO: What do you think, then, Socrates? Is there something in what they say? There is no doubt that their account of themselves looks well.

SOCRATES: Yes, that's exactly it, Crito, looks well rather than truly is well. For it is not easy to persuade them what is the truth about these borderlands. Both men and things, if they stand between two and have a share of both, when these two are bad and good, are better than the one and worse than the other; when they stand between two good things which do not aim at the same object, they are worse than both the two components for that for which each is useful; when these two things are bad, but not directed to the same thing, and they are composed of both and stand between them, these alone are better than either of those things of which they have a part. Then if both philosophy and political action are good, but each aims at a different thing, and if these persons are between them and have a part of both, there is nothing in what they say, for they are worse than both; if the things are one good and one bad, they are worse than the one and better than the other; if both are bad, then these people would be speaking some truth, but otherwise not at all. Now I do not think they would admit that the two are both bad, nor that one is good and one bad; but in reality these persons who partake of both are worse than both for each thing which politics and philosophy are important for, and although they are really third, they try to be thought first. We must then not be hard on them, because of their ambition; we must not be angry, but we must believe them to be such as they are. For we ought to be content with every man who says anything which comes near to wisdom, when he bravely follows it up and works it out.

CRITO: Well, you know, Socrates, as I always tell you, I am in perplexity about my sons and what I am to do with them. The younger is quite small still, but Critobulus is already growing up and needs someone to help him on. The fact is, whenever I meet you, I think of all the trouble I have taken, for the sake of the children, about many other things, as about marrying a woman of the best family to be their

e mother, and about money that they may be as rich as we can manage. And after all that it seems to me to be simple madness to neglect their education. But when I glance at any one of those who profess to educate people, I am horrified; each one I look at seems to me to be quite  
 307 unsuitable, to tell you the truth, so I don't see how I am to direct the boy to philosophy.

SOCRATES: My dear Crito, don't you know that in every line of life the stupid are many and worthless, the serious are few and worth everything? What about gymnastics? Doesn't that seem a good line to you, and business and oratory, and leadership in war?

CRITO: Most certainly they do.

b SOCRATES: Very well, don't you see that in each of these professions the many are just laughable at their professional work?

CRITO: Yes, I do. What you say is perfectly true.

SOCRATES: Will that be a reason for yourself avoiding all the professions and not giving one to your son?

CRITO: That would not be fair, Socrates.

c SOCRATES: Then, Crito, don't do what you ought not. Do not trouble about those who practice philosophy, whether they are good or bad; but examine the thing itself well and carefully. And if philosophy appears a bad thing to you, turn every man from it, not only your sons; but if it appears to you such as I think it to be, take courage, pursue it, and practice it, as the saying is, 'both you and your house.'

#### NOTE

My cousin, Dr. W. H. D. Rouse, was unfortunately prevented, by the volume of other work which he undertook, from giving his translation of *Euthydemus* a final revision in detail before his death in February 1950.

In doing this revision I have tried to clear up the few inconsistencies and obscurities which he had not removed, and at the same time to interrupt as little as possible the distinctive character of his translation.

By far the greater part of his work remains unaltered, but at 283e-284b, in order to make the sense more intelligible to the reader, I have revised the whole short passage containing the quibble 'Is it possible to tell a lie?' and have there introduced 'the facts' as a rendering of τῶν ὄντων instead of the usual rendering 'things that are.'

I am grateful to Professor Eric H. Warmington, my co-editor of *Great Dialogues of Plato* translated by W. H. D. Rouse (the *Republic* and six other dialogues), for finally reading through this revision for me and making some very helpful comments.

PHILIP G. ROUSE

# CRATYLUS

---

*This dialogue has to do with the origin of language, then essentially a new subject. Socrates' discourse on it contains many fantastic guesses, but occasionally an insight, even a deep insight, into the truth. He will have nothing to do with the suggestion that the first words came to men from God. That, he says, is not a reason, but merely an excuse for having no reason. It is to act as a tragic poet does when he has a difficulty and brings in a deus ex machina to solve it.*

*The main part of the dialogue is given over to guesses about the derivation of Greek words, comprehensible, of course, only to those who can read Greek and finally, like all guessing, tiresome to them, too. The dialogue will be passed over by most readers and that is a pity, for the portrait of Socrates that emerges after much wearisome reading is delightful. He is often at his best in making fun of the endless power of the human mind to spin intricate arguments about nothing at all and "evermore come out by the same door wherein it went." "After much study," he remarks, "I found myself more puzzled than I was before I began to learn."*

*Just at the end, the jesting and the irony are put away. All these verbal niceties and changes are no help, he says, in finding the truth. Goodness and beauty exist and are permanent, but the words by which we try to express them will never be adequate. "Reflect well," he bids Cratylus. "And when you have found the truth, come and tell me."*

383 HERMOGENES: Suppose that we make Socrates a party to the argument.

CRATYLUS: If you please.

HERMOGENES: I should explain to you, Socrates, that our friend Cratylus has been arguing about names. He says that they are natural and not conventional—not a portion of the human voice which men agree to use—but that there is a truth or correctness in  
b them, which is the same for Hellenes as for barbarians. Whereupon I ask him whether his own name of Cratylus is a true name or not, and he answers yes. And Socrates? Yes. Then every man's name, as I tell him, is that which he is called. To this he replies, If all the world were to call you Hermogenes, that would not be your name. And when I am anxious to have a further explanation he is ironical and mys-  
384 terious, and seems to imply that he has a notion of his own about the matter if he would only tell, and could entirely convince me if he chose to be intelligible. Tell me, Socrates, what this oracle means, or rather tell me, if you will be so good, what is your own view of the truth or correctness of names, which I would far sooner hear.

SOCRATES: Son of Hipponicus, there is an ancient saying that  
b 'hard is the knowledge of the good.' And the knowledge of names is a great part of knowledge. If I had not been poor, I might have heard the fifty-drachma course of the great Prodicus, which is a complete education in grammar and language—these are his own words—and then I should have been at once able to answer your question about the correctness of names. But, indeed, I have only heard the single-  
c drachma course, and therefore I do not know the truth about such matters. I will, however, gladly assist you and Cratylus in the investigation of them. When he declares that your name is not really Hermogenes, I suspect that he is only making fun of you; he means to say that you are no true son of Hermes, because you are always looking after a fortune and never in luck. But, as I was saying, there is a good deal of difficulty in this sort of knowledge, and therefore we had better leave the question open until we have heard both sides.

HERMOGENES: I have often talked over this matter, both with Cratylus and others, and cannot convince myself that there is any  
d principle of correctness in names other than convention and agreement. Any name which you give, in my opinion, is the right one, and if you change that and give another, the new name is as correct as the old—we frequently change the names of our slaves, and the newly imposed name is as good as the old. For there is no name given to anything by nature; all is convention and habit of the users.

From *The Dialogues of Plato*, translated with analyses and introductions by B. Jowett (3rd edn., Oxford, 1892; 1st edn., 1871).

Such is my view. But if I am mistaken I shall be happy to hear and learn of Cratylus, or of anyone else.

SOCRATES: I dare say that you may be right, Hermogenes. Let us see—your meaning is that the name of each thing is only that which anybody agrees to call it? 385

HERMOGENES: That is my notion.

SOCRATES: Whether the giver of the name be an individual or a city?

HERMOGENES: Yes.

SOCRATES: Well, now, let me take an instance. Suppose that I call a man a horse or a horse a man. You mean to say that a man will be rightly called a horse by me individually, and rightly called a man by the rest of the world, and a horse again would be rightly called a man by me and a horse by the world—that is your meaning?

HERMOGENES: He would, according to my view. b

SOCRATES: But how about truth, then? You would acknowledge that there is in words a true and a false?

HERMOGENES: Certainly.

SOCRATES: And there are true and false propositions?

HERMOGENES: To be sure.

SOCRATES: And a true proposition says that which is, and a false proposition says that which is not?

HERMOGENES: Yes, what other answer is possible?

SOCRATES: Then in a proposition there is a true and false?

HERMOGENES: Certainly.

SOCRATES: But is a proposition true as a whole only, and are c the parts untrue?

HERMOGENES: No, the parts are true as well as the whole.

SOCRATES: Would you say the large parts and not the smaller ones, or every part?

HERMOGENES: I should say that every part is true.

SOCRATES: Is a proposition resolvable into any part smaller than a name?

HERMOGENES: No, that is the smallest.

SOCRATES: Then the name is a part of the true proposition?

HERMOGENES: Yes.

SOCRATES: Yes, and a true part, as you say.

HERMOGENES: Yes.

SOCRATES: And is not the part of a falsehood also a falsehood?

HERMOGENES: Yes.

SOCRATES: Then, if propositions may be true and false, names may be true and false?

HERMOGENES: So we must infer.

SOCRATES: And the name of anything is that which anyone d affirms to be the name?

HERMOGENES: Yes.

SOCRATES: And will there be so many names of each thing as everybody says that there are? And will they be true names at the time of uttering them?

HERMOGENES: Yes, Socrates, I can conceive no correctness of names other than this. You give one name, and I another, and in different cities and countries there are different names for the same things. Hellenes differ from barbarians in their use of names, and the several Hellenic tribes from one another.

SOCRATES: But would you say, Hermogenes, that the things differ as the names differ? And are they relative to individuals, as Protagoras tells us? For he says that man is the measure of all things, and that things are to me as they appear to me, and that they are to you as they appear to you. Do you agree with him, or would you say that things have a permanent essence of their own?

HERMOGENES: There have been times, Socrates, when I have been driven in my perplexity to take refuge with Protagoras, not that I agree with him at all.

SOCRATES: What! Have you ever been driven to admit that there was no such thing as a bad man?

HERMOGENES: No, indeed, but I have often had reason to think that there are very bad men, and a good many of them.

SOCRATES: Well, and have you ever found any very good ones?

HERMOGENES: Not many.

SOCRATES: Still you have found them?

HERMOGENES: Yes.

SOCRATES: And would you hold that the very good were the very wise, and the very evil very foolish? Would that be your view?

HERMOGENES: It would.

SOCRATES: But if Protagoras is right, and the truth is that things are as they appear to anyone, how can some of us be wise and some of us foolish?

HERMOGENES: Impossible.

SOCRATES: And if, on the other hand, wisdom and folly are really distinguishable you will allow, I think, that the assertion of Protagoras can hardly be correct. For if what appears to each man is true to him, one man cannot in reality be wiser than another.

HERMOGENES: He cannot.

SOCRATES: Nor will you be disposed to say with Euthydemus that all things equally belong to all men at the same moment and always, for neither on his view can there be some good and others bad, if virtue and vice are always equally to be attributed to all.

HERMOGENES: There cannot.

SOCRATES: But if neither is right, and things are not relative to individuals, and all things do not equally belong to all at the same moment and always, they must be supposed to have their own proper

and permanent essence; they are not in relation to us, or influenced e by us, fluctuating according to our fancy, but they are independent, and maintain to their own essence the relation prescribed by nature.

HERMOGENES: I think, Socrates, that you have said the truth.

SOCRATES: Does what I am saying apply only to the things themselves, or equally to the actions which proceed from them? Are not actions also a class of being?

HERMOGENES: Yes, the actions are real as well as the things.

SOCRATES: Then the actions also are done according to their 387 proper nature, and not according to our opinion of them? In cutting, for example, we do not cut as we please, and with any chance instrument, but we cut with the proper instrument only, and according to the natural process of cutting, and the natural process is right and will succeed, but any other will fail and be of no use at all.

HERMOGENES: I should say that the natural way is the right way.

SOCRATES: Again, in burning, not every way is the right way, but the right way is the natural way, and the right instrument the natural instrument. b

HERMOGENES: True.

SOCRATES: And this holds good of all actions?

HERMOGENES: Yes.

SOCRATES: And speech is a kind of action?

HERMOGENES: True.

SOCRATES: And will a man speak correctly who speaks as he pleases? Will not the successful speaker rather be he who speaks in c the natural way of speaking, and as things ought to be spoken, and with the natural instrument? Any other mode of speaking will result in error and failure.

HERMOGENES: I quite agree with you.

SOCRATES: And is not naming a part of speaking? For in giving names men speak.

HERMOGENES: That is true.

SOCRATES: And if speaking is a sort of action and has a relation to acts, is not naming also a sort of action?

HERMOGENES: True.

SOCRATES: And we saw that actions were not relative to our- d selves, but had a special nature of their own?

HERMOGENES: Precisely.

SOCRATES: Then the argument would lead us to infer that names ought to be given according to a natural process, and with a proper instrument, and not at our pleasure; in this and no other way shall we name with success.

HERMOGENES: I agree.

SOCRATES: But again, that which has to be cut has to be cut with something?

HERMOGENES : Yes.

e SOCRATES : And that which has to be woven or pierced has to be woven or pierced with something?

HERMOGENES : Certainly.

SOCRATES : And that which has to be named has to be named with something?

HERMOGENES : True.

SOCRATES : What is that with which we pierce?

HERMOGENES : An awl.

388 SOCRATES : And with which we weave?

HERMOGENES : A shuttle.

SOCRATES : And with which we name?

HERMOGENES : A name.

SOCRATES : Very good. Then a name is an instrument?

HERMOGENES : Certainly.

SOCRATES : Suppose that I ask, What sort of instrument is a shuttle? And you answer, A weaving instrument.

HERMOGENES : Well.

b SOCRATES : And I ask again, What do we do when we weave? The answer is that we separate or disengage the warp from the woof.

HERMOGENES : Very true.

SOCRATES : And may not a similar description be given of an awl, and of instruments in general?

HERMOGENES : To be sure.

SOCRATES : And now suppose that I ask a similar question about names. Will you answer me? Regarding the name as an instrument, what do we do when we name?

HERMOGENES : I cannot say.

SOCRATES : Do we not give information to one another, and distinguish things according to their natures?

HERMOGENES : Certainly we do.

c SOCRATES : Then a name is an instrument of teaching and of distinguishing natures, as the shuttle is of distinguishing the threads of the web.

HERMOGENES : Yes.

SOCRATES : And the shuttle is the instrument of the weaver?

HERMOGENES : Assuredly.

SOCRATES : Then the weaver will use the shuttle well—and well means like a weaver? And the teacher will use the name well—and well means like a teacher?

HERMOGENES : Yes.

SOCRATES : And when the weaver uses the shuttle, whose work will he be using well?

HERMOGENES : That of the carpenter.

SOCRATES : And is every man a carpenter, or the skilled only?

HERMOGENES : Only the skilled.

SOCRATES : And when the piercer uses the awl, whose work will a he be using well?

HERMOGENES : That of the smith.

SOCRATES : And is every man a smith, or only the skilled?

HERMOGENES : The skilled only.

SOCRATES : And when the teacher uses the name, whose work will he be using?

HERMOGENES : There again I am puzzled.

SOCRATES : Cannot you at least say who gives us the names which we use?

HERMOGENES : Indeed I cannot.

SOCRATES : Does not the law seem to you to give us them?

HERMOGENES : Yes, I suppose so.

SOCRATES : Then the teacher, when he gives us a name, uses e the work of the legislator?

HERMOGENES : I agree.

SOCRATES : And is every man a legislator, or the skilled only?

HERMOGENES : The skilled only.

SOCRATES : Then, Hermogenes, not every man is able to give a name, but only a maker of names, and this is the legislator, who of all 389 skilled artisans in the world is the rarest.

HERMOGENES : True.

SOCRATES : And how does the legislator make names? And to what does he look? Consider this in the light of the previous instances. To what does the carpenter look in making the shuttle? Does he not look to that which is naturally fitted to act as a shuttle?

HERMOGENES : Certainly.

SOCRATES : And suppose the shuttle to be broken in making. b Will he make another, looking to the broken one? Or will he look to the form according to which he made the other?

HERMOGENES : To the latter, I should imagine.

SOCRATES : Might not that be justly called the true or ideal shuttle?

HERMOGENES : I think so.

SOCRATES : And whatever shuttles are wanted, for the manufacture of garments, thin or thick, of flaxen, woolen, or other material, ought all of them to have the true form of the shuttle, and whatever is the shuttle best adapted to each kind of work, that ought to be the c form which the maker produces in each case?

HERMOGENES : Yes.

SOCRATES : And the same holds of other instruments. When a man has discovered the instrument which is naturally adapted to each work, he must express this natural form, and not others which he fancies, in the material, whatever it may be, which he employs. For example, he ought to know how to put into iron the forms of awls adapted by nature to their several uses?

HERMOGENES : Certainly.

SOCRATES : And how to put into wood forms of shuttles adapted by nature to their uses?

HERMOGENES : True.

- d      SOCRATES : For the several forms of shuttles naturally answer to the several kinds of webs, and this is true of instruments in general.

HERMOGENES : Yes.

- 390      SOCRATES : Then, as to names, ought not our legislator also to know how to put the true natural name of each thing into sounds and syllables, and to make and give all names with a view to the ideal name, if he is to be a namer in any true sense? And we must remember that different legislators will not use the same syllables. For neither does every smith, although he may be making the same instrument for the same purpose, make them all of the same iron. The form must be the same, but the material may vary, and still the instrument may be equally good of whatever iron made, whether in Hellas or in a foreign country—there is no difference.

HERMOGENES : Very true.

SOCRATES : And the legislator, whether he be Hellene or barbarian, is not therefore to be deemed by you a worse legislator, provided he gives the true and proper form of the name in whatever syllables—this or that country makes no matter.

HERMOGENES : Quite true.

- b      SOCRATES : But who then is to determine whether the proper form is given to the shuttle, whatever sort of wood may be used? The carpenter who makes, or the weaver who is to use them?

HERMOGENES : I should say, he who is to use them, Socrates.

SOCRATES : And who uses the work of the lyre maker? Will not he be the man who knows how to direct what is being done, and who will know also whether the work is being well done or not?

HERMOGENES : Certainly.

SOCRATES : And who is he?

HERMOGENES : The player of the lyre.

SOCRATES : And who will direct the shipwright?

- c      HERMOGENES : The pilot.

SOCRATES : And who will be best able to direct the legislator in his work, and will know whether the work is well done, in this or any other country? Will not the user be the man?

HERMOGENES : Yes.

SOCRATES : And this is he who knows how to ask questions?

HERMOGENES : Yes.

SOCRATES : And how to answer them?

HERMOGENES : Yes.

SOCRATES : And him who knows how to ask and answer you would call a dialectician?

HERMOGENES : Yes, that would be his name.

SOCRATES : Then the work of the carpenter is to make a rudder, and the pilot has to direct him, if the rudder is to be well made.

HERMOGENES : True.

SOCRATES : And the work of the legislator is to give names, and the dialectician must be his director if the names are to be rightly given?

HERMOGENES : That is true.

SOCRATES : Then, Hermogenes, I should say that this giving of names can be no such light matter as you fancy, or the work of light or chance persons. And Cratylus is right in saying that things have names by nature, and that not every man is an artificer of names, but he only who looks to the name which each thing by nature has, and is able to express the true forms of things in letters and syllables.

HERMOGENES : I cannot answer you, Socrates, but I find a difficulty in changing my opinion all in a moment, and I think that I should be more readily persuaded, if you would show me what this is which you term the natural fitness of names.

SOCRATES : My good Hermogenes, I have none to show. Was I not telling you just now—but you have forgotten—that I knew nothing, and was I not proposing to share the inquiry with you? But now that you and I have talked over the matter, a step has been gained, for we have discovered that names have by nature a truth, and that not every man knows how to give a thing a name.

HERMOGENES : Very good.

SOCRATES : And what is the nature of this truth or correctness of names? That, if you care to know, is the next question.

HERMOGENES : Certainly, I care to know.

SOCRATES : Then reflect.

HERMOGENES : How shall I reflect?

SOCRATES : The true way is to have the assistance of those who know, and you must pay them well both in money and in thanks—these are the Sophists, of whom your brother, Callias, has, rather dearly, bought the reputation of wisdom. But you have not yet come into your inheritance, and therefore you had better go to him, and beg and entreat him to tell you what he has learned from Protagoras about the fitness of names.

HERMOGENES : But how inconsistent should I be, if, while repudiating Protagoras and his truth, I were to attach any value to what he and his book affirm!

SOCRATES : Then if you despise him, you must learn of Homer and the poets.

HERMOGENES : And where does Homer say anything about names, and what does he say?

SOCRATES : He often speaks of them—notably and nobly in the places where he distinguishes the different names which gods and men give to the same things. Does he not in these passages make a

- e remarkable statement about the correctness of names? For the gods must clearly be supposed to call things by their right and natural names, do you not think so?

HERMOGENES: Why, of course they call them rightly, if they call them at all. But to what are you referring?

SOCRATES: Do you not know what he says about the river in Troy who had a single combat with Hephaestus—'whom,' as he says, 'the gods call Xanthus, and men call Scamander'? <sup>1</sup>

HERMOGENES: I remember.

- 392 SOCRATES: Well, and about this river—to know that he ought to be called Xanthus and not Scamander—is not that a solemn lesson? Or about the bird which, as he says, 'the gods call *chalcis*, and men *cymindis*'? <sup>2</sup> To be taught how much more correct the name *chalcis* is than the name *cymindis*—do you deem that a light matter? Or about Batia and Myrina? And there are many other observations of the same kind in Homer and other poets. Now, I think that this is beyond the understanding of you and me, but the names of Scamandrius and Astyanax, which he affirms to have been the names of Hector's son, are more within the range of human faculties, as I am disposed to think, and what the poet means by correctness may be more readily apprehended in that instance. You will remember, I dare say, the lines to which I refer.

HERMOGENES: I do.

SOCRATES: Let me ask you, then, which did Homer think the more correct of the names given to Hector's son—Astyanax or Scamandrius?

- c HERMOGENES: I do not know.

SOCRATES: How would you answer, if you were asked whether the wise or the unwise are more likely to give correct names?

HERMOGENES: I should say the wise, of course.

SOCRATES: And are the men or the women of a city, taken as a class, the wiser?

HERMOGENES: I should say, the men.

- d SOCRATES: And Homer, as you know, says that the Trojan men called him Astyanax (king of the city), but if the men called him Astyanax, the other name of Scamandrius could only have been given to him by the women.

HERMOGENES: That may be inferred.

SOCRATES: And must not Homer have imagined the Trojans to be wiser than their wives?

HERMOGENES: To be sure.

SOCRATES: Then he must have thought Astyanax to be a more correct name for the boy than Scamandrius?

HERMOGENES: Clearly.

SOCRATES: And what is the reason of this? Let us consider.

<sup>1</sup> *Iliad* 20.74.      <sup>2</sup> *Iliad* 14.291.

Does he not himself suggest a very good reason, when he says, 'For he alone defended their city and long walls'? <sup>3</sup> This appears to be a good reason for calling the son of the savior king of the city which his father was saving, as Homer observes.

HERMOGENES: I see.

SOCRATES: Why, Hermogenes, I do not as yet see myself, and do you?

HERMOGENES: No, indeed, not I.

SOCRATES: But tell me, friend, did not Homer himself also give Hector his name? 393

HERMOGENES: What of that?

SOCRATES: The name appears to me to be very nearly the same as the name of Astyanax—both are Hellenic. And a king (ἄναξ) and a holder (ἔκτωρ) have nearly the same meaning, and are both descriptive of a king, for a man is clearly the holder of that of which he is king—he rules, and owns, and holds it. But, perhaps, you may think that I am talking nonsense, and indeed I believe that I myself did not know what I meant when I imagined that I had found some indication of the opinion of Homer about the correctness of names.

HERMOGENES: I assure you that I think otherwise, and I believe you to be on the right track.

SOCRATES: There is reason, I think, in calling the lion's whelp a lion, and the foal of a horse a horse; I am speaking only of the ordinary course of nature, when an animal produces after his kind, and not of extraordinary births. If contrary to nature a horse have a calf, then I should not call that a foal but a calf; nor do I call any inhuman birth a man, but only a natural birth. And the same may be said of trees and other things. Do you agree with me?

HERMOGENES: Yes, I agree.

SOCRATES: Very good. But you had better watch me and see that I do not play tricks with you. For on the same principle the son of a king is to be called a king. And whether the syllables of the name are the same or not the same makes no difference, provided the meaning is retained; nor does the addition or subtraction of a letter make any difference so long as the essence of the thing remains in possession of the name and appears in it.

HERMOGENES: What do you mean?

SOCRATES: A very simple matter. I may illustrate my meaning by the names of letters, which you know are not the same as the letters themselves with the exception of the four, ε, υ, ο, ω. The names of the rest, whether vowels or consonants, are made up of other letters which we add to them, but so long as we introduce the meaning, and there can be no mistake, the name of the letter is quite correct. Take, for example, the letter *beta*—the addition of η, τ, α gives no offense,

<sup>3</sup> *Iliad* 22.507.

and does not prevent the whole name from having the value which the legislator intended—so well did he know how to give the letters names.

HERMOGENES: I believe you are right.

- 394 SOCRATES: And may not the same be said of a king? A king will often be the son of a king, the good son or the noble son of a good or noble sire, and similarly the offspring of every kind, in the regular course of nature, is like the parent, and therefore has the same name. Yet the syllables may be disguised until they appear different to the ignorant person, and he may not recognize them, although they are the same, just as any one of us would not recognize the same drugs under different disguises of color and smell, although to the physician, b who regards the power of them, they are the same, and he is not put out by the addition. And in like manner the etymologist is not put out by the addition or transposition or subtraction of a letter or two, or indeed by the change of all the letters, for this need not interfere with the meaning. As was just now said, the names of Hector and Astyanax have only one letter alike, which is the  $\tau$ , and yet they have the same meaning. And how little in common with the letters of c their names has Archepolis (ruler of the city)—and yet the meaning is the same. And there are many other names which just mean *king*. Again, there are several names for a general, as, for example, Agis (leader) and Polemarchus (chief in war) and Eupolemus (good warrior), and others which denote a physician, as Iatrocles (famous healer) and Acesimbrotus (curer of mortals), and there are many others which might be cited, differing in their syllables and letters, but having the same meaning. Would you not say so?

- d HERMOGENES: Yes.

SOCRATES: The same names, then, ought to be assigned to those who follow in the course of nature?

HERMOGENES: Yes.

SOCRATES: And what of those who follow out of the course of nature, and are prodigies? For example, when a good and religious man has an irreligious son, he ought to bear the name not of his father, but of the class to which he belongs, just as in the case which was before supposed of a horse foaling a calf.

HERMOGENES: Quite true.

- e SOCRATES: Then the irreligious son of a religious father should be called irreligious?

HERMOGENES: Certainly.

SOCRATES: He should not be called Theophilus (beloved of God) or Mnesitheus (mindful of God), or any of these names—if names are correctly given, his should have an opposite meaning.

HERMOGENES: Certainly, Socrates.

SOCRATES: Again, Hermogenes, there is Orestes (the man of the mountains), who appears to be rightly called, whether

chance gave the name, or perhaps some poet who meant to express the brutality and fierceness and mountain wilderness of his hero's nature.

HERMOGENES: That is very likely, Socrates.

395

SOCRATES: And his father's name is also according to nature.

HERMOGENES: Clearly.

SOCRATES: Yes, for as his name, so also is his nature. Agamemnon (admirable for remaining) is one who is patient and persevering in the accomplishment of his resolves, and by his virtue crowns them, and his continuance at Troy with all the vast army is a proof of that admirable endurance in him which is signified by the name *b* Agamemnon. I also think that Atreus is rightly called, for his murder of Chrysippus and his exceeding cruelty to Thyestes are damaging and destructive to his reputation. The name is a little altered and disguised so as not to be intelligible to everyone, but to the etymologist there is no difficulty in seeing the meaning, for whether you think of him as ἀτειρής the stubborn, or as ἄτρεστος the fearless, or as ἀτηρός *c* the destructive one, the name is perfectly correct in every point of view. And I think that Pelops is also named appropriately, for, as the name implies, he is rightly called Pelops who sees what is near only (ὁ τὰ πέλας ὁρῶν).

HERMOGENES: How so?

SOCRATES: Because, according to the tradition, he had no forethought or foresight of all the evil which the murder of Myrtilus would entail upon his whole race in remote ages; he saw only what *d* was at hand and immediate, or in other words, πέλας (near), in his eagerness to win Hippodamia by all means for his bride. Everyone would agree that the name of Tantalus is rightly given and in accordance with nature, if the traditions about him are true.

HERMOGENES: And what are the traditions?

SOCRATES: Many terrible misfortunes are said to have happened to him in his life—last of all, came the utter ruin of his country—and after his death he had the stone suspended (ταλάντεια) *e* over his head in the world below. All this agrees wonderfully well with his name. You might imagine that some person who wanted to call him τολάντωτος (most weighed down by misfortune) disguised the name by altering it into Tantalus, and into this form, by some accident of tradition, it has actually been transmuted. The name of Zeus, who is his alleged father, has also an excellent meaning, although hard to be understood, because really like a sentence, which is *396* divided into two parts, for some call him Zena (Ζῆνα), and use the one half, and others who use the other half call him Dia (Δία); the two together signify the nature of the god, and the business of a name, as we were saying, is to express the nature. For there is none who is more the author of life to us and to all than the lord and king of all. Wherefore we are right in calling him Zena and Dia, which are one

- b name, although divided, meaning the god through whom all creatures always have life (δι' ὃν ζῆν ἀει πᾶσι τοῖς ζῶσιν ὑπάρχει). There is an irreverence, at first sight, in calling him son of Cronus, who is a proverb for stupidity, and we might rather expect Zeus to be the child of a mighty intellect, which is the fact, for this is the meaning of his father's name—Κρόνος quasi Κόπος (κορέω, to sweep), not in the sense of a youth, but signifying τὸ καθαρὸν καὶ ἀκήρατον τοῦ νοῦ, the pure and garnished mind (sc. ἀπὸ τοῦ κορεῖν). He, as we are informed by
- c tradition, was begotten of Uranus, rightly so called (ἀπὸ τοῦ ὀρᾶν τὰ ἄνω) from looking upward, which, as philosophers tell us, is the way to have a pure mind, and the name Uranus is therefore correct. If I could remember the genealogy of Hesiod, I would have gone on and tried more conclusions of the same sort on the remoter ancestors of the gods—then I might have seen whether this wisdom, which has come to me all in an instant, I know not whence, will or will not hold
- d good to the end.

HERMOGENES: You seem to me, Socrates, to be quite like a prophet newly inspired, and to be uttering oracles.

- SOCRATES: Yes, Hermogenes, and I believe that I caught the inspiration from the great Euthyphro of the Prospaltian deme, who gave me a long lecture which commenced at dawn. He talked and I listened, and his wisdom and enchanting ravishment have not only
- e filled my ears but taken possession of my soul, and today I shall let his superhuman power work and finish the investigation of names—that will be the way—but tomorrow, if you are so disposed, we will conjure him away, and make a purgation of him, if we can only find some
- 397 priest or Sophist who is skilled in purifications of this sort.

HERMOGENES: With all my heart, for I am very curious to hear the rest of the inquiry about names.

- SOCRATES: Then let us proceed, and where would you have us begin, now that we have got a sort of outline of the inquiry? Are there any names which witness of themselves that they are not given arbitrarily, but have a natural fitness? The names of heroes and of men in
- b general are apt to be deceptive because they are often called after ancestors with whose names, as we were saying, they may have no business, or they are the expression of a wish, like Eutychides (the son of good fortune), or Sosias (the Savior), or Theophilus (the beloved of God), and others. But I think that we had better leave these, for there will be more chance of finding correctness in the names of
- immutable essences—there ought to have been more care taken about them when they were named, and perhaps there may have been some
- c more-than-human power at work occasionally in giving them names.

HERMOGENES: I think so, Socrates.

SOCRATES: Ought we not to begin with the consideration of the gods, and show that they are rightly named gods?

HERMOGENES: Yes, that will be well.

SOCRATES: My notion would be something of this sort. I suspect that the sun, moon, earth, stars, and heaven, which are still the gods of many barbarians, were the only gods known to the aboriginal Hellenes. Seeing that they were always moving and running, from their running nature they were called gods or runners (θεούς, θεόντας), and when men became acquainted with the other gods, they proceeded to apply the same name to them all. Do you think that likely?

HERMOGENES: I think it very likely indeed.

SOCRATES: What shall follow the gods?

HERMOGENES: Must not daemons and heroes and men come next?

SOCRATES: Daemons! And what do you consider to be the meaning of this word? Tell me if my view is right.

HERMOGENES: Let me hear.

SOCRATES: You know how Hesiod uses the word?

HERMOGENES: I do not.

SOCRATES: Do you not remember that he speaks of a golden race of men who came first?

HERMOGENES: Yes, I do.

SOCRATES: He says of them,

But now that Fate has closed over this race,  
They are holy daemons upon the earth,  
Beneficent, averters of ills, guardians of mortal men.<sup>4</sup>

HERMOGENES: What is the inference?

398

SOCRATES: What is the inference! Why, I suppose that he means by the golden men, not men literally made of gold, but good and noble, and I am convinced of this, because he further says that we are the iron race.

HERMOGENES: That is true.

SOCRATES: And do you not suppose that good men of our own day would by him be said to be of golden race?

b

HERMOGENES: Very likely.

SOCRATES: And are not the good wise?

HERMOGENES: Yes, they are wise.

SOCRATES: And therefore I have the most entire conviction that he called them daemons, because they were δαίμονες (knowing or wise), and in our older Attic dialect the word itself occurs. Now he and other poets say truly that when a good man dies he has honor and a mighty portion among the dead, and becomes a daemon, which is a name given to him signifying wisdom. And I say too, that every wise man who happens to be a good man is more than human (δαιμόνιον) both in life and death, and is rightly called a daemon.

HERMOGENES: Then I rather think that I am of one mind

with you, but what is the meaning of the word *hero* (ἥρως, in the old writing ἑρως)?

SOCRATES: I think that there is no difficulty in explaining, for the name is not much altered, and signifies that they were born of love.

HERMOGENES: What do you mean?

SOCRATES: Do you not know that the heroes are demigods?

HERMOGENES: What then?

- d     SOCRATES: All of them sprang either from the love of a god for a mortal woman, or of a mortal man for a goddess. Think of the word in the old Attic, and you will see better that the name *heros* is only a slight alteration of Eros, from whom the heroes sprang. Either this is the meaning, or, if not this, then they must have been skillful as rhetoricians and dialecticians, and able to put the question (ἑρωτᾶν), for εἶπαι is equivalent to λέγειν. And therefore, as I was saying, in e the Attic dialect the heroes turn out to be rhetoricians and questioners. All this is easy enough; the noble breed of heroes are a tribe of Sophists and rhetors. But can you tell me why men are called ἀνθρωποι? That is more difficult.

HERMOGENES: No, I cannot, and I would not try even if I could, because I think that you are the more likely to succeed.

- 399   SOCRATES: That is to say, you trust to the inspiration of Euthyphro.

HERMOGENES: Of course.

SOCRATES: Your faith is not vain, for at this very moment a new and ingenious thought strikes me, and, if I am not careful, before tomorrow's dawn I shall be wiser than I ought to be. Now, attend to me, and first, remember that we often put in and pull out letters in words, and give names as we please and change the accents. Take, for b example, the word Διὶ φίλος; in order to convert this from a sentence into a noun, we omit one *iota* and sound the middle syllable grave instead of acute, as, on the other hand, letters are sometimes inserted in words instead of being omitted, and the acute takes the place of the grave.

HERMOGENES: That is true.

SOCRATES: The name ἀνθρωπος, which was once a sentence, and is now a noun, appears to be a case just of this sort, for one letter, which is the α, has been omitted, and the acute on the last syllable has been changed to a grave.

HERMOGENES: What do you mean?

- c     SOCRATES: I mean to say that the word *man* implies that other animals never examine, or consider, or look up at (ἀναθεῖν) what they see, but that man not only sees (δπωπε) but considers and looks up at that which he sees, and hence he alone of all animals is rightly called ἀνθρωπος, meaning ἀναθεῶν ἃ δπωπεν.

HERMOGENES: May I ask you to examine another word about which I am curious?

SOCRATES: Certainly.

HERMOGENES: I will take that which appears to me to follow a next in order. You know the distinction of soul and body?

SOCRATES: Of course.

HERMOGENES: Let us endeavor to analyze them like the previous words.

SOCRATES: You want me first of all to examine the natural fitness of the word ψυχή (soul) and then of the word σῶμα (body)?

HERMOGENES: Yes.

SOCRATES: If I am to say what occurs to me at the moment, I should imagine that those who first used the name ψυχή meant to express that the soul when in the body is the source of life, and gives the power of breath and revival (ἀναψύχον), and when this reviving power fails then the body perishes and dies, and this, if I am not mistaken, they called *psyche*. But please stay a moment. I fancy that I can discover something which will be more acceptable to the disciples of Euthyphro, for I am afraid that they will scorn this explanation. What do you say to another? 400

HERMOGENES: Let me hear.

SOCRATES: What is that which holds and carries and gives life and motion to the entire nature of the body? What else but the soul?

HERMOGENES: Just that.

SOCRATES: And do you not believe with Anaxagoras that mind or soul is the ordering and containing principle of all things?

HERMOGENES: Yes, I do.

SOCRATES: Then you may well call that power φούρη which carries and holds nature (ἡ φύσιν ὅχει καὶ ἔχει), and this may be refined away into ψυχή.

HERMOGENES: Certainly, and this derivation is, I think, more scientific than the other.

SOCRATES: It is so, but I cannot help laughing, if I am to suppose that this was the true meaning of the name.

HERMOGENES: But what shall we say of the next word?

SOCRATES: You mean σῶμα (body).

HERMOGENES: Yes.

SOCRATES: That may be variously interpreted, and yet more variously if a little permutation is allowed. For some say that the body is the grave (σῆμα) of the soul which may be thought to be buried in our present life, or again the index of the soul, because the soul gives indications to (σημαίνει) the body. Probably the Orphic poets were the inventors of the name, and they were under the impression that the soul is suffering the punishment of sin, and that the body is an enclosure or prison in which the soul is incarcerated, kept safe (σῶμα,

σώζῃται), as the name σῶμα implies, until the penalty is paid. According to this view, not even a letter of the word need be changed.

- d HERMOGENES: I think, Socrates, that we have said enough of this class of words. But have we any more explanations of the names of the gods, like that which you were giving of Zeus? I should like to know whether any similar principle of correctness is to be applied to them.

- SOCRATES: Yes, indeed, Hermogenes, and there is one excellent principle which, as men of sense, we must acknowledge—that of the gods we know nothing, either of their natures or of the names which they give themselves, but we are sure that the names by which they call themselves, whatever they may be, are true. And this is the  
c best of all principles, and the next best is to say, as in prayers, that we will call them by any sort or kind of names or patronymics which  
401 they like, because we do not know of any other. That also, I think, is a very good custom, and one which I should much wish to observe. Let us, then, if you please, in the first place announce to them that we are not inquiring about them—we do not presume that we are able to do so. But we are inquiring about the meaning of men in giving them these names—in this there can be small blame.

HERMOGENES: I think, Socrates, that you are quite right, and I should like to do as you say.

- b SOCRATES: Shall we begin, then, with Hestia, according to custom?

HERMOGENES: Yes, that will be very proper.

SOCRATES: What may we suppose him to have meant who gave the name Hestia?

HERMOGENES: That is another and certainly a most difficult question.

SOCRATES: My dear Hermogenes, the first imposers of names must surely have been considerable persons; they were philosophers, and had a good deal to say.

HERMOGENES: Well, and what of them?

- SOCRATES: They are the men to whom I should attribute the  
c imposition of names. Even in foreign names, if you analyze them, a meaning is still discernible. For example, that which we term οὐσία is by some called ἑσσία, and by others again ὦσία. Now that the essence of things should be called ἑστία, which is akin to the first of these (ἑσσία = ἑστία), is rational enough. And there is reason in the Athenians' calling that ἑστία which participates in οὐσία. For in ancient times we too seem to have said ἑσσία for οὐσία, and this you may note  
d to have been the idea of those who appointed that sacrifices should be first offered to ἑστία, which was natural enough if they meant that ἑστία was the essence of things. Those again who said ὦσία seem to have inclined to the opinion of Heraclitus, that all things flow and nothing stands; with them the pushing principle (ὤθον) was the

cause and ruling power of all things, and was therefore rightly called ὠσα. Enough of this, which is all that we who know nothing can affirm. Next in order after Hestia we ought to consider Rhea and Cronus, although the name of Cronus has been already discussed. But I dare say that I am talking great nonsense.

HERMOGENES: Why, Socrates?

SOCRATES: My good friend, I have discovered a hive of wisdom.

HERMOGENES: Of what nature?

SOCRATES: Well, rather ridiculous, and yet plausible.

402

HERMOGENES: How plausible?

SOCRATES: I fancy to myself Heraclitus repeating wise traditions of antiquity as old as the days of Cronus and Rhea, and of which Homer also spoke.

HERMOGENES: How do you mean?

SOCRATES: Heraclitus is supposed to say that all things are in motion and nothing at rest; he compares them to the stream of a river, and says that you cannot go into the same water twice.

HERMOGENES: That is true.

SOCRATES: Well, then, how can we avoid inferring that he who gave the names of Cronus and Rhea to the ancestors of the gods agreed pretty much in the doctrine of Heraclitus? Is the giving of the names of streams to both of them purely accidental? Compare the line in which Homer, and, as I believe, Hesiod also, tells of 'Oceanus, the origin of gods, and mother Tethys.'<sup>5</sup> And again, Orpheus says that 'The fair river of Oceanus was the first to marry, and he espoused his sister Tethys, who was his mother's daughter.'<sup>6</sup> You see that this is a remarkable coincidence, and all in the direction of Heraclitus.

HERMOGENES: I think that there is something in what you say, Socrates, but I do not understand the meaning of the name Tethys.

SOCRATES: Well, that is almost self-explained, being only the name of a spring, a little disguised, for that which is strained and filtered (διαττώμενον, ῥηθούμενον) may be likened to a spring, and the name Tethys is made up of these two words.

HERMOGENES: The idea is ingenious, Socrates.

SOCRATES: To be sure. But what comes next? Of Zeus we have spoken.

HERMOGENES: Yes.

SOCRATES: Then let us next take his two brothers, Poseidon and Pluto, whether the latter is called by that or by his other name.

HERMOGENES: By all means.

SOCRATES: Poseidon is ποσίδεσμος, the chain of the feet. The original inventor of the name had been stopped by the watery element

<sup>5</sup> *Iliad* 14.201.

<sup>6</sup> *Iliad* 14.302.

in his walks, and not allowed to go on, and therefore he called the ruler of this element Poseidon; the ε was probably inserted as an ornament. Yet, perhaps, not so, but the name may have been originally  
 403 written with a double λ and not with a σ, meaning that the god knew many things (πολλὰ εἰδώς). And perhaps also he, being the shaker of the earth, has been named from shaking (σειεῖν), and then π and δ have been added. Pluto gives wealth (πλοῦτος), and his name means the giver of wealth, which comes out of the earth beneath. People in general appear to imagine that the term Hades is connected with the invisible (ἄειδής), and so they are led by their fears to call the god Pluto instead.

b HERMOGENES: And what is the true derivation?

SOCRATES: In spite of the mistakes which are made about the power of this deity, and the foolish fears which people have of him, such as the fear of always being with him after death, and of the soul denuded of the body going to him, my belief is that all is quite consistent, and that the office and name of the god really correspond.

HERMOGENES: Why, how is that?

c SOCRATES: I will tell you my own opinion. But first I should like to ask you which chain does any animal feel to be the stronger, and which confines him more to the same spot—desire or necessity?

HERMOGENES: Desire, Socrates, is stronger far.

SOCRATES: And do you not think that many a one would escape from Hades, if he did not bind those who depart to him by the strongest of chains?

HERMOGENES: Assuredly they would.

SOCRATES: And if by the greatest of chains, then by some desire, as I should certainly infer, and not by necessity?

HERMOGENES: That is clear.

SOCRATES: And there are many desires?

HERMOGENES: Yes.

d SOCRATES: And therefore by the greatest desire, if the chain is to be the greatest?

HERMOGENES: Yes.

SOCRATES: And is any desire stronger than the thought that you will be made better by associating with another?

HERMOGENES: Certainly not.

SOCRATES: And is not that the reason, Hermogenes, why no one, who has been to him, is willing to come back to us? Even the Sirens, like all the rest of the world, have been laid under his spells.

e Such a charm, as I imagine, is the god able to infuse into his words. And, according to this view, he is the perfect and accomplished Sophist, and the great benefactor of the inhabitants of the other world, and even to us who are upon earth he sends from below exceeding blessings. For he has much more than he wants down there; wherefore he is called Pluto (the rich). Note also that he will have

nothing to do with men while they are in the body, but only when the soul is liberated from the desires and evils of the body. Now there is a great deal of philosophy and reflection in that, for in their liberated state he can bind them with the desire of virtue, but while they are flustered and maddened by the body, not even father Cronus himself would suffice to keep them with him in his own far-famed chains.

HERMOGENES: There is a deal of truth in what you say.

SOCRATES: Yes, Hermogenes, and the legislator called him Hades, not from the unseen (ἀειδής)—far otherwise—but from his knowledge (εἰδέναι) of all noble things.

HERMOGENES: Very good. And what do we say of Demeter, and Hera, and Apollo, and Athena, and Hephaestus, and Ares, and the other deities?

SOCRATES: Demeter is ἡ διδοῦσα μήτηρ, who gives food like a mother. Hera is the lovely one (ἑρατή), for Zeus, according to tradition, loved and married her; possibly also the name may have been given when the legislator was thinking of the heavens, and may be only a disguise of the air (ἄήρ), putting the end in the place of the beginning. You will recognize the truth of this if you repeat the letters of Hera several times over. People dread the name of Pherephatta as they dread the name of Apollo—and with as little reason. The fear, if I am not mistaken, only arises from their ignorance of the nature of names, but they go changing the name into Phersephone, and they are terrified at this, whereas the new name means only that the goddess is wise (σοφή). For seeing that all things in the world are in motion (φερομένων), that principle which embraces and touches and is able to follow them is wisdom. And therefore the goddess may be truly called Pherepapha (Φερεπάφα), or some name like it, because she touches that which is in motion (τοῦ φερομένου ἐφαπτομένη), herein showing her wisdom. And Hades, who is wise, consorts with her, because she is wise. They alter her name into Pherephatta nowadays, because the present generation care for euphony more than truth. There is the other name, Apollo, which, as I was saying, is generally supposed to have some terrible signification. Have you remarked this fact?

HERMOGENES: To be sure, I have, and what you say is true.

SOCRATES: But the name, in my opinion, is really most expressive of the power of the god.

HERMOGENES: How so?

SOCRATES: I will endeavor to explain, for I do not believe that any single name could have been better adapted to express the attributes of the god, embracing and in a manner signifying all four of them—music, and prophecy, and medicine, and archery.

HERMOGENES: That must be a strange name, and I should like to hear the explanation.

SOCRATES: Say rather a harmonious name, as beseems the

god of harmony. In the first place, the purgations and purifications which doctors and diviners use, and their fumigations with drugs  
 b magical or medicinal, as well as their washings and lustral sprinklings, have all one and the same object, which is to make a man pure both in body and soul.

HERMOGENES: Very true.

SOCRATES: And is not Apollo the purifier, and the washer, and the absolver from all impurities?

HERMOGENES: Very true.

SOCRATES: Then in reference to his ablutions and absolutions,  
 c as being the physician who orders them, he may be rightly called 'Απολούων (purifier), or in respect of his powers of divination, and his truth and sincerity, which is the same as truth, he may be most fitly called 'Απλῶς, from ἀπλοῦς (sincere), as in the Thessalian dialect, for all the Thessalians call him 'Απλός. Also, he is αἰ βάλλων (always shooting), because he is a master archer who never misses. Or again, the name may refer to his musical attributes, and then, as in ἀκόλουθος and ἄκοιτις, and in many other words, the α is supposed to mean 'together'; so the meaning of the name Apollo will be 'moving together,' whether in the poles of heaven as they are called, or in the  
 d harmony of song, which is termed concord, because he moves all together by a harmonious power, as astronomers and musicians ingeniously declare. And he is the god who presides over harmony, and makes all things move together, both among gods and among men. And as in the words ἀκόλουθος and ἄκοιτις the α is substituted for ὅμο; so the name 'Απόλλων is equivalent to ὁμοπολῶν; only the second λ is  
 e added in order to avoid the ill-omened sound of destruction (ἀπολῶν). Now the suspicion of this destructive power still haunts the minds of some who do not consider the true value of the name, which, as I was  
 406 saying just now, has reference to all the powers of the god, who is the single one, the ever-darting, the purifier, the mover-together (ἀπλοῦς, αἰ βάλλων, ἀπολούων, ὁμοπολῶν).

The name of the Muses and of music would seem to be derived from their making philosophical inquiries (μῶσθαι). And Leto is called by this name, because she is such a gentle goddess, and so willing (ἑθελήμων) to grant our requests, or her name may be Letho, as she is often called by strangers—they seem to imply by it her amiability,  
 b and her smooth and easy-going way of behaving. Artemis is named from her healthy (ἀρτεμής), well-ordered nature, and because of her love of virginity, perhaps because she is a proficient in virtue (ἀρετή), and perhaps also as hating intercourse of the sexes (τὸν ἄροτον μισήσασα). He who gave the goddess her name may have had any or all of these reasons.

HERMOGENES: What is the meaning of Dionysus and Aphrodite?

SOCRATES: Son of Hipponicus, you ask a solemn question.

There is a serious and also a facetious explanation of both these names; the serious explanation is not to be had from me, but there is c  
no objection to your hearing the facetious one, for the gods too love a joke. Διόνυσος is simply διδούς οἶνον (giver of wine)—Διδοίνυσος, as he might be called in fun—and οἶνος is properly ολόνους, because wine makes those who drink think (οἰεσθαι) that they have a mind (νοῦν) when they have none. The derivation of Aphrodite, born of the foam (ἀφρός), may be fairly accepted on the authority of Hesiod. d

HERMOGENES: Still there remains Athena, whom you, Socrates, as an Athenian, will surely not forget; there are also Hephaestus and Ares.

SOCRATES: I am not likely to forget them.

HERMOGENES: No, indeed.

SOCRATES: There is no difficulty in explaining the other appellation of Athena.

HERMOGENES: What other appellation?

SOCRATES: We call her Pallas.

HERMOGENES: To be sure.

SOCRATES: And we cannot be wrong in supposing that this is derived from armed dances. For the elevation of oneself or anything e  
else above the earth, or by the use of the hands, we call shaking (πάλλειν), or dancing. 407

HERMOGENES: That is quite true.

SOCRATES: Then that is the explanation of the name Pallas?

HERMOGENES: Yes, but what do you say of the other name?

SOCRATES: Athena?

HERMOGENES: Yes.

SOCRATES: That is a graver matter, and there, my friend, the modern interpreters of Homer may, I think, assist in explaining the view of the ancients. For most of these, in their explanations of the poet, assert that he meant by Athena *mind* (νοῦς) and *intelligence* (διάνοια). And the maker of names appears to have had a singular notion about her, and indeed calls her by a still higher title, *divine intelligence* (θεοῦ νόησις), as though he would say, This is she who has the mind of God (θεονόα)—using α as a dialectic variety for η, and taking away ι and σ. Perhaps, however, the name Θεονόη may mean *she who knows divine things* (θεῖα νοοῦσα) *better than others*. Nor shall we be far wrong in supposing that the author of it wished to identify this goddess with moral intelligence (ἐν ᾗθει νόησις), and therefore gave her the name Ἡθεονόη, which, however, either he or his c  
successors have altered into what they thought a nicer form, and called her Athena.

HERMOGENES: But what do you say of Hephaestus?

SOCRATES: Speak you of the princely lord of light (φάεος ἱστορα)?

HERMOGENES: Surely.

SOCRATES: "Ἡφαίστος is Φαῖστος, and has added the η by attraction; that is obvious to anybody.

HERMOGENES: That is very probable, until some more probable notion gets into your head.

SOCRATES: To prevent that, you had better ask what is the derivation of Ares.

HERMOGENES: What is Ares?

- d      SOCRATES: Ares may be called, if you will, from his manhood (ἄρρεν) and manliness, or if you please, from his hard and unchangeable nature, which is the meaning of ἄρρετος; the latter is a derivation in every way appropriate to the god of war.

HERMOGENES: Very true.

SOCRATES: And now, by the gods, let us have no more of the gods, for I am afraid of them. Ask about anything but them, and thou shalt see how the steeds of Euthyphro can prance.

- e      HERMOGENES: Only one more god! I should like to know about Hermes, of whom I am said not to be a true son. Let us make him out, and then I shall know whether there is any meaning in what Cratylus says.

- 408      SOCRATES: I should imagine that the name Hermes has to do with speech, and signifies that he is the interpreter (ἑρμηνεύς), or messenger, or thief, or liar, or bargainer; all that sort of thing has a great deal to do with language. As I was telling you, the word εἰπεῖν is expressive of the use of speech, and there is an often-recurring Homeric word ἐμήσατο, which means *he contrived*. Out of these two words, εἰπεῖν and μῆσασθαι, the legislator formed the name of the god who invented language and speech, and we may imagine him dictating to us the use of this name. O my friends, says he to us, seeing that he is the contriver of tales or speeches, you may rightly call him Εἰρέμης. And this has been improved by us, as we think, into Hermes. Iris also appears to have been called from the verb *to tell* (εἰπεῖν), because she was a messenger.

HERMOGENES: Then I am very sure that Cratylus was quite right in saying that I was no true son of Hermes (ἑρμογενής), for I am not a good hand at speeches.

SOCRATES: There is also reason, my friend, in Pan's being the double-formed son of Hermes.

- c      HERMOGENES: How do you make that out?

SOCRATES: You are aware that speech signifies all things (πάν), and is always turning them round and round, and has two forms, true and false?

HERMOGENES: Certainly.

SOCRATES: Is not the truth that is in him the smooth or sacred form which dwells above among the gods, whereas falsehood dwells among men below, and is rough like the goat of tragedy, for tales and falsehoods have generally to do with the tragic or goatish life, and tragedy is the place of them?

HERMOGENES: Very true.

SOCRATES: Then surely Pan, who is the declarer of all things (πᾶν) and the perpetual mover (ἀεὶ πολῶν) of all things, is rightly called αἰπόλος (goatherd), he being the two-formed son of Hermes, smooth in his upper part, and rough and goatlike in his lower regions. And, as the son of Hermes, he is speech or the brother of speech, and that brother should be like brother is no marvel. But, as I was saying, my dear Hermogenes, let us get away from the gods.

HERMOGENES: From this sort of gods, by all means, Socrates. But why should we not discuss another kind of gods—the sun, moon, stars, earth, aether, air, fire, water, the seasons, and the year?

SOCRATES: You impose a great many tasks upon me. Still, if you wish, I will not refuse.

HERMOGENES: You will oblige me.

SOCRATES: How would you have me begin? Shall I take first of all him whom you mentioned first—the sun?

HERMOGENES: Very good.

SOCRATES: The origin of the sun will probably be clearer in the Doric form, for the Dorians call him ἄλιος, and this name is given to him because when he rises he gathers (ἀλίζοι) men together or because he is always rolling in his course (ἀεὶ εἰλεῖν ἰών) about the earth, or from αἰολεῖν, of which the meaning is the same as ποικίλλειν (to variegate), because he variegates the productions of the earth.

HERMOGENES: But what is σελήνη (the moon)?

SOCRATES: That name is rather unfortunate for Anaxagoras.

HERMOGENES: How so?

SOCRATES: The word seems to forestall his recent discovery, that the moon receives her light from the sun.

HERMOGENES: Why do you say so?

SOCRATES: The two words σέλας (brightness) and φῶς (light) have much the same meaning?

HERMOGENES: Yes.

SOCRATES: This light about the moon is always new (νέον) and always old (ἔνουν), if the disciples of Anaxagoras say truly. For the sun in his revolution always adds new light, and there is the old light of the previous month.

HERMOGENES: Very true.

SOCRATES: The moon is not infrequently called σελαναία.

HERMOGENES: True.

SOCRATES: And as she has a light which is always old and always new (ἐνὸν νέον ἀεὶ), she may very properly have the name σελαενονοεοεία, and this when hammered into shape becomes σελαναία.

HERMOGENES: A real dithyrambic sort of name that, Socrates. But what do you say of the month and the stars?

SOCRATES: Μεῖς (month) is called from μειοῦσθαι (to lessen), because suffering diminution; the name of ἀστρα (stars) seems to be derived from ἀστραπή (blinding light), which is an improvement on

ἀναστρωπή, signifying the upsetting of the eyes (ἀναστρέφειν ὥπα).  
 HERMOGENES: What do you say of πῦρ (fire) and ὕδωρ (water)?

- d     SOCRATES: I am at a loss how to explain πῦρ; either the Muse of Euthyphro has deserted me, or there is some very great difficulty in the word. Please, however, to note the contrivance which I adopt whenever I am in a difficulty of this sort.

HERMOGENES: What is it?

SOCRATES: I will tell you, but I should like to know first whether you can tell me what is the meaning of the word πῦρ.

HERMOGENES: Indeed I cannot.

- SOCRATES: Shall I tell you what I suspect to be the true explanation of this and several other words? My belief is that they are of  
 e foreign origin. For the Hellenes, especially those who were under the dominion of the barbarians, often borrowed from them.

HERMOGENES: What is the inference?

SOCRATES: Why, you know that anyone who seeks to demonstrate the fitness of these names according to the Hellenic language, and not according to the language from which the words are derived, is rather likely to be at fault.

HERMOGENES: Yes, certainly.

- 410     SOCRATES: Well then, consider whether this πῦρ is not foreign, for the word is not easily brought into relation with the Hellenic tongue, and the Phrygians may be observed to have the same word slightly changed, just as they have ὕδωρ (water) and κύνες (dogs), and many other words.

HERMOGENES: That is true.

- SOCRATES: Any violent interpretations of the words should be avoided, for something to say about them may easily be found. And  
 b thus I get rid of πῦρ and ὕδωρ. Ἄήρ (air), Hermogenes, may be explained as the element which raises (αἶρει) things from the earth, or as ever flowing (ἀεὶ ρεῖ), or because the flux of the air is wind, and the poets call the winds *air blasts*, (ἀήται); he who uses the term may mean, so to speak, *air flux* (ἀητόρρουν), in the sense of *wind flux* (πνευματόρρουν), and because this moving wind may be expressed by either term he employs the word *air* (ἀήρ = ἀήτης ῥέω). Αἰθήρ (aether) I should interpret as αἰθεήρ; this may be correctly said, because this element is always running in a flux about the air (ἀεὶ θεῖ περὶ τὸν ἀέρα ῥέων). The meaning of the word γῆ (earth) comes out  
 c better when in the form of γαῖα, for the earth may be truly called *mother* (γαῖα, γεννήτειρα), as in the language of Homer γεγάασι means γεγενῆσθαι.

HERMOGENES: Good.

SOCRATES: What shall we take next?

HERMOGENES: There are ὥραι (the seasons), and the two names of the year, ἐνιαυτός and ἔτος.

SOCRATES: The ὥραι should be spelled in the old Attic way, if

you desire to know the probable truth about them; they are rightly called the ὄροι because they divide (ὀρίζουσιν) the summers and winters and winds and the fruits of the earth. The words ἐνιαυτός and ἔτος appear to be the same—that which brings to light the plants and growths of the earth in their turn, and passes them in review within itself (ἐν ἑαυτῷ ἐξετάζει)—this is broken up into two words, ἐνιαυτός from ἐν ἑαυτῷ, and ἔτος from ἐτάζει, just as the original name of Ζεύς was divided into Ζῆνα and Δία, and the whole proposition means that this power of reviewing from within is one, but has two names, two words ἔτος and ἐνιαυτός being thus formed out of a single proposition.

HERMOGENES: Indeed, Socrates, you make surprising progress.

SOCRATES: I am run away with.

HERMOGENES: Very true.

SOCRATES: But am not yet at my utmost speed.

HERMOGENES: I should like very much to know, in the next place, how you would explain the virtues. What principle of correctness is there in those charming words—wisdom, understanding, justice, and the rest of them? 411

SOCRATES: That is a tremendous class of names which you are disinterring; still, as I have put on the lion's skin, I must not be faint of heart. And I suppose that I must consider the meaning of wisdom (φρόνησις) and understanding (σύνησις), and judgment (γνώμη) and knowledge (ἐπιστήμη), and all those other charming words, as you call them. b

HERMOGENES: Surely, we must not leave off until we find out their meaning.

SOCRATES: By the dog of Egypt I have not a bad notion which came into my head only this moment. I believe that the primeval givers of names were undoubtedly like too many of our modern philosophers, who, in their search after the nature of things, are always getting dizzy from constantly going round and round, and then they imagine that the world is going round and round and moving in all directions. And this appearance, which arises out of their own internal condition, they suppose to be a reality of nature; they think that there is nothing stable or permanent, but only flux and motion, and that the world is always full of every sort of motion and change. The consideration of the names which I mentioned has led me into making this reflection. c

HERMOGENES: How is that, Socrates?

SOCRATES: Perhaps you did not observe that in the names which have just been cited the motion or flux or generation of things is most surely indicated.

HERMOGENES: No, indeed, I never thought of it.

SOCRATES: Take the first of those which you mentioned; clearly that is a name indicative of motion. d

HERMOGENES: What was the name?

SOCRATES: Φρόνησις (wisdom), which may signify φορᾶς καὶ ῥοῦ νόησις (perception of motion and flux), or perhaps φορᾶς ὄνησις (the blessing of motion), but is at any rate connected with φέρεσθαι (motion); γνώμη (judgment), again, certainly implies the ponderation or consideration (νόμησις) of generation (γονή), for to ponder is the same as to consider. Or, if you would rather, here is νόησις, the very word just now mentioned, which is νέου ξίσις (the desire of the new); the word νέος implies that the world is always in process of creation.

- e The giver of the name wanted to express his longing of the soul, for the original name was νεόσεις, and not νόησις, but η took the place of a double ε. The word σωφροσύνη is the salvation (σωτηρία) of that wisdom  
412 (φρόνησις) which we were just now considering. Ἐπιστήμη (knowledge) is akin to this, and indicates that the soul which is good for anything follows (ἔπεται) the motion of things, neither anticipating them nor falling behind them; wherefore the word should rather be read as ἔπειστήμη, inserting ε. Σύνεσις (understanding) may be regarded in like manner as a kind of conclusion; the word is derived from συνίεναι (to go along with), and, like ἐπίστασθαι (to know), implies the progression  
b of the soul in company with the nature of things. Σοφία (wisdom) is very dark, and appears not to be of native growth; the meaning is *touching the motion or stream of things*. You must remember that the poets, when they speak of the commencement of any rapid motion, often use the word ἐσύθη (he rushed), and there was a famous Lacedaemonian who was named Σοῦς (Rush), for by this word the Lacedaemonians signify rapid motion, and the touching (ἐπαφή) of motion is expressed by σοφία, for all things are supposed to be in motion.  
c Good (ἀγαθόν) is the name which is given to the admirable (ἀγαστῶ) in nature, for, although all things move, still there are degrees of motion—some are swifter, some slower—but there are some things which are admirable for their swiftness, and this admirable part of nature is called ἀγαθόν.

- Δικαιοσύνη (justice) is clearly δίκαιον σύνεσις (understanding of the just), but the actual word δίκαιον is more difficult. Men are only agreed to a certain extent about justice, and then they begin to disagree.  
d For those who suppose all things to be in motion conceive the greater part of nature to be a mere receptacle, and they say that there is a penetrating power which passes through all this, and is the instrument of creation in all, and is the subtlest and swiftest element, for if it were not the subtlest, and a power which none can keep out, and also the swiftest, passing by other things as if they were standing still, it could not penetrate through the moving universe. And this  
e element, which superintends all things and pierces (διαιδόν) all, is rightly called δίκαιον; the letter κ is only added for the sake of euphony. Thus far, as I was saying, there is a general agreement about  
413 the nature of justice, but I, Hermogenes, being an enthusiastic disciple, have been told in a mystery that the justice of which I am speak-

ing is also the cause of the world. Now a cause is that because of which anything is created, and someone comes and whispers in my ear that justice is rightly so called because partaking of the nature of the cause. And I begin, after hearing what he has said, to interrogate him gently. Well, my excellent friend, say I, but if all this be true, I still want to know what is justice. Thereupon they think that I ask tiresome questions, and am leaping over the barriers, and have been already sufficiently answered, and they try to satisfy me with one derivation after another, and at length they quarrel. For one of them says that justice is the sun, and that he only is the piercing (δισαῖοντα) and burning (κάνοντα) element which is the guardian of nature. And when I joyfully repeat this beautiful notion, I am answered by the satirical remark, What, is there no justice in the world when the sun is down? And when I earnestly beg my questioner to tell me his own honest opinion, he says, Fire in the abstract. But this is not very intelligible. Another says, No, not fire in the abstract, but the abstraction of heat in the fire. Another man professes to laugh at all this, and says, as Anaxagoras says, that justice is mind, for mind, as they say, has absolute power, and mixes with nothing, and orders all things, and passes through all things. At last, my friend, I find myself in far greater perplexity about the nature of justice than I was before I began to learn. But still I am of the opinion that the name, which has led me into this digression, was given to justice for the reasons which I have mentioned.

HERMOGENES: I think, Socrates, that you are not improvising now. You must have heard this from someone else.

SOCRATES: And not the rest?

HERMOGENES: Hardly.

SOCRATES: Well, then, let me go on in the hope of making you believe in the originality of the rest. What remains after justice? I do not think that we have as yet discussed courage (ἀνδρεία). Injustice (ἀδικία), which is obviously nothing more than a hindrance to the penetrating principle (δισαῖοντος), need not be considered. Well, then, the name of ἀνδρεία seems to imply a battle—this battle is in the world of existence, and according to the doctrine of flux is only the counterflux (ἐναντία ῥοή). If you extract the δ from ἀνδρεία, the name at once signifies the thing, and you may clearly understand that ἀνδρεία is not the stream opposed to every stream, but only to that which is contrary to justice, for otherwise courage would not have been praised. The words ἄρρεν (male) and ἀνὴρ (man) also contain a similar allusion to the same principle of the upward flux (τῇ ἄνω ῥοῇ). Γυνή (woman) I suspect to be the same word as γονή (birth); θῆλυ (female) appears to be partly derived from θηλή (the teat), because the teat is like rain, and makes things flourish (τεθληέναι).

HERMOGENES: That is surely probable.

SOCRATES: Yes, and the very word θάλλειν (to flourish) seems

to figure the growth of youth, which is swift and sudden ever. And this is expressed by the legislator in the name, which is a compound of  $\theta\epsilon\acute{\iota}\nu$  (running) and  $\alpha\lambda\lambda\epsilon\sigma\theta\alpha\iota$  (leaping). Pray observe how I gallop away when I get on smooth ground. There are a good many names generally thought to be of importance, which have still to be explained.

HERMOGENES: True.

SOCRATES: There is the meaning of the word  $\tau\acute{\epsilon}\chi\eta$  (art), for example.

HERMOGENES: Very true.

SOCRATES: That may be identified with  $\epsilon\chi\omicron\nu\omicron\eta$ , and expresses the possession of mind—you have only to take away the  $\tau$  and insert  $\omicron$ , between the  $\chi$  and  $\nu$ , and between the  $\nu$  and  $\eta$ .

HERMOGENES: That is a very shabby etymology.

SOCRATES: Yes, my dear friend, but then you know that the original names have been long ago buried and disguised by people sticking on and stripping off letters for the sake of euphony, and twisting and bedizening them in all sorts of ways, and time too may have had a share in the change. Take, for example, the word  $\kappa\acute{\alpha}\tau\omicron\pi\tau\tau\omicron\nu$  (mirror). Why is the letter  $\rho$  inserted? This must surely be the addition of someone who cares nothing about the truth, but thinks only of putting the mouth into shape. And the additions are often such that at last no human being can possibly make out the original meaning of the word. Another example is the word  $\sigma\phi\acute{\iota}\gamma\zeta$ ,  $\sigma\phi\acute{\iota}\gamma\gamma\omicron\varsigma$ , which ought properly to be  $\phi\acute{\iota}\gamma\zeta$ ,  $\phi\acute{\iota}\gamma\gamma\omicron\varsigma$ , and there are other examples.

HERMOGENES: That is quite true, Socrates.

SOCRATES: And yet, if you are permitted to put in and pull out any letters which you please, names will be too easily made, and any name may be adapted to any object.

HERMOGENES: True.

SOCRATES: Yes, that is true. And therefore a wise dictator, like yourself, should observe the laws of moderation and probability.

HERMOGENES: Such is my desire.

SOCRATES: And mine, too, Hermogenes. But do not be too much of a precisian, or 'you will unnerve me of my strength.' When you have allowed me to add  $\mu\eta\chi\alpha\nu\acute{\eta}$  (contrivance) to  $\tau\acute{\epsilon}\chi\eta$  (art) I shall be at the top of my bent, for I conceive  $\mu\eta\chi\alpha\nu\acute{\eta}$  to be a sign of great accomplishment ( $\delta\upsilon\epsilon\acute{\iota}\nu$ ), for  $\mu\grave{\eta}\kappa\omicron\varsigma$  has the meaning of greatness, and these two,  $\mu\grave{\eta}\kappa\omicron\varsigma$  and  $\delta\upsilon\epsilon\acute{\iota}\nu$ , make up the word  $\mu\eta\chi\alpha\nu\acute{\eta}$ . But, as I was saying, being now at the top of my bent, I should like to consider the meaning of the two words  $\acute{\alpha}\rho\epsilon\tau\acute{\eta}$  (virtue) and  $\kappa\alpha\kappa\acute{\iota}\alpha$  (vice);  $\acute{\alpha}\rho\epsilon\tau\acute{\eta}$  I do not as yet understand, but  $\kappa\alpha\kappa\acute{\iota}\alpha$  is transparent, and agrees with the principles which preceded, for all things being in a flux ( $\acute{\iota}\omicron\nu\tau\omega\nu$ ),  $\kappa\alpha\kappa\acute{\iota}\alpha$  is  $\kappa\alpha\kappa\omega\varsigma \acute{\iota}\omicron\nu$  (going badly), and this evil motion when existing in

the soul has the general name of κακία, or vice, specially appropriated to it. The meaning of κακῶς λέναι may be further illustrated by the use of δειλία (cowardice), which ought to have come after ἀνδρεία, but was forgotten, and, as I fear, is not the only word which has been passed over. Δειλία signifies that the soul is bound with a strong chain (δεσμός), for λιών means strength, and therefore δειλία expresses the greatest and strongest bond of the soul. And ἀπορία (difficulty) is an evil of the same nature (from α *not* and πορεύεσθαι *to go*), like anything else which is an impediment to motion and movement. Then the word κακία appears to mean κακῶς λέναι, or going badly, or limping and halting, of which the consequence is that the soul becomes filled with vice. And if κακία is the name of this sort of thing, ἀρετή will be the opposite of it, signifying in the first place ease of motion, then that the stream of the good soul is unimpeded, and has therefore the attribute of ever flowing without let or hindrance, and is therefore called ἀρετή, or, more correctly, ἀειρετή (ever flowing), and may perhaps have had another form, αἰρετή (eligible), indicating that nothing is more eligible than virtue, and this has been hammered into ἀρετή. I dare say that you will deem this to be another invention of mine, but I think that if the previous word κακία was right, then ἀρετή is also right.

HERMOGENES: But what is the meaning of κακόν (bad), which has played so great a part in your previous discourse? 416

SOCRATES: That is a very singular word about which I can hardly form an opinion, and therefore I must have recourse to my ingenious device.

HERMOGENES: What device?

SOCRATES: The device of a foreign origin, which I shall give to this word also.

HERMOGENES: Very likely you are right, but suppose that we leave these words, and endeavor to see the rationale of καλόν (beautiful) and αἰσχρόν (ugly).

SOCRATES: The meaning of αἰσχρόν is evident, being only αἰ ἴσχον ῥοῆς (always preventing from flowing), and this is in accordance with our former derivations. For the name giver was a great enemy to stagnation of all sorts, and hence he gave the name ἀεισχοροῦν to that which hindered the flux (αἰ ἴσχον ῥοῦν), and this is now beaten together into αἰσχρόν.

HERMOGENES: But what do you say of καλόν?

SOCRATES: That is more obscure; yet the form is only due to the quantity, and has been changed by altering ου into ο.

HERMOGENES: What do you mean?

SOCRATES: This name appears to denote mind.

HERMOGENES: How so?

SOCRATES: Let me ask you what is the cause why anything has a name. Is not the principle which imposes the name the cause?

HERMOGENES: Certainly.

SOCRATES : And must not this be the mind of gods, or of men, or of both?

HERMOGENES : Yes.

SOCRATES : Is not mind that which called (καλέσαν) things by their names, and is not mind the beautiful (καλόν)?

HERMOGENES : That is evident.

SOCRATES : And are not the works of intelligence and mind worthy of praise, and are not other works worthy of blame?

HERMOGENES : Certainly.

d     SOCRATES : Physic does the work of a physician, and carpentering does the works of a carpenter?

HERMOGENES : Exactly.

SOCRATES : And the principle of beauty does the works of beauty?

HERMOGENES : Of course.

SOCRATES : And that principle we affirm to be mind?

HERMOGENES : Very true.

SOCRATES : Then mind is rightly called beauty because she does the works which we recognize and speak of as the beautiful?

HERMOGENES : That is evident.

e     SOCRATES : What more names remain to us?

HERMOGENES : There are the words which are connected with  
417 ἀγαθόν and καλόν, such as συμφέρον and λυσιτελοῦν, ὠφέλιμον, κερδαλέον, and their opposites.

SOCRATES : The meaning of συμφέρον (expedient) I think that you may discover for yourself by the light of the previous examples, for it is a sister word to ἐπιστήμη, meaning just the motion (φορά) of the soul accompanying the world, and things which are done upon this principle are called σύμφορα or συμφέροντα, because they are carried round with the world.

HERMOGENES : That is probable.

b     SOCRATES : Again, κερδαλέον (gainful) is called from κέρδος (gain), but you must alter the ν into δ if you want to get at the meaning, for this word also signifies good, but in another way; he who gave the name intended to express the power of admixture (κεραννύμενον) and universal penetration in the good; in forming the word, however, he inserted a δ instead of a ν, and so made κέρδος.

HERMOGENES : Well, but what is λυσιτελοῦν (profitable)?

c     SOCRATES : I suppose, Hermogenes, that people do not mean by the profitable the gainful or that which pays (λύει) the retailer, but they use the word in the sense of swift. You regard the profitable (λυσιτελοῦν) as that which, being the swiftest thing in existence, allows of no stay in things and no pause or end of motion, but always, if there begins to be any end, lets things go again (λύει), and makes motion immortal and unceasing. And from this point of view, as appears to me, the good was happily denominated λυσιτελοῦν—being

that which looses (λύον) the end (τέλος) of motion. Ὠφέλιμον (the advantageous) is derived from ὀφέλλειν, meaning that which creates and increases; this latter is a common Homeric word, and has a foreign character.

HERMOGENES: And what do you say of their opposites? d

SOCRATES: Of such as mere negatives I hardly think that I need speak.

HERMOGENES: Which are they?

SOCRATES: The words ἀξύμφορον (inexpedient), ἀνωφελές (unprofitable), ἄλυσιτελές (unadvantageous), ἀκερδές (ungainful).

HERMOGENES: True.

SOCRATES: I would rather take the words βλαβερόν (harmful), ζημιῶδες (hurtful).

HERMOGENES: Good.

SOCRATES: The word βλαβερόν is that which is said to hinder or harm (βλάπτειν) the stream (ῥοῦν); βλάπτων is βουλόμενον ἅπτειν e (seeking to hold or bind), for ἅπτειν is the same as δεῖν, and δεῖν is always a term of censure; βουλόμενον ἅπτειν ῥοῦν (wanting to bind the stream) would properly be βουλαπτεροῦν, and this, as I imagine, is improved into βλαβερόν.

HERMOGENES: You bring out curious results, Socrates, in the use of names, and when I hear the word βουλαπτεροῦν I cannot help imagining that you are making your mouth into a flute, and puffing away at some prelude to Athena.

418

SOCRATES: That is the fault of the makers of the name, Hermogenes—not mine.

HERMOGENES: Very true, but what is the derivation of ζημιῶδες?

SOCRATES: What is the meaning of ζημιῶδες? Let me remark, Hermogenes, how right I was in saying that great changes are made in the meaning of words by putting in and pulling out letters; even a very slight permutation will sometimes give an entirely opposite sense. I may instance the word δέον, which occurs to me at the moment, and reminds me of what I was going to say to you, that the fine fashionable language of modern times has twisted and disguised and entirely altered the original meaning both of δέον and of ζημιῶδες, which in the old language is clearly indicated.

HERMOGENES: What do you mean?

SOCRATES: I will try to explain. You are aware that our forefathers loved the sounds ι and δ, especially the women, who are most conservative of the ancient language, but now they change ι into η or ε, and δ into ζ—this is supposed to increase the grandeur of the sound.

HERMOGENES: How do you mean?

SOCRATES: For example, in very ancient times they called the day either ἡμέρα or ἑμέρα, which is called by us ἡμέρα.

HERMOGENES: That is true.

**SOCRATES:** Do you observe that only the ancient form shows the intention of the giver of the name? The reason is that men long  
 d for (ἰμείρουσι) and love the light which comes after the darkness, and is therefore called ἡμέρα, from ἱμερος (desire).

**HERMOGENES:** Clearly.

**SOCRATES:** But now the name is so travestied that you cannot tell the meaning, although there are some who imagine the day to be called ἡμέρα because it makes things gentle (ἡμερα).

**HERMOGENES:** Such is my view.

**SOCRATES:** And do you know that the ancients said δυογόν and not ζυγόν?

**HERMOGENES:** They did so.

**SOCRATES:** And ζυγόν (yoke) has no meaning—it ought to be  
 e δυογόν, which word expresses the binding of two together (δυνεῖν ἀγωγή) for the purpose of drawing—this has been changed into ζυγόν. And there are many other examples of similar changes.

**HERMOGENES:** There are.

**SOCRATES:** Proceeding in the same train of thought I may remark that the word δέον (obligation) has a meaning which is the opposite of all the other appellations of good, for δέον is here a species of good, and is, nevertheless, the chain (δεσμός) or hinderer of motion, and therefore own brother of βλαβερόν.

**HERMOGENES:** Yes, Socrates, that is quite plain.

**SOCRATES:** Not if you restore the ancient form, which is more  
 419 likely to be the correct one, and read διόν instead of δέον. If you convert the ε into an ι after the old fashion, this word will then agree with other words meaning good, for διόν, not δέον, signifies the good, and is a term of praise. And the author of names has not contradicted himself, but in all these various appellations, δέον (obligatory), ὠφέλιμον (advantageous), λυσιτελοῦν (profitable), κερδαλέον (gainful), ἀγαθόν (good), συμφέρον (expedient), εὖπορον (plenteous), the same conception is implied of the ordering or all-pervading principle which is praised, and the restraining and binding principle which is censured.  
 b And this is further illustrated by the word ζημιώδης (hurtful), which if the ζ is only changed into δ, as in the ancient language, becomes δημιώδης, and this name, as you will perceive, is given to that which binds motion (δοῦντι ἰόν).

**HERMOGENES:** What do you say of ἡδονή (pleasure), λύπη (pain), ἐπιθυμία (desire), and the like, Socrates?

**SOCRATES:** I do not think, Hermogenes, that there is any great difficulty about them—ἡδονή is ἡ ὄνησις, the action which tends to advantage, and the original form may be supposed to have been ἡονή,  
 c but this has been altered by the insertion of the δ. Λύπη appears to be derived from the relaxation (λύειν) which the body feels when in sorrow; ἀνία (trouble) is the hindrance of motion (α and ἰέναι); ἀλγηδών (distress), if I am not mistaken, is a foreign word, which is derived

from ἀλγείνους (grievous); δόνη (grief) is called from the putting on (ἐνδυσίς) of sorrow; in ἀχθιδών (vexation) 'the word too labors,' as anyone may see; χαρά (joy) is the very expression of the fluency and diffusion of the soul (χέω); τέρψις (delight) is so called from the pleasure creeping (ἐρπον) through the soul, which may be likened to a breath (πνοή) and is properly ἐρπνοῦν, but has been altered by time into τερπνόν. Εὐφροσύνη (cheerfulness) and ἐπιθυμία explain themselves; the former, which ought to be εὐφεροσύνη and has been changed into εὐφροσύνη, is named, as everyone may see, from the soul moving (φέρεισθαι) in harmony with nature; ἐπιθυμία is really ἡ ἐπὶ τὸν θυμὸν ἵουσα δύναμις, the power which enters into the soul. Θυμός (passion) is called from the rushing (θύσεως) and boiling of the soul ἵμερος (desire) denotes the stream (ῥοῦς) which most draws the soul διὰ τὴν ἔσιν τῆς ῥοῆς, because flowing with desire (ἰέμενος), and expresses a longing after things and violent attraction of the soul to them, and is termed ἵμερος from possessing this power; πόθος (longing) is expressive of the desire of that which is not present but absent, and in another place (πou); this is the reason why the name πόθος is applied to things absent, as ἵμερος is to things present. Ἔρως (love) is so called because flowing in (ἐσρῶν) from without; the stream is not inherent, but is an influence introduced through the eyes, and from flowing in was called ἔσρος (influx) in the old time when they used ο for ω, and is called ἔρως, now that ω is substituted for ο. But why do you not give me another word?

HERMOGENES: What do you think of δόξα (opinion), and that class of words?

SOCRATES: Δόξα is either derived from δίωξις (pursuit), and expresses the march of the soul in the pursuit of knowledge, or from the shooting of a bow (τόξον). The latter is more likely, and is confirmed by οἴσις (thinking), which is only οἰσις (moving), and implies the movement of the soul to the essential nature of each thing, just as βουλή (counsel) has to do with shooting (βολή), and βούλεσθαι (to wish) combines the notion of aiming and deliberating—all these words seem to follow δόξα, and all involve the idea of shooting, just as ἀβουλία, absence of counsel, on the other hand, is a mishap, or missing, or mistaking of the mark, or aim, or proposal, or object.

HERMOGENES: You are quickening your pace now, Socrates.

SOCRATES: Why yes, the end I now dedicate to God, not, however, until I have explained ἀνάγκη (necessity), which ought to come next, and ἐκούσιον (the voluntary). Ἐκούσιον is certainly the yielding (εἶκον) and unresisting—the notion implied is yielding and not opposing, yielding, as I was just now saying, to that motion which is in accordance with our will. But the necessary and resistant, being contrary to our will, implies error and ignorance; the idea is taken from walking through a ravine which is impassable, and rugged, and overgrown, and impedes motion—and this is the derivation of the word

ἀναγκαῖον (necessary), ἀν' ἄγκη ἰόν, going through a ravine. But while my strength lasts let us persevere, and I hope that you will persevere with your questions.

- 421 HERMOGENES: Well, then, let me ask about the greatest and noblest, such as ἀλήθεια (truth) and ψεῦδος (falsehood) and ὄν (being), not forgetting to inquire why the word ὄνομα (name), which is the theme of our discussion, has this name of ὄνομα.

SOCRATES: You know the word μάισσθαι (to seek)?

HERMOGENES: Yes—meaning the same as ζητεῖν (to inquire).

- SOCRATES: The word ὄνομα seems to be a compressed sentence, signifying ὄν οὗ ζήτημα (being for which there is a search), as is still more obvious in ὄνομαστόν (notable), which states in so many words that real existence is that for which there is a seeking (ὄν οὗ μάισμα);  
 b ἀλήθεια is also an agglomeration of θεία ἄλη (divine wandering), implying the divine motion of existence. Ψεῦδος (falsehood) is the opposite of motion; here is another ill name given by the legislator to stagnation and forced inaction, which he compares to sleep (εὔδειν), but the original meaning of the word is disguised by the addition of ψ.  
 \*Ὀν and οὐσία are ἰόν with an ι broken off; this agrees with the true principle, for being (ὄν) is also moving (ἰόν), and the same may be  
 c said of not-being, which is likewise called not-going (οὔκιον or οὔκι ὄν = οὔκ ἰόν).

HERMOGENES: You have hammered away at them manfully, but suppose that someone were to say to you, What is the word ἰόν, and what are ῥέον and δοῦν? Show me their fitness.

SOCRATES: You mean to say, how should I answer him?

HERMOGENES: Yes.

SOCRATES: One way of giving the appearance of an answer has been already suggested.

HERMOGENES: What way?

- SOCRATES: To say that names which we do not understand are  
 d of foreign origin, and this is very likely the right answer, and something of this kind may be true of them, but also the original forms of words may have been lost in the lapse of ages; names have been so twisted in all manner of ways that I should not be surprised if the old language when compared with that now in use would appear to us to be a barbarous tongue.

HERMOGENES: Very likely.

- SOCRATES: Yes, very likely. But still the inquiry demands our earnest attention and we must not flinch. For we should remember that if a person goes on analyzing names into words, and inquiring  
 e also into the elements out of which the words are formed, and keeps on always repeating this process, he who has to answer him must at last give up the inquiry in despair.

HERMOGENES: Very true.

SOCRATES: And at what point ought he to lose heart and give 422 up the inquiry? Must he not stop when he comes to the names which are the elements of all other names and sentences? For these cannot be supposed to be made up of other names. The word ἀγαθόν (good), for example, is, as we were saying, a compound of ἀγαστός (admirable) and θεός (swift). And probably θεός is made up of other elements, and these again of others. But if we take a word which is incapable of further resolution, then we shall be right in saying that we have at last reached a primary element, which need not be resolved any further. b

HERMOGENES: I believe you to be in the right.

SOCRATES: And suppose the names about which you are now asking should turn out to be primary elements. Must not their truth or law be examined according to some new method?

HERMOGENES: Very likely.

SOCRATES: Quite so, Hermogenes. All that has preceded would lead to this conclusion. And if, as I think, the conclusion is c true, then I shall again say to you, come and help me, that I may not fall into some absurdity in stating the principle of primary names.

HERMOGENES: Let me hear, and I will do my best to assist you.

SOCRATES: I think that you will acknowledge with me that one principle is applicable to all names, primary as well as secondary—when they are regarded simply as names, there is no difference in them.

HERMOGENES: Certainly not.

SOCRATES: All the names that we have been explaining were d intended to indicate the nature of things.

HERMOGENES: Of course.

SOCRATES: And that this is true of the primary quite as much as of the secondary names is implied in their being names.

HERMOGENES: Surely.

SOCRATES: But the secondary, as I conceive, derive their significance from the primary.

HERMOGENES: That is evident.

SOCRATES: Very good, but then how do the primary names which precede analysis show the natures of things, as far as they can be shown, which they must do, if they are to be real names? And here e I will ask you a question. Suppose that we had no voice or tongue, and wanted to communicate with one another. Should we not, like the deaf and dumb, make signs with the hands and head and the rest of the body?

HERMOGENES: There would be no choice, Socrates.

SOCRATES: We should imitate the nature of the thing; the elevation of our hands to heaven would mean lightness and upwardness; heaviness and downwardness would be expressed by letting them 423

drop to the ground; if we were describing the running of a horse, or any other animal, we should make our bodies and their gestures as like as we could to them.

HERMOGENES: I do not see that we could do anything else.

SOCRATES: We could not, for by bodily imitation only can the  
b body ever express anything.

HERMOGENES: Very true.

SOCRATES: And when we want to express ourselves, either with the voice, or tongue, or mouth, the expression is simply their imitation of that which we want to express?

HERMOGENES: It must be so, I think.

SOCRATES: Then a name is a vocal imitation of that which the vocal imitator names or imitates?

HERMOGENES: I think so.

c SOCRATES: Nay, my friend, I am disposed to think that we have not reached the truth as yet.

HERMOGENES: Why not?

SOCRATES: Because if we have we shall be obliged to admit that the people who imitate sheep, or cocks, or other animals, name that which they imitate.

HERMOGENES: Quite true.

SOCRATES: Then could I have been right in what I was saying?

HERMOGENES: In my opinion, no. But I wish that you would tell me, Socrates, what sort of an imitation is a name?

SOCRATES: In the first place, I should reply, not a musical imitation, although that is also vocal, nor, again, an imitation of what  
d music imitates; these, in my judgment, would not be naming. Let me put the matter as follows. All objects have sound and figure, and many have color?

HERMOGENES: Certainly.

SOCRATES: But the art of naming appears not to be concerned with imitations of this kind. The arts which have to do with them are music and drawing?

HERMOGENES: True.

e SOCRATES: Again, is there not an essence of each thing, just as there is a color, or sound? And is there not an essence of color and sound as well as of anything else which may be said to have an essence?

HERMOGENES: I should think so.

SOCRATES: Well, and if anyone could express the essence of each thing in letters and syllables, would he not express the nature of each thing?

424 HERMOGENES: Quite so.

SOCRATES: The musician and the painter were the two names which you gave to the two other imitators. What will this imitator be called?

HERMOGENES : I imagine, Socrates, that he must be the namer, or name giver, of whom we are in search.

SOCRATES : If this is true, then I think that we are in a condition to consider the names ποτή (stream), λέναι (to go), σχέσις (retention), about which you were asking, and we may see whether the namer has grasped the nature of them in letters and syllables in such a manner as to imitate the essence or not. b

HERMOGENES : Very good.

SOCRATES : But are these the only primary names, or are there others?

HERMOGENES : There must be others.

SOCRATES : So I should expect. But how shall we further analyze them, and where does the imitator begin? Imitation of the essence is made by syllables and letters. Ought we not, therefore, first to separate the letters, just as those who are beginning rhythm c first distinguish the powers of elementary and then of compound sounds, and when they have done so, but not before, proceed to the consideration of rhythms?

HERMOGENES : Yes.

SOCRATES : Must we not begin in the same way with letters—first separating the vowels, and then the consonants and mutes, into classes, according to the received distinctions of the learned, also the semivowels, which are neither vowels nor yet mutes, and distinguishing into classes the vowels themselves? And when we have perfected d the classification of things, we shall give their names, and see whether, as in the case of letters, there are any classes to which they may be all referred, and hence we shall see their natures, and see, too, whether they have in them classes as there are in the letters. And when we have well considered all this, we shall know how to apply them to what they resemble, whether one letter is used to denote one thing, or whether there is to be an admixture of several of them, just as, in painting, the painter who wants to depict anything sometimes uses purple only, or any other color, and sometimes mixes up several e colors, as his method is when he has to paint flesh color or anything of that kind—he uses his colors as his figures appear to require them. And so, too, we shall apply letters to the expression of objects, either single letters when required, or several letters, and so we shall form syllables, as they are called, and from syllables make nouns and verbs, and thus, at last, from the combinations of nouns and verbs arrive at language, large and fair and whole. And as the painter made a figure, 425 even so shall we make speech by the art of the namer or the rhetorician, or by some other art. Not that I am literally speaking of ourselves, but I was carried away—meaning to say that this was the way in which not we, but the ancients formed language, and what they put together we must take to pieces in like manner, if we are to attain a scientific view of the whole subject. And we must see whether the

- b primary, and also whether the secondary elements are rightly given or not, for if they are not, the composition of them, my dear Hermogenes, will be a sorry piece of work, and in the wrong direction.

HERMOGENES : That, Socrates, I can quite believe.

SOCRATES : Well, but do you suppose that you will be able to analyze them in this way? For I am certain that I should not.

HERMOGENES : Much less am I likely to be able.

- SOCRATES : Shall we leave them, then? Or shall we seek to discover, if we can, something about them, according to the measure of  
c our ability, saying by way of preface, as I said before of the gods, that of the truth about them we know nothing, and do but entertain human notions of them. And in this present inquiry, let us say to ourselves, before we proceed, that the higher method is the one which we or others who would analyze language to any good purpose must follow, but under the circumstances, as men say, we must do as well as we can. What do you think?

HERMOGENES : I very much approve.

- d SOCRATES : That objects should be imitated in letters and syllables, and so find expression, may appear ridiculous, Hermogenes, but it cannot be avoided—there is no better principle to which we can look for the truth of first names. Deprived of this, we must have recourse to divine help, like the tragic poets, who in any perplexity have their gods waiting in the air, and must get out of our difficulty in like fashion, by saying that ‘the gods gave the first names, and therefore  
e they are right.’ This will be the best contrivance, or perhaps that other notion may be even better still, of deriving them from some barbarous people, for the barbarians are older than we are, or we may say that antiquity has cast a veil over them, which is the same sort of excuse  
426 as the last, for all these are not reasons but only ingenious excuses for having no reasons concerning the truth of words. And yet any sort of ignorance of first or primitive names involves an ignorance of secondary words, for they can only be explained by the primary. Clearly then the professor of languages should be able to give a very lucid explanation of first names, or let him be assured he will only talk nonsense about the rest. Do you not suppose this to be true?

HERMOGENES : Certainly, Socrates.

SOCRATES : My first notions of original names are truly wild and ridiculous, though I have no objection to imparting them to you if you desire, and I hope that you will communicate to me in return anything better which you may have.

HERMOGENES : Fear not. I will do my best.

- c SOCRATES : In the first place, the letter ρ appears to me to be the general instrument expressing all motion (κίνησις). But I have not yet explained the meaning of this latter word, which is just ἵεσις (going), for the letter η was not in use among the ancients, who only employed ε, and the root is κείν, which is a foreign form, the

same as *λέναι*. And the old word *κίνησις* will be correctly given as *ῥεσις* in corresponding modern letters. Assuming this foreign root *κλείν*, and allowing for the change of the *η* and the insertion of the *ν*, we have *κίνησις*, which should have been *κείνησις* or *εἰσις*, and *στᾶσις* is the negative of *λέναι* (or *εἰσις*), and has been improved into *στάσις*. Now the letter *ρ*, as I was saying, appeared to the imposer of names an excellent instrument for the expression of motion, and he frequently uses the letter for this purpose. For example, in the actual words *ρεῖν* and *ρόή* he represents motion by *ρ*—also in the words *τρόμος* (trembling), *τραχύς* (rugged), and again, in words such as *κρούειν* (strike), *θραύειν* (crush), *ἐρείκειν* (bruise), *θρύπτειν* (break), *κερματίζειν* (crumble), *ρुμβεῖν* (whirl). Of all these sorts of movements he generally finds an expression in the letter *ρ*, because, as I imagine, he had observed that the tongue was most agitated and least at rest in the pronunciation of this letter, which he therefore used in order to express motion, just as by the letter *ι* he expresses the subtle elements which pass through all things. This is why he uses the letter *ι* as imitative of motion, *λέναι*, *ῥεσθαι*. And there is another class of letters, *φ*, *ψ*, *σ*, and *ζ*, of which the pronunciation is accompanied by great expenditure of breath; these are used in the imitation of such notions as *ψυχρόν* (shivering), *ζέον* (seething), *σειεσθαι* (to be shaken), *σεισμός* (shock), and are always introduced by the giver of names when he wants to imitate what is *φυσῶδες* (windy). He seems to have thought that the closing and pressure of the tongue in the utterance of *δ* and *τ* were expressive of binding and rest in a place. He further observed the liquid movement of *λ*, in the pronunciation of which the tongue slips, and in this he found the expression of smoothness, as in *λείος* (level), and in the word *δλισθάνειν* (to slip) itself, *λιπαρόν* (sleek), in the word *κολλῶδες* (gluey), and the like; the heavier sound of *γ* detained the slipping tongue, and the union of the two gave the notion of a glutinous clammy nature, as in *γλίσχρος*, *γλυκύς*, *γλοιῶδες*. The *ν* he observed to be sounded from within, and therefore to have a notion of inwardness; hence he introduced the sound in *ἔνδον* and *ἐντός*; *α* he assigned to the expression of size, and *η* of length, because they are great letters; *ο* was the sign of roundness, and therefore there is plenty of *ο* mixed up in the word *γογγύλον* (round). Thus did the legislator, reducing all things into letters and syllables, and impressing on them names and signs, and out of them by imitation compounding other signs. That is my view, Hermogenes, of the truth of names, but I should like to hear what Cratylus has more to say.

HERMOGENES: But, Socrates, as I was telling you before, Cratylus mystifies me; he says that there is a fitness of names, but he never explains what is this fitness, so that I cannot tell whether his obscurity is intended or not. Tell me now, Cratylus, here in the presence of Socrates, do you agree in what Socrates has been saying about names, or have you something better of your own? And if you have,

tell me what your view is, and then you will either learn of Socrates, or Socrates and I will learn of you.

CRATYLUS: Well, but surely, Hermogenes, you do not suppose that you can learn, or I explain, any subject of importance all in a moment—at any rate, not such a subject as language, which is, perhaps, the very greatest of all.

428 HERMOGENES: No, indeed, but, as Hesiod says, and I agree with him, 'to add little to little'<sup>8</sup> is worth while. And, therefore, if you think that you can add anything at all, however small, to our knowledge, take a little trouble and oblige Socrates, and me too, who certainly have a claim upon you.

SOCRATES: I am by no means positive, Cratylus, in the view which Hermogenes and myself have worked out, and therefore do not hesitate to say what you think, which if it be better than my own  
b view I shall gladly accept. And I should not be at all surprised to find that you have found some better notion. For you have evidently reflected on these matters and have had teachers, and if you have really a better theory of the truth of names, you may count me in the number of your disciples.

CRATYLUS: You are right, Socrates, in saying that I have made a study of these matters, and I might possibly convert you into a dis-  
ciple. But I fear that the opposite is more probable, and I already find myself moved to say to you what Achilles in the 'Prayers' says to Ajax,

Illustrious Ajax, son of Telamon, lord of the people,  
You appear to have spoken in all things much to my mind.<sup>9</sup>

And you, Socrates, appear to me to be an oracle, and to give answers much to my mind, whether you are inspired by Euthyphro, or whether some Muse may have long been an inhabitant of your breast, unconsciously to yourself.

d SOCRATES: Excellent Cratylus, I have long been wondering at my own wisdom. I cannot trust myself. And I think that I ought to stop and ask myself, What am I saying? For there is nothing worse than self-deception—when the deceiver is always at home and always with you—it is quite terrible, and therefore I ought often to retrace my steps and endeavor to 'look fore and aft,'<sup>10</sup> in the words of the aforesaid  
e Homer. And now let me see, where are we? Have we not been saying that the correct name indicates the nature of the thing? Has this proposition been sufficiently proved?

CRATYLUS: Yes, Socrates, what you say, as I am disposed to think, is quite true.

SOCRATES: Names, then, are given in order to instruct?

<sup>8</sup> *Works and Days* 9.359.      <sup>9</sup> *Iliad* 9.644 sq.

<sup>10</sup> *Iliad* 1.343, 3.109.

CRATYLUS: Certainly.

SOCRATES: And naming is an art, and has artificers?

CRATYLUS: Yes.

SOCRATES: And who are they?

CRATYLUS: The legislators, of whom you spoke at first.

429

SOCRATES: And does this art grow up among men like other arts? Let me explain what I mean. Of painters, some are better and some worse?

CRATYLUS: Yes.

SOCRATES: The better painters execute their works, I mean their figures, better, and the worse execute them worse. And of builders also, the better sort build fairer houses, and the worse build them worse.

CRATYLUS: True.

SOCRATES: And among legislators, there are some who do their work better and some worse?

CRATYLUS: No, there I do not agree with you.

SOCRATES: Then you do not think that some laws are better and others worse?

CRATYLUS: No, indeed.

SOCRATES: Or that one name is better than another?

CRATYLUS: Certainly not.

SOCRATES: Then all names are rightly imposed?

CRATYLUS: Yes, if they are names at all.

SOCRATES: Well, what do you say to the name of our friend Hermogenes, which was mentioned before—assuming that he has nothing of the nature of Hermes in him, shall we say that this is a wrong name, or not his name at all?

CRATYLUS: I should reply that Hermogenes is not his name at all, but only appears to be his, and is really the name of somebody else, who has the nature which corresponds to it.

SOCRATES: And if a man were to call him Hermogenes, would he not be even speaking falsely? For there may be a doubt whether you can call him Hermogenes, if he is not.

CRATYLUS: What do you mean?

SOCRATES: Are you maintaining that falsehood is impossible? For if this is your meaning I should answer that there have been plenty of liars in all ages.

CRATYLUS: Why, Socrates, how can a man say that which is not—say something and yet say nothing? For is not falsehood saying the thing which is not?

SOCRATES: Your argument, friend, is too subtle for a man of my age. But I should like to know whether you are one of those philosophers who think that falsehood may be spoken but not said?

CRATYLUS: Neither spoken nor said.

SOCRATES: Nor uttered nor addressed? For example, if a per-

son, saluting you in a foreign country, were to take your hand and say, Hail, Athenian stranger, Hermogenes, son of Smicrion—these words, whether spoken, said, uttered, or addressed, would have no application to you but only to our friend Hermogenes, or perhaps to nobody at all?

CRATYLUS: In my opinion, Socrates, the speaker would only be talking nonsense.

430 SOCRATES: Well, but that will be quite enough for me, if you will tell me whether the nonsense would be true or false, or partly true and partly false, which is all that I want to know.

CRATYLUS: I should say that he would be putting himself in motion to no purpose, and that his words would be an unmeaning sound like the noise of hammering at a brazen pot.

SOCRATES: But let us see, Cratylus, whether we cannot find a meeting point, for you would admit that the name is not the same with the thing named?

CRATYLUS: I should.

b SOCRATES: And would you further acknowledge that the name is an imitation of the thing?

CRATYLUS: Certainly.

SOCRATES: And you would say that pictures are also imitations of things, but in another way?

CRATYLUS: Yes.

SOCRATES: I believe you may be right, but I do not rightly understand you. Please to say, then, whether both sorts of imitation—I mean both pictures or words—are not equally attributable and applicable to the things of which they are the imitation.

c CRATYLUS: They are.

SOCRATES: First look at the matter thus. You may attribute the likeness of the man to the man, and of the woman to the woman, and so on?

CRATYLUS: Certainly.

SOCRATES: And conversely you may attribute the likeness of the man to the woman, and of the woman to the man?

CRATYLUS: Very true.

SOCRATES: And are both modes of assigning them right, or only the first?

CRATYLUS: Only the first.

SOCRATES: That is to say, the mode of assignment which attributes to each that which belongs to it and is like it?

CRATYLUS: That is my view.

SOCRATES: Now then, as I am desirous that we being friends should have a good understanding about the argument, let me state my view to you. The first mode of assignment, whether applied to figures or to names, I call right, and when applied to names only, true as well as right, and the other mode of giving and assigning the name

which is unlike, I call wrong, and in the case of names, false as well as wrong.

CRATYLUS: That may be true, Socrates, in the case of pictures; they may be wrongly assigned. But not in the case of names—they must be always right. e

SOCRATES: Why, what is the difference? May I not go to a man and say to him, This is your picture, showing him his own likeness, or perhaps the likeness of a woman, and when I say show, I mean bring before the sense of sight.

CRATYLUS: Certainly.

SOCRATES: And may I not go to him again, and say, This is your name? For the name, like the picture, is an imitation. May I not 431 say to him, This is your name? And may I not then bring to his sense of hearing the imitation of himself, when I say, This is a man, or of a female of the human species, when I say, This is a woman, as the case may be? Is not all that quite possible?

CRATYLUS: I would fain agree with you, Socrates, and therefore I say, granted.

SOCRATES: That is very good of you, if I am right, which need hardly be disputed at present. But if I can assign names as well as pictures to objects, the right assignment of them we may call truth, and b the wrong assignment of them falsehood. Now if there be such a wrong assignment of names, there may also be a wrong or inappropriate assignment of verbs, and if of names and verbs then of the sentences, which are made up of them. What do you say, Cratylus? c

CRATYLUS: I agree, and think that what you say is very true.

SOCRATES: And further, primitive nouns may be compared to pictures, and in pictures you may either give all the appropriate colors and figures, or you may not give them all—some may be wanting—d or there may be too many or too much of them—may there not?

CRATYLUS: Very true.

SOCRATES: And he who gives all gives a perfect picture or figure, and he who takes away or adds also gives a picture or figure, but not a good one.

CRATYLUS: Yes.

SOCRATES: In like manner, he who by syllables and letters imitates the nature of things, if he gives all that is appropriate will produce a good image, or in other words a name, but if he subtracts or perhaps adds a little, he will make an image but not a good one; whence I infer that some names are well and others ill made.

CRATYLUS: That is true.

SOCRATES: Then the artist of names may be sometimes good, e or he may be bad?

CRATYLUS: Yes.

SOCRATES: And this artist of names is called the legislator?

CRATYLUS: Yes.

SOCRATES: Then like other artists the legislator may be good or he may be bad; it must surely be so if our former admissions hold good.

CRATYLUS: Very true, Socrates, but the case of language, you see, is different. For when by the help of grammar we assign the letters  
 432  $\alpha$  or  $\beta$ , or any other letters, to a certain name, then, if we add, or subtract, or misplace a letter, the name which is written is not only written wrongly, but not written at all, and in any of these cases becomes other than a name.

SOCRATES: But I doubt whether your view is altogether correct, Cratylus.

CRATYLUS: How so?

SOCRATES: I believe that what you say may be true about numbers, which must be just what they are, or not be at all. For example, the number ten at once becomes other than ten if a unit be added or  
 b subtracted, and so of any other number, but this does not apply to that which is qualitative or to anything which is represented under an image. I should say rather that the image, if expressing in every point the entire reality, would no longer be an image. Let us suppose the existence of two objects. One of them shall be Cratylus, and the other the image of Cratylus, and we will suppose, further, that some god makes not only a representation such as a painter would make of your outward form and color, but also creates an inward organization like  
 c yours, having the same warmth and softness, and into this infuses motion, and soul, and mind, such as you have, and in a word copies all your qualities, and places them by you in another form. Would you say that this was Cratylus and the image of Cratylus, or that there were two Cratyluses?

CRATYLUS: I should say that there were two Cratyluses.

SOCRATES: Then you see, my friend, that we must find some other principle of truth in images, and also in names, and not insist that an image is no longer an image when something is added or sub-  
 d tracted. Do you not perceive that images are very far from having qualities which are the exact counterpart of the realities which they represent?

CRATYLUS: Yes, I see.

SOCRATES: But then how ridiculous would be the effect of names on things, if they were exactly the same with them! For they would be the doubles of them, and no one would be able to determine which were the names and which were the realities.

CRATYLUS: Quite true.

SOCRATES: Then fear not, but have the courage to admit that  
 e one name may be correctly and another incorrectly given, and do not insist that the name shall be exactly the same with the thing, but allow the occasional substitution of a wrong letter, and if of a letter also

of a noun in a sentence, and if of a noun in a sentence also of a sentence which is not appropriate to the matter, and acknowledge that the thing may be named, and described, so long as the general character of the thing which you are describing is retained. And this, as you will remember, was remarked by Hermogenes and myself in the particular instance of the names of the letters.

433

CRATYLUS: Yes, I remember.

SOCRATES: Good, and when the general character is preserved, even if some of the proper letters are wanting, still the thing is signified—well, if all the letters are given, not well, when only a few of them are given. I think that we had better admit this, lest we be punished like travelers in Aegina who wander about the street late at night, and be likewise told by truth herself that we have arrived too late. Or if not, you must find out some new notion of correctness of names, and no longer maintain that a name is the expression of a thing in letters or syllables, for if you say both, you will be inconsistent with yourself.

CRATYLUS: I quite acknowledge, Socrates, what you say to be very reasonable.

SOCRATES: Then as we are agreed thus far, let us ask ourselves whether a name rightly imposed ought not to have the proper letters.

CRATYLUS: Yes.

SOCRATES: And the proper letters are those which are like the things?

CRATYLUS: Yes.

SOCRATES: Enough then of names which are rightly given. And in names which are incorrectly given, the greater part may be supposed to be made up of proper and similar letters, or there would be no likeness, but there will be likewise a part which is improper and spoils the beauty and formation of the word. You would admit that?

CRATYLUS: There would be no use, Socrates, in my quarreling with you, since I cannot be satisfied that a name which is incorrectly given is a name at all.

SOCRATES: Do you admit a name to be the representation of a thing?

CRATYLUS: Yes, I do.

SOCRATES: But do you not allow that some nouns are primitive, and some derived?

CRATYLUS: Yes, I do.

SOCRATES: Then if you admit that primitive or first nouns are representations of things, is there any better way of framing representations than by assimilating them to the objects as much as you can? Or do you prefer the notion of Hermogenes and of many others, who say that names are conventional, and have a meaning to those who have agreed about them, and who have previous knowledge of the

things intended by them, and that convention is the only principle? And whether you abide by our present convention, or make a new and opposite one, according to which you call small great and great small—that, they would say, makes no difference, if you are only agreed. Which of these two notions do you prefer?

434 CRATYLUS: Representation by likeness, Socrates, is infinitely better than representation by any chance sign.

SOCRATES: Very good, but if the name is to be like the thing, the letters out of which the first names are composed must also be like things. Returning to the image of the picture, I would ask how any one could ever compose a picture which would be like anything at all, if there were not pigments in nature which resembled the things  
b imitated, and out of which the picture is composed.

CRATYLUS: Impossible.

SOCRATES: No more could names ever resemble any actually existing thing, unless the original elements of which they are compounded bore some degree of resemblance to the objects of which the names are the imitation. And the original elements are letters?

CRATYLUS: Yes.

SOCRATES: Let me now invite you to consider what Her-  
c mogenes and I were saying about sounds. Do you agree with me that the letter ρ is expressive of rapidity, motion, and hardness? Were we right or wrong in saying so?

CRATYLUS: I should say that you were right.

SOCRATES: And that λ was expressive of smoothness, and softness, and the like?

CRATYLUS: There again you were right.

SOCRATES: And yet, as you are aware, that which is called by us σκληρότης, is by the Eretrians called σκληρότηρ.

CRATYLUS: Very true.

SOCRATES: But are the letters ρ and σ equivalents, and is there the same significance to them in the termination ρ, which there is to us in σ, or is there no significance to one of us?

d CRATYLUS: Nay, surely there is a significance to both of us.

SOCRATES: In so far as they are like, or in so far as they are unlike?

CRATYLUS: In so far as they are like.

SOCRATES: Are they altogether alike?

CRATYLUS: Yes, for the purpose of expressing motion.

SOCRATES: And what do you say of the insertion of the λ? For that is expressive not of hardness but of softness.

CRATYLUS: Why, perhaps the letter λ is wrongly inserted, Socrates, and should be altered into ρ, as you were saying to Her-  
mogenes, and in my opinion rightly, when you spoke of adding and subtracting letters upon occasion.

SOCRATES: Good, but still the word is intelligible to both of us. e  
When I say σκληρός (hard), you know what I mean.

CRATYLUS: Yes, my dear friend, and the explanation of that is custom.

SOCRATES: And what is custom but convention? When I utter a sound which I understand, and you know that I understand the meaning of the sound—this is what you are saying? 435

CRATYLUS: Yes.

SOCRATES: And if when I speak you know my meaning, there is an indication given by me to you?

CRATYLUS: Yes.

SOCRATES: This indication of my meaning may proceed from unlike as well as from like, for example, in the λ of σκληρότης. But if this is true, then you have made a convention with yourself, and the correctness of a name turns out to be convention, since letters which are unlike are indicative equally with those which are like, if they are sanctioned by custom and convention. And even supposing that you distinguish custom from convention ever so much, still you b must say that the signification of words is given by custom and not by likeness, for custom may indicate by the unlike as well as by the like. But as we are agreed thus far, Cratylus, for I shall assume that your silence gives consent, then custom and convention must be supposed to contribute to the indication of our thoughts. For suppose we take the instance of number. How can you ever imagine, my good friend, that you will find names resembling every individual number, unless you allow that which you term convention and agreement to have authority in determining the correctness of names? I quite c agree with you that words should as far as possible resemble things, but I fear that this dragging in of resemblance, as Hermogenes says, is a shabby thing, which has to be supplemented by the mechanical aid of convention with a view to correctness. For I believe that if we could always, or almost always, use likenesses, which are perfectly appropriate, this would be the most perfect state of language, as the opposite is the most imperfect. But let me ask you, what is the d force of names, and what is the use of them?

CRATYLUS: The use of names, Socrates, as I should imagine, is to inform. The simple truth is that he who knows names knows also the things which are expressed by them.

SOCRATES: I suppose you mean to say, Cratylus, that as the name is, so also is the thing, and that he who knows the one will also know the other, because they are similars, and all similars fall under e the same art or science, and therefore you would say that he who knows names will also know things.

CRATYLUS: That is precisely what I mean.

SOCRATES: But let us consider what is the nature of this

information about things which, according to you, is given us by names. Is it the best sort of information? Or is there any other? What do you say?

436 CRATYLUS: I believe that to be both the only and the best sort of information about them—there can be no other.

SOCRATES: But do you believe that in the discovery of them he who discovers the names discovers also the things, or is this only the method of instruction, and is there some other method of inquiry and discovery?

CRATYLUS: I certainly believe that the methods of inquiry and discovery are of the same nature as instruction.

SOCRATES: Well, but do you not see, Cratylus, that he who follows names in the search after things, and analyzes their meaning, is b in great danger of being deceived?

CRATYLUS: How so?

SOCRATES: Why clearly he who first gave names gave them according to his conception of the things which they signified—did he not?

CRATYLUS: True.

SOCRATES: And if his conception was erroneous, and he gave names according to his conception, in what position shall we who are his followers find ourselves? Shall we not be deceived by him?

CRATYLUS: But, Socrates, am I not right in thinking that he c must surely have known, or else, as I was saying, his names would not be names at all? And you have a clear proof that he has not missed the truth, and the proof is—that he is perfectly consistent. Did you ever observe in speaking that all the words which you utter have a common character and purpose?

SOCRATES: But that, friend Cratylus, is no answer. For if he did begin in error, he may have forced the remainder into agreement d with the original error and with himself; there would be nothing strange in this, any more than in geometric diagrams, which have often a slight and invisible flaw in the first part of the process, and are consistently mistaken in the long deductions which follow. And this is the reason why every man should expend his chief thought and attention on the consideration of his first principles—are they or are they not rightly laid down? And when he has duly sifted them, all the e rest will follow. Now I should be astonished to find that names are really consistent. And here let us revert to our former discussion. Were we not saying that all things are in motion and progress and flux, and that this idea of motion is expressed by names? Do you not conceive that to be the meaning of them?

CRATYLUS: Yes, that is assuredly their meaning, and the true meaning.

437 SOCRATES: Let us revert to ἐπιστήμη (knowledge), and observe

how ambiguous this word is, seeming rather to signify stopping the soul at things than going round with them, and therefore we should leave the beginning as at present, and not reject the ε, but make an insertion of an ι instead of an ε (not πιστήμη, but ἐπιστήμη). Take another example. Βέβαιον (sure) is clearly the expression of station and position, and not of motion. Again, the word ἱστορία (inquiry) bears upon the face of it the stopping (ἰστάναι) of the stream, and the word πιστόν (faithful) certainly indicates cessation of motion; then, again, μνήμη (memory), as anyone may see, expresses rest in the soul, and not motion. Moreover, words such as ἀμαρτία and συμφορά, which have a bad sense, viewed in the light of their etymologies will be the same as σύνεσις and ἐπιστήμη and other words which have a good sense (cf. ὁμαρτεῖν, συνιέναι, ἔπεσθαι, συμφέρεσθαι). And much the same may be said of ἀμαθία and ἀκολασία, for ἀμαθία (ignorance) may be explained as ἡ ἄμα θεῷ ἰόντος πορεία (the progress of one who goes with God), and ἀκολασία (unrestraint) as ἡ ἀκολουθία τοῖς πράγμασιν (movement in company with things). Thus the names which in these instances we find to have the worst sense will turn out to be framed on the same principle as those which have the best. And anyone I believe who would take the trouble might find many other examples in which the giver of names indicates, not that things are in motion or progress, but that they are at rest, which is the opposite of motion.

CRATYLUS: Yes, Socrates, but observe, the greater number express motion.

SOCRATES: What of that, Cratylus? Are we to count them like votes? And is correctness of names the voice of the majority? Are we to say of whichever sort there are most, those are the true ones?

CRATYLUS: No, that is not reasonable.

SOCRATES: Certainly not. But let us have done with this question and proceed to another, about which I should like to know whether you think with me. Were we not lately acknowledging that the first givers of names in states, both Hellenic and barbarous, were the legislators, and that the art which gave names was the art of the legislator?

CRATYLUS: Quite true.

SOCRATES: Tell me, then, did the first legislators, who were the givers of the first names, know or not know the things which they named?

CRATYLUS: They must have known, Socrates.

SOCRATES: Why, yes, friend Cratylus, they could hardly have been ignorant.

CRATYLUS: I should say not.

SOCRATES: Let us return to the point from which we digressed. You were saying, if you remember, that he who gave names must have known the things which he named. Are you still of that opinion?

CRATYLUS: I am.

SOCRATES: And would you say that the giver of the first names had also a knowledge of the things which he named?

CRATYLUS: I should.

SOCRATES: But how could he have learned or discovered things  
b from names if the primitive names were not yet given? For, if we are correct in our view, the only way of learning and discovering things is either to discover names for ourselves or to learn them from others.

CRATYLUS: I think that there is a good deal in what you say,  
Socrates.

SOCRATES: But if things are only to be known through names, how can we suppose that the givers of names had knowledge, or were legislators, before there were names at all, and therefore before they could have known them?

c CRATYLUS: I believe, Socrates, the true account of the matter to be that a power more than human gave things their first names, and that the names which are thus given are necessarily their true names.

SOCRATES: Then how came the giver of the names, if he was an inspired being or god, to contradict himself? For were we not saying just now that he made some names expressive of rest and others of motion? Were we mistaken?

CRATYLUS: But I suppose one of the two not to be names at all.

SOCRATES: And which, then, did he make, my good friend—those which are expressive of rest, or those which are expressive of motion? This is a point which, as I said before, cannot be determined by counting them.

d CRATYLUS: No, not in that way, Socrates.

SOCRATES: But if this is a battle of names, some of them asserting that they are like the truth, others contending that *they* are, how or by what criterion are we to decide between them? For there are no other names to which appeal can be made, but obviously recourse must be had to another standard which, without employing names, will make clear which of the two are right, and this must be a standard which shows the truth of things.

e CRATYLUS: I agree.

SOCRATES: But if that is true, Cratylus, then I suppose that things may be known without names?

CRATYLUS: Clearly.

SOCRATES: But how would you expect to know them? What other way can there be of knowing them, except the true and natural way, through their affinities, when they are akin to each other, and through themselves? For that which is other and different from them must signify something other and different from them.

CRATYLUS: What you are saying is, I think, true.

439 SOCRATES: Well, but reflect. Have we not several times ac-

knowledged that names rightly given are the likenesses and images of the things which they name?

CRATYLUS: Yes.

SOCRATES: Let us suppose that to any extent you please you can learn things through the medium of names, and suppose also that you can learn them from the things themselves. Which is likely to be the nobler and clearer way—to learn of the image, whether the image and the truth of which the image is the expression have been rightly conceived, or to learn of the truth whether the truth and the image of it have been duly executed? b

CRATYLUS: I should say that we must learn of the truth.

SOCRATES: How real existence is to be studied or discovered is, I suspect, beyond you and me. But we may admit so much, that the knowledge of things is not to be derived from names. No, they must be studied and investigated in themselves.

CRATYLUS: Clearly, Socrates.

SOCRATES: There is another point. I should not like us to be imposed upon by the appearance of such a multitude of names, all tending in the same direction. I myself do not deny that the givers of names did really give them under the idea that all things were in motion and flux, which was their sincere but, I think, mistaken opinion. And having fallen into a kind of whirlpool themselves, they are carried round, and want to drag us in after them. There is a matter, master Cratylus, about which I often dream, and should like to ask your opinion. Tell me whether there is or is not any absolute beauty or good, or any other absolute existence. d

CRATYLUS: Certainly, Socrates, I think so.

SOCRATES: Then let us seek the true beauty, not asking whether a face is fair, or anything of that sort, for all such things appear to be in a flux, but let us ask whether the true beauty is not always beautiful.

CRATYLUS: Certainly.

SOCRATES: And can we rightly speak of a beauty which is always passing away, and is first this and then that? Must not the same thing be born and retire and vanish while the word is in our mouths? e

CRATYLUS: Undoubtedly.

SOCRATES: Then how can that be a real thing which is never in the same state? For obviously things which are the same cannot change while they remain the same, and if they are always the same and in the same state, and never depart from their original form, they can never change or be moved.

CRATYLUS: Certainly they cannot.

SOCRATES: Nor yet can they be known by anyone, for at the moment that the observer approaches, then they become other and of another nature, so that you cannot get any further in knowing their nature or state, for you cannot know that which has no state. 440

CRATYLUS: True.

SOCRATES: Nor can we reasonably say, Cratylus, that there is knowledge at all, if everything is in a state of transition and there is nothing abiding. For knowledge too cannot continue to be knowledge  
 b unless continuing always to abide and exist. But if the very nature of knowledge changes, at the time when the change occurs there will be no knowledge, and if the transition is always going on, there will always be no knowledge, and, according to this view, there will be no one to know and nothing to be known. But if that which knows and that which is known exist ever, and the beautiful and the good and every other thing also exist, then I do not think that they can resemble a process or flux, as we were just now supposing. Whether  
 c there is this eternal nature in things, or whether the truth is what Heraclitus and his followers and many others say, is a question hard to determine, and no man of sense will like to put himself or the education of his mind in the power of names. Neither will he so far trust names or the givers of names as to be confident in any knowledge which condemns himself and other existences to an unhealthy state of unreality; he will not believe that all things leak like a pot, or imagine that the world is a man who has a running at the nose. This may  
 d be true, Cratylus, but is also very likely to be untrue, and therefore I would not have you be too easily persuaded of it. Reflect well and like a man, and do not easily accept such a doctrine, for you are young and of an age to learn. And when you have found the truth, come and tell me.

CRATYLUS: I will do as you say, though I can assure you, Socrates, that I have been considering the matter already, and the result  
 e of a great deal of trouble and consideration is that I incline to Heraclitus.

SOCRATES: Then, another day, my friend, when you come back, you shall give me a lesson, but at present, go into the country, as you are intending, and Hermogenes shall set you on your way.

CRATYLUS: Very good, Socrates. I hope, however, that you will continue to think about these things yourself.

# PHAEDRUS

*This is one of the greatest of the dialogues. It should be read with the Symposium. The two together give Plato's idea of love. The Phaedrus is a conversation, not a discourse or a succession of questions and answers directed to a single subject. Socrates and Phaedrus take a walk into the country and talk about whatever occurs to them, but they are Athenians and one of them is Socrates and their notion—and Plato's—of how to pass the time pleasantly while walking is something quite different from our own.*

*Love is the first matter they take up. Phaedrus has with him a piece of writing about it which he greatly admires and reads to Socrates who objects to it as making love chiefly a physical desire. To him it is an impulse full of beauty and goodness, a kind of divine madness which lifts the soul up and can enable it to enter the path which leads to the truth. The first movement to philosophy, the impulse to seek what is higher—in Plato's phrase, "the beyond"—comes from falling in love with visible, physical beauty.*

*It is really impossible for us to grasp what beauty meant to the Greeks. It was a mighty power exercising a profound influence upon their daily lives. The greatest leader Thebes produced was said to have told his countrymen that they would never conquer Athens until they had brought the Parthenon to Thebes. Any Greek would understand that. Of course the Thebans would be better men, more courageous, wiser, too, with that beauty always before them. In the Republic, Plato's philosopher-rulers must be graceful as well as wise. Socrates gives Phaedrus a description of what a lover feels which leaves our love poetry far behind. To fall truly in love starts a man on the path upward to where love is satisfied in the perfect beauty of the truth.*

*The stress in the Phaedrus is on visible beauty, but the reader of Plato must always remember that Socrates, the most beloved and the most lovely of all, was completely without it. Again and again his snub nose is mentioned, his protruding eyes, and so on. He had "no form nor comeliness that we should desire him." His wonderful beauty was within.*

*The last part of the dialogue is about the inferiority of books and writing in general to pure thought and to discussion concerned only with seeking for knowledge, not with putting it into a shape accept-*

*able to others, the inferiority of reading to reasoning and of rhetoric to dialectic. The best books do no more than remind us of what we know. The only truly valuable way to write is to inscribe justice and beauty and goodness upon a soul.*

227      **SOCRATES:** Where do you come from, Phaedrus my friend, and where are you going?

**PHAEDRUS:** I've been with Lysias, Socrates, the son of Cephalus, and I'm off for a walk outside the wall, after a long morning's sitting there. On the instructions of our common friend Acumenus I take my walks on the open roads; he tells me that is more invigorating than walking in the colonnades.

b      **SOCRATES:** Yes, he's right in saying so. But Lysias, I take it, was in town.

**PHAEDRUS:** Yes, staying with Epicrates, in that house where Morychus used to live, close to the temple of Olympian Zeus.

**SOCRATES:** Well, how were you occupied? No doubt Lysias was giving the company a feast of eloquence.

**PHAEDRUS:** I'll tell you, if you can spare time to come along with me and listen.

**SOCRATES:** What? Don't you realize that I should account it, in Pindar's words, 'above all business'<sup>1</sup> to hear how you and Lysias passed your time?

c      **PHAEDRUS:** Lead on then.

**SOCRATES:** Please tell me.

**PHAEDRUS:** As a matter of fact the topic is appropriate for your ears, Socrates, for the discussion that engaged us may be said to have concerned love. Lysias, you must know, has described how a handsome boy was tempted, but not by a lover—that's the clever part of it. He maintains that surrender should be to one who is not in love rather than to one who is.

d      **SOCRATES:** Splendid! I wish he would add that it should be to a poor man rather than a rich one, an elderly man rather than a young one, and, in general, to ordinary folk like myself. What an attractive democratic theory that would be! However, I'm so eager to hear about it that I vow I won't leave you even if you extend your

<sup>1</sup> *Isthmionikai* 1.1.

walk as far as Megara, up to the walls and back again as recommended by Herodicus.

PHAEDRUS: What do you mean, my good man? Do you expect 228 an amateur like me to repeat by heart, without disgracing its author, the work of the ablest writer of our day, which it took him weeks to compose at his leisure? That is far beyond me, though I'd rather have had the ability than come into a fortune.

SOCRATES: I know my Phaedrus. Yes indeed, I'm as sure of him as of my own identity. I'm certain that the said Phaedrus didn't listen just once to Lysias' speech; time after time he asked him to repeat it to him, and Lysias was very ready to comply. Even that would b not content him. In the end he secured the script and began poring over the parts that specially attracted him, and thus engaged he sat there the whole morning, until he grew weary and went for a walk. Upon my word, I believe he had learned the whole speech by heart, unless it was a very long one, and he was going into the country to practice declaiming it. Then he fell in with one who has a passion for listening to discourses, and when he saw him he was delighted to think he would have someone to share his frenzied enthusiasm; so he asked him to join him on his way. But when the lover of discourses c begged him to discourse, he became difficult, pretending he didn't want to, though he meant to do so ultimately, even if he had to force himself on a reluctant listener. So beg him, Phaedrus, to do straight-way what he will soon do in any case.

PHAEDRUS: Doubtless it will be much my best course to deliver myself to the best of my ability, for I fancy you will never let me go until I have given you some sort of a speech.

SOCRATES: You are quite right about my intention.

PHAEDRUS: Then here's what I will do. It really is perfectly d true, Socrates, that I have not got the words by heart, but I will sketch the general purport of the several points in which the lover and the nonlover were contrasted, taking them in order one by one, and beginning at the beginning.

SOCRATES: Very well, my dear fellow, but you must first show me what it is that you have in your left hand under your cloak, for I surmise that it is the actual discourse. If that is so, let me assure you of this, that much as I love you I am not altogether inclined to let e you practice your oratory on me when Lysias himself is here present. Come now, show it me.

PHAEDRUS: Say no more, Socrates; you have dashed my hope of trying out my powers on you. Well, where would you like us to sit for our reading?

SOCRATES: Let us turn off here and walk along the Ilissus; 229 then we can sit down in any quiet spot you choose.

PHAEDRUS: It's convenient, isn't it, that I chance to be bare-foot; you of course always are so. There will be no trouble in wading

in the stream, which is especially delightful at this hour of a summer's day.

SOCRATES: Lead on then, and look out for a place to sit down.

PHAEDRUS: You see that tall plane tree over there?

SOCRATES: To be sure.

- b PHAEDRUS: There's some shade, and a little breeze, and grass to sit down on, or lie down if we like.

SOCRATES: Then make for it.

PHAEDRUS: Tell me, Socrates, isn't it somewhere about here that they say Boreas seized Orithyia from the river?

SOCRATES: Yes, that is the story.

PHAEDRUS: Was this the actual spot? Certainly the water looks charmingly pure and clear; it's just the place for girls to be playing beside the stream.

- c SOCRATES: No, it was about a quarter of a mile lower down, where you cross to the sanctuary of Agra; there is, I believe, an altar dedicated to Boreas close by.

PHAEDRUS: I have never really noticed it, but pray tell me, Socrates, do you believe that story to be true?

SOCRATES: I should be quite in the fashion if I disbelieved it, as the men of science do. I might proceed to give a scientific account of how the maiden, while at play with Pharmacia, was blown by a gust of Boreas down from the rocks hard by, and having thus met her

- d death was said to have been seized by Boreas, though it may have happened on the Areopagus, according to another version of the occurrence. For my part, Phaedruss, I regard such theories as no doubt attractive, but as the invention of clever, industrious people who are not exactly to be envied, for the simple reason that they must then go on and tell us the real truth about the appearance of centaurs and the Chimera, not to mention a whole host of such creatures, Gorgons and  
e Pegasuses and countless other remarkable monsters of legend flocking in on them. If our skeptic, with his somewhat crude science, means to reduce every one of them to the standard of probability, he'll need a deal of time for it. I myself have certainly no time for the business,  
230 and I'll tell you why, my friend. I can't as yet 'know myself,' as the inscription at Delphi enjoins, and so long as that ignorance remains it seems to me ridiculous to inquire into extraneous matters. Consequently I don't bother about such things, but accept the current beliefs about them, and direct my inquiries, as I have just said, rather to myself, to discover whether I really am a more complex creature and more puffed up with pride than Typhon, or a simpler, gentler being whom heaven has blessed with a quiet, un-Typhonic nature. By the  
b way, isn't this the tree we were making for?

PHAEDRUS: Yes, that's the one.

SOCRATES: Upon my word, a delightful resting place, with this tall, spreading plane, and a lovely shade from the high branches of

the *agnos*. Now that it's in full flower, it will make the place ever so fragrant. And what a lovely stream under the plane tree, and how cool to the feet! Judging by the statuettes and images I should say it's consecrated to Achelous and some of the nymphs. And then too, c isn't the freshness of the air most welcome and pleasant, and the shrill summery music of the cicada choir! And as crowning delight the grass, thick enough on a gentle slope to rest your head on most comfortably. In fact, my dear Phaedrus, you have been the stranger's perfect guide.

PHAEDRUS: Whereas you, my excellent friend, strike me as the oddest of men. Anyone would take you, as you say, for a stranger being shown the country by a guide instead of a native—never leaving d town to cross the frontier nor even, I believe, so much as setting foot outside the walls.

SOCRATES: You must forgive me, dear friend; I'm a lover of learning, and trees and open country won't teach me anything, whereas men in the town do. Yet you seem to have discovered a recipe for getting me out. A hungry animal can be driven by dangling a carrot or a bit of greenstuff in front of it; similarly if you proffer me volumes of speeches I don't doubt you can cart me all round Attica, and anywhere else you please. Anyhow, now that we've got here I propose e for the time being to lie down, and you can choose whatever posture you think most convenient for reading, and proceed.

PHAEDRUS: Here you are then.

You know how I am situated, and I have told you that I think it to our advantage that this should happen. Now I claim that I should not be refused what I ask simply because I am not your lover. Lovers, 231 when their craving is at an end, repent of such benefits as they have conferred, but for the other sort no occasion arises for regretting what has passed. For being free agents under no constraint, they regulate their services by the scale of their means, with an eye to their own personal interest. Again, lovers weigh up profit and loss accruing to their account by reason of their passion, and with the extra item of labor expended decide that they have long since made full payment for b favors received, whereas the nonlovers cannot allege any consequential neglect of their personal affairs, nor record any past exertions on the debit side, nor yet complain of having quarreled with their relatives; hence, with all these troubles removed, all they have left to do is to devote their energies to such conduct as they conceive likely to gratify the other party.

Again, it is argued that a lover ought to be highly valued because c he professes to be especially kind toward the loved one, and ready to gratify him in words and deeds while arousing the dislike of everyone else. If this is true, however, it is obvious that he will set greater store by the loved one of tomorrow than by that of today, and will doubtless do an injury to the old love if required by the new.

And really, what sense is there in lavishing what is so precious  
 d upon one laboring under an affliction which nobody who knew anything of it would even attempt to remove? Why, the man himself admits that he is not sound, but sick, that he is aware of his folly, but cannot control himself. How then, when he comes to his senses, is he likely to approve of the intentions that he formed in his aberration?

And observe this. If you are to choose the best of a number of lovers, your choice will be only among a few, whereas a general choice of the person who most commends himself to you gives you a wide  
 e field, so that in that wide field you have a much better prospect of finding someone worthy of your friendship.

Now maybe you respect established conventions, and anticipate odium if people get to hear about you; if so, it may be expected that a  
 232 lover, conceiving that everyone will admire him as he admires himself, will be proud to talk about it and flatter his vanity by declaring to all and sundry that his enterprise has been successful, whereas the other type, who can control themselves, will prefer to do what is best rather than shine in the eyes of their neighbors.

Again, a lover is bound to be heard about and seen by many people, consorting with his beloved and caring about little else, so that  
 b when they are observed talking to one another, the meeting is taken to imply the satisfaction, actual or prospective, of their desires, whereas, with the other sort, no one ever thinks of putting a bad construction on their association, realizing that a man must have someone to talk to by way of friendship or gratification of one sort or another.

And observe this. Perhaps you feel troubled by the reflection that it is hard for friendship to be preserved, and that whereas a quarrel arising from other sources will be a calamity shared by both parties,  
 c one that follows the sacrifice of your all will involve a grievous hurt to yourself; in that case it is doubtless the lover who should cause you the more alarm, for he is very ready to take offense, and thinks the whole affair is to his own hurt. Hence he discourages his beloved from consorting with anyone else, fearing that a wealthy rival may overreach him with his money, or a cultured one outdo him with his intelligence, and he is perpetually on guard against the influence of  
 d those who possess other advantages. So by persuading you to become estranged from such rivals he leaves you without a friend in the world; alternatively, if you look to your own interest and show more good sense than your lover, you will find yourself quarreling with him. On the other hand, one who is not a lover, but has achieved what he asked of you by reason of his merit, will not be jealous of others who seek your society, but will rather detest those who avoid it, in the belief that the latter look down on him, whereas the former are serv-

ing his turn. Consequently the object of his attentions is far more e likely to make friends than enemies out of the affair.

And observe this. A lover more often than not wants to possess you before he has come to know your character or become familiar with your general personality, and that makes it uncertain whether he will still want to be your friend when his desires have waned, whereas 233 in the other case, the fact that the pair were already friends before the affair took place makes it probable that instead of friendship diminishing as the result of favors received, these favors will abide as a memory and promise of more to come.

And observe this. It ought to be for your betterment to listen to me rather than to a lover, for a lover commends anything you say or do even when it is amiss, partly from fear that he may offend you, partly because his passion impairs his own judgment. For the record b of Love's achievement is, first, that when things go badly, he makes a man count that an affliction which normally causes no distress; secondly, that when things go well, he compels his subjects to extol things that ought not to gratify them, which makes it fitting that they should be pitied far more than admired by the objects of their passion. On the other hand, if you listen to me, my intercourse with you will be a matter of ministering not to your immediate pleasure but to your future advantage, for I am the master of myself, rather than c the victim of love; I do not bring bitter enmity upon myself by resenting trifling offenses. On the contrary, it is only on account of serious wrongs that I am moved, and that but slowly, to mild indignation, pardoning what is done unintentionally, and endeavoring to hinder what is done of intent, for these are the tokens of lasting friendship. If however you are disposed to think that there can be no firm friendship save with a lover, you should reflect that in that case we should d not set store by sons, or fathers, or mothers, nor should we possess any trustworthy friends. No, it is not to erotic passion that we owe these, but to conduct of a different order.

Again, if we ought to favor those who press us most strongly, then in other matters too we should give our good offices not to the worthiest people but to the most destitute, for since their distress is the greatest, they will be the most thankful to us for relieving them. And observe this further consequence. When we give private banquets, e the right people to invite will be not our friends but beggars and those in need of a good meal, for it is they that will be fond of us and attend upon us and flock to our doors; it is they that will be most delighted and most grateful and call down blessings on our heads. No, the proper course, surely, is to show favor not to the most importunate but to those most able to make us a return—not to mere beggars, but to the deserving; not to those who will regale themselves with your 234 youthful beauty, but to those who will let you share their prosperity

when you are older; not to those who, when they have had their will of you, will flatter their vanity by telling the world, but to those who will keep a strict and modest silence; not to those who are devoted to you for a brief period, but to those who will continue to be your friends as long as you live; not to those who, when their passion is spent, will look for an excuse to turn against you, but to those who, when your beauty is past, will make that the time for displaying their own goodness.

- b Do you therefore be mindful of what I have said and reflect that, while lovers are admonished by their friends and relatives for the wrongness of their conduct, the other sort have never been reproached by one of their family on the score of behaving to the detriment of their own interest.

Perhaps you will ask me whether I recommend you to accord your favors to all and sundry of this sort. Well, I do not suppose that even a lover would bid you to be favorable toward all and sundry lovers; in c the first place a recipient would not regard it as meriting so much gratitude, and in the second you would find it more difficult if you wished to keep your affairs concealed, and what is wanted is that the business should involve no harm, but mutual advantage.

And now I think I have said all that is needed; if you think I have neglected anything, and want more, let me know.

What do you think of the speech, Socrates? Isn't it extraordinarily fine, especially in point of language?

- d SOCRATES: Amazingly fine indeed, my friend. I was thrilled by it. And it was you, Phaedrus, that made me feel as I did. I watched your apparent delight in the words as you read. And as I'm sure that you understand such matters better than I do, I took my cue from you, and therefore joined in the ecstasy of my right worshipful companion.

PHAEDRUS: Come, come! Do you mean to make a joke of it?

SOCRATES: Do you think I am joking, and don't mean it seriously?

- e PHAEDRUS: No more of that, Socrates. Tell me truly, as one friend to another, do you think there is anyone in Greece who could make a finer and more exhaustive speech on the same-subject?

SOCRATES: What? Are you and I required to extol the speech not merely on the score of its author's lucidity and terseness of expression, and his consistently precise and well-polished vocabulary, but also for his having said what he ought? If we are, we shall have to allow it only on your account, for my feeble intelligence failed 235 to appreciate it; I was only attending to it as a piece of rhetoric, and as such I couldn't think that even Lysias himself would deem it adequate. Perhaps you won't agree with me, Phaedrus, but really it seemed to me that he said the same things several times over. Maybe he's not very clever at expatiating at length on a single theme, or pos-

sibly he has no interest in such topics. In fact it struck me as an extravagant performance, to demonstrate his ability to say the same thing twice, in different words but with equal success.

PHAEDRUS: Not a bit of it, Socrates. The outstanding feature b of the discourse is just this, that it has not overlooked any important aspect of the subject, so making it impossible for anyone else to outdo what he has said with a fuller or more satisfactory oration.

SOCRATES: If you go as far as that I shall find it impossible to agree with you; if I were to assent out of politeness, I should be confuted by the wise men and women who in past ages have spoken and written on this theme.

PHAEDRUS: To whom do you refer? Where have you heard any- c thing better than this?

SOCRATES: I can't tell you offhand, but I'm sure I have heard something better, from the fair Sappho maybe, or the wise Anacreon, or perhaps some prose writer. What ground, you may ask, have I for saying so? Good sir, there is something welling up within my breast, which makes me feel that I could find something different, and something better, to say. I am of course well aware it can't be anything originating in my own mind, for I know my own ignorance; so I suppose it can only be that it has been poured into me, through my ears, as into a vessel, from some external source, though in my stupid d fashion I have actually forgotten how, and from whom, I heard it.

PHAEDRUS: Well said! You move me to admiration. I don't mind your not telling me, even though I should press you, from whom and how you heard it, provided you do just what you say. You have undertaken to make a better speech than that in the book here and one of not less length which shall owe nothing to it; I in my turn undertake like the nine Archons to set up at Delphi a golden life-sized e statue, not only of myself but of you also.

SOCRATES: How kind you are, Phaedrus, and what a pattern of golden-age simplicity, in supposing me to mean that Lysias has wholly missed the mark and that another speech could avoid all his points! Surely that couldn't be so even with the most worthless of writers. Thus, as regards the subject of the speech, do you imagine that anybody could argue that the nonlover should be favored, rather than the lover, without praising the wisdom of the one and censuring the folly of the other? That he could dispense with these essential points, and 236 then bring up something different? No, no, surely we must allow such arguments, and forgive the orator for using them, and in that sort of field what merits praise is not invention, but arrangement; but when it comes to nonessential points, that are difficult to invent, we should praise arrangement and invention too.

PHAEDRUS: I agree. What you say seems fair enough. For my part, this is what I will do. I will allow you to take it for granted that b the lover is less sane than the nonlover, and for the rest, if you can

replace what we have here by a fuller speech of superior merit, up with your statue in wrought gold beside the offering of the Cypselids at Olympia.

SOCRATES: Have you taken me seriously, Phaedrus, for teasing you with an attack on your darling Lysias? Can you possibly suppose that I shall make a real attempt to rival his cleverness with something more ornate?

PHAEDRUS: As to that, my friend, I've got you where I can return your fire. Assuredly you must do what you can in the way of a speech, or else we shall be driven, like vulgar comedians, to capping each other's remarks. Beware. Do not deliberately compel me to utter the words, 'Don't I know my Socrates? If not, I've forgotten my own identity,' or 'He wanted to speak, but made difficulties about it.' No, make up your mind that we're not going to leave this spot until you have delivered yourself of what you told me you had within your breast. We are by ourselves in a lonely place, and I am stronger and  
d younger than you, for all which reasons 'mistake not thou my bidding' and please don't make me use force to open your lips.

SOCRATES: But, my dear good Phaedrus, it will be courting ridicule for an amateur like me to improvise on the same theme as an accomplished writer.

PHAEDRUS: Look here, I'll have no more of this affectation, for I'm pretty sure I have something to say which will compel you to speak.

SOCRATES: Then please don't say it.

PHAEDRUS: Oh, but I shall, here and now, and what I say will  
e be on oath. I swear to you by—but by whom, by what god? Or shall it be by this plane tree? I swear that unless you deliver your speech here in its very presence, I will assuredly never again declaim nor report any other speech by any author whatsoever.

SOCRATES: Aha, you rogue! How clever of you to discover the means of compelling a lover of discourse to do your bidding!

PHAEDRUS: Then why all this twisting?

SOCRATES: I give it up, in view of what you've sworn. For how could I possibly do without such entertainment?

237 PHAEDRUS: Then proceed.

SOCRATES: Well, do you know what I'm going to do?

PHAEDRUS: Do about what?

SOCRATES: I shall cover my head before I begin; then I can rush through my speech at top speed without looking at you and breaking down for shame.

PHAEDRUS: You can do anything else you like, provided you make your speech.

SOCRATES: Come then, ye clear-voiced Muses, whether it be from the nature of your song, or from the musical people of Liguria that ye came to be so styled, 'assist the tale I tell' under compulsion

by my good friend here, to the end that he may think yet more highly of one dear to him, whom he already accounts a man of wisdom. b

Well then, once upon a time there was a very handsome boy, or rather young man, who had a host of lovers, and one of them was wily, and had persuaded the boy that he was not in love with him, though really he was, quite as much as the others. And on one occasion, in pressing his suit he actually sought to convince him that he ought to favor a nonlover rather than a lover. And this is the purport of what he said.

My boy, if anyone means to deliberate successfully about anything, there is one thing he must do at the outset. He must know what it is he is deliberating about; otherwise he is bound to go utterly astray. Now most people fail to realize that they don't know what this or that really is; consequently when they start discussing something, they dispense with any agreed definition, assuming that they know the thing; then later on they naturally find, to their cost, that they agree neither with each other nor with themselves. That being so, you and I would do well to avoid what we charge against other people, and as the question before us is whether one should preferably consort with a lover or a nonlover, we ought to agree upon a definition of love which shows its nature and its effects, so that we may have it before our minds as something to refer to while we discuss whether love is d beneficial or injurious.

Well now, it is plain to everyone that love is some sort of desire, and further we know that men desire that which is fair without being lovers. How then are we to distinguish one who loves from one who does not? We must go on to observe that within each one of us there are two sorts of ruling or guiding principle that we follow. One is an innate desire for pleasure, the other an acquired judgment that aims at what is best. Sometimes these internal guides are in accord, sometimes at variance; now one gains the mastery, now the other. And e when judgment guides us rationally toward what is best, and has the mastery, that mastery is called temperance, but when desire drags us 238 irrationally toward pleasure, and has come to rule within us, the name given to that rule is wantonness. But in truth wantonness itself has many names, as it has many branches or forms, and when one of these forms is conspicuously present in a man it makes that man bear its name, a name that it is no credit or distinction to possess. If it be in the matter of food that desire has the mastery over judgment of what is for the best, and over all other desires, it is called gluttony, and the person in question will be called a glutton, or again if desire b has achieved domination in the matter of drink, it is plain what term we shall apply to its subject who is led down that path, and no less plain what are the appropriate names in the case of other such persons and of other such desires, according as this one or that holds sway.

Now the reason for saying all this can hardly remain in doubt;

yet even so a statement of it will be illuminating. When irrational desire, pursuing the enjoyment of beauty, has gained the mastery  
 c over judgment that prompts to right conduct, and has acquired from other desires, akin to it, fresh strength to strain toward bodily beauty, that very strength provides it with its name—it is the strong passion called love.

Well, Phaedrus my friend, do you think, as I do, that I am divinely inspired?

PHAEDRUS : Undoubtedly, Socrates, you have been vouchsafed a quite unusual eloquence.

SOCRATES : Then listen to me in silence. For truly there seems  
 d to be a divine presence in this spot, so that you must not be surprised if, as my speech proceeds, I become as one possessed; already my style is not far from dithyrambic.

PHAEDRUS : Very true.

SOCRATES : But for that you are responsible. Still, let me continue; possibly the menace may be averted. However, that must be as God wills; our business is to resume our address to the boy.

Very well then, my good friend, the true nature of that on which we have to deliberate has been stated and defined, and so, with that  
 e definition in mind, we may go on to say what advantage or detriment may be expected to result to one who accords his favor to a lover and a nonlover, respectively.

Now a man who is dominated by desire and enslaved to pleasure is of course bound to aim at getting the greatest possible pleasure out of his beloved, and what pleases a sick man is anything that does not thwart him, whereas anything that is as strong as, or stronger than, himself gives him offense. Hence he will not, if he can avoid it,  
 239 put up with a favorite that matches or outdoes him in strength, but will always seek to make him weaker and feebler, and weakness is found in the ignorant, the cowardly, the poor speaker, the slow thinker, as against the wise, the brave, the eloquent, the quick-minded. All these defects of mind and more in the beloved are bound to be a source of pleasure to the lover; if they do not exist already as innate qualities, he will cultivate them, for not to do so means depriving himself of immediate pleasure. And of course he is bound to be jealous,  
 b constantly debarring the boy not only, to his great injury, from the advantages of consorting with others, which would make a real man of him, but, greatest injury of all, from consorting with that which would most increase his wisdom—by which I mean divine philosophy. No access to that can possibly be permitted by the lover, for he dreads becoming thereby an object of contempt. And in general he must aim at making the boy totally ignorant and totally dependent on his lover, by way of securing the maximum of pleasure for himself, and the maximum of damage to the other.

c Hence in respect of the boy's mind it is anything but a profitable investment to have as guardian or partner a man in love.

After the mind, the body; we must see what sort of physical condition will be fostered, and how it will be fostered, in the boy that has become the possession of one who is under compulsion to pursue pleasure instead of goodness. We shall find him, of course, pursuing a weakling rather than a sturdy boy, one who has had a cozy, sheltered upbringing instead of being exposed to the open air, who has given himself up to a soft unmanly life instead of the toil and sweat of manly exercise, who for lack of natural charm tricks himself out with artificial cosmetics, and resorts to all sorts of other similar practices which are too obvious to need further enumeration. Yet before leaving the topic we may sum it up in a sentence. The boy will be of that physical type which in wartime, and other times that try a man's mettle, inspires confidence in his enemies and alarm in his friends, aye and in his very lovers too.

And now let us pass from these obvious considerations and raise the next question. What advantage or detriment in respect of property and possessions shall we find resulting from the society and guardianship of a lover? Well, one thing is plain enough to anyone, and especially to the lover, namely that his foremost wish will be for the boy to be bereft of his dearest possessions, his treasury of kindness and ideal affection—father and mother, kinsmen and friends—he will want him to be robbed of them all, as likely to make difficulties and raise objections to the intercourse which he finds so pleasant. If however the boy possesses property, in money or whatever it may be, he will reckon that he will not be so easy to capture, or if captured to manage; hence a lover is bound to nurse a grudge against one who possesses property, and to rejoice when he loses it. Furthermore he will want his beloved to remain as long as possible without wife or child or home, so as to enjoy for as long as may be his own delights.

There are, to be sure, other evils in life, but with most of them heaven has mixed some momentary pleasure. Thus in the parasite, a fearsome and most pernicious creature, nature has mingled a dash of pleasing wit or charm; a courtesan may well be branded as pernicious, not to mention many other similar creatures with their respective callings; yet in everyday life they can be very agreeable, but a lover, besides being pernicious, is the most disagreeable of all men for a boy to spend his days with. There's an old saying about 'not matching May with December,' based, I suppose, on the idea that similarity of age tends to similarity of pleasures and consequently makes a couple good friends; still even with such a couple the association is apt to pall. Then again, in addition to the dissimilarity of age, there is that compulsion which is burdensome for anybody in any circumstances, but especially so in the relations of such a pair.

The elderly lover will not, if he can help it, suffer any desertion by his beloved by day or by night; he is driven on by a compelling, goading power, lured by the continual promise of pleasure in the sight, hearing, touching, or other physical experience of the beloved; to

minister unfailingly to the boy's needs is his delight. But what pleasure or what solace will he have to offer to the beloved? How will he save him from experiencing the extremity of discomfort in those long hours at his lover's side, as he looks upon a face which years have  
 e robbed of its beauty, together with other consequences which it is unpleasant even to hear mentioned, let alone to have continually to cope with in stark reality. And what of the suspicious precautions with which he is incessantly guarded, with whomsoever he associates, the unseasonable fulsome compliments to which he has to listen, alternating with reproaches which when uttered in soberness are hard to endure, but coming from one in his cups, in language of unlimited, undisguised coarseness, are both intolerable and disgusting?

To continue, if while his love lasts he is harmful and offensive, in later days, when it is spent, he will show his bad faith. He was lavish with promises, interspersed among his vows and entreaties, regarding those later days, contriving with some difficulty to secure  
 241 his partner's endurance of an intercourse which even then was burdensome, by holding out hopes of benefits to come. But when the time comes for fulfilling the promises, a new authority takes the place within him of the former ruler; love and passion are replaced by wisdom and temperance; he has become a different person. But the boy does not realize it, and demands a return for what he gave in the past, reminding him of what had been done and said, as though he were talking to the same person, while the erstwhile lover, who has now acquired wisdom and temperance, cannot for very shame bring him-  
 b self to declare that he has become a new man, nor yet see his way to redeeming the solemn assurances and promises made under the old regime of folly; he fears that if he were to go on acting as before he would revert to his old character, his former self. So he runs away from his obligations as one compelled to default; it's 'tails' this time instead of 'heads,' and he has to turn tail and rush away. But the boy must needs run after him, crying indignantly to high heaven, though from start to finish he has never understood that he ought not to have yielded to a lover inevitably devoid of reason, but far rather  
 c to one possessed of reason and not in love. He should have known that the wrong choice must mean surrendering himself to a faithless, peevish, jealous, and offensive captor, to one who would ruin his property, ruin his physique, and above all ruin his spiritual development, which is assuredly and ever will be of supreme value in the sight of gods and men alike.

Let that then, my boy, be your lesson. Be sure that the attentions of a lover carry no good will; they are no more than a glutting of his  
 d appetite, for 'As wolf to lamb, so lover to his lad.'

There, I knew I should [break out into verse], Phaedrus. Not a word more shall you have from me; let that be the end of my discourse.

PHAEDRUS: Why, I thought you were only halfway through

and would have an equal amount to say about the nonlover, enumerating his good points and showing that he should be the favored suitor. Why is it, Socrates, that instead of that you break off?

SOCRATES: My dear good man, haven't you noticed that I've got beyond dithyramb, and am breaking out into epic verse, despite my faultfinding? What do you suppose I shall do if I start extolling the other type? Don't you see that I shall clearly be possessed by those nymphs into whose clutches you deliberately threw me? I therefore tell you, in one short sentence, that to each evil for which I have abused the one party there is a corresponding good belonging to the other. So why waste words? All has been said that needs saying about them both. And that being so, my story can be left to the fate appropriate to it, and I will take myself off across the river here before you drive me to greater lengths. 242

PHAEDRUS: Oh, but you must wait until it gets cooler, Socrates. Don't you realize that it's just about the hour of 'scorching noonday,' as the phrase goes? Let us wait and discuss what we've heard; when it has got cool perhaps we will go.

SOCRATES: Phaedrus, your enthusiasm for discourse is sublime, and really moves me to admiration. Of the discourses pronounced during your lifetime no one, I fancy, has been responsible for more than you, whether by delivering them yourself or by compelling others to do so by one means or another—with one exception, Simmias of Thebes; you are well ahead of all the rest. And now it seems that once more you are the cause of my having to deliver myself.

PHAEDRUS: It might be a lot worse! But how so? To what do you refer?

SOCRATES: At the moment when I was about to cross the river, dear friend, there came to me my familiar divine sign—which always checks me when on the point of doing something or other—and all at once I seemed to hear a voice, forbidding me to leave the spot until I had made atonement for some offense to heaven. Now, you must know, I am a seer—not a very good one, it's true, but, like a poor scholar, good enough for my own purposes—hence I understand already well enough what my offense was. The fact is, you know, Phaedrus, the mind itself has a kind of divining power, for I felt disturbed some while ago as I was delivering that speech, and had a misgiving lest I might, in the words of Ibycus, 'By sinning in the sight of God win high renown from man.'<sup>2</sup> But now I realize my sin.

PHAEDRUS: And what is it?

SOCRATES: That was a terrible theory, Phaedrus, a terrible theory that you introduced and compelled me to expound.

PHAEDRUS: How so?

<sup>2</sup> *Ibycus*, fr. 24.

SOCRATES: It was foolish, and somewhat blasphemous, and what could be more terrible than that?

PHAEDRUS: I agree, if it merits your description.

SOCRATES: Well, do you not hold Love to be a god, the child of Aphrodite?

PHAEDRUS: He is certainly said to be.

SOCRATES: But not according to Lysias, and not according to  
e that discourse of yours which you caused my lips to utter by putting a spell on them. If Love is, as he is indeed, a god or a divine being, he cannot be an evil thing; yet this pair of speeches treated him as evil. That then was their offense toward Love, to which was added the most exquisite folly of parading their pernicious rubbish as though it were good sense because it might deceive a few miserable people and win  
243 their applause.

And so, my friend, I have to purify myself. Now for such as offend in speaking of gods and heroes there is an ancient mode of purification, which was known to Stesichorus, though not to Homer. When Stesichorus lost the sight of his eyes because of his defamation of Helen, he was not, like Homer, at a loss to know why. As a true artist he understood the reason, and promptly wrote the lines:

False, false the tale.

Thou never didst sail in the well-decked ships

b Nor come to the towers of Troy.<sup>3</sup>

And after finishing the composition of his so-called palinode he straightway recovered his sight. Now it's here that I shall show greater wisdom than these poets. I shall attempt to make my due palinode to Love before any harm comes to me for my defamation of him, and no longer veiling my head for shame, but uncovered.

PHAEDRUS: Nothing you could say, Socrates, would please me more.

c SOCRATES: Yes, dear Phaedrus, you understand how irreverent the two speeches were, the one in the book and that which followed. Suppose we were being listened to by a man of generous and humane character, who loved or had once loved another such as himself. Suppose he heard us saying that for some trifling cause lovers conceive bitter hatred and a spirit of malice and injury toward their loved ones. Wouldn't he be sure to think that we had been brought up among the scum of the people and had never seen a case of noble  
d love? Wouldn't he utterly refuse to accept our vilification of Love?

PHAEDRUS: Indeed, Socrates, he well might.

SOCRATES: Then out of respect for him, and in awe of Love himself, I should like to wash the bitter taste out of my mouth with a

<sup>3</sup> Stesichorus, fr. 32.

draught of wholesome discourse, and my advice to Lysias is that he should lose no time in telling us that, other things being equal, favor should be accorded to the lover rather than to the nonlover.

PHAEDRUS: Rest assured; that will be done. When you have delivered your encomium of the lover, I shall most certainly make e Lysias compose a new speech to the same purport.

SOCRATES: I'm sure of that, so long as you continue to be the man you are.

PHAEDRUS: Then you may confidently proceed.

SOCRATES: Where is that boy I was talking to? He must listen to me once more, and not rush off to yield to his nonlover before he hears what I have to say.

PHAEDRUS: Here he is, quite close beside you, whenever you want him.

SOCRATES: Now you must understand, fair boy, that whereas the preceding discourse was by Phaedrus, son of Pythocles, of Myrrhinus, that which I shall now pronounce is by Stesichorus, son of Euphemus, of Himera. This then is how it must run.

'False is the tale' that when a lover is at hand favor ought rather to be accorded to one who does not love, on the ground that the former is mad, and the latter sound of mind. That would be right if it were an invariable truth that madness is an evil, but in reality, the greatest blessings come by way of madness, indeed of madness that is heaven-sent. It was when they were mad that the prophetess at Delphi b and the priestesses at Dodona achieved so much for which both states and individuals in Greece are thankful; when sane they did little or nothing. As for the Sibyl and others who by the power of inspired prophecy have so often foretold the future to so many, and guided them aright, I need not dwell on what is obvious to everyone. Yet it is in place to appeal to the fact that madness was accounted no shame nor disgrace by the men of old who gave things their names; otherwise they would not have connected that greatest of arts, whereby the future is discerned, with this very word 'madness,' and c named it accordingly. No, it was because they held madness to be a valuable gift, when due to divine dispensation, that they named that art as they did, though the men of today, having no sense of values, have put in an extra letter, making it not *manic* but *mantic*. That is borne out by the name they gave to the art of those sane prophets who inquire into the future by means of birds and other signs; the name was '*oionoistic*,' which by its components indicated that the prophet attained understanding and information by a purely human activity of thought belonging to his own intelligence, though a younger generation has come to call it '*oionistic*,' lengthening the quantity of the o to make it sound impressive. You see then what this ancient evidence attests. Corresponding to the superior perfection and value of d the prophecy of inspiration over that of omen reading, both in name

and in fact, is the superiority of heaven-sent madness over man-made sanity.

And in the second place, when grievous maladies and afflictions have beset certain families by reason of some ancient sin, madness  
 e has appeared among them, and breaking out into prophecy has secured relief by finding the means thereto, namely by recourse to prayer and worship, and in consequence thereof rites and means of purification were established, and the sufferer was brought out of danger, alike for the present and for the future. Thus did madness secure, for him that was maddened aright and possessed, deliverance from his troubles.

245 There is a third form of possession or madness, of which the Muses are the source. This seizes a tender, virgin soul and stimulates it to rapt passionate expression, especially in lyric poetry, glorifying the countless mighty deeds of ancient times for the instruction of posterity. But if any man come to the gates of poetry without the madness of the Muses, persuaded that skill alone will make him a good poet, then shall he and his works of sanity with him be brought to nought by the poetry of madness, and behold, their place is nowhere to be found.

b Such then is the tale, though I have not told it fully, of the achievements wrought by madness that comes from the gods. So let us have no fears simply on that score; let us not be disturbed by an argument that seeks to scare us into preferring the friendship of the sane to that of the passionate. For there is something more that it must prove if it is to carry the day, namely that love is not a thing sent from heaven for the advantage both of lover and beloved. What we  
 c have to prove is the opposite, namely that this sort of madness is a gift of the gods, fraught with the highest bliss. And our proof assuredly will prevail with the wise, though not with the learned.

Now our first step toward attaining the truth of the matter is to discern the nature of soul, divine and human, its experiences, and its activities. Here then our proof begins.

All soul is immortal, for that which is ever in motion is immortal. But that which while imparting motion is itself moved by something else can cease to be in motion, and therefore can cease to live; it is only that which moves itself that never intermits its motion, inasmuch as it cannot abandon its own nature; moreover this self-mover is the source and first principle of motion for all other things that are  
 d moved. Now a first principle cannot come into being, for while anything that comes to be must come to be from a first principle, the latter itself cannot come to be from anything whatsoever; if it did, it would cease any longer to be a first principle. Furthermore, since it does not come into being, it must be imperishable, for assuredly if a first principle were to be destroyed, nothing could come to be out of it, nor could anything bring the principle itself back into existence, see-

ing that a first principle is needed for anything to come into being.

The self-mover, then, is the first principle of motion, and it is as impossible that it should be destroyed as that it should come into being; were it otherwise, the whole universe, the whole of that which comes to be, would collapse into immobility, and never find another source of motion to bring it back into being. e

And now that we have seen that that which is moved by itself is immortal, we shall feel no scruple in affirming that precisely that is the essence and definition of soul, to wit, self-motion. Any body that has an external source of motion is soulless, but a body deriving its motion from a source within itself is animate or *besouled*, which implies that the nature of soul is what has been said.

And if this last assertion is correct, namely that 'that which moves itself' is precisely identifiable with soul, it must follow that soul 246 is not born and does not die.

As to soul's immortality then we have said enough, but as to its nature there is this that must be said. What manner of thing it is would be a long tale to tell, and most assuredly a god alone could tell it, but what it resembles, that a man might tell in briefer compass. Let this therefore be our manner of discourse. Let it be likened to the union of powers in a team of winged steeds and their winged charioteer. Now all the gods' steeds and all their charioteers are good, and of good stock, but with other beings it is not wholly so. With us men, in the first place, it is a pair of steeds that the charioteer controls; moreover one of them is noble and good, and of good stock, while the other has the opposite character, and his stock is opposite. Hence the task of our charioteer is difficult and troublesome. b

And now we must essay to tell how it is that living beings are called mortal and immortal. All soul has the care of all that is inanimate, and traverses the whole universe, though in ever-changing forms. Thus when it is perfect and winged it journeys on high and controls the whole world, but one that has shed its wings sinks down until it can fasten on something solid, and settling there it takes to itself an earthy body which seems by reason of the soul's power to move itself. This composite structure of soul and body is called a living being, and is further termed 'mortal'; 'immortal' is a term applied on no basis of reasoned argument at all, but our fancy pictures the god whom we have never seen, nor fully conceived, as an immortal living being, possessed of a soul and a body united for all time. Howbeit, let these matters, and our account thereof, be as God pleases; what we must understand is the reason why the soul's wings fall from it, and are lost. It is on this wise. c

The natural property of a wing is to raise that which is heavy and carry it aloft to the region where the gods dwell, and more than any other bodily part it shares in the divine nature, which is fair, wise, and good, and possessed of all other such excellences. Now by these e

excellences especially is the soul's plumage nourished and fostered, while by their opposites, even by ugliness and evil, it is wasted and destroyed. And behold, there in the heaven Zeus, mighty leader, drives his winged team. First of the host of gods and daemons he proceeds, ordering all things and caring therefor, and the host follows  
 247 after him, marshaled in eleven companies. For Hestia abides alone in the gods' dwelling place, but for the rest, all such as are ranked in the number of the twelve as ruler gods lead their several companies, each according to his rank.

Now within the heavens are many spectacles of bliss upon the highways whereon the blessed gods pass to and fro, each doing his own work, and with them are all such as will and can follow them, for jealousy has no place in the choir divine. But at such times as they go to their feasting and banquet, behold they climb the steep ascent  
 b even unto the summit of the arch that supports the heavens, and easy is that ascent for the chariots of the gods, for they are well balanced and readily guided. But for the others it is hard, by reason of the heaviness of the steed of wickedness, which pulls down his driver with his weight, except that driver have schooled him well.

And now there awaits the soul the extreme of her toil and struggling. For the souls that are called immortal, so soon as they are at the summit, come forth and stand upon the back of the world, and  
 c straightway the revolving heaven carries them round, and they look upon the regions without.

Of that place beyond the heavens none of our earthly poets has yet sung, and none shall sing worthily. But this is the manner of it, for assuredly we must be bold to speak what is true, above all when our discourse is upon truth. It is there that true being dwells, without color or shape, that cannot be touched; reason alone, the soul's pilot, can behold it, and all true knowledge is knowledge thereof. Now even  
 d as the mind of a god is nourished by reason and knowledge, so also is it with every soul that has a care to receive her proper food; wherefore when at last she has beheld being she is well content, and contemplating truth she is nourished and prospers, until the heaven's revolution brings her back full circle. And while she is borne round she discerns justice, its very self, and likewise temperance, and knowledge, not the knowledge that is neighbor to becoming and varies  
 e with the various objects to which we commonly ascribe being, but the veritable knowledge of being that veritably is. And when she has contemplated likewise and feasted upon all else that has true being, she descends again within the heavens and comes back home. And having so come, her charioteer sets his steeds at their manger, and puts ambrosia before them and draught of nectar to drink withal.  
 248 Such is the life of gods. Of the other souls that which best follows a god and becomes most like thereunto raises her charioteer's head into the outer region, and is carried round with the gods in the

revolution, but being confounded by her steeds she has much ado to discern the things that are; another now rises, and now sinks, and by reason of her unruly steeds sees in part, but in part sees not. As for the rest, though all are eager to reach the heights and seek to follow, they are not able; sucked down as they travel they trample and tread upon one another, this one striving to outstrip that. Thus confusion b ensues, and conflict and grievous sweat. Whereupon, with their charioteers powerless, many are lamed, and many have their wings all broken, and for all their toiling they are balked, every one, of the full vision of being, and departing therefrom, they feed upon the food of semblance.

Now the reason wherefore the souls are fain and eager to behold the plain of Truth, and discover it, lies herein—to wit, that the pasturage that is proper to their noblest part comes from that meadow, c and the plumage by which they are borne aloft is nourished thereby.

Hear now the ordinance of Necessity. Whatsoever soul has followed in the train of a god, and discerned something of truth, shall be kept from sorrow until a new revolution shall begin, and if she can do this always, she shall remain always free from hurt. But when she is not able so to follow, and sees none of it, but meeting with some mischance comes to be burdened with a load of forgetfulness and wrongdoing, and because of that burden sheds her wings and falls to the earth, then thus runs the law. In her first birth she shall not be d planted in any brute beast, but the soul that hath seen the most of being shall enter into the human babe that shall grow into a seeker after wisdom or beauty, a follower of the Muses and a lover; the next, having seen less, shall dwell in a king that abides by law, or a warrior and ruler; the third in a statesman, a man of business, or a trader; the fourth in an athlete, or physical trainer, or physician; the fifth shall e have the life of a prophet or a Mystery priest; to the sixth that of a poet or other imitative artist shall be fittingly given; the seventh shall live in an artisan or farmer; the eighth in a Sophist or demagogue; the ninth in a tyrant.

Now in all these incarnations he who lives righteously has a better lot for his portion, and he who lives unrighteously a worse. For a soul does not return to the place whence she came for ten thousand years, since in no lesser time can she regain her wings, save only his 249 soul who has sought after wisdom unfeignedly, or has conjoined his passion for a loved one with that seeking. Such a soul, if with three revolutions of a thousand years she has thrice chosen this philosophical life, regains thereby her wings, and speeds away after three thousand years; but the rest, when they have accomplished their first life, are brought to judgment, and after the judgment some are taken to be punished in places of chastisement beneath the earth, while others are borne aloft by Justice to a certain region of the heavens, there to live in such manner as is merited by their past life in the flesh. And after b

a thousand years these and those alike come to the allotment and choice of their second life, each choosing according to her will; then does the soul of a man enter into the life of a beast, and the beast's soul that was aforetime in a man goes back to a man again. For only the soul that has beheld truth may enter into this our human form—  
 c seeing that man must needs understand the language of forms, passing from a plurality of perceptions to a unity gathered together by reasoning—and such understanding is a recollection of those things which our souls beheld aforetime as they journeyed with their god, looking down upon the things which now we suppose to be, and gazing up to that which truly is.

Therefore is it meet and right that the soul of the philosopher alone should recover her wings, for she, so far as may be, is ever near in memory to those things a god's nearness whereunto makes him truly god. Wherefore if a man makes right use of such means of remembrance, and ever approaches to the full vision of the perfect mysteries, he and he alone becomes truly perfect. Standing aside  
 d from the busy doings of mankind, and drawing nigh to the divine, he is rebuked by the multitude as being out of his wits, for they know not that he is possessed by a deity.

Mark therefore the sum and substance of all our discourse touching the fourth sort of madness—to wit, that this is the best of all forms of divine possession, both in itself and in its sources, both for him that has it and for him that shares therein—and when he that  
 e loves beauty is touched by such madness he is called a lover. Such a one, as soon as he beholds the beauty of this world, is reminded of true beauty, and his wings begin to grow; then is he fain to lift his wings and fly upward; yet he has not the power, but inasmuch as he gazes upward like a bird, and cares nothing for the world beneath, men charge it upon him that he is demented.

Now, as we have said, every human soul has, by reason of her nature, had contemplation of true being; else would she never have  
 250 entered into this human creature; but to be put in mind thereof by things here is not easy for every soul. Some, when they had the vision, had it but for a moment; some when they had fallen to earth consoorted unhappily with such as led them to deeds of unrighteousness, wherefore they forgot the holy objects of their vision. Few indeed are left that can still remember much, but when these discern some likeness of the things yonder, they are amazed, and no longer masters of themselves, and know not what is come upon them by reason of  
 b their perception being dim.

Now in the earthly likenesses of justice and temperance and all other prized possessions of the soul there dwells no luster; nay, so dull are the organs wherewith men approach their images that hardly can a few behold that which is imaged, but with beauty it is otherwise. Beauty it was ours to see in all its brightness in those days when,

amidst that happy company, we beheld with our eyes that blessed vision, ourselves in the train of Zeus, others following some other god; then were we all initiated into that mystery which is rightly accounted blessed beyond all others; whole and unblemished were we that did c celebrate it, untouched by the evils that awaited us in days to come; whole and unblemished likewise, free from all alloy, steadfast and blissful were the spectacles on which we gazed in the moment of final revelation; pure was the light that shone around us, and pure were we, without taint of that prison house which now we are encompassed withal, and call a body, fast bound therein as an oyster in its shell.

There let it rest then, our tribute to a memory that has stirred us to linger awhile on those former joys for which we yearn. Now beauty, d as we said, shone bright amidst these visions, and in this world below we apprehend it through the clearest of our senses, clear and resplendent. For sight is the keenest mode of perception vouchsafed us through the body; wisdom, indeed, we cannot see thereby—how passionate had been our desire for her, if she had granted us so clear an image of herself to gaze upon—nor yet any other of those beloved objects, save only beauty; for beauty alone this has been ordained, to be most manifest to sense and most lovely of them all.

Now he whose vision of the mystery is long past, or whose purity e has been sullied, cannot pass swiftly hence to see beauty's self yonder, when he beholds that which is called beautiful here; wherefore he looks upon it with no reverence, and surrendering to pleasure he essays to go after the fashion of a four-footed beast, and to beget offspring of the flesh, or consorting with wantonness he has no fear nor shame in running after unnatural pleasure. But when one who is 251 fresh from the mystery, and saw much of the vision, beholds a godlike face or bodily form that truly expresses beauty, first there come upon him a shuddering and a measure of that awe which the vision inspired, and then reverence as at the sight of a god, and but for fear of being deemed a very madman he would offer sacrifice to his beloved, as to a holy image of deity. Next, with the passing of the shudder, a strange sweating and fever seizes him. For by reason of the stream of b beauty entering in through his eyes there comes a warmth, whereby his soul's plumage is fostered, and with that warmth the roots of the wings are melted, which for long had been so hardened and closed up that nothing could grow; then as the nourishment is poured in, the stump of the wing swells and hastens to grow from the root over the whole substance of the soul, for aforetime the whole soul was furnished with wings. Meanwhile she throbs with ferment in every c part, and even as a teething child feels an aching and pain in its gums when a tooth has just come through, so does the soul of him who is beginning to grow his wings feel a ferment and painful irritation. Wherefore as she gazes upon the boy's beauty, she admits a flood of

- particles streaming therefrom—that is why we speak of a ‘flood of passion’—whereby she is warmed and fostered; then has she respite  
 d from her anguish, and is filled with joy. But when she has been parted from him and become parched, the openings of those outlets at which the wings are sprouting dry up likewise and are closed, so that the wing’s germ is barred off. And behind its bars, together with the flood aforesaid, it throbs like a fevered pulse, and pricks at its proper outlet, and thereat the whole soul round about is stung and goaded into anguish; howbeit she remembers the beauty of her beloved, and rejoices again. So between joy and anguish she is distraught at being  
 e in such strange case, perplexed and frenzied; with madness upon her she can neither sleep by night nor keep still by day, but runs hither and thither, yearning for him in whom beauty dwells, if haply she may behold him. At last she does behold him, and lets the flood pour in upon her, releasing the imprisoned waters; then has she refreshment and respite from her stings and sufferings, and at that moment tastes a pleasure that is sweet beyond compare. Nor will she  
 252 willingly give it up. Above all others does she esteem her beloved in his beauty; mother, brother, friends, she forgets them all. Nought does she reckon of losing worldly possessions through neglect. All the rules of conduct, all the graces of life, of which aforetime she was proud, she now disdains, welcoming a slave’s estate and any couch where she may be suffered to lie down close beside her darling, for besides her reverence for the possessor of beauty she has found in him  
 b the only physician for her grievous suffering.

Hearken, fair boy to whom I speak. This is the experience that men term love (ἔρως), but when you hear what the gods call it, you will probably smile at its strangeness. There are a couple of verses on love quoted by certain Homeric scholars from the unpublished works, the second of which is remarkably bold and a trifle astray in its quantities. They run as follows:

Eros, cleaver of air, in mortals’ speech is he named,  
 But, since he must grow wings, Pteros the celestials call him.

- c You may believe that or not, as you please; at all events the cause and the nature of the lover’s experience are in fact what I have said.

Now if he whom Love has caught be among the followers of Zeus, he is able to bear the burden of the winged one with some constancy, but they that attend upon Ares, and did range the heavens in his train, when they are caught by Love and fancy that their beloved is doing them some injury, will shed blood and not scruple to offer both themselves and their loved ones in sacrifice. And so does each lover  
 d live, after the manner of the god in whose company he once was, honoring him and copying him so far as may be, so long as he remains uncorrupt and is still living in his first earthly period, and in like manner does he comport himself toward his beloved and all his other as-

sociates. And so each selects a fair one for his love after his disposition, and even as if the beloved himself were a god he fashions for himself as it were an image, and adorns it to be the object of his veneration and worship.

Thus the followers of Zeus seek a beloved who is Zeuslike in e soul; wherefore they look for one who is by nature disposed to the love of wisdom and the leading of men, and when they have found him and come to love him they do all in their power to foster that disposition. And if they have not aforetime trodden this path, they now set out upon it, learning the way from any source that may offer or finding it for themselves, and as they follow up the trace within themselves of the nature of their own god their task is made easier, inasmuch 253 as they are constrained to fix their gaze upon him, and reaching out after him in memory they are possessed by him, and from him they take their ways and manners of life, in so far as a man can partake of a god. But all this, mark you, they attribute to the beloved, and the draughts which they draw from Zeus they pour out, like bacchantes, into the soul of the beloved, thus creating in him the closest possible likeness to the god they worship. b

Those who were in the train of Hera look for a royal nature, and when they have found him they do unto him all things in like fashion. And so it is with the followers of Apollo and each other god. Every lover is fain that his beloved should be of a nature like to his own god, and when he has won him, he leads him on to walk in the ways of their god, and after his likeness, patterning himself thereupon and giving counsel and discipline to the boy. There is no jealousy nor petty spitefulness in his dealings, but his every act is aimed at bringing the beloved to be every whit like unto himself and unto the c god of their worship.

So therefore glorious and blissful is the endeavor of true lovers in that mystery rite, if they accomplish that which they endeavor after the fashion of which I speak, when mutual affection arises through the madness inspired by love. But the beloved must needs be captured, and the manner of that capture I will now tell.

In the beginning of our story we divided each soul into three parts, two being like steeds and the third like a charioteer. Well and good. Now of the steeds, so we declare, one is good and the other is d not, but we have not described the excellence of the one nor the badness of the other, and that is what must now be done. He that is on the more honorable side is upright and clean-limbed, carrying his neck high, with something of a hooked nose; in color he is white, with black eyes; a lover of glory, but with temperance and modesty; one that consorts with genuine renown, and needs no whip, being driven by the word of command alone. The other is crooked of frame, e a massive jumble of a creature, with thick short neck, snub nose, black skin, and gray eyes; hot-blooded, consorting with wantonness

and vainglory; shaggy of ear, deaf, and hard to control with whip and goad.

- Now when the driver beholds the person of the beloved, and causes a sensation of warmth to suffuse the whole soul, he begins to  
 254 experience a tickling or pricking of desire, and the obedient steed, constrained now as always by modesty, refrains from leaping upon the beloved. But his fellow, heeding no more the driver's goad or whip, leaps and dashes on, sorely troubling his companion and his driver, and forcing them to approach the loved one and remind him of the  
 b delights of love's commerce. For a while they struggle, indignant that he should force them to a monstrous and forbidden act, but at last, finding no end to their evil plight, they yield and agree to do his bidding. And so he draws them on, and now they are quite close and behold the spectacle of the beloved flashing upon them. At that sight the driver's memory goes back to that form of beauty, and he sees her once again enthroned by the side of temperance upon her holy seat; then in awe and reverence he falls upon his back, and therewith is  
 c compelled to pull the reins so violently that he brings both steeds down on their haunches, the good one willing and unresistant, but the wanton sore against his will. Now that they are a little way off, the good horse in shame and horror drenches the whole soul with sweat, while the other, contriving to recover his wind after the pain of the bit and his fall, bursts into angry abuse, railing at the charioteer  
 d and his yokefellow as cowardly treacherous deserters. Once again he tries to force them to advance, and when they beg him to delay awhile he grudgingly consents. But when the time appointed is come, and they feign to have forgotten, he reminds them of it—struggling and neighing and pulling until he compels them a second time to approach the beloved and renew their offer—and when they have come close, with head down and tail stretched out he takes the bit between  
 e his teeth and shamelessly plunges on. But the driver, with resentment even stronger than before, like a racer recoiling from the starting rope, jerks back the bit in the mouth of the wanton horse with an even stronger pull, bespatters his railing tongue and his jaws with blood, and forcing him down on legs and haunches delivers him over to anguish.

And so it happens time and again, until the evil steed casts off his wantonness; humbled in the end, he obeys the counsel of his driver, and when he sees the fair beloved is like to die of fear. Wherefore at long last the soul of the lover follows after the beloved with reverence and awe.

- 255 Thus the loved one receives all manner of service, as peer of the gods, from a lover that is no pretender but loves in all sincerity; of his own nature, too, he is kindly disposed to him who pays such service. Now it may be that in time past he has been misled, by his school-fellows or others, who told him that it is shameful to have commerce

with a lover, and by reason of this he may repel his advances. Nevertheless as time goes on ripening age and the ordinance of destiny together lead him to welcome the other's society, for assuredly fate does not suffer one evil man to be friend to another, nor yet one good man to lack the friendship of another.

And now that he has come to welcome his lover and to take pleasure in his company and converse, it comes home to him what a depth of kindliness he has found, and he is filled with amazement, for he perceives that all his other friends and kinsmen have nothing to offer in comparison with this friend in whom there dwells a god. So as he continues in this converse and society, and comes close to his lover in the gymnasium and elsewhere, that flowing stream which Zeus, as the lover of Ganymede, called the 'flood of passion,' pours in upon the lover. And part of it is absorbed within him, but when he can contain no more the rest flows away outside him, and as a breath of wind or an echo, rebounding from a smooth hard surface, goes back to its place of origin, even so the stream of beauty turns back and re-enters the eyes of the fair beloved. And so by the natural channel it reaches his soul and gives it fresh vigor, watering the roots of the wings and quickening them to growth, whereby the soul of the beloved, in its turn, is filled with love. So he loves, yet knows not what he loves; he does not understand, he cannot tell what has come upon him; like one that has caught a disease of the eye from another, he cannot account for it, not realizing that his lover is as it were a mirror in which he beholds himself. And when the other is beside him, he shares his respite from anguish; when he is absent, he likewise shares his longing and being longed for, since he possesses that counterlove which is the image of love, though he supposes it to be friendship rather than love, and calls it by that name. He feels a desire—like the lover's, yet not so strong—to behold, to touch, to kiss him, to share his couch, and now ere long the desire, as one might guess, leads to the act.

So when they lie side by side, the wanton horse of the lover's soul would have a word with the charioteer, claiming a little guerdon for all his trouble. The like steed in the soul of the beloved has no word to say, but, swelling with desire for he knows not what, embraces and kisses the lover, in grateful acknowledgment of all his kindness. And when they lie by one another, he is minded not to refuse to do his part in gratifying his lover's entreaties; yet his yokefellow in turn, being moved by reverence and heedfulness, joins with the driver in resisting. And so, if the victory be won by the higher elements of mind guiding them into the ordered rule of the philosophical life, their days on earth will be blessed with happiness and concord, for the power of evil in the soul has been subjected, and the power of goodness liberated; they have won self-mastery and inward peace. And when life is over, with burden shed and wings recovered they stand

victorious in the first of the three rounds in that truly Olympic struggle; nor can any nobler prize be secured whether by the wisdom that is of man or by the madness that is of god.

- c But if they turn to a way of life more ignoble and unphilosophical, yet covetous of honor, then mayhap in a careless hour, or when the wine is flowing, the wanton horses in their two souls will catch them off their guard, bring the pair together, and choosing that part which the multitude account blissful achieve their full desire. And this once done, they continue therein, albeit but rarely, seeing that their minds are not wholly set thereupon. Such a pair as this also are dear friends, but not so dear as that other pair, one to another, both in the  
d time of their love and when love is past, for they feel that they have exchanged the most binding pledges, which it were a sin to break by becoming enemies. When death comes they quit the body wingless indeed, yet eager to be winged, and therefore they carry off no mean reward for their lovers' madness, for it is ordained that all such as have taken the first steps on the celestial highway shall no more return to the dark pathways beneath the earth, but shall walk together in a life  
e of shining bliss, and be furnished in due time with like plumage the one to the other, because of their love.

These then, my boy, are the blessings great and glorious which will come to you from the friendship of a lover. He who is not a lover can offer a mere acquaintance flavored with worldly wisdom, dispensing a niggardly measure of worldly goods; in the soul to which he is attached he will engender an ignoble quality extolled by the multitude as virtue, and condemn it to float for nine thousand years  
257 hither and thither, around the earth and beneath it, bereft of understanding.

- Thus then, dear god of love, I have offered the fairest recantation and fullest atonement that my powers could compass; some of its language, in particular, was perforce poetical, to please Phaedrus. Grant me thy pardon for what went before, and thy favor for what ensued; be merciful and gracious, and take not from me the lover's talent wherewith thou hast blessed me; neither let it wither by reason of thy displeasure, but grant me still to increase in the esteem of the  
b fair. And if anything that Phaedrus and I said earlier sounded discordant to thy ear, set it down to Lysias, the only begetter of that discourse, and staying him from discourses after this fashion turn him toward the love of wisdom, even as his brother Polemarchus has been turned. Then will his loving disciple here present no longer halt between two opinions, as now he does, but live for Love in singleness of purpose with the aid of philosophical discourse.

- c PHAEDRUS: If that be for our good, Socrates, I join in your prayer for it. And I have this long while been filled with admiration for your speech as a far finer achievement than the one you made before. It makes me afraid that I shall find Lysias cutting a poor figure,

if he proves to be willing to compete with another speech of his own. The fact is that only the other day, my dear good sir, one of our politicians was railing at him and reproaching him on this very score, constantly dubbing him a 'speech writer'; so possibly we shall find him desisting from further composition to preserve his reputation.

SOCRATES: What a ridiculous line to take, young man! And how utterly you misjudge our friend, if you suppose him to be such a timid creature! Am I to believe you really do think that the person you speak of meant his raillery as a reproach?

PHAEDRUS: He gave me that impression, Socrates, and of course you know as well as I do that the men of greatest influence and dignity in political life are reluctant to write speeches and bequeath to posterity compositions of their own, for fear of the verdict of later ages, which might pronounce them Sophists.

SOCRATES: Phaedrus, you are unaware that the expression 'Pleasant Bend' comes from the long bend in the Nile, and besides the matter of the Bend you are unaware that the proudest of politicians have the strongest desire to write speeches and bequeath compositions; why, whenever they write a speech, they are so pleased to have admirers that they put in a special clause at the beginning with the names of the persons who admire the speech in question.

PHAEDRUS: What do you mean? I don't understand.

SOCRATES: You don't understand that when a politician begins a composition the first thing he writes is the name of his admirer.

PHAEDRUS: Is it?

SOCRATES: Yes, he says maybe, 'Resolved by the Council' or 'by the people' or by both, and then 'Proposed by so-and-so'—a pompous piece of self-advertisement on the part of the author—after which he proceeds with what he has to say, showing off his own wisdom to his admirers, sometimes in a very lengthy composition. This sort of thing amounts, don't you think, to composing a speech?

PHAEDRUS: Yes, I think it does.

SOCRATES: Then if the speech holds its ground, the author quits the scene rejoicing, but if it is blotted out, and he loses his status as a recognized speech writer, he goes into mourning, and his friends with him.

PHAEDRUS: Quite so.

SOCRATES: Which clearly implies that their attitude to the profession is not one of disdain, but of admiration.

PHAEDRUS: To be sure.

SOCRATES: Tell me then, when an orator, or a king, succeeds in acquiring the power of a Lycurgus, a Solon, or a Darius, and so winning immortality among his people as a speech writer, doesn't he deem himself a peer of the gods while still living, and do not people of later ages hold the same opinion of him when they contemplate his writings?

PHAEDRUS: Yes, indeed.

SOCRATES: Then do you suppose that anyone of that type, whoever he might be, and whatever his animosity toward Lysias, could reproach him simply on the ground that he writes?

PHAEDRUS: What you say certainly makes that improbable, for apparently he would be reproaching what he wanted to do himself.

d       SOCRATES: Then the conclusion is obvious, that there is nothing shameful in the mere writing of speeches.

PHAEDRUS: Of course.

SOCRATES: But in speaking and writing shamefully and badly, instead of as one should, that is where the shame comes in, I take it.

PHAEDRUS: Clearly.

SOCRATES: Then what is the nature of good writing and bad? Is it incumbent on us, Phaedrus, to examine Lysias on this point, and all such as have written or mean to write anything at all, whether in the field of public affairs or private, whether in the verse of the poet or the plain speech of prose?

e       PHAEDRUS: Is it incumbent! Why, life itself would hardly be worth living save for pleasures like this—certainly not for those pleasures that involve previous pain, as do almost all concerned with the body, which for that reason are rightly called slavish.

SOCRATES: Well, I suppose we can spare the time, and I think too that the cicadas overhead, singing after their wont in the hot sun and conversing with one another, don't fail to observe us as well. So  
259 if they were to see us two behaving like ordinary folk at midday, not conversing but dozing lazy-minded under their spell, they would very properly have the laugh of us, taking us for a pair of slaves that had invaded their retreat like sheep, to have their midday sleep beside the spring. If however they see us conversing and steering clear of their bewitching Siren song, they might feel respect for us and grant us  
b that boon which heaven permits them to confer upon mortals.

PHAEDRUS: Oh, what is that? I don't think I have heard of it.

SOCRATES: Surely it is unbecoming in a devotee of the Muses not to have heard of a thing like that! The story is that once upon a time these creatures were men—men of an age before there were any Muses—and that when the latter came into the world, and music made its appearance, some of the people of those days were so thrilled  
c with pleasure that they went on singing, and quite forgot to eat and drink until they actually died without noticing it. From them in due course sprang the race of cicadas, to which the Muses have granted the boon of needing no sustenance right from their birth, but of singing from the very first, without food or drink, until the day of their death, after which they go and report to the Muses how they severally are paid honor among mankind, and by whom. So for those whom  
d Muse's favor, for those that have worshiped in the rites of love the

favor of Erato, and so with all the others, according to the nature of the worship paid to each. To the eldest, Calliope, and to her next sister, Urania, they tell of those who live a life of philosophy and so do honor to the music of those twain whose theme is the heavens and all the story of gods and men, and whose song is the noblest of them all.

Thus there is every reason for us not to yield to slumber in the noontide, but to pursue our talk.

PHAEDRUS: Of course we must pursue it.

SOCRATES: Well, the subject we proposed for inquiry just now <sup>e</sup> was the nature of good and bad speaking and writing; so we are to inquire into that.

PHAEDRUS: Plainly.

SOCRATES: Then does not a good and successful discourse presuppose a knowledge in the mind of the speaker of the truth about his subject?

PHAEDRUS: As to that, dear Socrates, what I have heard is that the intending orator is under no necessity of understanding what is <sup>260</sup> truly just, but only what is likely to be thought just by the body of men who are to give judgment; nor need he know what is truly good or noble, but what will be thought so, since it is on the latter, not the former, that persuasion depends.

SOCRATES: 'Not to be lightly rejected,' <sup>4</sup> Phaedrus, is any word of the wise. Perhaps they are right; one has to see. And in particular this present assertion must not be dismissed.

PHAEDRUS: I agree.

SOCRATES: Well, here is my suggestion for discussion.

PHAEDRUS: Yes?

SOCRATES: Suppose I tried to persuade you to acquire a horse to <sup>b</sup> use in battle against the enemy, and suppose that neither of us knew what a horse was, but I knew this much about you, that Phaedrus believes a horse to be that tame animal which possesses the largest ears.

PHAEDRUS: A ridiculous thing to suppose, Socrates.

SOCRATES: Wait a moment. Suppose I continued to urge upon you in all seriousness, with a studied encomium of a donkey, that it was what I called it, a horse, that it was highly important for you to possess the creature, both at home and in the field, that it was just the animal to ride on into battle, and that it was handy, into the bar- <sup>c</sup> gain, for carrying your equipment and so forth.

PHAEDRUS: To go to that length would be utterly ridiculous.

SOCRATES: Well, isn't it better to be a ridiculous friend than a clever enemy?

PHAEDRUS: I suppose it is.

SOCRATES: Then when a master of oratory, who is ignorant of good and evil, employs his power of persuasion on a community as

<sup>4</sup> *Iliad* 2.361.

ignorant as himself, not by extolling a miserable donkey as being really a horse, but by extolling evil as being really good, and when by studying the beliefs of the masses he persuades them to do evil instead of good, what kind of crop do you think his oratory is likely to reap from the seed thus sown?

PHAEDRUS: A pretty poor one.

SOCRATES: Well now, my good friend, have we been too scurrilous in our abuse of the art of speech? Might it not retort, 'Why do you extraordinary people talk such nonsense? I never insist on ignorance of the truth on the part of one who would learn to speak; on the contrary, if my advice goes for anything, it is that he should only resort to me after he has come into possession of truth; what I do however pride myself on is that without my aid knowledge of what is true will get a man no nearer to mastering the art of persuasion.'

e PHAEDRUS: And will not such a retort be just?

SOCRATES: Yes, if the arguments advanced against oratory sustain its claim to be an art. In point of fact, I fancy I can hear certain arguments advancing, and protesting that the claim is false, that it is no art, but a knack that has nothing to do with art, inasmuch as there is, as the Spartans put it, no 'soothfast' art of speech, nor assuredly will there ever be one, without a grasp of truth.

261 PHAEDRUS: We must have these arguments, Socrates. Come, bring them up before us, and examine their purport.

SOCRATES: Come hither then, you worthy creatures, and impress upon Phaedrus, who is so blessed in his offspring, that unless he gets on with his philosophy he will never get on as a speaker on any subject, and let Phaedrus be your respondent.

PHAEDRUS: I await their questions.

SOCRATES: Must not the art of rhetoric, taken as a whole, be a kind of influencing of the mind by means of words, not only in courts of law and other public gatherings, but in private places also? And must it not be the same art that is concerned with great issues and small, its right employment commanding no more respect when dealing with important matters than with unimportant? Is that what you have been told about it?

PHAEDRUS: No indeed, not exactly that. It is principally, I should say, to lawsuits that an art of speaking and writing is applied—and of course to public harangues also. I know of no wider application.

SOCRATES: What? Are you acquainted only with the 'Arts' or manuals of oratory by Nestor and Odysseus, which they composed in their leisure hours at Troy? Have you never heard of the work of Palamedes?

c PHAEDRUS: No, upon my word, nor of Nestor either, unless you are casting Gorgias for the role of Nestor, with Odysseus played by Thrasymachus, or maybe Theodorus.

SOCRATES : Perhaps I am. But anyway we may let them be, and do you tell me, what is it that the contending parties in law courts do? Do they not in fact contend with words, or how else should we put it?

PHAEDRUS : That is just what they do.

SOCRATES : About what is just and unjust?

PHAEDRUS : Yes.

SOCRATES : And he who possesses the art of doing this can make the same thing appear to the same people now just, now unjust, d at will?

PHAEDRUS : To be sure.

SOCRATES : And in public harangues, no doubt, he can make the same things seem to the community now good, and now the reverse of good?

PHAEDRUS : Just so.

SOCRATES : Then can we fail to see that the Palamedes of Elea has an art of speaking, such that he can make the same things appear to his audience like and unlike, or one and many, or again at rest and in motion?

PHAEDRUS : Indeed he can.

SOCRATES : So contending with words is a practice found not only in lawsuits and public harangues but, it seems, wherever men e speak we find this single art, if indeed it is an art, which enables people to make out everything to be like everything else, within the limits of possible comparison, and to expose the corresponding attempts of others who disguise what they are doing.

PHAEDRUS : How so, pray?

SOCRATES : I think that will become clear if we put the following question. Are we misled when the difference between two things is wide, or narrow?

PHAEDRUS : When it is narrow.

262

SOCRATES : Well then, if you shift your ground little by little, you are more likely to pass undetected from so-and-so to its opposite than if you do so at one bound.

PHAEDRUS : Of course.

SOCRATES : It follows that anyone who intends to mislead another, without being misled himself, must discern precisely the degree of resemblance and dissimilarity between this and that.

PHAEDRUS : Yes, that is essential.

SOCRATES : Then if he does not know the truth about a given thing, how is he going to discern the degree of resemblance between that unknown thing and other things?

PHAEDRUS : It will be impossible.

b

SOCRATES : Well now, when people hold beliefs contrary to fact, and are misled, it is plain that the error has crept into their minds through the suggestion of some similarity or other.

PHAEDRUS : That certainly does happen.

**SOCRATES:** But can anyone possibly master the art of using similarities for the purpose of bringing people round, and leading them away from the truth about this or that to the opposite of the truth, or again can anyone possibly avoid this happening to himself, unless he has knowledge of what the thing in question really is?

**PHAEDRUS:** No, never.

**SOCRATES:** It would seem to follow, my friend, that the art of speech displayed by one who has gone chasing after beliefs, instead of knowing the truth, will be a comical sort of art, in fact no art at all.

**PHAEDRUS:** I dare say.

**SOCRATES:** Then would you like to observe some instances of what I call the presence and absence of art in that speech of Lysias which you are carrying, and in those which I have delivered?

**PHAEDRUS:** Yes, by all means. At present our discussion is somewhat abstract, for want of adequate illustrations.

**SOCRATES:** Why, as to that it seems a stroke of luck that in the two speeches we have a sort of illustration of the way in which one who knows the truth can mislead his audience by playing an oratorical joke on them. I myself, Phaedrus, put that down to the local deities, or perhaps those mouthpieces of the Muses that are chirping over our heads have vouchsafed us their inspiration, for of course I don't lay claim to any oratorical skill myself.

**PHAEDRUS:** I dare say that is so, but please explain your point.

**SOCRATES:** Well, come along, read the beginning of Lysias' speech.

**PHAEDRUS:** 'You know how I am situated, and I have told you that I think it to our advantage that the thing should be done. Now I claim that I should not be refused what I ask simply because I am not your lover. Lovers repent when . . .'

**SOCRATES:** Stop. Our business is to indicate where the speaker is at fault, and shows absence of art, isn't it?

263

**PHAEDRUS:** Yes.

**SOCRATES:** Well now, is not the following assertion obviously true—that there are some words about which we all agree, and others about which we are at variance?

**PHAEDRUS:** I think I grasp your meaning, but you might make it still plainer.

**SOCRATES:** When someone utters the word 'iron' or 'silver,' we all have the same object before our minds, haven't we?

**PHAEDRUS:** Certainly.

**SOCRATES:** But what about the words 'just' and 'good'? Don't we diverge, and dispute not only with one another but with our own selves?

**PHAEDRUS:** Yes indeed.

**SOCRATES:** So in some cases we agree, and in others we don't.

**PHAEDRUS:** Quite so.

SOCRATES: Now in which of the cases are we more apt to be misled, and in which is rhetoric more effective?

PHAEDRUS: Plainly in the case where we fluctuate.

SOCRATES: Then the intending student of the art of rhetoric ought, in the first place, to make a systematic division of words, and get hold of some mark distinguishing the two kinds of words, those namely in the use of which the multitude are bound to fluctuate, and those in which they are not.

PHAEDRUS: To grasp that, Socrates, would certainly be an excellent piece of discernment.

SOCRATES: And secondly, I take it, when he comes across a particular word he must realize what it is, and be swift to perceive which of the two kinds the thing he proposes to discuss really belongs to.

PHAEDRUS: To be sure.

SOCRATES: Well then, shall we reckon love as one of the disputed terms, or as one of the other sort?

PHAEDRUS: As a disputed term, surely. Otherwise can you suppose it would have been possible for you to say of it what you said just now, namely that it is harmful both to the beloved and the lover, and then to turn round and say that it is really the greatest of goods?

SOCRATES: An excellent point. But now tell me this, for thanks to my inspired condition I can't quite remember. Did I define love at the beginning of my speech?

PHAEDRUS: Yes indeed, and immensely thorough you were about it.

SOCRATES: Upon my word, you rate the nymphs of Achelous and Pan, son of Hermes, much higher as artists in oratory than Lysias, son of Cephalus. Or am I quite wrong? Did Lysias at the beginning of his discourse on love compel us to conceive of it as a certain definite entity, with a meaning he had himself decided upon? And did he proceed to bring all his subsequent remarks, from first to last, into line with that meaning? Shall we read his first words once again?

PHAEDRUS: If you like, but what you are looking for isn't there.

SOCRATES: Read it out, so that I can listen to the author himself.

PHAEDRUS: 'You know how I am situated, and I have told you that I think it to our advantage that the thing should be done. Now I claim that I should not be refused what I ask simply because I am not your lover. Lovers, when their craving is at an end, repent of such benefits as they have conferred.'

SOCRATES: No, he doesn't seem to get anywhere near what we are looking for; he goes about it like a man swimming on his back, in reverse, and starts from the end instead of the beginning; his opening words are what the lover would naturally say to his boy only when he had finished. Or am I quite wrong, dear Phaedruss?

- b PHAEDRUS: I grant you, Socrates, that the substance of his address is really a peroration.

SOCRATES: And to pass to other points, doesn't his matter strike you as thrown out at haphazard? Do you find any cogent reason for his next remark, or indeed any of his remarks, occupying the place it does? I myself, in my ignorance, thought that the writer, with a fine abandon, put down just what came into his head. Can you find any cogent principle of composition which he observed in setting down his observations in this particular order?

- PHAEDRUS: You flatter me in supposing that I am competent to see into his mind with all that accuracy.

SOCRATES: Well, there is one point at least which I think you will admit, namely that any discourse ought to be constructed like a living creature, with its own body, as it were; it must not lack either head or feet; it must have a middle and extremities so composed as to suit each other and the whole work.

PHAEDRUS: Of course.

SOCRATES: Then ask yourself whether that is or is not the case with your friend's speech. You will find that it is just like the epitaph said to have been carved on the tomb of Midas the Phrygian.

- d PHAEDRUS: What is that, and what's wrong with it?

SOCRATES: It runs like this:

A maid of bronze I stand on Midas' tomb,  
So long as waters flow and trees grow tall,  
Abiding here on his lamented grave,  
I tell the traveler Midas here is laid.

- e I expect you notice that it makes no difference what order the lines come in.

PHAEDRUS: Socrates, you are making a joke of our speech!

SOCRATES: Well, to avoid distressing you, let us say no more of that—though indeed I think it provides many examples which it would be profitable to notice, provided one were chary of imitating them—and let us pass to the other speeches, for they, I think, presented a certain feature which everyone desirous of examining oratory would do well to observe.

- 265 PHAEDRUS: To what do you refer?

SOCRATES: They were of opposite purport, one maintaining that the lover should be favored, the other the nonlover.

PHAEDRUS: Yes, they did so very manfully.

SOCRATES: I thought you were going to say—and with truth—madly, but that reminds me of what I was about to ask. We said, did we not, that love is a sort of madness?

PHAEDRUS: Yes.

SOCRATES: And that there are two kinds of madness, one resulting from human ailments, the other from a divine disturbance of our conventions of conduct.

PHAEDRUS: Quite so.

SOCRATES: And in the divine kind we distinguished four types, ascribing them to four gods: the inspiration of the prophet to Apollo, that of the mystic to Dionysus, that of the poet to the Muses, and a fourth type which we declared to be the highest, the madness of the lover, to Aphrodite and Eros. Moreover we painted, after a fashion, a picture of the lover's experience, in which perhaps we attained some degree of truth, though we may well have sometimes gone astray—the blend resulting in a discourse which had some claim to plausibility, or shall we say a mythical hymn of praise, in due religious language, a festal celebration of my master and yours too, Phaedrus, that god of love who watches over the young and fair.

PHAEDRUS: It certainly gave me great pleasure to listen to it.

SOCRATES: Then let us take one feature of it, the way in which the discourse contrived to pass from censure to encomium.

PHAEDRUS: Well now, what do you make of that?

SOCRATES: For the most part I think our festal hymn has really been just a festive entertainment, but we did casually allude to a certain pair of procedures, and it would be very agreeable if we could seize their significance in a scientific fashion.

PHAEDRUS: What procedures do you mean?

SOCRATES: The first is that in which we bring a dispersed plurality under a single form, seeing it all together—the purpose being to define so-and-so, and thus to make plain whatever may be chosen as the topic for exposition. For example, take the definition given just now of love. Whether it was right or wrong, at all events it was that which enabled our discourse to achieve lucidity and consistency.

PHAEDRUS: And what is the second procedure you speak of, Socrates?

SOCRATES: The reverse of the other, whereby we are enabled to divide into forms, following the objective articulation; we are not to attempt to hack off parts like a clumsy butcher, but to take example from our two recent speeches. The single general form which they postulated was irrationality; next, on the analogy of a single natural body with its pairs of like-named members, right arm or leg, as we say, and left, they conceived of madness as a single objective form existing in human beings. Wherefore the first speech divided off a part on the left, and continued to make divisions, never desisting until it discovered one particular part bearing the name of 'sinister' love, on which it very properly poured abuse. The other speech conducted us to the forms of madness which lay on the right-hand side, and upon discovering a type of love that shared its name with the other but was divine, displayed it to our view and extolled it as the source of the greatest goods that can befall us.

PHAEDRUS: That is perfectly true.

SOCRATES: Believe me, Phaedrus, I am myself a lover of these divisions and collections, that I may gain the power to speak and to

think, and whenever I deem another man able to discern an objective unity and plurality, I follow 'in his footsteps where he leadeth as a god.'<sup>5</sup> Furthermore—whether I am right or wrong in doing so, God alone knows—it is those that have this ability whom for the present I call dialecticians.

- c But now tell me what we ought to call them if we take instruction from Lysias and yourself. Or is what I have been describing precisely that art of oratory thanks to which Thrasymachus and the rest of them have not only made themselves masterly orators, but can do the same for anyone else who cares to bring offerings to these princes among men?

PHAEDRUS: Doubtless they behave like princes, but assuredly they do not possess the kind of knowledge to which you refer. No, I think you are right in calling the procedure that you have described dialectic, but we still seem to be in the dark about rhetoric.

- d SOCRATES: What? Can there really be anything of value that admits of scientific acquisition despite the lack of that procedure? If so, you and I should certainly not disdain it, but should explain what this residuum of rhetoric actually consists in.

PHAEDRUS: Well, Socrates, of course there is plenty of matter in the rhetorical manuals.

SOCRATES: Thank you for the reminder. The first point, I suppose, is that a speech must begin with a preamble. You are referring, are you not, to such niceties of the art?

- e PHAEDRUS: Yes.

SOCRATES: And next comes exposition accompanied by direct evidence; thirdly, indirect evidence; fourthly, probabilities; besides which there are the proof and supplementary proof mentioned by the Byzantine master of rhetorical artifice.

PHAEDRUS: You mean the worthy Theodorus?

- 267 SOCRATES: Of course. And we are to have a refutation and supplementary refutation both for prosecution and defense. And can we leave the admirable Evenus of Paros out of the picture, the inventor of covert allusion and indirect compliment and, according to some accounts, of the indirect censure in mnemonic verse? A real master, that. But we won't disturb the rest of Tisias and Gorgias, who realized that probability deserves more respect than truth, who could make trifles seem important and important points trifles by the force of their language, who dressed up novelties as antiques and vice versa, and found out how to argue concisely or at interminable length about anything and everything. This last accomplishment provoked Prodicus once to mirth when he heard me mention it; he remarked that he and he alone had discovered what sort of speeches the art demands—to wit, neither long ones nor short, but of fitting length.

<sup>5</sup> *Odyssey* 5.193.

PHAEDRUS: Masterly, Prodicus!

SOCRATES: Are we forgetting Hippias? I think Prodicus' view would be supported by the man of Elis.

PHAEDRUS: No doubt.

SOCRATES: And then Polus. What are we to say of his *Muses' Treasury of Phrases* with its reduplications and maxims and similes, and of words à la Licymnius which that master made him a present of as a contribution to his fine writing?

PHAEDRUS: But didn't Protagoras in point of fact produce some such works, Socrates?

SOCRATES: Yes, my young friend, there is his *Correct Diction*, and many other excellent works. But to pass now to the application of pathetic language to the poor and aged, the master in that style seems to me to be the mighty man of Chalcedon, who was also expert at rousing a crowd to anger and then soothing them down again with his spells, to quote his own saying, while at casting aspersions and dissipating them, whatever their source, he was unbeatable.

But to resume, on the way to conclude a speech there seems to be general agreement, though some call it recapitulation and others by some other name.

PHAEDRUS: You mean the practice of reminding the audience toward the end of a speech of its main points?

SOCRATES: Yes. And now if you have anything further to add about the art of rhetoric . . .

PHAEDRUS: Only a few unimportant points.

SOCRATES: If they are unimportant, we may pass them over. But let us look at what we have got in a clearer light, to see what power the art possesses, and when.

PHAEDRUS: A very substantial power, Socrates, at all events in large assemblies.

SOCRATES: Yes indeed. But have a look at it, my good sir, and see whether you discern some holes in the fabric, as I do.

PHAEDRUS: Do show them me.

SOCRATES: Well, look here. Suppose someone went up to your friend Eryximachus, or his father Acumenus, and said, 'I know how to apply such treatment to a patient's body as will induce warmth or coolness, as I choose; I can make him vomit, if I see fit, or go to stool, and so on and so forth. And on the strength of this knowledge I claim to be a competent physician, and to make a competent physician of anyone to whom I communicate this knowledge.' What do you imagine they would have to say to that?

PHAEDRUS: They would ask him, of course, whether he also knew which patients ought to be given the various treatments, and when, and for how long.

SOCRATES: Then what if he said, 'Oh, no, but I expect my pupils to manage what you refer to by themselves'?

PHAEDRUS: I expect they would say, 'The man is mad; he thinks he has made himself a doctor by picking up something out of a book, or coming across some common drug or other, without any real knowledge of medicine.'

SOCRATES: Now suppose someone went up to Sophocles or Euripides and said he knew how to compose lengthy dramatic speeches about a trifling matter, and quite short ones about a matter of moment, that he could write pathetic passages when he chose, or again  
d passages of intimidation and menace, and so forth, and that he considered that by teaching these accomplishments he could turn a pupil into a tragic poet.

PHAEDRUS: I imagine that they too would laugh at anyone who supposed that you could make a tragedy otherwise than by so arranging such passages as to exhibit a proper relation to one another and to the whole of which they are parts.

SOCRATES: Still I don't think they would abuse him rudely, but rather treat him as a musician would treat a man who fancied himself to be a master of harmony simply because he knew how to produce the highest possible note and the lowest possible on his strings.  
e The musician would not be so rude as to say, 'You miserable fellow, you're off your head,' but rather, in the gentler language befitting his profession, 'My good sir, it is true that one who proposes to become a master of harmony must know the things you speak of, but it is perfectly possible for one who has got as far as yourself to have not the slightest real knowledge of harmony. You are acquainted with what has to be learned before studying harmony, but of harmony itself you know nothing.'

PHAEDRUS: Perfectly true.

269 SOCRATES: Similarly then Sophocles would tell the man who sought to show off to himself and Euripides that what he knew was not tragic composition but its antecedents, and Acumenus would make the same distinction between medicine and the antecedents of medicine.

PHAEDRUS: I entirely agree.

SOCRATES: And if 'mellifluous' <sup>6</sup> Adrastus, or shall we say Pericles, were to hear of those admirable artifices that we were referring to just now—the brachylogies and imageries and all the rest of them, which we enumerated and deemed it necessary to examine in a clear light—are we to suppose that they would address those who practice and teach this sort of thing, under the name of the art of rhetoric, with  
b the severity you and I displayed, and in rude, coarse language? Or would they, in their ampler wisdom, actually reproach us and say, 'Phaedrus and Socrates, you ought not to get angry, but to make allowances for such people; it is because they are ignorant of dialectic that they are incapable of properly defining rhetoric, and that in turn

<sup>6</sup> Tyrtaeus, fr. 9, 7.

leads them to imagine that by possessing themselves of the requisite antecedent learning they have discovered the art itself. And so they c teach these antecedents to their pupils, and believe that that constitutes a complete instruction in rhetoric; they don't bother about employing the various artifices in such a way that they will be effective, or about organizing a work as a whole; that is for the pupils to see to for themselves when they come to make speeches.'

PHAEDRUS: Well yes, Socrates, I dare say that does more or less describe what the teachers and writers in question regard as the art of rhetoric; personally I think what you say is true. But now by what means and from what source can one attain the art of the true rhetorician, the real master of persuasion?

SOCRATES: If you mean how can one become a finished performer, then probably—indeed I might say undoubtedly—it is the same as with anything else. If you have an innate capacity for rhetoric, you will become a famous rhetorician, provided you also acquire knowledge and practice, but if you lack any of these three you will be correspondingly unfinished. As regards the art itself, as distinct from the artist, I fancy that the line of approach adopted by Lysias and Thrasymachus is not the one I have in view.

PHAEDRUS: Then what is?

SOCRATES: I am inclined to think, my good friend, that it was e not surprising that Pericles became the most finished exponent of rhetoric there has ever been.

PHAEDRUS: Why so?

SOCRATES: All the great arts need supplementing by a study of nature; your artist must cultivate garrulity and high-flown speculation; 270 from that source alone can come the mental elevation and thoroughly finished execution of which you are thinking, and that is what Pericles acquired to supplement his inborn capacity. He came across the right sort of man, I fancy, in Anaxagoras, and by enriching himself with high speculation and coming to recognize the nature of wisdom and folly—on which topics of course Anaxagoras was always discoursing—he drew from that source and applied to the art of rhetoric what was suitable thereto.

PHAEDRUS: How do you mean?

SOCRATES: Rhetoric is in the same case as medicine, don't you b think?

PHAEDRUS: How so?

SOCRATES: In both cases there is a nature that we have to determine, the nature of body in the one, and of soul in the other, if we mean to be scientific and not content with mere empirical routine when we apply medicine and diet to induce health and strength, or words and rules of conduct to implant such convictions and virtues as we desire.

PHAEDRUS: You are probably right, Socrates.

- c        **SOCRATES**: Then do you think it possible to understand the nature of the soul satisfactorily without taking it as a whole?

**PHAEDRUS**: If we are to believe Hippocrates, the Asclepiad, we can't understand even the body without such a procedure.

**SOCRATES**: No, my friend, and he is right. But we must not just rely on Hippocrates; we must examine the assertion and see whether it accords with the truth.

**PHAEDRUS**: Yes.

- d        **SOCRATES**: Then what is it that Hippocrates and the truth have to say on this matter of nature? I suggest that the way to reflect about the nature of anything is as follows: first, to decide whether the object in respect of which we desire to have scientific knowledge, and to be able to impart it to others, is simple or complex; secondly, if it is simple, to inquire what natural capacity it has of acting upon another thing, and through what means; or by what other thing, and through what means, it can be acted upon; or, if it is complex, to enumerate its parts and observe in respect of each what we observe in the case of the simple object, to wit what its natural capacity, active or passive, consists in.

**PHAEDRUS**: Perhaps so, Socrates.

- e        **SOCRATES**: Well, at all events, to pursue an inquiry without doing so would be like a blind man's progress. Surely we mustn't make out that any sort of scientific inquirer resembles a blind or deaf person. No, it is plain that if we are to address people scientifically, we shall show them precisely what is the real and true nature of that object on which our discourse is brought to bear. And that object, I take it, is the soul.

**PHAEDRUS**: To be sure.

- 271      **SOCRATES**: Hence the speaker's whole effort is concentrated on that, for it is there that he is attempting to implant conviction. Isn't that so?

**PHAEDRUS**: Yes.

**SOCRATES**: Then it is plain that Thrasymachus, or anyone else who seriously proffers a scientific rhetoric, will, in the first place, describe the soul very precisely, and let us see whether it is single and uniform in nature or, analogously to the body, complex. For to do that is, we maintain, to show a thing's nature.

**PHAEDRUS**: Yes, undoubtedly.

**SOCRATES**: And secondly he will describe what natural capacity it has to act upon what, and through what means, or by what it can be acted upon.

**PHAEDRUS**: Quite so.

- b        **SOCRATES**: Thirdly, he will classify the types of discourse and the types of soul, and the various ways in which souls are affected, explaining the reasons in each case, suggesting the type of speech appropriate to each type of soul, and showing what kind of speech can be

relied on to create belief in one soul and disbelief in another, and why.

PHAEDRUS: I certainly think that would be an excellent procedure.

SOCRATES: Yes, in fact I can assure you, my friend, that no other scientific method of treating either our present subject or any other will ever be found, whether in the models of the schools or in speeches actually delivered. But the present-day authors of manuals of rhetoric, of whom you have heard, are cunning folk who know all about the soul but keep their knowledge out of sight. So don't let us admit their claim to write scientifically until they compose their speeches and writings in the way we have indicated.

PHAEDRUS: And what way is that?

SOCRATES: To give the actual words would be troublesome, but I am quite ready to say how one ought to compose if he means to be as scientific as possible.

PHAEDRUS: Then please do.

SOCRATES: Since the function of oratory is in fact to influence men's souls, the intending orator must know what types of soul there are. Now these are of a determinate number, and their variety results in a variety of individuals. To the types of soul thus discriminated there corresponds a determinate number of types of discourse. Hence a certain type of hearer will be easy to persuade by a certain type of speech to take such and such action for such and such reason, while another type will be hard to persuade. All this the orator must fully understand, and next he must watch it actually occurring, exemplified in men's conduct, and must cultivate a keenness of perception in following it, if he is going to get any advantage out of the previous instruction that he was given in the school. And when he is competent to say what type of man is susceptible to what kind of discourse; when, further, he can, on catching sight of so-and-so, tell himself, 'That is the man, that character now actually before me is the one I heard about in school, and in order to persuade him of so-and-so I have to apply *these* arguments in *this* fashion'; and when, on top of all this, he has further grasped the right occasions for speaking and for keeping quiet, and has come to recognize the right and the wrong time for the brachylogy, the pathetic passage, the exacerbation, and all the rest of his accomplishments—then and not till then has he well and truly achieved the art. But if in his speaking or teaching or writing he fails in any of these requirements, he may tell you that he has the art of speech, but one mustn't believe all one is told. 272

And now maybe our author will say, 'Well, what of it, Phaedrus and Socrates? Do you agree with me, or should we accept some other account of the art of speech?'

PHAEDRUS: Surely we can't accept any other, Socrates; still it does seem a considerable business.

SOCRATES: You are right, and that makes it necessary

thoroughly to overhaul all our arguments, and see whether there is  
 c some easier and shorter way of arriving at the art; we don't want to waste effort in going off on a long rough road, when we might take a short smooth one. But if you can help us at all through what you have heard from Lysias or anyone else, do try to recall it.

PHAEDRUS: As far as trying goes, I might, but I can suggest nothing on the spur of the moment.

SOCRATES: Then would you like me to tell you something I have heard from those concerned with these matters?

PHAEDRUS: Why, yes.

SOCRATES: Anyhow, Phaedrus, we are told that even the devil's advocate ought to be heard.

d PHAEDRUS: Then you can put his case.

SOCRATES: Well, they tell us that there is no need to make such a solemn business of it, or fetch such a long compass on an uphill road. As we remarked at the beginning of this discussion, there is, they maintain, absolutely no need for the budding orator to concern himself with the truth about what is just or good conduct, nor indeed about who are just and good men whether by nature or education. In the law courts nobody cares a rap for the truth about these matters,  
 e but only about what is plausible. And that is the same as what is probable, and is what must occupy the attention of the would-be master of the art of speech. Even actual facts ought sometimes not be stated, if they don't tally with probability; they should be replaced by what is probable, whether in prosecution or defense; whatever you say, you simply must pursue this probability they talk of, and can say good-by  
 273 to the truth forever. Stick to that all through your speech, and you are equipped with the art complete.

PHAEDRUS: Your account, Socrates, precisely reproduces what is said by those who claim to be experts in the art of speech. I remember that we did touch briefly on this sort of contention a while ago, and the professionals regard it as a highly important point.

SOCRATES: Very well then, take Tisias himself; you have thumbled him carefully, so let Tisias tell us this. Does he maintain that  
 b the probable is anything other than that which commends itself to the multitude?

PHAEDRUS: How could it be anything else?

SOCRATES: Then in consequence, it would seem, of that profound scientific discovery he laid down that if a weak but brave man is arrested for assaulting a strong but cowardly one, whom he has robbed of his cloak or some other garment, neither of them ought to state the true facts; the coward should say that the brave man didn't assault him singlehanded, and the brave man should contend that there were only the two of them, and then have recourse to the famous  
 c plea, 'How could a little fellow like me have attacked a big fellow like him?' Upon which the big fellow will not avow his own poltroon-

ery but will try to invent some fresh lie which will probably supply his opponent with a means of refuting him. And similar 'scientific' rules are given for other cases of the kind. Isn't that so, Phaedrus?

PHAEDRUS: To be sure.

SOCRATES: Bless my soul! It appears that he made a brilliant discovery of a buried art, your Tisias, or whoever it really was and whatever he is pleased to be called after. But, my friend, shall we or shall we not say to him . . .

PHAEDRUS: Say what?

d

SOCRATES: This. 'In point of fact, Tisias, we have for some time before you came on the scene been saying that the multitude get their notion of probability as the result of a likeness to truth, and we explained just now that these likenesses can always be best discovered by one who knows the truth. Therefore if you have anything else to say about the art of speech, we should be glad to hear it, but if not we shall adhere to the point we made just now, namely that unless the aspirant to oratory can on the one hand list the various natures among his prospective audiences, and on the other divide things into their e kinds and embrace each individual thing under a single form, he will never attain such success as is within the grasp of mankind. Yet he will assuredly never acquire such competence without considerable diligence, which the wise man should exert not for the sake of speaking to and dealing with his fellow men, but that he may be able to speak what is pleasing to the gods, and in all his dealings to do their pleasure to the best of his ability. For you see, Tisias, what we are told by those wiser than ourselves is true, that a man of sense ought never 274 to study the gratification of his fellow slaves, save as a minor consideration, but that of his most excellent masters. So don't be surprised that we have to make a long detour; it is because the goal is glorious, though not the goal you think of.' Not but what those lesser objects also, if you would have them, can best be attained, so our argument assures us, as a consequence of the greater.

PHAEDRUS: Your project seems to be excellent, Socrates, if only one could carry it out.

SOCRATES: Well, when a man sets his hand to something good, it is good that he should take what comes to him.

b

PHAEDRUS: Yes, of course.

SOCRATES: Then we may feel that we have said enough about the art of speech, both the true art and the false?

PHAEDRUS: Certainly.

SOCRATES: But there remains the question of propriety and impropriety in writing, that is to say the conditions which make it proper or improper. Isn't that so?

PHAEDRUS: Yes.

SOCRATES: Now do you know how we may best please God, in practice and in theory, in this matter of words?

PHAEDRUS: No indeed. Do you?

- c SOCRATES: I can tell you the tradition that has come down from our forefathers, but they alone know the truth of it. However, if we could discover that for ourselves, should we still be concerned with the fancies of mankind?

PHAEDRUS: What a ridiculous question! But tell me the tradition you speak of.

- SOCRATES: Very well. The story is that in the region of Naucratis in Egypt there dwelt one of the old gods of the country, the god to whom the bird called Ibis is sacred, his own name being Theuth. He
- d it was that invented number and calculation, geometry and astronomy, not to speak of draughts and dice, and above all writing. Now the king of the whole country at that time was Thamus, who dwelt in the great city of Upper Egypt which the Greeks call Egyptian Thebes, while Thamus they call Ammon. To him came Theuth, and revealed his arts, saying that they ought to be passed on to the Egyptians in general. Thamus asked what was the use of them all, and when
- e Theuth explained, he condemned what he thought the bad points and praised what he thought the good. On each art, we are told, Thamus had plenty of views both for and against; it would take too long to give them in detail. But when it came to writing Theuth said, 'Here, O king, is a branch of learning that will make the people of Egypt wiser and improve their memories; my discovery provides a recipe for memory and wisdom.' But the king answered and said, 'O man full of arts, to one it is given to create the things of art, and to another to judge what measure of harm and of profit they have for those that shall employ
- 275 them. And so it is that you, by reason of your tender regard for the writing that is your offspring, have declared the very opposite of its true effect. If men learn this, it will implant forgetfulness in their souls; they will cease to exercise memory because they rely on that which is written, calling things to remembrance no longer from within themselves, but by means of external marks. What you have discovered is a recipe not for memory, but for reminder. And it is no true wisdom that you offer your disciples, but only its semblance, for by telling them of many things without teaching them you will make them
- b seem to know much, while for the most part they know nothing, and as men filled, not with wisdom, but with the conceit of wisdom, they will be a burden to their fellows.'

PHAEDRUS: It is easy for you, Socrates, to make up tales from Egypt or anywhere else you fancy.

- SOCRATES: Oh, but the authorities of the temple of Zeus at Dodona, my friend, said that the first prophetic utterances came from an oak tree. In fact the people of those days, lacking the wisdom of you young people, were content in their simplicity to listen to trees
- c or rocks, provided these told the truth. For you apparently it makes a difference who the speaker is, and what country he comes from; you don't merely ask whether what he says is true or false.

PHAEDRUS : I deserve your rebuke, and I agree that the man of Thebes is right in what he said about writing.

SOCRATES : Then anyone who leaves behind him a written manual, and likewise anyone who takes it over from him, on the supposition that such writing will provide something reliable and permanent, must be exceedingly simple-minded; he must really be ignorant of Ammon's utterance, if he imagines that written words can do anything more than remind one who knows that which the writing is concerned with.

PHAEDRUS : Very true.

SOCRATES : You know, Phaedrus, that's the strange thing about writing, which makes it truly analogous to painting. The painter's products stand before us as though they were alive, but if you question them, they maintain a most majestic silence. It is the same with written words; they seem to talk to you as though they were intelligent, but if you ask them anything about what they say, from a desire to be instructed, they go on telling you just the same thing forever. And once a thing is put in writing, the composition, whatever it may be, drifts all over the place, getting into the hands not only of those who understand it, but equally of those who have no business with it; it doesn't know how to address the right people, and not address the wrong. And when it is ill-treated and unfairly abused it always needs its parent to come to its help, being unable to defend or help itself.

PHAEDRUS : Once again you are perfectly right.

SOCRATES : But now tell me, is there another sort of discourse, that is brother to the written speech, but of unquestioned legitimacy? Can we see how it originates, and how much better and more effective it is than the other?

PHAEDRUS : What sort of discourse have you now in mind, and what is its origin?

SOCRATES : The sort that goes together with knowledge, and is written in the soul of the learner, that can defend itself, and knows to whom it should speak and to whom it should say nothing.

PHAEDRUS : You mean no dead discourse, but the living speech, the original of which the written discourse may fairly be called a kind of image.

SOCRATES : Precisely. And now tell me this. If a sensible farmer had some seeds to look after and wanted them to bear fruit, would he with serious intent plant them during the summer in a garden of Adonis, and enjoy watching it producing fine fruit within eight days? If he did so at all, wouldn't it be in a holiday spirit, just by way of pastime? For serious purposes wouldn't he behave like a scientific farmer, sow his seeds in suitable soil, and be well content if they came to maturity within eight months?

PHAEDRUS : I think we may distinguish as you say, Socrates, between what the farmer would do seriously and what he would do in a different spirit.

**SOCRATES:** And are we to maintain that he who has knowledge of what is just, honorable, and good has less sense than the farmer in dealing with his seeds?

**PHAEDRUS:** Of course not.

**SOCRATES:** Then it won't be with serious intent that he 'writes them in water' or that black fluid we call ink, using his pen to sow words that can't either speak in their own defense or present the truth adequately.

**PHAEDRUS:** It certainly isn't likely.

**SOCRATES:** No, it is not. He will sow his seed in literary gardens, I take it, and write when he does write by way of pastime, collecting a store of refreshment both for his own memory, against the day 'when age oblivious comes,' and for all such as tread in his footsteps, and he will take pleasure in watching the tender plants grow up. And when other men resort to other pastimes, regaling themselves with drinking parties and suchlike, he will doubtless prefer to indulge in the recreation I refer to.

**PHAEDRUS:** And what an excellent one it is, Socrates! How far superior to the other sort is the recreation that a man finds in words, when he discourses about justice and the other topics you speak of.

**SOCRATES:** Yes indeed, dear Phaedrus. But far more excellent, I think, is the serious treatment of them, which employs the art of dialectic. The dialectician selects a soul of the right type, and in it he plants and sows his words founded on knowledge, words which can defend both themselves and him who planted them, words which instead of remaining barren contain a seed whence new words grow up in new characters, whereby the seed is vouchsafed immortality, and its possessor the fullest measure of blessedness that man can attain unto.

**PHAEDRUS:** Yes, that is a far more excellent way.

**SOCRATES:** Then now that that has been settled, Phaedrus, we can proceed to the other point.

**PHAEDRUS:** What is that?

**SOCRATES:** The point that we wanted to look into before we arrived at our present conclusion. Our intention was to examine the reproach leveled against Lysias on the score of speech writing, and therewith the general question of speech writing and what does and does not make it an art. Now I think we have pretty well cleared up the question of art.

**PHAEDRUS:** Yes, we did think so, but please remind me how we did it.

**SOCRATES:** The conditions to be fulfilled are these. First, you must know the truth about the subject that you speak or write about; that is to say, you must be able to isolate it in definition, and having so defined it you must next understand how to divide it into kinds, until you reach the limit of division; secondly, you must have a correspond-

ing discernment of the nature of the soul, discover the type of speech c  
appropriate to each nature, and order and arrange your discourse accordingly, addressing a variegated soul in a variegated style that ranges over the whole gamut of tones, and a simple soul in a simple style. All this must be done if you are to become competent, within human limits, as a scientific practitioner of speech, whether you propose to expound or to persuade. Such is the clear purport of all our foregoing discussion.

PHAEDRUS: Yes, that was undoubtedly how we came to see the matter.

SOCRATES: And now to revert to our other question, whether d  
the delivery and composition of speeches is honorable or base, and in what circumstances they may properly become a matter of reproach, our earlier conclusions have, I think, shown . . .

PHAEDRUS: Which conclusions?

SOCRATES: They have shown that any work, in the past or in the future, whether by Lysias or anyone else, whether composed in a private capacity or in the role of a public man who by proposing a law becomes the author of a political composition, is a matter of reproach to its author—whether or no the reproach is actually voiced—if he regards it as containing important truth of permanent validity. For ignorance of what is a waking vision and what is a mere dream image of justice and injustice, good and evil, cannot truly be acquitted of e  
involving reproach, even if the mass of men extol it.

PHAEDRUS: No indeed.

SOCRATES: On the other hand, if a man believes that a written discourse on any subject is bound to contain much that is fanciful, that nothing that has ever been written whether in verse or prose merits much serious attention—and for that matter nothing that has ever been spoken in the declamatory fashion which aims at mere persuasion without any questioning or exposition—that in reality such compositions are, at the best, a means of reminding those who know the 278  
truth, that lucidity and completeness and serious importance belong only to those lessons on justice and honor and goodness that are expounded and set forth for the sake of instruction, and are veritably written in the soul of the listener, and that such discourses as these ought to be accounted a man's own legitimate children—a title to be applied primarily to such as originate within the man himself, and secondarily to such of their sons and brothers as have grown up aright b  
in the souls of other men—the man, I say, who believes this, and disdains all manner of discourse other than this, is, I would venture to affirm, the man whose example you and I would pray that we might follow.

PHAEDRUS: My own wishes and prayers are most certainly to that effect.

SOCRATES: Then we may regard our literary pastime as having

reached a satisfactory conclusion. Do you now go and tell Lysias that we two went down to the stream where is the holy place of the nymphs, and there listened to words which charged us to deliver a message, first to Lysias and all other composers of discourses, secondly to Homer and all others who have written poetry whether to be read or sung, and thirdly to Solon and all such as are authors of political compositions under the name of laws—to wit, that if any of them has done his work with a knowledge of the truth, can defend his statements when challenged, and can demonstrate the inferiority of his writings out of his own mouth, he ought not to be designated by a name drawn from those writings, but by one that indicates his serious pursuit.

PHAEDRUS : Then what names would you assign him?

SOCRATES : To call him wise, Phaedrus, would, I think be going too far; the epithet is proper only to a god. A name that would fit him better, and have more seemliness, would be 'lover of wisdom,' or something similar.

PHAEDRUS : Yes, that would be quite in keeping.

SOCRATES : On the other hand, one who has nothing to show of more value than the literary works on whose phrases he spends hours, twisting them this way and that, pasting them together and pulling them apart, will rightly, I suggest, be called a poet or speech writer or law writer.

PHAEDRUS : Of course.

SOCRATES : Then that is what you must tell your friend.

PHAEDRUS : But what about yourself? What are you going to do? You too have a friend who should not be passed over.

SOCRATES : Who is that?

PHAEDRUS : The fair Isocrates. What will be your message to him, Socrates, and what shall we call him?

SOCRATES : Isocrates is still young, Phaedrus, but I don't mind telling you the future I prophesy for him.

PHAEDRUS : Oh, what is that?

SOCRATES : It seems to me that his natural powers give him a superiority over anything that Lysias has achieved in literature, and also that in point of character he is of a nobler composition; hence it would not surprise me if with advancing years he made all his literary predecessors look like very small-fry—that is, supposing him to persist in the actual type of writing in which he engages at present—still more so, if he should become dissatisfied with such work, and a sublimer impulse lead him to do greater things. For that mind of his, Phaedrus, contains an innate tincture of philosophy.

Well then, there's the report I convey from the gods of this place to Isocrates my beloved, and there's yours for your beloved Lysias.

PHAEDRUS : So be it. But let us be going, now that it has become less oppressively hot.

SOCRATES : Oughtn't we first to offer a prayer to the divinities here?

PHAEDRUS : To be sure.

SOCRATES : Dear Pan, and all ye other gods that dwell in this place, grant that I may become fair within, and that such outward things as I have may not war against the spirit within me. May I count c him rich who is wise, and as for gold, may I possess so much of it as only a temperate man might bear and carry with him.

Is there anything more we can ask for, Phaedrus? The prayer contents me.

PHAEDRUS : Make it a prayer for me too, since friends have all things in common.

SOCRATES : Let us be going.

# SYMPOSIUM

---

*It is agreed that the Symposium is one of Plato's two greatest dialogues, either greater than the Republic or next to it. Of all of them it tells the most vivid story and it gives the most arresting and the most detailed portrait of Socrates. Also it contains the loftiest expression of Plato's inmost conviction that it is the things not seen which are eternal and eternally important.*

*There is little need for any introduction to it and no need for any explanation. It presents no difficulties. It is not an argument to be followed, but a series of speeches made at a supper party, a symposium. These speeches are not connected with each other except that they all have the same subject, love, all love in all its degrees of low, higher, highest. The culminating speech is, of course, spoken by Socrates. It follows that of the host, Agathon, a poet, whose words make the reader recall the thirteenth chapter of First Corinthians written some four hundred years later, Paul's unapproachable praise of love.*

*Like Paul in First Corinthians, Agathon speaks of human love. Socrates in his speech passes from the human to the divine, much as does John. (If we love one another God dwelleth in us.) We begin, Socrates says, by loving beauty in people and go on to loving not the beauty we see, but that which is unseen, the beautiful soul. From there we go on to love beautiful thoughts and ideas, ever ascending under the influence of true love. So we draw nearer to the vast sea of beauty until at last we perceive beauty itself, not existing in any being, but beauty alone, absolute, simple, and everlasting. Thither looking we become the friends of God. To that consummation we are led by love.*

*From this height Plato leads us down rapidly by way of Alcibiades, who never occupied any height whatsoever and who, moreover, when he breaks in upon the supper party declares that he is very drunk. And yet he pays a hardly to be surpassed tribute to Socrates, who alone, he says, has made him ashamed of the poor, trivial life he is living, so ashamed that he has sometimes felt it unendurable. For*

*greatness and goodness, he concludes, Socrates stands alone among all the men there have ever been. To all of this the reader sees Socrates listening with a smile, kindly and amused.*

APOLLODORUS: Oh, if that's what you want to know, it isn't long 172 since I had occasion to refresh my memory. Only the day before yesterday, as I was coming up to the city from my place at Phalerum, a friend of mine caught sight of me from behind, and while I was still a long way ahead he shouted after me, Here, I say, Apollodorus! Can't you wait for me?

So I stopped and waited for him.

Apollodorus, he said as he came up, you're the very man I'm looking for. I want to ask you about this party at Agathon's, when Socrates and Alcibiades and the rest of them were at dinner there. What were all these speeches they were making about Love? I've heard b something about them from a man who'd been talking to Phoenix, but his information was rather sketchy and he said I'd better come to you. So you'll have to tell me the whole story, for you know we always count on you, Apollodorus, to report your beloved Socrates. But before you begin, tell me, were you there yourself?

Well, said I, whoever was your informant I can well believe he wasn't very clear about it if you gathered it was such a recent party that I could have been there! c

That was my impression, said he.

My dear Glaucon, I protested, how could it have been? Have you forgotten how long Agathon's been away from Athens? And don't you know it's only two or three years since I started spending so much of my time with Socrates, and making it my business to follow everything he says and does from day to day? Because, you know, before 173 that I used to go dashing about all over the place, firmly convinced that I was leading a full and interesting life, when I was really as wretched as could be—much the same as you, for instance, for I know philosophy's the last thing *you'd* spend your time on.

Now don't start girding at me, said Glaucon, but tell me, when was this party, then?

It was given, I told him, when you and I were in the nursery, the day after Agathon's celebrations with the players when he'd won the prize with his first tragedy.

---

*Plato's Symposium, or The Drinking Party*, translated by Michael Joyce (Everyman's Library, London and New York, 1935).

Yes, he admitted, that must have been a good many years ago. But who told you about it—Socrates himself?

- b No, no, I said. I had it from the same source as Phoenix—Aristodemus of Cydathenaeum, a little fellow who used to go about barefoot. He was there himself; indeed I fancy he was one of Socrates' most impassioned admirers at the time. As a matter of fact I did ask Socrates about one or two points later on, and he confirmed what Aristodemus had told me.

Very well, said Glaucon, then you must tell me all about it before we reach the city. I'm sure it'll pass the time most agreeably.

- c Well, I told him all about it as we went along, and so, as I was saying, I've got the story pretty pat, and if you want to hear it too I suppose I may as well begin. For that matter I don't know anything that gives me greater pleasure, or profit either, than talking or listening to philosophy. But when it comes to ordinary conversation, such as the stuff you talk about financiers and the money market, well, I find it pretty tiresome personally, and I feel sorry that my friends should think they're being very busy when they're really doing absolutely nothing. Of course, I know your idea of me; you think I'm just a poor unfortunate, and I shouldn't wonder if you're right. But then, I don't *think* that *you're* unfortunate—I know you are.

- FRIEND: There you go again, Apollodorus! Always running down yourself and everybody else! You seem to have some extravagant idea that the whole world, with the sole exception of Socrates, is in a state of utter misery—beginning with yourself. You're always the same—perhaps that's why people think you're mad—always girding at yourself and all the rest of us, except Socrates of course.

APOLLODORUS: My dear man, of course I am! And of course I shouldn't *dream* of thinking such things about myself or about my friends if I weren't completely crazy.

FRIEND: Oh, come now, Apollodorus! We needn't go into that. For heaven's sake, man, don't fly off at a tangent, but simply answer our question. What were these speeches about Love?

- APOLLODORUS: Well then, they were something like this—but  
174 perhaps I'd better begin at the beginning and tell you in Aristodemus' own words.

I met Socrates, he told me, looking very spruce after his bath, with a nice pair of shoes on although, as you know, he generally goes about barefoot. So I asked him where he was going, cutting such a dash.

I'm going to dinner with Agathon, he said. I kept away from the public celebrations yesterday because I was afraid there'd be a crush, but I promised I'd go along this evening. And I've got myself up like this because I don't want to disgrace such a distinguished host.

- b But what about you? he went on. How would you like to join the party uninvited?

Just as you think, I replied.

Then come along with me, he said, and we'll adapt the proverb, 'Unbidden do the good frequent the tables of the good.' Though, if it comes to that, Homer himself has not so much adapted that very proverb as exploded it, for after making Agamemnon extremely stout and warlike, and Menelaus a most indifferent spearman, he shows Agamemnon making merry after the sacrifice and Menelaus coming to his table uninvited—that is, the lesser man coming to supper with the greater.

I'm afraid, said I, that Homer's version is the apter so far as I'm concerned—an uninvited ignoramus going to dinner with a man of letters. So you'd better be preparing your excuses on the way, for you needn't think I'll apologize for coming without an invitation—I shall plead that you invited me.

Two heads are better than one, he said, when it comes to excuses. Well, anyway, let's be off.

Having settled this point, continued Aristodemus, we started out, and as we went along Socrates fell into a fit of abstraction and began to lag behind, but when I was going to wait for him he told me to go on ahead. So when I arrived at Agathon's, where the door was standing wide-open, I found myself in rather a curious position, for a servant immediately showed me in and announced me to the assembled company, who were already at table and just about to begin.

However, the moment Agathon saw me he cried, Ah! Here's Aristodemus—just in time for dinner, and if you've come on business it'll have to wait, that's flat. I was going to invite you yesterday, only I couldn't get hold of you. But I say, where's Socrates? Haven't you brought him with you?

I looked round, supposing that Socrates was bringing up the rear, but he was nowhere to be seen; so I explained that we'd been coming along together, and that I'd come at his invitation.

Very nice of you, said Agathon, but what on earth can have happened to the man?

He was just coming in behind me; I can't think where he can be.

Here, said Agathon to one of the servants, run along and see if you can find Socrates, and show him in. And now, my dear Aristodemus, may I put you next to Eryximachus?

And so, Aristodemus went on, I made my toilet and sat down, the servant meanwhile returning with the news that our friend Socrates had retreated into the next-door neighbor's porch.

And there he stood, said the man. And when I asked him in he wouldn't come.

This is very odd, said Agathon. You must speak to him again, and insist.

But here I broke in. I shouldn't do that, I said. You'd much better leave him to himself. It's quite a habit of his, you know; off he

goes and there he stands, no matter where it is. I've no doubt he'll be with us before long, so I really don't think you'd better worry him.

Oh, very well, said Agathon. I expect you know best. We won't wait then, he said, turning to the servants. Now you understand, you fellows are to serve whatever kind of dinner you think fit; I'm leaving it entirely to you. I know it's a new idea, but you'll simply have to imagine that we've all come here as your guests. Now go ahead and show us what you can do.

c Well, we started dinner, and still there was no sign of Socrates; Agathon still wanted to send for him, but I wouldn't let him. And when at last he did turn up, we weren't more than halfway through dinner, which was pretty good for him.

As he came in, Agathon, who was sitting by himself at the far end of the table, called out, Here you are, Socrates. Come and sit next to me; I want to share this great thought that's just struck you in the porch next door. I'm sure you must have mastered it, or you'd still  
d be standing there.

My dear Agathon, Socrates replied as he took his seat beside him, I only wish that wisdom *were* the kind of thing one could share by sitting next to someone—if it flowed, for instance, from the one that was full to the one that was empty, like the water in two cups finding its level through a piece of worsted. If that were how it  
e worked, I'm sure I'd congratulate myself on sitting next to you, for you'd soon have me brimming over with the most exquisite kind of wisdom. My own understanding is a shadowy thing at best, as equivocal as a dream, but yours, Agathon, glitters and dilates—as which of us can forget that saw you the other day, resplendent in your youth, visibly kindled before the eyes of more than thirty thousand of your fellow Greeks.

Now, Socrates, said Agathon, I know you're making fun of me; however, I shall take up this question of wisdom with you later on, and let Bacchus judge between us. In the meantime you must really show a little interest in your food.

So Socrates drew up and had his dinner with the rest of them, and  
176 then, after the libation and the usual hymn and so forth, they began to turn their attention to the wine. It was Pausanias, so far as Aristodemus could remember, who opened the conversation.

Well, gentlemen, he began, what do you say? What sort of a night shall we make of it? Speaking for myself, I'm not quite up to form. I'm still a bit the worse for what I had last night, and I don't suppose you're most of you much better—we were all in the same boat. Anyhow, what do you say? How does everybody feel about the  
b drink?

That's a most sensible question of yours, Pausanias, said Aristophanes. We don't want to make a burden of it—I speak as one who was pretty well soaked last night.

I quite agree, observed Eryximachus, and there is just one question I should like to add. What about Agathon? Has he sufficiently recovered to feel like drinking?

Not I, said Agathon. You can count me out.

So much the better for me, then, said Eryximachus, and so much the better for Aristodemus and Phaedrus and one or two more I could mention. We never could keep up with heavy drinkers like the rest of you. I say nothing of Socrates, for we know he's equal to any occasion, drunk or sober. And now, gentlemen, since nobody seems very anxious to get drunk tonight, I may perhaps be pardoned if I take this opportunity of saying a few words on the true nature of inebriation. My own experience in medicine has entirely satisfied me that vinous excess is detrimental to the human frame. And therefore I can never be a willing party to heavy drinking, as regards either myself or my friends—especially when one is only partially recovered from the excesses of the previous night.

But here Phaedrus broke in. My dear Eryximachus, he said, I always do what you tell me to, specially when it really is a case of 'doctor's orders,' and I think the others would be well advised to do the same.

Whereupon it was unanimously agreed that this was not to be a drunken party, and that the wine was to be served merely by way of refreshment.

Very well, then, said Eryximachus, since it is agreed that we need none of us drink more than we think is good for us, I also propose that we dispense with the services of the flute girl who has just come in, and let her go and play to herself or to the women inside there, whichever she prefers, while we spend our evening in discussion of a subject which, if you think fit, I am prepared to name.

It was generally agreed that he should go on with his proposal. So he continued, If I may preface my remarks by a tag from Euripides, 'The tale is not my own,'<sup>1</sup> as Melanippe says, that I am going to tell, but properly belongs to my friend Phaedrus here, who is continually coming to me with the following complaint. Is it not, he asks me, an extraordinary thing that, for all the hymns and anthems that have been addressed to the other deities, not one single poet has ever sung a song in praise of so ancient and so powerful a god as Love?

Take such distinguished men of letters as Prodicus, for instance, with their eulogies in prose of Heracles and all the rest of them—not that *they're* so much out of the way either, but do you know, I once came across a book which enumerated the uses of common salt and sang its praises in the most extravagant terms, and not only salt but all kinds of everyday commodities. Now isn't it, as I say, an extraordinary thing, Eryximachus, that while all these screeds have

<sup>1</sup> *Melanippe*, fr. 488.

been written on such trivial subjects, the god of love has found no man bold enough to sing his praises as they should be sung—is it not, in short, amazing that there should be so little reverence shown to such a god!

- This, gentlemen, is Phaedrus' complaint, and I must say I think it is justified. And, moreover, not only am I willing to oblige him with a contribution on my own account, but also I suggest that this is a most suitable occasion for each one of us to pay homage to the god.
- d If therefore, gentlemen, this meets with your approval, I venture to think we may spend a very pleasant evening in discussion. I suppose the best way would be for each in turn from left to right to address the company and speak to the best of his ability in praise of Love. Phaedrus, I think, should open the debate, for besides being head of the table he is the real author of our discussion.

- The motion is carried, Eryximachus, said Socrates, unanimously, I should think. Speaking for myself, I couldn't very well
- e stand—nor could Agathon and Pausanias; neither could Aristophanes, whose whole life is devoted to Dionysus and Aphrodite; no more could any of our friends who are here with us tonight. Of course, your procedure will come very hard on us who are sitting at the bottom of the table, but if the earlier speeches are fine enough, I promise you we shan't complain. So let Phaedrus go ahead with his eulogy of Love—and good luck to him.

- 178 Then all the rest of them agreed, and told Phaedrus to begin—but before I go on I must make it quite clear that Aristodemus did not pretend to reproduce the various speeches verbatim, any more than I could repeat them word for word as I had them from him. I shall simply recount such passages as the speaker or the thought itself made, so far as I could judge, especially memorable.

As I was saying, then, Phaedrus opened with some such arguments as these—that Love was a great god, wonderful alike to the gods and to mankind, and that of all the proofs of this the greatest was his birth.

- The worship of this god, he said, is of the oldest, for Love is un-
- b begotten, nor is there mention of his parentage to-be found anywhere in either prose or verse, while Hesiod tells us expressly that Chaos first appeared, and then

From Chaos rose broad-bosomed Earth, the sure  
And everlasting seat of all that is,  
And after, Love . . .<sup>2</sup>

Acusilaus agrees with Hesiod, for he holds that after Chaos were brought forth these twain, Earth and Love, and Parmenides writes of the creative principle.

<sup>2</sup> *Theogony* 116 sq.

And Love she framed the first of all the gods.<sup>3</sup>

Thus we find that the antiquity of Love is universally admitted, c and in very truth he is the ancient source of all our highest good. For I, at any rate, could hardly name a greater blessing to the man that is to be than a generous lover, or, to the lover, than the beloved youth. For neither family, nor privilege, nor wealth, nor anything but Love can light that beacon which a man must steer by when he sets out to live the better life. How shall I describe it—as that contempt for the d vile, and emulation of the good, without which neither cities nor citizens are capable of any great or noble work. And I will say this of the lover, that, should he be discovered in some inglorious act, or in abject submission to ill-usage, he could better bear that anyone—father, friends, or who you will—should witness it than his beloved. And the same holds good of the beloved—that his confusion would be e more than ever painful if he were seen by his lovers in an unworthy light.

If only, then, a city or an army could be composed of none but lover and beloved, how could they deserve better of their country than by shunning all that is base, in mutual emulation? And men like these fighting shoulder to shoulder, few as they were, might conquer 179—I had almost said—the whole world in arms. For the lover would rather anyone than his beloved should see him leave the ranks or throw away his arms in flight—nay, he would sooner die a thousand deaths. Nor is there any lover so faint of heart that he could desert his beloved or fail to help him in the hour of peril, for the very presence of Love kindles the same flame of valor in the faintest heart that burns in those whose courage is innate. And so, when Homer b writes that some god 'breathed might' <sup>4</sup> into one of the heroes, we may take it that this is what the power of Love effects in the heart of the lover.

And again, nothing but Love will make a man offer his life for another's—and not only man but woman, of which last we Greeks can ask no better witness than Alcestis, for she alone was ready to lay down her life for her husband—for all he had a father and a mother, whose love fell so far short of hers in charity that they seemed to be c alien to their own son, and bound to him by nothing but a name. But hers was accounted so great a sacrifice, not only by mankind but by the gods, that in recognition of her magnanimity it was granted—and among the many doers of many noble deeds there is only the merest handful to whom such grace has been given—that her soul should rise again from the Stygian depths.

Thus heaven itself has a peculiar regard for ardor and resolution d in the cause of Love. And yet the gods sent Orpheus away from Hades empty-handed, and showed him the mere shadow of the woman he

<sup>3</sup> Parmenides, fr. 132.

<sup>4</sup> *Iliad* 10.482, 15.262.

had come to seek. Eurydice herself they would not let him take, because he seemed, like the mere minstrel that he was, to be a lukewarm lover, lacking the courage to die as Alcestis died for love, and choosing rather to scheme his way, living, into Hades. And it was for this that the gods doomed him, and doomed him justly, to meet his death at the hands of women.

- e How different was the fate of Achilles, Thetis' son, whom they sent with honors to the Islands of the Blessed, because, after learning from his mother that if he slew Hector he should die, while if he spared him he should end his days at home in the fullness of his years, he made the braver choice and went to rescue his lover Patroclus, avenged his death, and so died, not only for his friend, but to be with his friend in death. And it was because his lover had been so precious to him that he was honored so signally by the gods.

- 180 I may say that Aeschylus has reversed the relation between them by referring to Patroclus as Achilles' darling, whereas Achilles, we know, was much handsomer than Patroclus or any of the heroes, and was besides still beardless and, as Homer says, by far the younger of the two. I make a point of this because, while in any case the gods display especial admiration for the valor that springs from Love, they are even more amazed, delighted, and beneficent when the beloved shows such devotion to his lover, than when the lover does the same for his beloved. For the lover, by virtue of Love's inspiration, is always nearer than his beloved to the gods. And this, I say, is why they paid more honor to Achilles than to Alcestis, and sent him to the Islands of the Blessed.

In short, this, gentlemen, is my theme, that Love is the oldest and most glorious of the gods, the great giver of all goodness and happiness to men, alike to the living and to the dead.

- c This, to the best of Aristodemus' recollection, was Phaedrus' speech. It was followed by several more which had almost, if not quite, escaped him; so he went straight on to Pausanias, who spoke as follows.

I am afraid, my dear Phaedrus, that our arrangement won't work very well if it means that we are simply to pronounce a eulogy of Love. It would be all very well if there were only one kind of Love, but unfortunately this is not the case, and we should therefore have begun by stipulating which kind in particular was to receive our homage. In the circumstances I will try to set the matter right by first defining the Love whom we are to honor, and then singing his praises in terms not unworthy, I hope, of his divinity.

Now you will all agree, gentlemen, that without Love there could be no such goddess as Aphrodite. If, then, there were only one goddess of that name, we might suppose that there was only one kind of Love, but since in fact there are two such goddesses there must also be two kinds of Love. No one, I think, will deny that there

are two goddesses of that name—one, the elder, sprung from no mother's womb but from the heavens themselves, we call the Uranian, the heavenly Aphrodite, while the younger, daughter of Zeus and Dione, we call Pandemus, the earthly Aphrodite. It follows, then, that Love should be known as earthly or as heavenly according to the goddess in whose company his work is done. And our business, gentlemen—I need hardly say that every god must command our homage—our business at the moment is to define the attributes peculiar to each of these two.

Now it may be said of any kind of action that the action itself, as such, is neither good nor bad. Take, for example, what we are doing now. Neither drinking nor singing nor talking has any virtue in itself, for the outcome of each action depends upon how it is performed. If it is done rightly and finely, the action will be good; if it is done basely, bad. And this holds good of loving, for Love is not of himself either admirable or noble, but only when he moves us to love nobly.

Well then, gentlemen, the earthly Aphrodite's Love is a very earthly Love indeed, and does his work entirely at random. It is he that governs the passions of the vulgar. For, first, they are as much attracted by women as by boys; next, whoever they may love, their desires are of the body rather than of the soul; and, finally, they make a point of courting the shallowest people they can find, looking forward to the mere act of fruition and careless whether it be a worthy or unworthy consummation. And hence they take their pleasures where they find them, good and bad alike. For this is the Love of the younger Aphrodite, whose nature partakes of both male and female.

But the heavenly Love springs from a goddess whose attributes have nothing of the female, but are altogether male, and who is also the elder of the two, and innocent of any hint of lewdness. And so those who are inspired by this other Love turn rather to the male, preferring the more vigorous and intellectual bent. One can always tell—even among the lovers of boys—the man who is wholly governed by this elder Love, for no boy can please him until he has shown the first signs of dawning intelligence, signs which generally appear with the first growth of beard. And it seems to me that the man who falls in love with a youth of such an age will be prepared to spend all his time with him, to share his whole life with him, in fact; nor will he be likely to take advantage of the lad's youth and credulity by seducing him and then turning with a laugh to some newer love.

But I cannot help thinking, gentlemen, that there should be a law to forbid the loving of mere boys, a law to prevent so much time and trouble being wasted upon an unknown quantity—for what else, after all, is the future of any boy, and who knows whether he will follow the paths of virtue or of vice, in body and in soul? Of course, your man of principle is a law unto himself, but these followers of the earthly Love should be legally compelled to observe a similar

restraint—just as we prevent them, as far as possible, from making  
 182 love to our own wives and daughters—for it is their behavior that has brought the name of Love into such disrepute that one has even heard it held to be degrading to yield to a lover's solicitation. Anyone who can hold such a view must surely have in mind these earthly lovers, with their offensive importunities, for there can be nothing derogatory in any conduct which is sanctioned both by decency and custom.

Then again, gentlemen, may I point out that, while in all the other states of Hellas the laws that deal with Love are so simple and well defined that they are easy enough to master, our own code is most  
 b involved. In Elis and Boeotia, for instance, and wherever else the people are naturally inarticulate, it has been definitely ruled that it is right for the lover to have his way. Nor does anyone, old or young, presume to say that it is wrong—the idea being, I suppose, to save themselves from having to plead with the young men for their favors, which is rather difficult for lovers who are practically dumb.

On the other hand, in Ionia and many other countries under oriental rule, the very same thing is held to be disgraceful. Indeed, the  
 c oriental thinks ill not only of Love but also of both philosophy and sport, on account of the despotism under which he lives. For I suppose it does not suit the rulers for their subjects to indulge in high thinking, or in staunch friendship and fellowship, which Love more than anything is likely to beget. And those who seized the power here in Athens learned the same lesson from bitter experience, for it was the might of Aristogiton's love and Harmodius' friendship that brought their reign to an end. Thus, wherever the law enacts that it is  
 d wrong to yield to the lover, you may be sure that the fault lies with the legislators—that is to say, it is due to the oppression of the rulers and the servility of their subjects. On the other hand, wherever you find the same thing expressly sanctioned, you may blame the legislators' mental inertia.

But in Athens, gentlemen, we have a far more admirable code—a code which, as I was saying, is not nearly so easy to understand. Take for instance our maxim that it is better to love openly than in secret, especially when the object of one's passion is eminent in nobility and virtue, and even if his personal appearance should lack the same distinction. And think how we all love to cheer the lover on, without the least idea that he is doing anything unworthy, and how  
 e we see honor in his success and shame in his defeat. And remember, gentlemen, what latitude the law offers to the lover in the prosecution of his suit, and how he may be actually applauded for conduct which, in any other circumstances or in any other cause, would call down upon him the severest censure.

183 Imagine what would happen to a man who wanted to get money out of someone, or a post, or powers of some kind, and who therefore

thought fit to behave as the lover behaves to his beloved—urging his need with prayers and entreaties, and vowing vows, and sleeping upon doorsteps, subjecting himself, in short, to a slavery which no slave would ever endure—why, gentlemen, not only his friends, but his very enemies, would do their best to stop him, for his enemies would accuse him of the most abject servility, while his friends would take him to task because they felt ashamed of him.

But when it is a lover who does this kind of thing people only think the more of him, and the law expressly sanctions his conduct as the means to an honorable end. And, what is the most extraordinary thing of all, it is popularly supposed that the lover is the one man whom the gods will pardon for breaking his vows, for lovers' promises, they say, are made to be forsworn. And so, gentlemen, we see what complete indulgence, not only human but divine, is accorded to the lover by our Athenian code.

In view of this, one would have thought that, here if anywhere, loving and being kind to one's lover would have been positively applauded. Yet we find in practice that if a father discovers that someone has fallen in love with his son, he puts the boy in charge of an attendant, with strict injunctions not to let him have anything to do with his lover. And if the boy's little friends and playmates see anything of that kind going on, you may be sure they'll call him names, while their elders will neither stop their being rude nor tell them they are talking nonsense. So if there were no more to it than that, anyone would think that we Athenians were really shocked at the idea of yielding to a lover.

But I fancy we can account for the apparent contradiction if we remember that the moral value of the act is not what one might call a constant. We agreed that love itself, as such, was neither good nor bad, but only in so far as it led to good or bad behavior. It is base to indulge a vicious lover viciously, but noble to gratify a virtuous lover virtuously. Now the vicious lover is the follower of the earthly Love who desires the body rather than the soul; his heart is set on what is mutable and must therefore be inconstant. And as soon as the body he loves begins to pass the first flower of its beauty, he 'spreads his wings and flies away,' giving the lie to all his pretty speeches and dishonoring his vows, whereas the lover whose heart is touched by moral beauties is constant all his life, for he has become one with what will never fade.

Now it is the object of the Athenian law to make a firm distinction between the lover who should be encouraged and the lover who should be shunned. And so it enjoins pursuit in certain cases, and flight in others, and applies various touchstones and criteria to discriminate between the two classes of lover and beloved. And this is why it is immoral, according to our code, to yield too promptly to solicitation; there should first be a certain lapse of time, which is

b generally considered to be the most effective test. Secondly, it is immoral when the surrender is due to financial or political considerations, or to unmanly fear of ill-treatment; it is immoral, in short, if the youth fails to show the contempt he should for any advantage he may gain in pocket or position. For in motives such as these we can find nothing fixed or permanent, except, perhaps, the certainty that they have never been the cause of any noble friendship.

c There remains, therefore, only one course open to the beloved if he is to yield to his lover without offending our ideas of decency. It is held that, just as the lover's willing and complete subjection to his beloved is neither abject nor culpable, so there is one other form of voluntary submission that shall be blameless—a submission which is made for the sake of virtue. And so, gentlemen, if anyone is prepared to devote himself to the service of another in the belief that through him he will find increase of wisdom or of any other virtue, we hold that such willing servitude is neither base nor abject.

d We must therefore combine these two laws—the one that deals with the love of boys and the one that deals with the pursuit of wisdom and the other virtues—before we can agree that the youth is justified in yielding to his lover. For it is only when lover and beloved come together, each governed by his own especial law—the former lawfully enslaving himself to the youth he loves, in return for his compliance, the latter lawfully devoting his services to the friend who is helping him to become wise and good—the one sharing his  
e wealth of wisdom and virtue, and the other drawing, in his poverty, upon his friend for a liberal education—it is then, I say, and only then, when the observance of the two laws coincides, that it is right for the lover to have his way.

There is no shame in being disappointed of such hopes as these, but any other kind of hope, whether it comes true or not, is shameful in itself. Take the case of a youth who gratifies his lover in the belief that he is wealthy and in the hope of making money. Such hopes  
185 will be nonetheless discreditable if he finds in the event that he has been the prey of a penniless seducer, for he will have shown himself for what he is, the kind of person, namely, who will do anything for money—which is nothing to be proud of. But suppose that he had yielded because he believed in his lover's virtue, and hoped to be improved by such an association; then, even if he discovered in the end  
b that he had been duped by an unholy blackguard, there would still have been something noble in his mistake, for he, too, would have shown himself for what he was—the kind of person who will do anything for anybody for the sake of progress in the ways of virtue. And what, gentlemen, could be more admirable than that? I conclude, therefore, that it is right to let the lover have his way in the interests of virtue.

Such, then, is the Love of the heavenly Aphrodite, heavenly in

himself and precious alike to cities and to men, for he constrains both lover and beloved to pay the most earnest heed to their moral welfare, but all the rest are followers of the other, the earthly Aphrodite. And this, Phaedrus, is all I have to say, extempore, on the subject of Love.

When Pausanias had paused—you see the kind of tricks we catch from our philologists, with their punning derivations—the next speaker, so Aristodemus went on to tell me, should have been Aristophanes; only as it happened, whether he'd been overeating I don't know, but he had got the hiccups so badly that he really wasn't fit to make a speech. So he said to the doctor, Eryximachus, who was sitting next below him, Eryximachus, you'll either have to cure my hiccups or take my turn and go on speaking till they've stopped.

I'm prepared to do both, said Eryximachus. I'll take your turn to speak, and then when you've recovered you can take mine. Meanwhile, you'd better try holding your breath, or if that won't stop your hiccup try gargling with a little water, or if it's particularly stubborn you'll have to get something that you can tickle your nostrils with, and sneeze, and by the time you've done that two or three times you'll find that it will stop, however bad it is.

Go ahead, then, said Aristophanes. You make your speech, and I'll be doing as you say.

Whereupon Eryximachus spoke as follows.

Well, gentlemen, since Pausanias broke off, after an excellent beginning, without having really finished, I must try to wind up his argument myself. I admit that in defining the two kinds of Love he has drawn a very useful distinction, but the science of medicine seems to me to prove that, besides attracting the souls of men to human beauty, Love has many other objects and many other subjects, and that his influence may be traced both in the brute and the vegetable creations, and I think I may say in every form of existence—so great, so wonderful, and so all-embracing is the power of Love in every activity, whether sacred or profane.

I propose, in deference to my own profession, to begin with the medical aspect. I would have you know that the body comprehends in its very nature the dichotomy of Love, for, as we all agree, bodily health and sickness are both distinct and dissimilar, and unlike clings to unlike. And so the desires of health are one thing, while the desires of sickness are quite another. I confirm what Pausanias has observed, that it is right to yield to the virtuous and wrong to yield to the vicious lover, and similarly, in the case of the body, it is both right and necessary to gratify such desires as are sound and healthy in each particular case, and this is what we call the art of medicine. But it is utterly wrong to indulge such desires as are bad and morbid, nor must anyone who hopes to become expert in this profession lend his countenance to such indulgence. For medicine may be described as the science of

d what the body loves, or desires, as regards repletion and evacuation, and the man who can distinguish between what is harmful and what is beneficial in these desires may claim to be a physician in the full sense of the word. And if he can replace one desire with another, and produce the requisite desire when it is absent, or, if necessary, remove it when it is present, then we shall regard him as an expert practitioner.

Yes, gentlemen, he must be able to reconcile the jarring elements of the body, and force them, as it were, to fall in love with one another. Now, we know that the most hostile elements are the opposites—hot and cold, sweet and sour, wet and dry, and so on—and if, as I do myself, we are to believe these poets of ours, it was his skill in imposing love and concord upon these opposites that enabled our illustrious progenitor Asclepius to found the science of medicine.

And so, gentlemen, I maintain that medicine is under the sole direction of the god of love, as are also the gymnastic and the agromonic arts. And it must be obvious to the most casual observer that the same holds good of music—which is, perhaps, what Heraclitus meant us to understand by that rather cryptic pronouncement, ‘The one in conflict with itself is held together, like the harmony of the bow and of the lyre.’<sup>5</sup> Of course it is absurd to speak of harmony as being in conflict, or as arising out of elements which are still conflicting, but perhaps he meant that the art of music was to create harmony by resolving the discord between the treble and the bass. There can certainly be no harmony of treble and bass while they are still in conflict, for harmony is concord, and concord is a kind of sympathy, and sympathy between things which are in conflict is impossible so long as that conflict lasts. There is, on the other hand, a kind of discord which it is not impossible to resolve, and here we may effect a harmony—as, for instance, we produce rhythm by resolving the difference between fast and slow. And just as we saw that the concord of the body was brought about by the art of medicine, so this other harmony is due to the art of music, as the creator of mutual love and sympathy. And so we may describe music, too, as a science of love, or of desire—in this case in relation to harmony and rhythm.

It is easy enough to distinguish the principle of Love in this rhythmic and harmonic union, nor is there so far any question of Love’s dichotomy. But when we come to the application of rhythm and harmony to human activities—as for instance the composition of a song, or the instruction of others in the correct performance of airs and measures which have already been composed—then, gentlemen, we meet with difficulties which call for expert handling. And this brings us back to our previous conclusion, that we are justified in

<sup>5</sup> Heraclitus, fr. 45.

yielding to the desires of the temperate—and of the intemperate in so far as such compliance will tend to sober them, and to this Love, gentlemen, we must hold fast, for he is the fair and heavenly one, born of Urania, the Muse of heaven. But as for that other, the earthly Love, he is sprung from Polyhymnia, the Muse of many songs, and whatever we have to do with him we must be very careful not to add the evils of excess to the enjoyment of the pleasures he affords—just as, in my own profession, it is an important part of our duties to regulate the pleasures of the table so that we may enjoy our meals without being the worse for them. And so in music, in medicine, and in every activity, whether sacred or profane, we must do our utmost to distinguish the two kinds of Love, for you may be sure that they will both be there.

188

And again, we find these two elements in the seasons of the year, for when the regulating principle of Love brings together those opposites of which I spoke—hot and cold, wet and dry—and compounds them in an ordered harmony, the result is health and plenty for mankind, and for the animal and vegetable kingdoms, and all goes as it should. But when the seasons are under the influence of that other Love, all is mischief and destruction, for now plague and disease of every kind attack both herds and crops, and not only these, but frost and hail and blight—and all of them are due to the uncontrolled and the acquisitive in that great system of Love which the astronomer observes when he investigates the movements of the stars and the seasons of the year.

And further, the sole concern of every rite of sacrifice and divination—that is to say, the means of communion between god and man—is either the preservation or the repair of Love. For most of our impiety springs from our refusal to gratify the more temperate Love, and to respect and defer to him in everything we do, and from our following that other Love in our attitude toward our parents, whether alive or dead, and toward the gods. It is the diviner's office to be the guide and healer of these Loves, and his art of divination, with its power to distinguish those principles of human love that tend to decency and reverence, is, in fact, the source of concord between god and man.

And so, gentlemen, the power of Love in its entirety is various and mighty, nay, all-embracing, but the mightiest power of all is wielded by that Love whose just and temperate consummation, whether in heaven or on earth, tends toward the good. It is he that bestows our every joy upon us, and it is through him that we are capable of the pleasures of society, aye, and friendship even, with the gods our masters.

And now, gentlemen, if, as is not unlikely, there are many points I have omitted in my praise of Love, let me assure you that such omissions have been unintentional. It is for you, Aristophanes, to make

good my deficiencies, that is unless you're thinking of some other kind of eulogy. But in any case, let us hear what you have to say—now you've recovered from your hiccups.

To which, Aristodemus went on to tell me, Aristophanes replied,  
 189 Yes, I'm better now, thank you, but not before I'd had recourse to sneezing—which made me wonder, Eryximachus, how your orderly principle of the body could possibly have called for such an appalling union of noise and irritation; yet there's no denying that the hiccups stopped immediately I sneezed.

Now, Aristophanes, take care, retorted Eryximachus, and don't try to raise a laugh before you've even started. You'll only have yourself to thank if I'm waiting to pounce on your silly jokes, instead of  
 b giving your speech a proper hearing.

Aristophanes laughed. You're quite right, Eryximachus, he said. I take it all back. But don't be too hard on me. Not that I mind if what I'm going to say is funny—all the better if it is; besides, a comic poet is supposed to be amusing. I'm only afraid of being utterly absurd.

Now, Aristophanes, said Eryximachus, I know the way you loose your shafts of ridicule and run away. But don't forget that anything  
 c you say may be used against you—and yet, who knows? Perhaps I shall decide to let you go with a caution.

Well then, Eryximachus, Aristophanes began, I propose, as you suggested, to take quite a different line from you and Pausanias. I am convinced that mankind has never had any conception of the power of Love, for if we had known him as he really is, surely we should have raised the mightiest temples and altars, and offered the most splendid sacrifices, in his honor, and not—as in fact we do—have utterly neglected him. Yet he of all the gods has the best title to  
 d our service, for he, more than all the rest, is the friend of man; he is our great ally, and it is he that cures us of those ills whose relief opens the way to man's highest happiness. And so, gentlemen, I will do my best to acquaint you with the power of Love, and you in your turn shall pass the lesson on.

First of all I must explain the real nature of man, and the change which it has undergone—for in the beginning we were nothing like we are now. For one thing, the race was divided into three; that is to say, besides the two sexes, male and female, which we have at present, there was a third which partook of the nature of both, and for  
 e which we still have a name, though the creature itself is forgotten. For though 'hermaphrodite' is only used nowadays as a term of contempt, there really was a man-woman in those days, a being which was half male and half female.

And secondly, gentlemen, each of these beings was globular in shape, with rounded back and sides, four arms and four legs, and two  
 190 faces, both the same, on a cylindrical neck, and one head, with one face one side and one the other, and four ears, and two lots of privates,

and all the other parts to match. They walked erect, as we do ourselves, backward or forward, whichever they pleased, but when they broke into a run they simply stuck their legs straight out and went whirling round and round like a clown turning cartwheels. And since they had eight legs, if you count their arms as well, you can imagine that they went bowling along at a pretty good speed.

The three sexes, I may say, arose as follows. The males were descended from the Sun, the females from the Earth, and the hermaphrodites from the Moon, which partakes of either sex, and they were round and they *went* round, because they took after their parents. And such, gentlemen, were their strength and energy, and such their arrogance, that they actually tried—like Ephialtes and Otus in Homer—to scale the heights of heaven and set upon the gods.

At this Zeus took counsel with the other gods as to what was to be done. They found themselves in rather an awkward position; they didn't want to blast them out of existence with thunderbolts as they did the giants, because that would be saying good-by to all their offerings and devotions, but at the same time they couldn't let them get altogether out of hand. At last, however, after racking his brains, Zeus offered a solution.

I think I can see my way, he said, to put an end to this disturbance by weakening these people without destroying them. What I propose to do is to cut them all in half, thus killing two birds with one stone, for each one will be only half as strong, and there'll be twice as many of them, which will suit us very nicely. They can walk about, upright, on their two legs, and if, said Zeus, I have any more trouble with them, I shall split them up again, and they'll have to hop about on one.

So saying, he cut them all in half just as you or I might chop up sorb apples for pickling, or slice an egg with a hair. And as each half was ready he told Apollo to turn its face, with the half-neck that was left, toward the side that was cut away—thinking that the sight of such a gash might frighten it into keeping quiet—and then to heal the whole thing up. So Apollo turned their faces back to front, and, pulling in the skin all the way round, he stretched it over what we now call the belly—like those bags you pull together with a string—and tied up the one remaining opening so as to form what we call the navel. As for the creases that were left, he smoothed most of them away, finishing off the chest with the sort of tool a cobbler uses to smooth down the leather on the last, but he left a few puckers round about the belly and the navel, to remind us of what we suffered long ago.

Now, when the work of bisection was complete it left each half with a desperate yearning for the other, and they ran together and flung their arms around each other's necks, and asked for nothing better than to be rolled into one. So much so, that they began to die

- b of hunger and general inertia, for neither would do anything without the other. And whenever one half was left alone by the death of its mate, it wandered about questing and clasping in the hope of finding a spare half-woman—or a whole woman, as we should call her nowadays—or half a man. And so the race was dying out.

- Fortunately, however, Zeus felt so sorry for them that he devised another scheme. He moved their privates round to the front, for of course they had originally been on the outside—which was now the back—and they had begotten and conceived not upon each other, but,
- c like the grasshoppers, upon the earth. So now, as I say, he moved their members round to the front and made them propagate among themselves, the male begetting upon the female—the idea being that if, in all these clippings and claspings, a man should chance upon a woman, conception would take place and the race would be continued, while if man should conjugate with man, he might at least obtain such satisfaction as would allow him to turn his attention and his energies to the everyday affairs of life. So you see, gentlemen,
- d how far back we can trace our innate love for one another, and how this love is always trying to reintegrate our former nature, to make two into one, and to bridge the gulf between one human being and another.

- And so, gentlemen, we are all like pieces of the coins that children break in half for keepsakes—making two out of one, like the flatfish—and each of us is forever seeking the half that will tally with himself. The man who is a slice of the hermaphrodite sex, as it was called, will naturally be attracted by women—the adulterer, for instance—and women who run after men are of similar descent—as,
- e for instance, the unfaithful wife. But the woman who is a slice of the original female is attracted by women rather than by men—in fact she is a Lesbian—while men who are slices of the male are followers of the male, and show their masculinity throughout their boyhood by the way they make friends with men, and the delight they take in lying beside them and being taken in their arms. And these are the
- 192 most hopeful of the nation's youth, for theirs is the most virile constitution.

- I know there are some people who call them shameless, but they are wrong. It is not immodesty that leads them to such pleasures, but daring, fortitude, and masculinity—the very virtues that they recognize and welcome in their lovers—which is proved by the fact that in after years they are the only men who show any real manliness in public life. And so, when they themselves have come to manhood, their love in turn is lavished upon boys. They have no natu-
- b ral inclination to marry and beget children. Indeed, they only do so in deference to the usage of society, for they would just as soon renounce marriage altogether and spend their lives with one another.

Such a man, then, gentlemen, is of an amorous disposition,

and gives his love to boys, always clinging to his like. And so, when this boy lover—or any lover, for that matter—is fortunate enough to meet his other half, they are both so intoxicated with affection, with friendship, and with love, that they cannot bear to let each other out of sight for a single instant. It is such reunions as these that impel men c to spend their lives together, although they may be hard put to it to say what they really want with one another, and indeed, the purely sexual pleasures of their friendship could hardly account for the huge delight they take in one another's company. The fact is that both their souls are longing for a something else—a something to which they can neither of them put a name, and which they can only give an inkling of in cryptic sayings and prophetic riddles. d

Now, supposing Hephaestus were to come and stand over them with his tool bag as they lay there side by side, and suppose he were to ask, Tell me, my dear creatures, what do you really want with one another?

And suppose they didn't know what to say, and he went on, How would you like to be rolled into one, so that you could always be together, day and night, and never be parted again? Because if that's e what you want, I can easily weld you together, and then you can live your two lives in one, and, when the time comes, you can die a common death and still be two-in-one in the lower world. Now, what do you say? Is that what you'd like me to do? And would you be happy if I did?

We may be sure, gentlemen, that no lover on earth would dream of refusing such an offer, for not one of them could imagine a happier fate. Indeed, they would be convinced that this was just what they'd been waiting for—to be merged, that is, into an utter oneness with the beloved.

And so all this to-do is a relic of that original state of ours, when 193 we were whole, and now, when we are longing for and following after that primeval wholeness, we say we are in love. For there was a time, I repeat, when we were one, but now, for our sins, God has scattered us abroad, as the Spartans scattered the Arcadians. Moreover, gentlemen, there is every reason to fear that, if we neglect the worship of the gods, they will split us up again, and then we shall have to go about with our noses sawed asunder, part and counterpart, like the basso-relievos on the tombstones. And therefore it is our duty one and all to inspire our friends with reverence and piety, for so we may ensure our safety and attain that blessed union by enlisting in the army b of Love and marching beneath his banners.

For Love must never be withstood—as we do, if we incur the displeasure of the gods. But if we cling to him in friendship and reconciliation, we shall be among the happy few to whom it is given in these latter days to meet their other halves. Now, I don't want any coarse remarks from Eryximachus. I don't mean Pausanias and

c Agathon, though for all I know they may be among the lucky ones, and both be sections of the male. But what I am trying to say is this—that the happiness of the whole human race, women no less than men, is to be found in the consummation of our love, and in the healing of our dissevered nature by finding each his proper mate. And if this be a counsel of perfection, then we must do what, in our present circumstances, is next best, and bestow our love upon the natures most congenial to our own.

d And so I say that Love, the god who brings all this to pass, is worthy of our hymns, for his is the inestimable and present service of conducting us to our true affinities, and it is he that offers this great hope for the future—that, if we do not fail in reverence to the gods, he will one day heal us and restore us to our old estate, and establish us in joy and blessedness.

Such, Eryximachus, is my discourse on Love—as different as could be from yours. And now I must ask you again. Will you please refrain from making fun of it, and let us hear what all the others have to say—or rather, the other two, for I see there's no one left but

e Agathon and Socrates.

Well, you shall have your way, said Eryximachus, and, joking apart, I enjoyed your speech immensely. Indeed, if I were not aware that Socrates and Agathon were both authorities on Love, I should be wondering what they could find to say after being treated to such a wealth and variety of eloquence. But, knowing what they are, I've no doubt we'll find them equal to the occasion.

194 To which Socrates retorted, It's all very well for you to talk, Eryximachus, after your own magnificent display, but if you were in my shoes now—or rather when Agathon has finished speaking—you'd be just as nervous as I am.

Now, Socrates, said Agathon, I suppose you're trying to upset me by insisting on the great things my public is expecting of me.

b My dear Agathon, said Socrates, do you think I don't remember your ease and dignity as you took the stage with the actors the other day, and how you looked that vast audience in the face, as cool as you please, and obviously prepared to show them what you were made of? And am I to suppose that the sight of two or three friends will put you out of countenance?

Ah, but, Socrates, protested Agathon, you mustn't think I'm so infatuated with the theater as to forget that a man of any judgment cares more for a handful of brains than an army of blockheads.

c Oh, I should never make such a mistake, Socrates assured him, as to credit *you*, my dear Agathon, with ideas that smacked of the illiterate. I've no doubt that if you found yourself in what you really considered intellectual company, you'd be more impressed by their opinion than by the mob's. But we, alas, can't claim to be your intelligent minority, for we were there too, you know, helping to swell that

very crowd. But tell me, if you were with some other set of people, whose judgment you respected, I suppose you'd feel uncomfortable if they saw you doing anything you thought beneath you. Am I right?

Perfectly, said Agathon.

And yet, Socrates went on, you wouldn't feel uncomfortable if the *mob* saw you doing something equally unworthy?

But here Phaedrus stepped in. My dear Agathon, he said, if you go on answering his questions he won't care twopence what becomes of our debate, so long as there's someone he can argue with—especially if it's somebody good-looking. Now, much as I enjoy listening to Socrates' arguments, it's my duty as chairman to insist that each man makes his speech. So I must ask you both to pay your tribute to the god, and then you can argue as much as you please.

Phaedrus is right, said Agathon. I'm quite prepared to speak. After all, I can argue with Socrates any day.

Now, before I begin my speech I want to explain what sort of a speech I think it ought to be. For to my way of thinking the speakers we have heard so far have been at such pains to congratulate mankind upon the blessings of Love that they have quite forgotten to extol the god himself, and have thrown no light at all upon the nature of our divine benefactor. Yet surely, if we are to praise anyone, no matter whom, no matter how, there is only one way to go about it, and that is to indicate the nature of him whose praises we are to sing, and of the blessings he is the author of. And so, gentlemen, with Love. Our duty is first to praise him for what he is, and secondly, for what he gives.

And so I shall begin by maintaining that, while all the gods are blessed, Love—be it said in all reverence—is the blessedest of all, for he is the loveliest and the best. The loveliest, I say, because first of all, Phaedrus, he is the youngest of the gods, which is proved by his flight, aye, and his escape, from the ravages of time, who travels fast enough—too fast, at any rate, for us poor mortals. But Love was born to be the enemy of age, and shuns the very sight of senility, clinging always to his like in the company of youth, because he is young himself.

I agreed with most of Phaedrus' speech, but not with his suggestion that Love was older than even Cronus or Iapetus. No, gentlemen, Love, in his imperishable youth, is, I repeat, the youngest of them all. And as for those old stories of the gods we have read in Hesiod and Parmenides, we may be sure that any such proceedings were the work not of Love but of Necessity—if, indeed, such tales are credible at all. For if Love had been among them then, they would neither have fettered nor gelded one another; they would have used no violence at all, but lived together in peace and concord as they do to-day, and as they have done since Love became their heavenly overlord.

It is clear, then, that he is young, and not only young but

dainty, with a daintiness that only a Homer could describe. For it is  
 d Homer, is it not, who writes of Ate as being both divine and dainty  
 —dainty of foot, that is. 'How delicate,' he says—

How delicate her feet who shuns the ground,  
 Stepping a-tiptoe on the heads of men.<sup>6</sup>

Now, you will agree that to prefer what is soft to what is hard is  
 proof enough of being dainty, and the same argument will demon-  
 e strate the daintiness of Love, for he never treads upon the ground,  
 nor even on our heads—which, after all, are not so very soft—but lives  
 and moves in the softest thing in the whole of nature. He makes the  
 dispositions and the hearts of gods and men his dwelling place—not,  
 however, without discrimination, for if the heart he lights upon be  
 hard he flies away to settle in a softer. And so, not only treading on  
 but altogether clinging to the softest of the soft, he must indeed be  
 exquisitely dainty.

196 We see, then, that Love is for one thing the youngest, and for  
 another the most delicate, thing in the world, and thirdly, gentlemen,  
 we find that he is tender and supple. For if he were hampered by the  
 least inflexibility, how could he wind us in such endless convolutions,  
 and steal into all our hearts so secretly—aye, and leave them, too,  
 when he pleases? And that elegance of his, which all the world con-  
 fesses, bears witness to his suppleness and symmetry, for Love and  
 unsightliness will never be at peace. Moreover, his life among the  
 flowers argues in himself a loveliness of hue, for Love will never settle  
 upon bodies, or souls, or anything at all where there is no bud to  
 b blossom, or where the bloom is faded. But where the ground is thick  
 with flowers and the air with scent, there he will settle, gentlemen,  
 and there he loves to linger.

I shall say no more about Love's loveliness—though much re-  
 mains to say—because we must now consider his moral excellence,  
 and in particular the fact that he is never injured by, nor ever injures,  
 either god or man. For, whatever Love may suffer, it cannot be by  
 violence—which, indeed, cannot so much as touch him—nor does he  
 c need to go to work by force, for the world asks no compulsion,  
 but is glad to serve him, and, as we know, a compact made in mutual  
 good will is held to be just and binding by the sovereign power of the  
 law.

Added to his righteousness is his entire temperance. I may take it,  
 I suppose, for granted that temperance is defined as the power to con-  
 trol our pleasures and our lusts, and that none of these is more power-  
 ful than Love. If, therefore, they are weaker, they will be overcome  
 by Love, and he will be their master, so that Love, controlling, as I  
 said, our lusts and pleasures, may be regarded as temperance itself.

<sup>6</sup> *Iliad* 19.92 sq.

Then, as to valor, as the poet sings, 'But him not even Ares can d withstand.'<sup>7</sup> For, as the story goes, it was not Ares that captured Love, but Love that captured Ares—love, that is, of Aphrodite. Now, the captor is stronger than the captive, and therefore Love, by overcoming one who is mightier than all the rest, has shown himself the mightiest of all.

So much, gentlemen, for the righteousness of Love, his temperance, and his valor; there remains his genius, to which I must do such scanty justice as I can. First of all, then—if, like Eryximachus, I may e give pride of place to my own vocation—Love is himself so divine a poet that he can kindle in the souls of others the poetic fire, for no matter what dull clay we seemed to be before, we are every one of us a poet when we are in love. We need ask no further proof than this that Love is a poet deeply versed in every branch of what I may define succinctly as creative art, for, just as no one can give away what he has not got, so no one can teach what he does not know.

And who will deny that the creative power by which all living 197 things are begotten and brought forth is the very genius of Love? Do we not, moreover, recognize that in every art and craft the artist and the craftsman who work under the direction of this same god achieve the brightest fame, while those that lack his influence grow old in the shadow of oblivion? It was longing and desire that led Apollo to found the arts of archery, healing, and divination—so he, too, was a scholar in the school of Love. It was thus that the fine arts were founded by the b Muses, the smithy by Hephaestus, and the loom by Pallas, and thus it was that Zeus himself attained the 'governance of gods and men.' And hence the actions of the gods were governed by the birth of Love—love, that is, of beauty, for, as we know, he will have none of ugliness. We are told, as I have already said, that in the beginning there were many strange and terrible happenings among them, because Necessity was king, but ever since the birth of the younger god, Love—the love of what is lovely—has showered every kind of blessing upon gods and men.

And so I say, Phaedrus, that Love, besides being in himself the c loveliest and the best, is the author of those very virtues in all around him. And now I am stirred to speak in numbers, and to tell how it is he that brings

Peace upon earth, the breathless calm  
That lulls the long-tormented deep,  
Rest to the winds, and that sweet balm  
And solace of our nature, sleep.

And it is he that banishes estrangement and ushers friendship in; d it is he that unites us in such friendly gatherings as this—presiding at

<sup>7</sup> Sophocles, *Thyestes*, fr. 235.

the table, at the dance, and at the altar, cultivating courtesy and weeding out brutality, lavish of kindness and sparing of malevolence, affable and gracious, the wonder of the wise, the admiration of the gods, the despair of him that lacks, and the happiness of him that has, the father of delicacy, daintiness, elegance, and grace, of longing and desire, heedful of the good and heedless of the bad, in toil or terror, e in drink or dialectic, our helmsman and helper, our pilot and preserver, the richest ornament of heaven and earth alike, and, to conclude, the noblest and the loveliest of leaders, whom every one of us must follow, raising our voices in harmony with the heavenly song of Love that charms both mortal and immortal hearts.

And there, my dear Phaedruss, he said, you have my speech. Such is my offering to the god of love. I have done my best to be at once amusing and instructive.

198 Agathon took his seat, continued Aristodemus, amid a burst of applause, for we all felt that his youthful eloquence did honor to himself as well as to the god.

Then Socrates turned to Eryximachus and said, Well, Eryximachus, you laughed at my misgivings, but you see—they've been justified by the event. There's not much left for *me* to say after the wonderful speech we've just had from Agathon.

I admit, Eryximachus replied, that your prognosis was correct so far as Agathon's eloquence was concerned, but as to your own embarrassment, I'm not so sure.

b My dear sir, protested Socrates, what chance have I or anyone of knowing what to say, after listening to such a flood of eloquence as that? The opening, I admit, was nothing out of the way, but when he came to his peroration, why, he held us all spellbound with the sheer beauty of his diction, while I, personally, was so mortified when I compared it with the best that I could ever hope to do, that for two pins I'd have tried to sneak away. Besides, his speech reminded me so c strongly of that master of rhetoric, Gorgias, that I couldn't help thinking of Odysseus, and his fear that Medusa would rise from the lower world among the ghosts, and I was afraid that when Agathon got near the end he would arm his speech against mine with the Gorgon's head of Gorgias' eloquence, and strike me as dumb as a stone.

d And then I saw what a fool I'd been to agree to take part in this eulogy of yours, and, what was worse, to claim a special knowledge of the subject, when, as it turned out, I had not the least idea how this or any other eulogy should be conducted. I had imagined in my innocence that one began by stating the facts about the matter in hand, and then proceeded to pick out the most attractive points and display them to the best advantage. And I flattered myself that my speech would be a great success, because I knew the facts. But the truth, it seems, is the last thing the successful eulogist cares about; on the contrary, what he does is simply to run through all the attributes of

power and virtue, however irrelevant they may be, and the whole thing may be a pack of lies, for all it seems to matter. e

I take it then that what we undertook was to flatter, rather than to praise, the god of love, and that's why you're all prepared to say the first thing about him that comes into your heads, and to claim that he either is, or is the cause of, everything that is loveliest and best. And of course the uninitiated are impressed by the beauty and grandeur of your encomiums; yet those who know will not be taken in so easily. 199 Well then, I repeat, the whole thing was a misunderstanding, and it was only in my ignorance that I agreed to take part at all. I protest, with Euripides' Hippolytus, it was my lips that promised, not my soul, and that, gentlemen, is that. I won't have anything to do with your eulogy, and what is more, I couldn't if I tried. But I don't mind telling you the truth about Love, if you're interested; only, if I do, I must tell b it in my own way, for I'm not going to make a fool of myself, at my age, trying to imitate the grand manner that sits so well on the rest of you. Now, Phaedrus, it's for you to say. Have you any use for a speaker who only cares whether his matter is correct and leaves his manner to take care of itself?

Whereupon Phaedrus and the others told him to go ahead and c make whatever kind of speech he liked.

Very well, said he, but there's just one other thing. Has our chairman any objection to my asking Agathon a few simple questions? I want to make certain we're not at cross-purposes before I begin my speech.

Ask what you like, said Phaedrus. I don't mind.

Whereupon Socrates began, so far as Aristodemus could trust his memory, as follows.

I must say, my dear Agathon, that the remarks with which you prefaced your speech were very much to the point. You were quite right in saying that the first thing you had to do was to acquaint us with the nature of the god, and the second to tell us what he did. Yes, your introduction was admirable. But now that we've had the pleasure of hearing your magnificent description of Love, there's just one little point I'm not quite clear about. Tell me. Do you think it is the nature of Love to be the love of somebody, or of nobody? I don't d mean, is he a mother's or a father's love? That would be a silly sort of question, but suppose I were to ask you whether a father, as a father, must be *somebody's* father, or not; surely the only reasonable answer would be that a father must be the father of a son or a daughter. Am I right?

Why, yes, said Agathon.

And could we say the same thing about a mother?

Yes.

Good. And now, if you don't mind answering just one or two more e questions, I think you'll see what I'm driving at. Suppose I were to ask,

what about a brother, *as* a brother? Must he be *somebody's* brother, or not?

Of course he must.

You mean, he must be the brother of a brother or a sister.

Precisely, said Agathon.

Well, then, Socrates went on, I want you to look at Love from the same point of view. Is he the love of something, or of nothing?

200 Of something, naturally.

And now, said Socrates, bearing in mind what Love is the love of, tell me this. Does he long for what he is in love with, or not?

Of course he longs for it.

And does he long for whatever it is he longs for, and is he in love with it, when he's got it, or when he hasn't?

When he hasn't got it, probably.

Then isn't it probable, said Socrates, or rather isn't it certain that everything longs for what it lacks, and that nothing longs for  
b what it doesn't lack? I can't help thinking, Agathon, that that's about as certain as anything could be. Don't you think so?

Yes, I suppose it is.

Good. Now, tell me. Is it likely that a big man will want to be big, or a strong man to be strong?

Not if we were right just now.

Quite, for the simple reason that neither of them would be lacking in that particular respect.

Exactly.

For if, Socrates continued, the strong were to long for strength, and the swift for swiftness, and the healthy for health—for I suppose it *might* be suggested that in such cases as these people long for the very things they have, or are, already, and so I'm trying to imagine  
c such a case, to make quite sure we're on the right track—people in their position, Agathon, if you stop to think about them, are bound here and now to have those very qualities, whether they want them or not; so why should they trouble to want them? And so, if we heard someone saying, 'I'm healthy, and I want to be healthy; I'm rich, and I want to be rich; and in fact I want just what I've got,' I think we should be justified in saying, 'But, my dear sir, you've *got* wealth and  
d health and strength already, and what you want is to go on having them, for at the moment you've got them whether you want them or not. Doesn't it look as if, when you say you want these things here and now, you really mean, what you've got now, you want to go on keeping?' Don't you think, my dear Agathon, that he'd be bound to agree?

Why, of course he would, said Agathon.

Well, then, continued Socrates, desiring to secure something to oneself forever may be described as loving something which is not  
e yet to hand.

Certainly.

And therefore, whoever feels a want is wanting something which is not yet to hand, and the object of his love and of his desire is whatever he isn't, or whatever he hasn't got—that is to say, whatever he is lacking in.

Absolutely.

And now, said Socrates, are we agreed upon the following conclusions? One, that Love is always the love of something, and two, that that something is what he lacks.

Agreed, said Agathon.

201

So far, so good, said Socrates. And now, do you remember what you said were the objects of Love, in your speech just now? Perhaps I'd better jog your memory. I fancy it was something like this—that the actions of the gods were governed by the love of beauty—for of course there was no such thing as the love of ugliness. Wasn't that pretty much what you said?

It was, said Agathon.

No doubt you were right, too, said Socrates. And if that's so, doesn't it follow that Love is the love of beauty, and not of ugliness?

It does.

And haven't we agreed that Love is the love of something which he hasn't got, and consequently lacks?

Yes.

Then Love has no beauty, but is lacking in it?

Yes, that must follow.

Well then, would you suggest that something which lacked beauty and had no part in it was beautiful itself?

Certainly not.

And, that being so, can you still maintain that Love is beautiful? c

To which Agathon could only reply, I begin to be afraid, my dear Socrates, that I didn't know what I was talking about.

Never mind, said Socrates, it was a lovely speech, but there's just one more point. I suppose you hold that the good is also beautiful?

I do.

Then, if Love is lacking in what is beautiful, and if the good and the beautiful are the same, he must also be lacking in what is good.

Just as you say, Socrates, he replied. I'm afraid you're quite unanswerable.

No, no, dear Agathon. It's the truth you find unanswerable, not Socrates. And now I'm going to leave you in peace, because I want to talk about some lessons I was given, once upon a time, by a Mantinean woman called Diotima—a woman who was deeply versed in this and many other fields of knowledge. It was she who brought about a ten years' postponement of the great plague of Athens on the occasion of a certain sacrifice, and it was she who taught me the philosophy of Love. And now I am going to try to connect her teaching—as well d

as I can without her help—with the conclusions that Agathon and I have just arrived at. Like him, I shall begin by stating who and what Love is, and go on to describe his functions, and I think the easiest way will be to adopt Diotima's own method of inquiry by question and answer. I'd been telling her pretty much what Agathon has just been telling me—how Love was a great god, and how he was the love of what is beautiful, and she used the same arguments on me that I've just brought to bear on Agathon to prove that, on my own showing, Love was neither beautiful nor good.

Whereupon, My dear Diotima, I asked, are you trying to make me believe that Love is bad and ugly?

202 Heaven forbid, she said. But do you really think that if a thing isn't beautiful it's therefore bound to be ugly?

Why, naturally.

And that what isn't learned must be ignorant? Have you never heard of something which comes between the two?

And what's that?

Don't you know, she asked, that holding an opinion which is in fact correct, without being able to give a reason for it, is neither true knowledge—how can it be knowledge without a reason?—nor ignorance—for how can we call it ignorance when it happens to be true? So may we not say that a correct opinion comes midway between knowledge and ignorance?

b Yes, I admitted, that's perfectly true.

Very well, then, she went on, why must you insist that what isn't beautiful is ugly, and that what isn't good is bad? Now, coming back to Love, you've been forced to agree that he is neither good nor beautiful, but that's no reason for thinking that he must be bad and ugly. The fact is that he's between the two.

And yet, I said, it's generally agreed that he's a great god.

It all depends, she said, on what you mean by 'generally.' Do you mean simply people that don't know anything about it, or do you include the people that do?

I meant everybody.

c At which she laughed, and said, Then can you tell me, my dear Socrates, how people can agree that he's a great god when they deny that he's a god at all?

What people do you mean? I asked her.

You for one, and I for another.

What on earth do you mean by that?

Oh, it's simple enough, she answered. Tell me, wouldn't you say that all the gods were happy and beautiful? Or would you suggest that any of them were neither?

Good heavens, no! said I.

And don't you call people happy when they possess the beautiful and the good?

Why, of course.

And yet you agreed just now that Love lacks, and consequently a longs for, those very qualities?

Yes, so I did.

Then, if he has no part in either goodness or beauty, how can he be a god?

I suppose he can't be, I admitted.

And now, she said, haven't I proved that you're one of the people who don't believe in the divinity of Love?

Yes, but what can he be, then? I asked her. A mortal?

Not by any means.

Well, what then?

What I told you before—halfway between mortal and immortal.

And what do you mean by that, Diotima?

A very powerful spirit, Socrates, and spirits, you know, are halfway between god and man.

What powers have they, then? I asked.

They are the envoys and interpreters that ply between heaven and earth, flying upward with our worship and our prayers, and descending with the heavenly answers and commandments, and since they are between the two estates they weld both sides together and merge them into one great whole. They form the medium of the prophetic arts, of the priestly rites of sacrifice, initiation, and incantation, of divination and of sorcery, for the divine will not mingle directly with the human, and it is only through the mediation of the spirit world that man can have any intercourse, whether waking or sleeping, with the gods. And the man who is versed in such matters is said to have spiritual powers, as opposed to the mechanical powers of the man who is expert in the more mundane arts. There are many spirits, and many kinds of spirits, too, and Love is one of them.

Then who were his parents? I asked.

I'll tell you, she said, though it's rather a long story. On the day of Aphrodite's birth the gods were making merry, and among them was Resource, the son of Craft. And when they had supped, Need came begging at the door because there was good cheer inside. Now, it happened that Resource, having drunk deeply of the heavenly nectar—for this was before the days of wine—wandered out into the garden of Zeus and sank into a heavy sleep, and Need, thinking that to get a child by Resource would mitigate her penury, lay down beside him and in time was brought to bed of Love. So Love became the follower and servant of Aphrodite because he was begotten on the same day that she was born, and further, he was born to love the beautiful since Aphrodite is beautiful herself.

Then again, as the son of Resource and Need, it has been his fate to be always needy; nor is he delicate and lovely as most of us believe, but harsh and arid, barefoot and homeless, sleeping on the

d naked earth, in doorways, or in the very streets beneath the stars of heaven, and always partaking of his mother's poverty. But, secondly, he brings his father's resourcefulness to his designs upon the beautiful and the good, for he is gallant, impetuous, and energetic, a mighty hunter, and a master of device and artifice—at once desirous and full of wisdom, a lifelong seeker after truth, an adept in sorcery, enchantment, and seduction.

e He is neither mortal nor immortal, for in the space of a day he will be now, when all goes well with him, alive and blooming, and now dying, to be born again by virtue of his father's nature, while what he gains will always ebb away as fast. So Love is never altogether in or out of need, and stands, moreover, midway between ignorance  
204 rance and wisdom. You must understand that none of the gods are seekers after truth. They do not long for wisdom, because they are wise—and why should the wise be seeking the wisdom that is already theirs? Nor, for that matter, do the ignorant seek the truth or crave to be made wise. And indeed, what makes their case so hopeless is that, having neither beauty, nor goodness, nor intelligence, they are satisfied with what they are, and do not long for the virtues they have never missed.

Then tell me, Diotima, I said, who are these seekers after truth, if they are neither the wise nor the ignorant?

b Why, a schoolboy, she replied, could have told you that, after what I've just been saying. They are those that come between the two, and one of them is Love. For wisdom is concerned with the loveliest of things, and Love is the love of what is lovely. And so it follows that Love is a lover of wisdom, and, being such, he is placed between wisdom and ignorance—for which his parentage also is responsible, in that his father is full of wisdom and resource, while his mother is devoid of either.

c Such, my dear Socrates, is the spirit of Love, and yet I'm not altogether surprised at your idea of him, which was, judging by what you said, that Love was the beloved rather than the lover. So naturally you thought of Love as utterly beautiful, for the beloved is, in fact, beautiful, perfect, delicate, and prosperous—very different from the lover, as I have described him.

Very well, dear lady, I replied, no doubt you're right. But in that case, what good can Love be to humanity?

d That's just what I'm coming to, Socrates, she said. So much, then, for the nature and the origin of Love. You were right in thinking that he was the love of what is beautiful. But suppose someone were to say, Yes, my dear Socrates. Quite so, my dear Diotima. But what do you mean by the love of what is beautiful? Or, to put the question more precisely, what is it that the lover of the beautiful is longing for?

He is longing to make the beautiful his own, I said.

Very well, she replied, but your answer leads to another question. What will he gain by making the beautiful his own?

This, as I had to admit, was more than I could answer on the spur of the moment.

Well then, she went on, suppose that, instead of the beautiful, e you were being asked about the good. I put it to you, Socrates. What is it that the lover of the good is longing for?

To make the good his own.

Then what will he gain by making it his own?

I can make a better shot at answering that, I said. He'll gain happiness.

Right, said she, for the happy are happy inasmuch as they possess 205 the good, and since there's no need for us to ask why men should want to be happy, I think your answer is conclusive.

Absolutely, I agreed.

This longing, then, she went on, this love—is it common to all mankind? What do you think, do we all long to make the good our own?

Yes, I said, as far as that goes we're all alike.

Well then, Socrates, if we say that everybody always loves the same thing, does that mean that everybody is in love? Or do we mean b that some of us are in love, while some of us are not?

I was a little worried about that myself, I confessed.

Oh, it's nothing to worry about, she assured me. You see, what we've been doing is to give the name of Love to what is only one single aspect of it; we make just the same mistake, you know, with a lot of other names.

For instance . . . ?

For instance, poetry. You'll agree that there is more than one kind of poetry in the true sense of the word—that is to say, calling something into existence that was not there before, so that every kind of artistic creation is poetry, and every artist is a poet. c

True.

But all the same, she said, we don't call them all poets, do we? We give various names to the various arts, and only call the one particular art that deals with music and meter by the name that should be given to them all. And that's the only art that we call poetry, while those who practice it are known as poets.

Quite.

And that's how it is with Love. For 'Love, that renowned and all-beguiling power,' includes every kind of longing for happiness and for the good. Yet those of us who are subject to this longing in the various fields of business, athletics, philosophy, and so on, are never said to be in love, and are never known as lovers, while the man who devotes himself to what is only one of Love's many activities is given the name that should apply to all the rest as well.

Yes, I said, I suppose you must be right.

I know it has been suggested, she continued, that lovers are people who are looking for their other halves, but as I see it, Socrates,

- e Love never longs for either the half or the whole of anything except the good. For men will even have their hands and feet cut off if they are once convinced that those members are bad for them. Indeed I think we only prize our own belongings in so far as we say that the  
 206 good belongs to us, and the bad to someone else, for what we love is the good and nothing but the good. Or do you disagree?

Good heavens, no! I said.

Then may we state categorically that men are lovers of the good?

Yes, I said, we may.

And shouldn't we add that they long for the good to be their own?

We should.

And not merely to be their own but to be their own forever?

Yes, that must follow.

In short, that Love longs for the good to be his own forever?

Yes, I said, that's absolutely true.

- b Very well, then. And that being so, what course will Love's followers pursue, and in what particular field will eagerness and exertion be known as Love? In fact, what is this activity? Can you tell me that, Socrates?

If I could, my dear Diotima, I retorted, I shouldn't be so much amazed at *your* grasp of the subject, and I shouldn't be coming to you to learn the answer to that very question.

Well, I'll tell you, then, she said. To love is to bring forth upon the beautiful, both in body and in soul.

- c I'm afraid that's too deep, I said, for my poor wits to fathom.

I'll try to speak more plainly, then. We are all of us prolific, Socrates, in body and in soul, and when we reach a certain age our nature urges us to procreation. Nor can we be quickened by ugliness, but only by the beautiful. Conception, we know, takes place when man and woman come together, but there's a divinity in human propagation, an immortal something in the midst of man's mortality which is incompatible with any kind of discord. And ugliness is at

- d odds with the divine, while beauty is in perfect harmony. In propagation, then, Beauty is the goddess of both fate and travail, and so when procreancy draws near the beautiful it grows genial and blithe, and birth follows swiftly on conception. But when it meets with ugliness it is overcome with heaviness and gloom, and turning away it shrinks into itself and is not brought to bed, but still labors under its painful burden. And so, when the procreant is big with child, he is strangely stirred by the beautiful, because he knows that beauty's  
 e tenant will bring his travail to an end. So you see, Socrates, that Love is not exactly a longing for the beautiful, as you suggested.

Well, what is it, then?

A longing not for the beautiful itself, but for the conception and generation that the beautiful effects.

Yes. No doubt you're right.

Of course I'm right, she said. And why all this longing for propagation? Because this is the one deathless and eternal element in our mortality. And since we have agreed that the lover longs for the good to be his own forever, it follows that we are bound to long for immortality as well as for the good—which is to say that Love is a longing for immortality. 207

So much I gathered, gentlemen, at one time and another from Diotima's dissertations upon Love.

And then one day she asked me, Well, Socrates, and what do you suppose is the cause of all this longing and all this love? Haven't you noticed what an extraordinary effect the breeding instinct has upon both animals and birds, and how obsessed they are with the desire, first to mate, and then to rear their litters and their broods, and how the weakest of them are ready to stand up to the strongest in defense of their young, and even die for them, and how they are content to bear the pinch of hunger and every kind of hardship, so long as they can rear their offspring? b

With men, she went on, you might put it down to the power of reason, but how can you account for Love's having such remarkable effects upon the brutes? What do you say to that, Socrates? c

Again I had to confess my ignorance.

Well, she said, I don't know how you can hope to master the philosophy of Love, if *that's* too much for you to understand.

But, my dear Diotima, I protested, as I said before, that's just why I'm asking you to teach me—because I realize how ignorant I am. And I'd be more than grateful if you'd enlighten me as to the cause not only of this, but of all the various effects of Love.

Well, she said, it's simple enough, so long as you bear in mind what we agreed was the object of Love. For here, too, the principle holds good that the mortal does all it can to put on immortality. And how can it do that except by breeding, and thus ensuring that there will always be a younger generation to take the place of the old? d

Now, although we speak of an individual as being the same so long as he continues to exist in the same form, and therefore assume that a man is the same person in his dotage as in his infancy, yet, for all we call him the same, every bit of him is different, and every day he is becoming a new man, while the old man is ceasing to exist, as you can see from his hair, his flesh, his bones, his blood, and all the rest of his body. And not only his body, for the same thing happens to his soul. And neither his manners, nor his disposition, nor his thoughts, nor his desires, nor his pleasures, nor his sufferings, nor his fears are the same throughout his life, for some of them grow, while others disappear. e

And the application of this principle to human knowledge is even more remarkable, for not only do some of the things we know increase, while some of them are lost, so that even in our knowledge

we are not always the same, but the principle applies as well to every single branch of knowledge. When we say we are studying, we really mean that our knowledge is ebbing away. We forget, because our knowledge disappears, and we have to study so as to replace what we  
 208 are losing, so that the state of our knowledge may seem, at any rate, to be the same as it was before.

This is how every mortal creature perpetuates itself. It cannot, like the divine, be still the same throughout eternity; it can only leave behind new life to fill the vacancy that is left in its species by obsolescence. This, my dear Socrates, is how the body and all else that is  
 b temporal partakes of the eternal; there is no other way. And so it is no wonder that every creature prizes its own issue, since the whole creation is inspired by this love, this passion for immortality.

Well, Diotima, I said, when she had done, that's a most impressive argument. I wonder if you're right.  
 c

Of course I am, she said with an air of authority that was almost professorial. Think of the ambitions of your fellow men, and though at first they may strike you as upsetting my argument, you'll see how right I am if you only bear in mind that men's great incentive is the love of glory, and that their one idea is 'To win eternal mention in the deathless roll of fame.'

For the sake of fame they will dare greater dangers, even, than for their children; they are ready to spend their money like water and to wear their fingers to the bone, and, if it comes to that, to die.

Do you think, she went on, that Alcestis would have laid down her life to save Admetus, or that Achilles would have died for the love he bore Patroclus, or that Codrus, the Athenian king, would have sacrificed himself for the seed of his royal consort, if they had not hoped to win 'the deathless name for valor,' which, in fact, posterity has granted them? No, Socrates, no. Every one of us, no matter what he does, is longing for the endless fame, the incomparable glory that is theirs, and the nobler he is, the greater his ambition, because he  
 d  
 e is in love with the eternal.

Well then, she went on, those whose procreancy is of the body turn to woman as the object of their love, and raise a family, in the blessed hope that by doing so they will keep their memory green,  
 209 'through time and through eternity.' But those whose procreancy is of the spirit rather than of the flesh—and they are not unknown, Socrates—conceive and bear the things of the spirit. And what are they? you ask. Wisdom and all her sister virtues; it is the office of every poet to beget them, and of every artist whom we may call creative.

Now, by far the most important kind of wisdom, she went on, is that which governs the ordering of society, and which goes by the  
 b names of justice and moderation. And if any man is so closely allied to the divine as to be teeming with these virtues even in his youth,

and if, when he comes to manhood, his first ambition is to be begetting, he too, you may be sure, will go about in search of the loveliness—and never of the ugliness—on which he may beget. And hence his procreant nature is attracted by a comely body rather than an ill-favored one, and if, besides, he happens on a soul which is at once beautiful, distinguished, and agreeable, he is charmed to find so welcome an alliance. It will be easy for him to talk of virtue to such a listener, and to discuss what human goodness is and how the virtuous should live—in short, to undertake the other's education. c

And, as I believe, by constant association with so much beauty, and by thinking of his friend when he is present and when he is away, he will be delivered of the burden he has labored under all these years. And what is more, he and his friend will help each other rear the issue of their friendship—and so the bond between them will be more binding, and their communion even more complete, than that which comes of bringing children up, because they have created something lovelier and less mortal than human seed.

And I ask you, who would not prefer such fatherhood to merely human propagation, if he stopped to think of Homer, and Hesiod, and all the greatest of our poets? Who would not envy them their immortal progeny, their claim upon the admiration of posterity? d

Or think of Lycurgus, she went on, and what offspring he left behind him in his laws, which proved to be the saviors of Sparta and, perhaps, the whole of Hellas. Or think of the fame of Solon, the father of Athenian law, and think of all the other names that are remembered in Grecian cities and in lands beyond the sea for the noble deeds they did before the eyes of all the world, and for all the diverse virtues that they fathered. And think of all the shrines that have been dedicated to them in memory of their immortal issue, and tell me if you can of *anyone* whose mortal children have brought him so much fame. e

Well now, my dear Socrates, I have no doubt that even you might be initiated into these, the more elementary mysteries of Love. But I don't know whether you could apprehend the final revelation, for so far, you know, we are only at the bottom of the true scale of perfection. 210

Never mind, she went on, I will do all I can to help you understand, and you must strain every nerve to follow what I'm saying.

Well then, she began, the candidate for this initiation cannot, if his efforts are to be rewarded, begin too early to devote himself to the beauties of the body. First of all, if his preceptor instructs him as he should, he will fall in love with the beauty of one individual body, so that his passion may give life to noble discourse. Next he must consider how nearly related the beauty of any one body is to the beauty of any other, when he will see that if he is to devote himself to loveliness of form it will be absurd to deny that the beauty of each b

and every body is the same. Having reached this point, he must set himself to be the lover of every lovely body, and bring his passion for the one into due proportion by deeming it of little or of no importance.

c Next he must grasp that the beauties of the body are as nothing to the beauties of the soul, so that wherever he meets with spiritual loveliness, even in the husk of an unlovely body, he will find it beautiful enough to fall in love with and to cherish—and beautiful enough to quicken in his heart a longing for such discourse as tends toward the building of a noble nature. And from this he will be led to contemplate the beauty of laws and institutions. And when he discovers how nearly every kind of beauty is akin to every other he will conclude that the beauty of the body is not, after all, of so great moment.

d And next, his attention should be diverted from institutions to the sciences, so that he may know the beauty of every kind of knowledge. And thus, by scanning beauty's wide horizon, he will be saved from a slavish and illiberal devotion to the individual loveliness of a single boy, a single man, or a single institution. And, turning his eyes toward the open sea of beauty, he will find in such contemplation the seed of the most fruitful discourse and the loftiest thought, and reap a golden harvest of philosophy, until, confirmed and strengthened, he will come upon one single form of knowledge, the knowledge of the beauty I am about to speak of.

e And here, she said, you must follow me as closely as you can.

Whoever has been initiated so far in the mysteries of Love and has viewed all these aspects of the beautiful in due succession, is at last drawing near the final revelation. And now, Socrates, there bursts upon him that wondrous vision which is the very soul of the beauty  
211 he has toiled so long for. It is an everlasting loveliness which neither comes nor goes, which neither flowers nor fades, for such beauty is the same on every hand, the same then as now, here as there, this way as that way, the same to every worshiper as it is to every other.

Nor will his vision of the beautiful take the form of a face, or of hands, or of anything that is of the flesh. It will be neither words, nor knowledge, nor a something that exists in something else, such as a living creature, or the earth, or the heavens, or anything that is—but  
b subsisting of itself and by itself in an eternal oneness, while every lovely thing partakes of it in such sort that, however much the parts may wax and wane, it will be neither more nor less, but still the same inviolable whole.

And so, when his prescribed devotion to boyish beauties has carried our candidate so far that the universal beauty dawns upon his inward sight, he is almost within reach of the final revelation. And  
c this is the way, the only way, he must approach, or be led toward, the sanctuary of Love. Starting from individual beauties, the quest for the

universal beauty must find him ever mounting the heavenly ladder, stepping from rung to rung—that is, from one to two, and from two to *every* lovely body, from bodily beauty to the beauty of institutions, from institutions to learning, and from learning in general to the special lore that pertains to nothing but the beautiful itself—until at last he comes to know what beauty is.

And if, my dear Socrates, Diotima went on, man's life is ever worth the living, it is when he has attained this vision of the very soul of beauty. And once you have seen it, you will never be seduced again by the charm of gold, of dress, of comely boys, or lads just ripening to manhood; you will care nothing for the beauties that used to take your breath away and kindle such a longing in you, and many others like you, Socrates, to be always at the side of the beloved and feasting your eyes upon him, so that you would be content, if it were possible, to deny yourself the grosser necessities of meat and drink, so long as you were with him.

But if it were given to man to gaze on beauty's very self—unsullied, unalloyed, and freed from the mortal taint that haunts the frailer loveliness of flesh and blood—if, I say, it were given to man to see the heavenly beauty face to face, would you call *his*, she asked me, an unenviable life, whose eyes had been opened to the vision, and who had gazed upon it in true contemplation until it had become his own forever?

And remember, she said, that it is when he looks upon beauty's visible presentment, and only then, that a man will be quickened with the true, and not the seeming, virtue—for it is virtue's self that quickens him, not virtue's semblance. And when he has brought forth and reared this perfect virtue, he shall be called the friend of god, and if ever it is given to man to put on immortality, it shall be given to him.

This, Phaedrus—this, gentlemen—was the doctrine of Diotima. I was convinced, and in that conviction I try to bring others to the same creed, and to convince them that, if we are to make this gift our own, Love will help our mortal nature more than all the world. And this is why I say that every man of us should worship the god of love, and this is why I cultivate and worship all the elements of Love myself, and bid others do the same. And all my life I shall pay the power and the might of Love such homage as I can. So you may call this my eulogy of Love, Phaedrus, if you choose; if not, well, call it what you like.

Socrates took his seat amid applause from everyone but Aristophanes, who was just going to take up the reference Socrates had made to his own theories, when suddenly there came a knocking at the outer door, followed by the notes of a flute and the sound of festive brawling in the street.

d Go and see who it is, said Agathon to the servants. If it's one of our particular friends you can ask him in, but if not, you'd better say the party's over and there's nothing left to drink.

Well, it wasn't long before they could hear Alcibiades shouting in the courtyard, evidently very drunk, and demanding where Agathon was, because he *must* see Agathon at once. So the flute girl and some of his other followers helped him stagger in, and there he stood in the doorway, with a mass of ribbons and an enormous wreath of ivy and  
e violets sprouting on his head, and addressed the company.

Good evening, gentlemen, he said. I'm pretty well bottled already, so if you'd rather I didn't join the party, only say the word and I'll go away, as soon as I've hung this wreath on Agathon's head—which is what I really came for. I couldn't get along yesterday, so here I am tonight, with a bunch of ribbons on my head, all ready to take them off and put them on the head of the cleverest, the most attractive, and, I may say—well, anyway, I'm going to crown him. And now I suppose you're laughing at me, just because I'm drunk. Go on, have  
213 your laugh out, don't mind me. I'm not so drunk that I don't know what I'm saying, and you can't deny it's true. Well, what do you say, gentlemen? Can I come in on that footing? And shall we all have a drink together, or shan't we?

At that they all cheered and told him to come in and make himself at home, while Agathon gave him a more formal invitation. And while his people helped him in he started pulling off the ribbons, so that he could transfer them to Agathon's head as soon as he was near enough. As it happened, the wreath slipped over his eyes and he didn't notice Socrates, although he sat down on the same couch, between him and Agathon—for Socrates had made room for him as soon as he  
b came in. So down he sat, with a 'How d' you do!' to Agathon, and began to tie the ribbons round his head.

Then Agathon said to the servants, Here, take off Alcibiades' shoes, so that we can all three make ourselves comfortable.

Yes, do, said Alcibiades. But just a minute, who's the third?

And when he turned round and saw who it was, he leaped out of his seat and cried, Well I'll be damned! You again, Socrates! So that's what you're up to, is it?—The same old game of lying in wait and  
c popping out at me when I least expect you. Well, what's in the wind tonight? And what do you mean by sitting *here*, and not by Aristophanes or one of these other humorists? Why make such a point of sitting next to the handsomest man in the room?

I say, Agathon, said Socrates, I'll have to ask you to protect me. You know, it's a dreadful thing to be in love with Alcibiades. It's been  
d the same ever since I fell in love with him; I've only got to look at anyone who's in the least attractive, or say a single word to him, and he flies into a fit of jealous fury, and calls me the most dreadful names, and behaves as if it was all he could do to keep his hands off

me. So I hope you'll keep an eye on him, in case he tries to do me an injury. If you can get him to be friends, so much the better, but if you can't, and if he gets violent, you'll really have to protect me—for I shudder to think what lengths he might go to in his amorous transports.

Friends with *you*? said Alcibiades. Not on your life! I'll be getting my own back on you one of these days, but at the moment—Agathon, give me back some of those ribbons, will you? I want to crown Socrates' head as well—and a most extraordinary head it is. I don't want him to say I wreathed a garland for Agathon and none for him, when *his* words have been too much for all the world—and all his life too, Agathon, not just the other day, like yours.

So saying, he crowned Socrates' head with a bunch of ribbons, and took his seat again.

And now, gentlemen, he said, as he settled himself on the couch, can I be right in thinking that you're sober? I say, you know, we can't have this! Come on, drink up! You promised to have a drink with me. Now, I'll tell you, there's no one fit to take the chair at this meeting—until you've all got reasonably drunk—but me. Come on, Agathon, tell them to bring out something that's worth drinking out of.

No, never mind, he went on. Here, you, just bring me that wine cooler, will you?

He saw it would hold a couple of quarts or so. He made them fill it up, and took the first drink himself, after which he told them to fill it again for Socrates, and remarked to the others, But I shan't get any change out of *him*. It doesn't matter *how* much you make him drink, it never makes him drunk.

Meanwhile the servant had filled the wine cooler up for Socrates and he had his drink.

But here Eryximachus broke in, Is this the way to do things, Alcibiades? he asked. Is there to be no grace before we drink? Are we to pour the wine down our throats like a lot of thirsty savages?

Why, there's Eryximachus, said Alcibiades, the noblest, soberest father's soberest, noblest son, what? Hallo, Eryximachus!

Hallo yourself, said Eryximachus. Well, what do you say?

What do *you* say? retorted Alcibiades. We have to take *your* orders, you know. What's the tag?—'A good physician's more than all the world.'<sup>8</sup> So let's have your prescription.

Here it is, then, said Eryximachus. Before you came in we had arranged for each of us in turn, going round from left to right, to make the best speech he could in praise of Love. Well, we've all had our turn; so since you've had your drink without having made a speech I think it's only right that you should make it now. And then, when you've finished, you can tell Socrates to do whatever you like and he

<sup>8</sup> *Iliad* II.514.

can do the same to the next man on his right, and so on all the way round.

That's a very good idea, Eryximachus, said Alcibiades. Only you know it's hardly fair to ask a man that's more than half cut already to compete with a lot of fellows who are practically sober. And another thing, my dear Eryximachus. You mustn't believe a word of what Socrates has just been telling you. Don't you see that it's just the other way round? It's him that can't keep his hands off *me* if he hears me say a good word for anyone—god or man—but him.

Oh, do be quiet, said Socrates.

You can't deny it, retorted Alcibiades. God knows I've never been able to praise anyone else in front of you.

Now there's a good idea, said Eryximachus. Why don't you give us a eulogy of Socrates?

Do you really mean that? asked Alcibiades. Do you think I ought to, Eryximachus? Shall I go for him, and let you all hear me get my own back?

Here, I say, protested Socrates. What are you up to now? Do you want to make me look a fool with this eulogy, or what?

I'm simply going to tell the truth—you won't mind that, will you?

Oh, of course, said Socrates, you may tell the truth; in fact I'll go so far as to say you must.

Then here goes, said Alcibiades. There's one thing, though. If I say a word that's not the solemn truth I want you to stop me right away and tell me I'm a liar—but I promise you it won't be my fault if I do. On the other hand, you mustn't be surprised if I tell them about you just as it comes into my head, and jump from one thing to another. You can't expect anyone that's as drunk as I am to give a clear and systematic account of all *your* eccentricities.

Well, gentlemen, I propose to begin my eulogy of Socrates with a simile. I expect he'll think I'm making fun of him, but, as it happens, I'm using this particular simile not because it's funny, but because it's true. What he reminds me of more than anything is one of those little silenoi that you see on the statuary stalls; you know the ones I mean—they're modeled with pipes or flutes in their hands, and when you open them down the middle there are little figures of the gods inside. And then again, he reminds me of Marsyas the satyr.

Now I don't think even you, Socrates, will have the face to deny that you *look* like them, but the resemblance goes deeper than that, as I'm going to show. You're quite as impudent as a satyr, aren't you? If you plead not guilty I can call witnesses to prove it. And aren't you a piper as well? I should think you were—and a far more wonderful piper than Marsyas, who had only to put his flute to his lips to bewitch mankind. It can still be done, too, by anyone who can play the tunes he used to play. Why, there wasn't a note of Olympus'

melodies that he hadn't learned from Marsyas. And whoever plays them, from an absolute virtuoso to a twopenny-halfpenny flute girl, the tunes will still have a magic power, and by virtue of their own divinity they will show which of us are fit subjects for divine initiation.

Now the only difference, Socrates, between you and Marsyas is that you can get just the same effect without any instrument at all—with nothing but a few simple words, not even poetry. Besides, when we listen to anyone else talking, however eloquent he is, we don't really care a damn what he says. But when we listen to you, or to someone else repeating what you've said, even if he puts it ever so badly, and never mind whether the person who's listening is man, woman, or child, we're absolutely staggered and bewitched. And speaking for myself, gentlemen, if I wasn't afraid you'd tell me I was completely bottled, I'd swear on oath what an extraordinary effect his words have had on me—and still do, if it comes to that. For the moment I hear him speak I am smitten with a kind of sacred rage, worse than any Corybant, and my heart jumps into my mouth and the tears start into my eyes—oh, and not only me, but lots of other men.

Yes, I've heard Pericles and all the other great orators, and very eloquent I thought they were, but they never affected me like that; they never turned my whole soul upside down and left me feeling as if I were the lowest of the low. But this latter-day Marsyas, here, has often left me in such a state of mind that I've felt I simply couldn't go on living the way I did—now, Socrates, you can't say that isn't true—and I'm convinced that if I were to listen to him at this very moment I'd feel just the same again. I simply couldn't help it. He makes me admit that while I'm spending my time on politics I am neglecting all the things that are crying for attention in myself. So I just refuse to listen to him—as if he were one of those Sirens, you know—and get out of earshot as quick as I can, for fear he keep me sitting listening till I'm positively senile.

And there's one thing I've never felt with anybody else—not the kind of thing you'd expect to find in me, either—and that is a sense of shame. Socrates is the only man in the world that can make me feel ashamed. Because there's no getting away from it, I know I ought to do the things he tells me to, and yet the moment I'm out of his sight I don't care what I do to keep in with the mob. So I dash off like a runaway slave, and keep out of his way as long as I can, and then next time I meet him I remember all that I had to admit the time before, and naturally I feel ashamed. There are times when I honestly be glad to hear that he was dead, and yet I know that if he did die I'd be more upset than ever—so I ask you, what is a man to do?

Well, that's what this satyr does for me, and plenty like me, with his pipings. And now let me show you how apt my comparison was

in other ways, and what extraordinary powers he has got. Take my word for it, there's not one of you that really knows him. But now I've  
 d started on him, I'll show him up. Notice, for instance, how Socrates is attracted by good-looking people, and how he hangs around them, positively gaping with admiration. Then again, he loves to appear utterly uninformed and ignorant—isn't that like Silenus? Of course it is. Don't you see that it's just his outer casing, like those little figures I was telling you about? But believe me, friends and fellow drunks, you've only got to open him up and you'll find him so full of temperance and sobriety that you'll hardly believe your eyes. Be-  
 e cause, you know, he doesn't really care a row of pins about good looks—on the contrary, you can't think how much he looks down on them—or money, or any of the honors that most people care about. He doesn't care a curse for anything of that kind, or for any of us either—yes, I'm telling you—and he spends his whole life playing his little game of irony, and laughing up his sleeve at all the world.

I don't know whether anybody else has ever opened him up when he's been being serious, and seen the little images inside, but  
 217 I saw them once, and they looked so godlike, so golden, so beautiful, and so utterly amazing that there was nothing for it but to do exactly what he told me. I used to flatter myself that he was smitten with my youthful charms, and I thought this was an extraordinary piece of luck because I'd only got to be a bit accommodating and I'd hear everything he had to say—I tell you, I'd a pretty high opinion of my own attractions. Well, I thought it over, and then, instead of taking  
 b a servant with me as I always used to, I got rid of the man, and went to meet Socrates by myself. Remember, I'm bound to tell you the whole truth and nothing but the truth; so you'd all better listen very carefully, and Socrates must pull me up if I begin telling lies.

Well, gentlemen, as I was saying, I used to go and meet him, and then, when we were by ourselves, I quite expected to hear some of those sweet nothings that lovers whisper to their darlings when they get them alone—and I liked the idea of that. But not a bit of it! He'd go on talking just the same as usual till it was time for him to go, and then he said good-by and went.

c So then I suggested we should go along to the gymnasium and take a bit of exercise together, thinking that something was bound to happen there. And, would you believe it, we did our exercises together and wrestled with each other time and again, with not a soul in sight, and still I got no further. Well, I realized that there was nothing to be gained in *that* direction, but having put my hand to the plow I wasn't going to look back till I was absolutely certain how I stood; so I decided to make a frontal attack. I asked him to dinner, just as if I were the lover trying to seduce his beloved, instead of the other way round. It wasn't easy, either, to get him to accept, but in the end I  
 d managed to.

Well, the first time he came he thought he ought to go as soon as we'd finished dinner, and I was too shy to stop him. But next time, I contrived to keep him talking after dinner, and went on far into the night, and then, when he said he must be going, I told him it was much too late and pressed him to stay the night with me. So he turned in on the couch beside me—where he'd sat at dinner—and the two of us had the room to ourselves.

So far I've said nothing I need blush to repeat in any company, e but you'd never have heard what I'm going to tell you now if there wasn't something in the proverb, 'Drunkards and children tell the truth'—drunkards anyway. Besides, having once embarked on my eulogy of Socrates it wouldn't be fair not to tell you about the arrogant way he treated me. People say, you know, that when a man's been bitten by a snake he won't tell anybody what it feels like except a fellow sufferer, because no one else would sympathize with him if the pain 218 drove him into making a fool of himself. Well, that's just how I feel, only I've been bitten by something much more poisonous than a snake; in fact, mine is the most painful kind of bite there is. I've been bitten in the heart, or the mind, or whatever you like to call it, by Socrates' philosophy, which clings like an adder to any young and gifted mind it can get hold of, and does exactly what it likes with it. And looking round me, gentlemen, I see Phaedrus, and Agathon, and Eryximachus, and Pausanias, and Aristodemus, and Aristophanes, b and all the rest of them—to say nothing of Socrates himself—and every one of you has had his taste of this philosophical frenzy, this sacred rage; so I don't mind telling *you* about it because I know you'll make allowances for me—both for the way I behaved with Socrates and for what I'm saying now. But the servants must put their fingers in their ears, and so must anybody else who's liable to be at all profane or beastly.

Well then, gentlemen, when the lights were out and the servants had all gone, I made up my mind to stop beating about the bush and c tell him what I thought point-blank.

So I nudged him and said, Are you asleep, Socrates?

No, I'm not, he said.

Then do you know what I think? I asked.

Well, what?

I think, I said, you're the only lover I've ever had who's been really worthy of me. Only you're too shy to talk about it. Well, this is how I look at it. I think it'd be just as absurd to refuse you *this* as anything else you wanted that belonged to me or any of my friends. If d there's one thing I'm keen on it's to make the best of myself, and I think you're more likely to help me there than anybody else, and I'm sure I'd find it harder to justify myself to men of sense for refusing to accommodate a friend of that sort than to defend myself to the vulgar if I *had* been kind to him.

He heard me out, and then said with that ironical simplicity of his, My dear Alcibiades, I've no doubt there's a lot in what you say, if  
 e you're right in thinking that I have some kind of power that would make a better man of you, because in that case you must find me so extraordinarily beautiful that your own attractions must be quite eclipsed. And if you're trying to barter your own beauty for the beauty you have found in me, you're driving a very hard bargain, let me tell you. You're trying to exchange the semblance of beauty for the thing itself—like Diomede and Glaucus swapping bronze for gold. But you know, my dear fellow, you really must be careful. Suppose you're mak-  
 219 ing a mistake, and I'm not worth anything at all. The mind's eye begins to see clearly when the outer eyes grow dim—and I fancy yours are still pretty keen.

To which I replied, Well, I've told you exactly how I feel about it, and now it's for you to settle what's best for us both.

That sounds reasonable enough, he said. We must think it over  
 b one of these days, and do whatever seems best for the two of us—about this and everything else.

Well, by this time I felt that I had shot my bolt, and I'd a pretty shrewd idea that I'd registered a hit. So I got up, and, without giving him a chance to say a word, I wrapped my own cloak round him—for this was in the winter—and, creeping under his shabby old mantle, I took him in my arms and lay there all night with this godlike and ex-  
 c traordinary man—you can't deny that, either, Socrates. And after *that* he had the insolence, the infernal arrogance, to laugh at my youthful beauty and jeer at the one thing I was really proud of, gentlemen of the jury—I say 'jury' because that's what you're here for, to try the man Socrates on the charge of arrogance—and believe it, gentlemen, or believe it not, when I got up next morning I had no more *slept* with Socrates, within the meaning of the act, than if he'd been  
 d my father or an elder brother.

You can guess what I felt like after *that*. I was torn between my natural humiliation and my admiration for his manliness and self-control, for this was strength of mind such as I had never hoped to meet. And so I couldn't take offense and cut myself off from his society, but neither was there any way I could think of to attract him. I  
 e knew very well that I'd no more chance of getting at him with money than I had of getting at Ajax with a spear, and the one thing I'd made sure would catch him had already failed. So I was at my wits' end, and went about in a state of such utter subjection to the man as was never seen before.

It was after all this, you must understand, that we were both sent on active service to Potidaea, where we messed together. Well, to begin with, he stood the hardships of the campaign far better than I  
 220 did, or anyone else, for that matter. And if—and it's always liable to happen when there's fighting going on—we were cut off from our sup-

plies, there was no one who put such a good face on it as he. But on the other hand, when there was plenty to eat he was the one man who really seemed to enjoy it, and though he didn't drink for choice, if we ever pressed him to he'd beat the lot of us. And, what's the most extraordinary thing of all, there's not a man living that's ever seen Socrates drunk. And I dare say he'll have a chance to show what he's made of before *this* party's over.

Then again, the way he got through that winter was most impressive, and the winters over there are pretty shocking. There was one time when the frost was harder than ever, and all the rest of us <sup>b</sup> stayed inside, or if we did go out we wrapped ourselves up to the eyes and tied bits of felt and sheepskins over our shoes, but Socrates went out in the same old coat he'd always worn, and made less fuss about walking on the ice in his bare feet than we did in our shoes. So much so, that the men began to look at him with some suspicion and actually took his toughness as a personal insult to themselves.

Well, so much for that. And now I must tell you about another <sup>c</sup> thing 'our valiant hero dared and did' <sup>9</sup> in the course of the same campaign. He started wrestling with some problem or other about sunrise one morning, and stood there lost in thought, and when the answer wouldn't come he still stood there thinking and refused to give it up. Time went on, and by about midday the troops noticed what was happening, and naturally they were rather surprised and began telling each other how Socrates had been standing there thinking ever since daybreak. And at last, toward nightfall, some of the Ionians brought out their bedding after supper—this was in the summer, of course— <sup>d</sup> partly because it was cooler in the open air, and partly to see whether he was going to stay there all night. Well, there he stood till morning, and then at sunrise he said his prayers to the sun and went away.

And now I expect you'd like to hear what kind of a show he made when we went into action, and I certainly think you ought to know. They gave me a decoration after one engagement, and do you know, <sup>e</sup> Socrates had saved my life, absolutely singlehanded. I'd been wounded and he refused to leave me, and he got me out of it, too, armor and all. And as you know, Socrates, I went straight to the general staff and told them *you* ought to have the decoration, and you can neither deny that nor blame me for doing it. But the authorities thought they'd rather give it to me, because of my family connections and so forth, and you were even keener than they were that I should have it instead of you.

And then, gentlemen, you should have seen him when we were in <sup>221</sup> retreat from Delium. I happened to be in the cavalry, while he was serving with the line. Our people were falling back in great disorder and he was retreating with Laches when I happened to catch sight of

<sup>9</sup> *Odyssey* 4.252.

them. I shouted to them not to be downhearted and promised to stand by them. And this time I'd a better chance of watching Socrates than I'd had at Potidaea—you see, being mounted, I wasn't quite so frightened. And I noticed for one thing how much cooler he was than Laches, and for another how—to borrow from a line of yours, Aristophanes—he was walking with the same 'lofty strut and sideways glance'<sup>10</sup> that he goes about with here in Athens. His 'sideways glance' was just as unconcerned whether he was looking at his own friends or at the enemy, and you could see from half a mile away that if you tackled *him* you'd get as good as you gave—with the result that he and Laches both got clean away. For you're generally pretty safe if that's the way you look when you're in action; it's the man whose one idea it is to get away that the other fellow goes for.

- c Well, there's a lot more to be said about Socrates, all very peculiar and all very much to his credit. No doubt there's just as much to be said about any of his little ways, but personally I think the most amazing thing about him is the fact that he is absolutely unique; there's no one like him, and I don't believe there ever was. You could point to some likeness to Achilles in Brasidas and the rest of them; you might compare Nestor and Antenor, and so on, with Pericles. There are plenty of such parallels in history, but you'll never find anyone like  
d Socrates, or any ideas like his ideas, in our own times or in the past—unless, of course, you take a leaf out of my book and compare him, not with human beings, but with sileni and satyrs—and the same with his ideas.

- Which reminds me of a point I missed at the beginning; I should have explained how his arguments, too, were exactly like those sileni  
e that open down the middle. Anyone listening to Socrates for the first time would find his arguments simply laughable; he wraps them up in just the kind of expressions you'd expect of such an insufferable satyr. He talks about pack asses and blacksmiths and shoemakers and tanners, and he always seems to be saying the same old thing in just the same old way, so that anyone who wasn't used to his style and wasn't very quick on the uptake would naturally take it for the most  
222 utter nonsense. But if you open up his arguments, and really get into the skin of them, you'll find that they're the only arguments in the world that have any sense at all, and that nobody else's are so godlike, so rich in images of virtue, or so peculiarly, so entirely pertinent to those inquiries that help the seeker on his way to the goal of true nobility.

- And there, gentlemen, you have my eulogy of Socrates, with a few complaints thrown in about the unspeakable way he's treated me.  
b I'm not the only one, either; there's Charmides, and Euthydemus, and ever so many more. He's made fools of them all, just as if he were the

<sup>10</sup> Aristophanes, *Clouds* 362.

beloved, not the lover. Now Agathon, I own good, so that you'll know what to look for in our misfortunes, and not wait for home to you, like the poor fool in the adage.

As Alcibiades took his seat beside him, his frankness—especially as he seemed to be a good deal drunk—was a good deal. But the latter said, I don't believe you're as drunk as you are. Alcibiades, or you'd never have given the argument such a subtle and obscured the real issue. What you really after—though I only slipped it in casually toward the end—between me and Agathon, so that I as your lover should both belong to you and nobody else. But he as your beloved, I can see what you're getting at with all this. I can't humbug me; I only hope, Agathon, my dear, that he won't silence busi-ness. I only hope you'll be very careful not to let anybody come between us, and I

I'm inclined to think you're right, Socrates, said Agathon. Remember how he sat down in the middle so as to keep us both. Remember come round and sit next to you, so that won't help him very much. But I'll e

Yes, do, said Socrates. Come round the other side.

Oh, God! cried Alcibiades. Look what I have to put up with. I'm determined to drive me off the field. All the same, Socrates, I think it might let Agathon sit in the middle.

Oh, no, said Socrates, that would never do. Now you've finished singing my praises, I've got to do the same by the next man on the right. So you see, if he sat next to you, he'd have to start eulogizing me before he'd had my eulogy of him. So be a good chap and let the boy alone; you mustn't grudge him the praise I'm going to give him, because I'm dying to start my eulogy.

Aha! cried Agathon. You don't catch me staying here much longer, Alcibiades. I shall certainly change places if it means a tribute from Socrates.

Oh, it's always the same, said Alcibiades bitterly. No one else gets a look in with the beauties when Socrates is there. Look how easily he trumped up an excuse for Agathon to sit beside him.

And then, all of a sudden, just as Agathon was getting up to go and sit by Socrates, a whole crowd of revelers came to the door, and finding it open, as someone was just going out, they marched straight in and joined the party. No sooner had they sat down than the whole place was in an uproar; decency and order went by the board, and everybody had to drink the most enormous quantities of wine. By this time Eryximachus and Phaedrus and some of the others were beginning to leave, so Aristodemus told me, while he himself fell off to sleep.

He slept on for some time, for this was in the winter and the nights were long, and when at last he woke it was near daybreak and the cocks were crowing. He noticed that all the others had either gone

home or fallen asleep, except Agathon and Aristophanes and Socrates, who were still awake and dripping out of an enormous bowl which they kept passing round from left to right. Socrates was arguing with the others—not that Aristophanes could remember very much of what he said, for, besides having missed the beginning, he was still more than half asleep. But the first of it was that Socrates was forcing them to admit that the same man might be capable of writing both comedy and tragedy—that the tragic poet might be a comedian as well.

But as he <sup>and</sup> ~~climbs~~ <sup>the</sup> argument, which the other two were scarcely in a state to follow, they began to nod, and first Aristophanes then Agathon, as day was breaking. Whereupon they fell off to sleep. Democritus, however, got up comfortably and went away, followed, of course, by Socrates tucked under his arm. And after calling at the Lyceum for a bath, he spent the rest of the day as usual, and then, toward evening, made up his mind to rest.

# REPUBLIC

---

*The Republic is the best known and generally considered the greatest of the dialogues. It is in chief part a construction of the ideal state undertaken by Socrates at the insistence of two young men who have been listening to a discussion in which Socrates has stated that the just man, not the unjust, is the happy man. At this point the two, Glaucon and Adimantus, break in, declaring that they have never heard the superiority of the just asserted convincingly by anyone, and they challenge Socrates to do so.*

*What follows is a summary of the way they see the argument.*

*Let Socrates describe what happens to a perfectly just and a perfectly unjust man and prove if he can that the advantage rests with the former. He must allow to the unjust the ability to conceal his injustice—anyone who is found out is a mere nobody. He will also be able to paint black white by his determination and command of money and supporters.*

*Then put beside him the just man, noble, single-minded, wanting not to seem, but to be good. He will be unpopular and misunderstood because he is so superior. He will always act with perfect justice and constantly be misjudged. Certainly he will suffer many hardships, be thrown into prison very likely, scourged, racked, even put to death, when at last he will see that he ought to have seemed, but never to have been, just. Whereas a man who is, but never seems, unjust will be honored everywhere. He can act in business and in politics always to his own advantage because he has no misgiving about injustice.*

*Are you going to say, But what about the world to come? Suppose there isn't any. Even if there is, we can repent for our sins and pray and be forgiven and so on, and in the end, after death, perhaps not be punished at all. What we are saying is realistic. Don't answer it by telling us that justice is noble and injustice base. Tell us what effect they have on a man which makes the one a pure good and the other a pure evil.*

*Socrates declares that he is delighted at the opportunity, but in taking up so serious a subject he will suggest that they begin with something easier than two individual men, something bigger where the just and the unjust can be seen more clearly. "Perhaps there*

would be more justice in the larger object," he says. "Let us first look for its quality in states, and then only examine it in the individual." They agree and the first and by far the greatest of all utopias ever imagined is the result. It is, of course, not ruled by laws under which injustice inevitably occurs, but by men and women who have been carefully selected in youth and become wise and good by a long training. The world will never be justly ruled until rulers are philosophers, that is, until they are themselves ruled by the idea of the good, which is divine perfection and brings about justice, which is human perfection.

But the Republic is more than the construction of the best possible state as a standard for all states and for all officials who toil at politics for the public good, not as though it was something fine, but only something necessary to be done. The Republic also lays down a standard for human life. To order a state rightly men's souls must be raised to behold the universal light. There is truth beyond this shifting, changing world and men can seek and find it. The just state may never come into being, but a man can always be just, and only the just can know what justice is. Of this Socrates himself was the proof. He showed the truth by living it and dying for it.

At the end of Book IX of the Republic when the perfect state has finally been constructed, Adimantus says, "I think that it can be found nowhere on earth."

"Perhaps," answers Socrates, "there is a pattern of it laid up in heaven for him who wishes to contemplate it. But it makes no difference whether it exists now or ever will come into being." A man can order his life by its laws.

---

## BOOK I

327 I went down yesterday to the Piraeus with Glaucon, the son of Ariston, to pay my devotions to the goddess, and also because I wished to see how they would conduct the festival, since this was its inauguration.

I thought the procession of the citizens very fine, but it was no better than the show made by the marching of the Thracian contingent.

b After we had said our prayers and seen the spectacle we were starting for town when Polemarchus, the son of Cephalus, caught sight of us from a distance as we were hastening homeward and or-

---

From *Plato: The Republic*, with an English translation by Paul Shorey (Loeb Classical Library, Cambridge, Mass., and London, 1953, 1956; first printed, 1930), 2 vols.

dered his boy run and bid us to wait for him, and the boy caught hold of my himation from behind and said, Polemarchus wants you to wait.

And I turned around and asked where his master was.

There he is, he said, behind you, coming this way. Wait for him.

So we will, said Glaucon. And shortly after Polemarchus came c  
up and Adimantus, the brother of Glaucon, and Niceratus, the son of Nicias, and a few others apparently from the procession.

Whereupon Polemarchus said, Socrates, you appear to have turned your faces townward and to be going to leave us.

Not a bad guess, said I.

But you see how many we are? he said.

Surely.

You must either then prove yourselves the better men or stay here.

Why, is there not left, said I, the alternative of our persuading  
you that you ought to let us go?

But *could* you persuade us, said he, if we refused to listen?

Nohow, said Glaucon.

Well, we won't listen, and you might as well make up your minds  
to it.

Do you mean to say, interposed Adimantus, that you haven't 328  
heard that there is to be a torchlight race this evening on horseback in honor of the goddess?

On horseback? said I. That is a new idea. Will they carry torches and pass them along to one another as they race with the horses, or how do you mean?

That's the way of it, said Polemarchus, and, besides, there is to be a night festival which will be worth seeing. For after dinner we will get up and go out and see the sights and meet a lot of the lads there and have good talk. So stay and do as we ask.

It looks as if we should have to stay, said Glaucon.

Well, said I, if it so be, so be it.

So we went with them to Polemarchus' house, and there we found Lysias and Euthydemus, the brothers of Polemarchus, yes, and Thrasymachus, too, of Chalcedon, and Charmantides of the deme of Paiania, and Clitophon, the son of Aristonymus. And the father of Polemarchus, Cephalus, was also at home.

And I thought him much aged, for it was a long time since I had seen him. He was sitting on a sort of chair with cushions and he had a chaplet on his head, for he had just finished sacrificing in the c  
court. So we went and sat down beside him, for there were seats there disposed in a circle.

As soon as he saw me Cephalus greeted me and said, You are not a very frequent visitor, Socrates. You don't often come down to the Piraeus to see us. That is not right. For if I were still able to make the d  
journey up to town easily there would be no need of your resorting hither, but we would go to visit you. But as it is you should not space

too widely your visits here. For I would have you know that, for my part, as the satisfactions of the body decay, in the same measure my desire for the pleasures of good talk and my delight in them increase. Don't refuse then, but be yourself a companion to these lads and make our house your resort and regard us as your very good friends and intimates.

e Why, yes, Cephalus, said I, and I enjoy talking with the very aged. For to my thinking we have to learn of them as it were from wayfarers who have preceded us on a road on which we too, it may be, must sometime fare—what it is like. Is it rough and hard-going or easy and pleasant to travel? And so now I would fain learn of you what you think of this thing, now that your time has come to it, the thing that the poets call 'the threshold of old age.' Is it a hard part of life to bear or what report have you to make of it?

329 Yes, indeed, Socrates, he said, I will tell you my own feeling about it. For it often happens that some of us elders of about the same age come together and verify the old saw of like to like. At these reunions most of us make lament, longing for the lost joys of youth and recalling to mind the pleasures of wine, women, and feasts, and other things thereto appertaining, and they repine in the belief that the greatest things have been taken from them and that then they lived well and now it is no life at all. And some of them complain of the indignities that friends and kinsmen put upon old age and thereto  
b recite a doleful litany of all the miseries for which they blame old age. But in my opinion, Socrates, they do not put the blame on the real cause. For if it were the cause I too should have had the same experience so far as old age is concerned, and so would all others who have come to this time of life. But in fact I have ere now met with others who do not feel in this way, and in particular I remember hearing Sophocles the poet greeted by a fellow who asked, How about your  
c service of Aphrodite, Sophocles—is your natural force still unabated? And he replied, Hush, man, most gladly have I escaped this thing you talk of, as if I had run away from a raging and savage beast of a master. I thought it a good answer then and now I think so still more. For in very truth there comes to old age a great tranquillity in such matters and a blessed release. When the fierce tensions of the passions and desires relax, then is the word of Sophocles approved, and we are  
d rid of many and mad masters. But indeed, in respect of these complaints and in the matter of our relations with kinsmen and friends there is just one cause, Socrates—not old age, but the character of the man. For if men are temperate and cheerful even old age is only moderately burdensome. But if the reverse, old age, Socrates, and youth are hard for such dispositions.

And I was filled with admiration for the man by these words, and  
e desirous of hearing more I tried to draw him out and said, I fancy, Cephalus, that most people, when they hear you talk in this way, are

not convinced but think that you bear old age lightly not because of your character but because of your wealth, for the rich, they say, have many consolations.

You are right, he said. They don't accept my view and there is something in their objection, though not so much as they suppose. But the retort of Themistocles comes in pat here, who, when a man from the little island of Seriphus grew abusive and told him that he owed his fame not to himself but to the city from which he came, replied that neither would he himself ever have made a name if he had been born in Seriphus nor the other if he had been an Athenian. And the same principle applies excellently to those who not being rich take old age hard, for neither would the reasonable man find it altogether easy to endure old age conjoined with poverty, nor would the unreasonable man by the attainment of riches ever attain to self-contentment and a cheerful temper. 330

May I ask, Cephalus, said I, whether you inherited most of your possessions or acquired them yourself?

Acquired, quotha? he said. As a money-maker, I hold a place somewhere halfway between my grandfather and my father. For my grandfather and namesake inherited about as much property as I now possess and multiplied it many times, my father Lysanias reduced it below the present amount, and I am content if I shall leave the estate to these boys not less but by some slight measure more than my inheritance. b

The reason I asked, I said, is that you appear to me not to be overfond of money. And that is generally the case with those who have not earned it themselves. But those who have themselves acquired it have a double reason in comparison with other men for loving it. For just as poets feel complacency about their own poems and fathers about their own sons, so men who have made money take this money seriously as their own creation and they also value it for its uses as other people do. So they are hard to talk to since they are unwilling to commend anything except wealth. c

You are right, he replied.

I assuredly am, said I. But tell me further this. What do you regard as the greatest benefit you have enjoyed from the possession of property? d

Something, he said, which I might not easily bring many to believe if I told them. For let me tell you, Socrates, he said, that when a man begins to realize that he is going to die, he is filled with apprehensions and concern about matters that before did not occur to him. The tales that are told of the world below and how the men who have done wrong here must pay the penalty there, though he may have laughed them down hitherto, then begin to torture his soul with the doubt that there may be some truth in them. And apart from that the man himself either from the weakness of old age or possibly as being now e

- nearer to the things beyond has a somewhat clearer view of them. Be that as it may, he is filled with doubt, surmises, and alarms and begins to reckon up and consider whether he has ever wronged anyone. Now he to whom the ledger of his life shows an account of many evil deeds starts up even from his dreams like a child again and again in
- 331 affright and his days are haunted by anticipations of worse to come. But on him who is conscious of no wrong that he has done a sweet hope ever attends and a goodly, to be nurse of his old age, as Pindar too says. For a beautiful saying it is, Socrates, of the poet that when a man lives out his days in justice and piety, 'sweet companion with him, to cheer his heart and nurse his old age, accompanieth hope, who chiefly ruleth the changeful mind of mortals.'<sup>1</sup> That is a fine saying and an admirable. It is for this, then, that I affirm that the possession of wealth is of most value, not it may be to every man but to the good man. Not to cheat any man even unintentionally or play him false, not remaining in debt to a god for some sacrifice or to a man for money, so to depart in fear to that other world—to this result the possession of property contributes not a little. It has also many other uses. But, setting one thing against another, I would lay it down, Socrates, that for a man of sense this is the chief service of wealth.
- c An admirable sentiment, Cephalus, said I. But speaking of this very thing, justice, are we to affirm thus without qualification that it is truth-telling and paying back what one has received from anyone, or may these very actions sometimes be just and sometimes unjust? I mean, for example, as everyone I presume would admit, if one took over weapons from a friend who was in his right mind and then the lender should go mad and demand them back, that we ought not to return them in that case and that he who did so return them would not be acting justly—nor yet would he who chose to speak nothing but the truth to one who was in that state.
- d You are right, he replied.
- Then this is not the definition of justice—to tell the truth and return what one has received.
- Nay, but it is, Socrates, said Polemarchus breaking in, if indeed we are to put any faith in Simonides.
- Very well, said Cephalus, indeed I make over the whole argument to you. For it is time for me to attend the sacrifices.
- Well, said I, is not Polemarchus the heir of everything that is yours?
- Certainly, said he with a laugh, and at the same time went out to the sacred rites.
- e Tell me, then, you the inheritor of the argument, what it is that you affirm that Simonides says and rightly says about justice.
- That it is just, he replied, to render to each his due. In saying this I think he speaks well.

<sup>1</sup> Pindar, fr. 214.

I must admit, said I, that it is not easy to disbelieve Simonides. For he is a wise and inspired man. But just what he may mean by this you, Polemarchus, doubtless know, but I do not. Obviously he does not mean what we were just speaking of, this return of a deposit to anyone whatsoever even if he asks it back when not in his right mind. And yet what the man deposited is due to him in a sense, is it not? 332

Yes.

But rendered to him it ought not to be by any manner of means when he demands it not being in his right mind.

True, said he.

It is then something other than this that Simonides must, as it seems, mean by the saying that it is just to render back what is due.

Something else in very deed, he replied, for he believes that friends owe it to friends to do them some good and no evil.

I see, said I. You mean that he does not render what is due or owing who returns a deposit of gold if this return and the acceptance prove harmful and the returner and the recipient are friends. Isn't that what you say Simonides means? b

Quite so.

But how about this—should one not render to enemies what is their due?

By all means, he said, what is due and owing to them, and there is due and owing from an enemy to an enemy what also is proper for him, some evil.

It was a riddling definition of justice, then, that Simonides gave after the manner of poets, for while his meaning, it seems, was that justice is rendering to each what befits him, the name that he gave to this was 'the due.' c

What else do you suppose? said he.

In heaven's name! said I. Suppose someone had questioned him thus. Tell me, Simonides, the art that renders what that is due and befitting to what is called the art of medicine? What do you take it would have been his answer?

Obviously, he said, the art that renders to bodies drugs, foods, and drinks.

And the art that renders to what things what that is due and befitting is called the culinary art?

Seasoning to meats.

Good. In the same way tell me the art that renders what to whom d would be denominated justice.

If we are to follow the previous examples, Socrates, it is that which renders benefits and harms to friends and enemies.

To good to friends and evil to enemies, then, is justice in his meaning?

I think so.

Who then is the most able when they are ill to benefit friends and harm enemies in respect to disease and health?

The physician.

e And who navigators in respect of the perils of the sea?

The pilot.

Well then, the just man, in what action and for what work is he the most competent to benefit friends and harm enemies?

In making war and as an ally, I should say.

Very well. But now if they are not sick, friend Polemarchus, the physician is useless to them.

True.

And so to those who are not at sea the pilot.

Yes.

Shall we also say this, that for those who are not at war the just man is useless?

By no means.

333 There is a use then even in peace for justice?

Yes, it is useful.

But so is agriculture, isn't it?

Yes.

Namely, for the getting of a harvest?

Yes.

But likewise the cobbler's art?

Yes.

Namely, I presume you would say, for the getting of shoes.

Certainly.

Then tell me, for the service and getting of what would you say that justice is useful in time of peace?

In engagements and dealings, Socrates.

And by dealings do you mean associations, partnerships, or something else?

Associations, of course.

b Is it the just man, then, who is a good and useful associate and partner in the placing of draughts or the draughts player?

The player.

And in the placing of bricks and stones is the just man a more useful and better associate than the builder?

By no means.

Then what is the association in which the just man is a better partner than the harpist as a harpist is better than the just man for striking the chords?

For money dealings, I think.

c Except, I presume, Polemarchus, for the use of money when there is occasion to buy in common or sell a horse. Then, I take it, the man who knows horses, isn't it so?

Apparently.

And again, if it is a vessel, the shipwright or the pilot.

It would seem so.

What then is the use of money in common for which a just man is the better partner?

When it is to be deposited and kept safe, Socrates.

You mean when it is to be put to no use but is to lie idle?

Quite so.

Then it is when money is useless that justice is useful in relation to it?

It looks that way.

And similarly when a scythe is to be kept safe, then justice is useful both in public and private. But when it is to be used, the vine-dresser's art is useful?

Apparently.

And so you will have to say that when a shield and a lyre are to be kept and put to no use, justice is useful, but when they are to be made use of, the military art and music.

Necessarily.

And so in all other cases, in the use of each thing, justice is useless but in its uselessness useful?

It looks that way.

Then, my friend, justice cannot be a thing of much worth if it is useful only for things out of use and useless. But let us consider this point. Is not the man who is most skillful to strike or inflict a blow in a fight, whether as a boxer or elsewhere, also the most wary to guard against a blow?

Assuredly.

Is it not also true that he who best knows how to guard against disease is also most cunning to communicate it and escape detection?

I think so.

But again, the very same man is a good guardian of an army who is good at stealing a march upon the enemy in respect of their designs and proceedings generally.

Certainly.

Of whatsoever, then, anyone is a skillful guardian, of that he is also a skillful thief?

It seems so.

If then the just man is an expert in guarding money he is an expert in stealing it.

The argument certainly points that way.

A kind of thief then the just man it seems has turned out to be, and it is likely that you acquired this idea from Homer. For he regards with complacency Autolycus, the maternal uncle of Odysseus, and says, 'he was gifted beyond all men in thievery and perjury.'<sup>2</sup> So justice, according to you and Homer and Simonides, seems to be a kind

<sup>2</sup> *Odyssey* 19.395.

of stealing, with the qualification that it is for the benefit of friends and the harm of enemies. Isn't that what you meant?

No, by Zeus, he replied. I no longer know what I did mean. Yet this I still believe, that justice benefits friends and harms enemies.

- c May I ask whether by friends you mean those who seem to a man to be worthy or those who really are so, even if they do not seem, and similarly of enemies?

It is likely, he said, that men will love those whom they suppose to be good and dislike those whom they deem bad.

Do not men make mistakes in this matter so that many seem good to them who are not and the reverse?

They do.

For those, then, who thus err the good are their enemies and the bad their friends?

Certainly.

- d But all the same it is then just for them to benefit the bad and injure the good?

It would seem so.

But again, the good are just and incapable of injustice.

True.

On your reasoning then it is just to wrong those who do no injustice.

Nay, nay, Socrates, he said, the reasoning can't be right.

Then, said I, it is just to harm the unjust and benefit the just.

That seems a better conclusion than the other.

- e It will work out, then, for many, Polemarchus, who have misjudged men that it is just to harm their friends, for they have got bad ones, and to benefit their enemies, for they are good. And so we shall find ourselves saying the very opposite of what we affirmed Simonides to mean.

Most certainly, he said, it does work out so. But let us change our ground, for it looks as if we were wrong in the notion we took up about the friend and the enemy.

What notion, Polemarchus?

That the man who seems to us good is the friend.

And to what shall we change it now? said I.

- 335 That the man who both seems and is good is the friend, but that he who seems but is not really so seems but is not really the friend. And there will be the same assumption about the enemy.

Then on this view it appears the friend will be the good man and the bad the enemy.

Yes.

So you would have us qualify our former notion of the just man by an addition. We then said it was just to do good to a friend and evil to an enemy, but now we are to add that it is just to benefit the friend if he is good and harm the enemy if he is bad?

By all means, he said, that, I think, would be the right way to b  
put it.

Is it then, said I, the part of a good man to harm anybody whatso-  
ever?

Certainly it is, he replied. A man ought to harm those who are  
both bad and his enemies.

When horses are harmed does it make them better or worse?

Worse.

In respect of the excellence or virtue of dogs or that of horses?

Of horses.

And do not also dogs when harmed become worse in respect of  
canine and not of equine virtue?

Necessarily.

And men, my dear fellow, must we not say that when they are c  
harmed it is in respect of the distinctive excellence or virtue of man  
that they become worse?

Assuredly.

And is not justice the specific virtue of man?

That too must be granted.

Then it must also be admitted, my friend, that men who are  
harmed become more unjust.

It seems so.

Do musicians then make men unmusical by the art of music?

Impossible.

Well, do horsemen by horsemanship unfit men for dealing with  
horses?

No.

By justice then do the just make men unjust, or in sum do the  
good by virtue make men bad? d

Nay, it is impossible.

It is not, I take it, the function of heat to chill but of its opposite.

Yes.

Nor of dryness to moisten but of its opposite.

Assuredly.

Nor yet of the good to harm but of its opposite.

So it appears.

But the just man is good?

Certainly.

It is not then the function of the just man, Polemarchus, to harm  
either friend or anyone else, but of his opposite, the unjust.

I think you are altogether right, Socrates.

If, then, anyone affirms that it is just to render to each his due e  
and he means by this that injury and harm is what is due to his en-  
emies from the just man and benefits to his friends, he was no truly  
wise man who said it. For what he meant was not true. For it has  
been made clear to us that in no case is it just to harm anyone.

I concede it, he said.

We will take up arms against him, then, said I, you and I together, if anyone affirms that either Simonides or Bias or Pittacus or any other of the wise and blessed said such a thing.

I, for my part, he said, am ready to join in the battle with you.

336 Do you know, said I, to whom I think the saying belongs—this statement that it is just to benefit friends and harm enemies?

To whom? he said.

I think it was the saying of Periander or Perdiccas or Xerxes or Ismenias the Theban or some other rich man who had great power in his own conceit.

That is most true, he replied.

Very well, said I, since it has been made clear that this too is not justice and the just, what else is there that we might say justice to be?

b Now Thrasyarchus, even while we were conversing, had been trying several times to break in and lay hold of the discussion but he was restrained by those who sat by him who wished to hear the argument out. But when we came to a pause after I had said this, he couldn't any longer hold his peace. But gathering himself up like a wild beast he hurled himself upon us as if he would tear us to pieces. And Polemarchus and I were frightened and fluttered apart.

c He bawled out into our midst, What balderdash is this that you have been talking, and why do you Simple Simons truckle and give way to one another? But if you really wish, Socrates, to know what the just is, don't merely ask questions or plume yourself upon controverting any answer that anyone gives—since your acumen has perceived that it is easier to ask questions than to answer them—but do you yourself answer and tell what you say the just is. And don't you d be telling me that it is that which ought to be, or the beneficial or the profitable or the gainful or the advantageous, but express clearly and precisely whatever you say. For I won't take from you any such drivel as that!

And I, when I heard him, was dismayed, and looking upon him was filled with fear, and I believe that if I had not looked at him before he did at me I should have lost my voice. But as it is, at the very moment when he began to be exasperated by the course of the argument I glanced at him first, so that I became capable of answering e him, and said with a slight tremor, Thrasyarchus, don't be harsh with us. If I, and my friend, have made mistakes in the consideration of the question, rest assured that it is unwillingly that we err. For you surely must not suppose that while, if our quest were for gold, we would never willingly truckle to one another and make concessions in the search and so spoil our chances of finding it, yet that when we are searching for justice, a thing more precious than much fine gold, we *should then be so foolish as to give way to one another and not rather do our serious best to have it discovered.* You surely must not sup-

pose that, my friend. But you see it is our lack of ability that is at fault. It is pity then that we should far more reasonably receive from clever fellows like you than severity. 337

And he, on hearing this, gave a great guffaw and laughed sardonically and said, Ye gods! Here we have the well-known irony of Socrates, and I knew it and predicted that when it came to replying you would refuse and dissemble and do anything rather than answer any question that anyone asked you.

That's because you are wise, Thrasymachus, and so you knew very well that if you asked a man how many are twelve, and in putting the question warned him, Don't you be telling me, fellow, that twelve is twice six or three times four or six times two or four times three, for I won't accept any such drivel as that from you as an answer—it was obvious, I fancy, to you that no one could give an answer to a question framed in that fashion. Suppose he had said to you, Thrasy- machus, what do you mean? Am I not to give any of the prohibited answers, not even, do you mean to say, if the thing really is one of these, but must I say something different from the truth, or what do you mean?—What would have been your answer to him? c

Humph! said he. How very like the two cases are!

There is nothing to prevent it, said I. Yet even granted that they are not alike, yet if it appears to the person asked the question that they are alike, do you suppose that he will any the less answer what appears to him, whether we forbid him or whether we don't?

Is that, then, said he, what you are going to do? Are you going to give one of the forbidden answers?

I shouldn't be surprised, I said, if on reflection that would be my view.

What then, he said, if I show you another answer about justice a differing from all these, a better one—what penalty do you think you deserve?

Why, what else, said I, than that which it befits anyone who is ignorant to suffer? It befits him, I presume, to learn from the one who does know. That then is what I propose that I should suffer.

I like your simplicity, said he. But in addition to 'learning' you must pay a fine of money.

Well, I will when I have got it, I said.

It is there, said Glaucon. If money is all that stands in the way, Thrasymachus, go on with your speech. We will all contribute for Socrates.

Oh yes, of course, said he, so that Socrates may contrive, as he e always does, to evade answering himself but may cross-examine the other man and refute his replies.

Why, how, I said, my dear fellow, could anybody answer if in the first place he did not know and did not even profess to know, and secondly, even if he had some notion of the matter, he had been told by a

man of weight that he mustn't give any of his suppositions as an answer? Nay, it is more reasonable that you should be the speaker. For you do affirm that you know and are able to tell. Don't be obstinate, 338 but do me the favor to reply and don't be chary of your wisdom, and instruct Glaucon here and the rest of us.

When I had spoken thus Glaucon and the others urged him not to be obstinate. It was quite plain that Thrasymachus was eager to speak in order that he might do himself credit, since he believed that he had a most excellent answer to our question. But he demurred and pretended to make a point of my being the respondent. Finally he b gave way and then said, Here you have the wisdom of Socrates, to refuse himself to teach, but go about and learn from others and not even pay thanks therefor.

That I learn from others, I said, you said truly, Thrasymachus. But in saying that I do not pay thanks you are mistaken. I pay as much as I am able. And I am able only to bestow praise. For money I lack. But that I praise right willingly those who appear to speak well you will well know forthwith as soon as you have given your answer. For I think that you will speak well.

c Hearken and hear then, said he. I affirm that the just is nothing else than the advantage of the stronger. Well, why don't you applaud? Nay, you'll do anything but that.

Provided only I first understand your meaning, said I, for I don't yet apprehend it. The advantage of the stronger is what you affirm the just to be. But what in the world do you mean by this? I presume you don't intend to affirm this, that if Polydamas, the pancratiast, is stronger than we are and the flesh of beef is advantageous for him, d for his body, this viand is also for us who are weaker than he both advantageous and just.

You are a buffoon, Socrates, and take my statement in the most detrimental sense.

Not at all, my dear fellow, said I. I only want you to make your meaning plainer.

Don't you know then, said he, that some cities are governed by tyrants, in others democracy rules, in others aristocracy?

Assuredly.

And is not this the thing that is strong and has the mastery in each—the ruling party?

Certainly.

e And each form of government enacts the laws with a view to its own advantage, a democracy democratic laws and tyranny autocratic and the others likewise, and by so legislating they proclaim that the just for their subjects is that which is for their—the rulers'—advantage and the man who deviates from this law they chastise as a law-breaker and a wrongdoer. This, then, my good sir, is what I understand as the identical principle of justice that obtains in all states—

the advantage of the established government. This I presume you 339 will admit holds power and is strong, so that, if one reasons rightly, it works out that the just is the same thing everywhere, the advantage of the stronger.

Now, said I, I have learned your meaning, but whether it is true or not I have to try to learn. The advantageous, then, is also your reply, Thrasymachus, to the question, what is the just—though you forbade me to give that answer. But you add thereto that of the stronger.

A trifling addition perhaps you think it, he said.

It is not yet clear whether it is a big one either, but that we must b inquire whether what you say is true is clear. For since I too admit that the just is something that is of advantage—but you are for making an addition and affirm it to be the advantage of the stronger, while I don't profess to know—we must pursue the inquiry.

Inquire away, he said.

I will do so, said I. Tell me, then, you affirm also, do you not, that obedience to rulers is just?

I do.

May I ask whether the rulers in the various states are infallible c or capable sometimes of error?

Surely, he said, they are liable to err.

Then in their attempts at legislation they enact some laws rightly and some not rightly, do they not?

So I suppose.

And by rightly we are to understand for their advantage, and by wrongly to their disadvantage? Do you mean that or not?

That.

But whatever they enact must be performed by their subjects and is justice?

Of course.

Then on your theory it is just not only to do what is the advantage d of the stronger but also the opposite, what is not to his advantage.

What's that you're saying? he replied.

What you yourself are saying, I think. Let us consider it more closely. Have we not agreed that the rulers in giving orders to the ruled sometimes mistake their own advantage, and that whatever the rulers e enjoin it is just for the subjects to perform? Was not that admitted?

I think it was, he replied.

Then you will have to think, I said, that to do what is disadvantageous to the rulers and the stronger has been admitted by you to be just in the case when the rulers unwittingly enjoin what is bad for themselves, while you affirm that it is just for the others to do what they enjoined. In that way does not this conclusion inevitably follow, my most sapient Thrasymachus, that it is just to do the very opposite of what you say? For it is in that case surely the disadvantage of the stronger or superior that the inferior are commanded to perform.

Yes, by Zeus, Socrates, said Polemarchus, nothing could be more conclusive.

340 Of course, said Clitophon, breaking in, if you are his witness.

What need is there of a witness? Polemarchus said. Thrasymachus himself admits that the rulers sometimes enjoin what is evil for themselves and yet says that it is just for the subjects to do this.

That, Polemarchus, is because Thrasymachus laid it down that it is just to obey the orders of the rulers.

Yes, Clitophon, but he also took the position that the advantage  
b of the stronger is just. And after these two assumptions he again admitted that the stronger sometimes bid the inferior and their subjects do what is to the disadvantage of the rulers. And from these admissions the just would no more be the advantage of the stronger than the contrary.

Oh well, said Clitophon, by the advantage of the superior he meant what the superior supposed to be for his advantage. This was what the inferior had to do, and that this is the just was his position.

That isn't what he said, replied Polemarchus.

c Never mind, Polemarchus, said I. But if that is Thrasymachus' present meaning, let us take it from him in that sense. So tell me, Thrasymachus, was this what you intended to say, that the just is the advantage of the superior as it appears to the superior whether it really is or not? Are we to say this was your meaning?

Not in the least, he said. Do you suppose that I call one who is in error a superior when he errs?

I certainly did suppose that you meant that, I replied, when you agreed that rulers are not infallible but sometimes make mistakes.

d That is because you argue like a pettifogger, Socrates. Why, to take the nearest example, do you call one who is mistaken about the sick a physician in respect of his mistake or one who goes wrong in a calculation a calculator when he goes wrong and in respect of this error? Yet that is what we say literally—we say that the physician erred, and the calculator and the schoolmaster. But the truth, I take it,  
e is, that each of these in so far as he is that which we entitle him never errs, so that, speaking precisely, since you are such a stickler for precision, no craftsman errs. For it is when his knowledge abandons him that he who goes wrong goes wrong—when he is not a craftsman. So that no craftsman, wise man, or ruler makes a mistake then when he is a ruler, though everybody would use the expression that the physician made a mistake and the ruler erred. It is in this loose way of speaking, then, that you must take the answer I gave you a little while ago. But the most precise statement is that other, that the ruler in so far forth as ruler does not err, and not erring he enacts what is best  
341 for himself, and this the subject must do, so that, even as I meant from the start, I say the just is to do what is for the advantage of the stronger.

So then, Thrasymachus, said I, my manner of argument seems to you pettifogging?

It does, he said.

You think, do you, that it was with malice aforethought and trying to get the better of you unfairly that I asked that question?

I don't think it, I know it, he said, and you won't make anything by it, for you won't get the better of me by stealth and, failing stealth, you are not of the force to beat me in debate.

Bless your soul, said I, I wouldn't even attempt such a thing. But that nothing of the sort may spring up between us again, define in which sense you take the ruler and stronger. Do you mean the so-called ruler or that ruler in the precise sense of whom you were just now telling us, and for whose advantage as being the superior it will be just for the inferior to act?

I mean the ruler in the very most precise sense of the word, he said. Now bring on against this your cavils and your shyster's tricks if you are able. I ask no quarter. But you'll find yourself unable.

Why, do you suppose, I said, that I am so mad as to try to beard a lion and try the pettifogger on Thrasymachus?

You did try it just now, he said, paltry fellow though you be.

Something too much of this sort of thing, said I. But tell me, your physician in the precise sense, of whom you were just now speaking, is he a money-maker, an earner of fees, or a healer of the sick? And remember to speak of the physician who is really such.

A healer of the sick, he replied.

And what of the pilot—the pilot rightly so called—is he a ruler of sailors or a sailor?

A ruler of sailors.

We don't, I fancy, have to take into account the fact that he actually sails in the ship, nor is he to be denominated a sailor. For it is not in respect of his sailing that he is called a pilot but in respect of his art and his ruling of the sailors.

True, he said.

Then for each of them is there not a something that is for his advantage?

Quite so.

And is it not also true, said I, that the art naturally exists for this, to discover and provide for each his advantage?

Yes, for this.

Is there, then, for each of the arts any other advantage than to be as perfect as possible?

What do you mean by that question?

Just as if, I said, you should ask me whether it is enough for the body to be the body or whether it stands in need of something else, I would reply, By all means it stands in need. That is the reason why the art of medicine has now been invented, because the body is

defective and such defect is unsatisfactory. To provide for this, then, what is advantageous, that is the end for which the art was devised. Do you think that would be a correct answer, or not?

342 Correct, he said.

But how about this? Is the medical art itself defective or faulty, or has any other art any need of some virtue, quality, or excellence—as the eyes of vision, the ears of hearing—and for this reason is there need of some art over them that will consider and provide what is advantageous for these very ends? Does there exist in the art itself some defect and does each art require another art to consider its advantage and is there need of still another for the considering art and so on ad infinitum, or will the art look out for its own advantage? Or  
b is it a fact that it needs neither itself nor another art to consider its advantage and provide against its deficiency? For there is no defect or error at all that dwells in any art. Nor does it befit an art to seek the advantage of anything else than that of its object. But the art itself is free from all harm and admixture of evil, and is right so long as each art is precisely and entirely that which it is. And consider the matter in that 'precise' way of speaking. Is it so or not?

It appears to be so, he said.

c Then medicine, said I, does not consider the advantage of medicine but of the body?

Yes.

Nor horsemanship of horsemanship but of horses, nor does any other art look out for itself—for it has no need—but for that of which it is the art.

So it seems, he replied.

But surely, Thrasymachus, the arts do hold rule and are stronger than that of which they are the arts.

He conceded this but it went very hard.

Then no art considers or enjoins the advantage of the stronger  
d but every art that of the weaker which is ruled by it.

This too he was finally brought to admit though he tried to contest it.

Can we deny, then, said I, that neither does any physician in so far as he is a physician seek or enjoin the advantage of the physician but that of the patient? For we have agreed that the physician, 'precisely' speaking, is a ruler and governor of bodies and not a money-maker. Did we agree on that?

He assented.

And so the 'precise' pilot is a ruler of sailors, not a sailor?

e That was admitted.

Then that sort of a pilot and ruler will not consider and enjoin the advantage of the pilot but that of the sailor whose ruler he is.

He assented reluctantly.

Then, said I, Thrasymachus, neither does anyone in any office of

rule in so far as he is a ruler consider and enjoin his own advantage but that of the one whom he rules and for whom he exercises his craft, and he keeps his eyes fixed on that and on what is advantageous and suitable to that in all that he says and does.

When we had come to this point in the discussion and it was apparent to everybody that his formula of justice had suffered a reversal of form, Thrasymachus, instead of replying, said, Tell me, Socrates, have you got a nurse? 343

What do you mean? said I. Why didn't you answer me instead of asking such a question?

Because, he said, she lets her little snotty run about driveling and doesn't wipe your face clean, though you need it badly, if she can't get you to know the difference between the shepherd and the sheep.

And what, pray, makes you think that? said I.

Because you think that the shepherds and the neatherds are considering the good of the sheep and the cattle and fatten and tend them with anything else in view than the good of their masters and themselves. And by the same token you seem to suppose that the rulers in our cities, I mean the real rulers, differ at all in their thoughts of the governed from a man's attitude toward his sheep or that they think of anything else night and day than the sources of their own profit. And you are so far out concerning the just and justice and the unjust and injustice that you don't know that justice and the just are literally the other fellow's good—the advantage of the stronger and the ruler, but a detriment that is all his own of the subject who obeys and serves—while injustice is the contrary and rules those who are simple in every sense of the word and just, and they being thus ruled do what is for his advantage who is the stronger and make him happy by serving him, but themselves by no manner of means. And you must look at the matter, my simple-minded Socrates, in this way, that the just man always comes out at a disadvantage in his relation with the unjust. To begin with, in their business dealings in any joint undertaking of the two you will never find that the just man has the advantage over the unjust at the dissolution of the partnership but that he always has the worst of it. Then again, in their relations with the state, if there are direct taxes or contributions to be paid, the just man contributes more from an equal estate and the other less, and when there is a distribution the one gains much and the other nothing. And so when each holds office, apart from any other loss the just man must count on his own affairs' falling into disorder through neglect, while because of his justice he makes no profit from the state, and thereto he will displease his friends and his acquaintances by his unwillingness to serve them unjustly. But to the unjust man all the opposite advantages accrue. I mean, of course, the one I was just speaking of, the man who has the ability to overreach on a large scale. Consider this type of man, then, if you wish to judge how much more profitable it is to him 344

personally to be unjust than to be just. And the easiest way of all to  
 \* understand this matter will be to turn to the most consummate form  
 of injustice which makes the man who has done the wrong most  
 happy and those who are wronged and who would not themselves will-  
 ingly do wrong most miserable. And this is tyranny, which both by  
 stealth and by force takes away what belongs to others, both sacred  
 and profane, both private and public, not little by little but at one  
 swoop. For each several part of such wrongdoing the malefactor who  
 fails to escape detection is fined and incurs the extreme of contumely,  
 for temple robbers, kidnapers, burglars, swindlers, and thieves are the  
 b appellations of those who commit these several forms of injustice.  
 But when in addition to the property of the citizens men kidnap and  
 enslave the citizens themselves, instead of these opprobrious names  
 c they are pronounced happy and blessed not only by their fellow citizens  
 but by all who hear the story of the man who has committed com-  
 plete and entire injustice. For it is not the fear of doing but of suffer-  
 ing wrong that calls forth the reproaches of those who revile injustice.  
 Thus, Socrates, injustice on a sufficiently large scale is a stronger,  
 freer, and more masterful thing than justice, and, as I said in the be-  
 ginning, it is the advantage of the stronger that is the just, while the  
 unjust is what profits a man's self and is for his advantage.

d After this Thrasymachus was minded to depart when like a bath-  
 man he had poured his speech in a sudden flood over our ears. But the  
 company would not suffer him and were insistent that he should re-  
 main and render an account of what he had said. And I was particu-  
 larly urgent and said, I am surprised at you, Thrasymachus. After  
 hurling such a doctrine at us, can it be that you propose to depart  
 without staying to teach us properly or learn yourself whether this  
 e thing is so or not? Do you think it a small matter that you are at-  
 tempting to determine and not the entire conduct of life that for each  
 of us would make living most worth while?

Well, do I deny it? said Thrasymachus.

You seem to, said I, or else to care nothing for us and so feel no  
 concern whether we are going to live worse or better lives in our igno-  
 rance of what you affirm that you know. Nay, my good fellow, do  
 your best to make the matter clear to us also—it will be no bad invest-  
 345 ment for you, any benefit that you bestow on such a company as this.  
 For I tell you for my part that I am not convinced; neither do I  
 think that injustice is more profitable than justice, not even if one  
 gives it free scope and does not hinder it of its will. But, suppose, sir, a  
 man to be unjust and to be able to act unjustly either because he is not  
 detected or can maintain it by violence. All the same he does not con-  
 vince me that it is more profitable than justice. Now it may be that  
 there is someone else among us who feels in this way and that I am  
 b not the only one. Persuade us, then, my dear fellow, convince us sat-  
 isfactorily that we are ill advised in preferring justice to injustice.

And how am I to persuade you? he said. If you are not convinced by what I just now was saying, what more can I do for you? Shall I take the argument and ram it into your head?

Heaven forbid! I said. Don't do that. But in the first place when you have said a thing stand by it, or if you shift your ground change openly and don't try to deceive us. But, as it is, you see, Thrasy-machus—let us return to the previous examples—you see that while you began by taking the physician in the true sense of the word, you did not think fit afterward to be consistent and maintain with precision the notion of the true shepherd, but you apparently think that he herds his sheep in his quality of shepherd, not with regard to what is best for the sheep, but as if he were a banqueter about to be feasted with regard to the good cheer, or again with a view to the sale of them, as if he were a money-maker and not a shepherd. But the art of the shepherd surely is concerned with nothing else than how to provide what is best for that over which it is set, since its own affairs, its own best estate, are surely sufficiently provided for so long as it in nowise fails of being the shepherd's art. And in like manner I supposed that we just now were constrained to acknowledge that every form of rule in so far as it is rule considers what is best for nothing else than that which is governed and cared for by it, alike in political and private rule. Why, do you think that the rulers and holders of office in our cities—the true rulers—willingly hold office and rule?

I don't think, he said, I know right well they do.

But what of other forms of rule, Thrasy-machus? Do you not perceive that no one chooses of his own will to hold the office of rule? Men demand pay, which implies that not to them will benefit accrue from their holding office but to those whom they rule. Tell me this. We ordinarily say, do we not, that each of the arts is different from others because its power or function is different? And, my dear fellow, in order that we may reach some result, don't answer counter to your real belief.

Well, yes, he said, that is what renders it different.

And does not each art also yield us benefit that is peculiar to itself and not general, as for example medicine health, the pilot's art safety at sea, and the other arts similarly?

Assuredly.

And does not the wage earner's art yield wages? For that is its function. Would you identify medicine and the pilot's art? Or if you please to discriminate 'precisely' as you proposed, none the more if a pilot regains his health because a sea voyage is good for him, no whit the more, I say, for this reason do you call his art medicine, do you?

Of course not, he said.

Neither, I take it, do you call wage earning medicine if a man earning wages is in health.

Surely not.

c But what of this? Do you call medicine wage earning, if a man when giving treatment earns wages?

No, he said.

And did we not agree that the benefit derived from each art is peculiar to it?

So be it, he said.

Any common or general benefit that all craftsmen receive, then, they obviously derive from their common use of some further identical thing.

It seems so, he said.

And we say that the benefit of earning wages accrues to the craftsmen from their further exercise of the wage-earning art.

d He assented reluctantly.

Then the benefit, the receiving of wages, does not accrue to each from his own art. But if we are to consider it 'precisely,' medicine produces health but the fee-earning art the pay, and architecture a house but the fee-earning art accompanying it the fee, and so with all the others—each performs its own task and benefits that over which it is set. But unless pay is added to it, is there any benefit which the craftsman receives from the craft?

Apparently not, he said.

e Does he then bestow no benefit either when he works for nothing?

I'll say he does.

Then, Thrasymachus, is not this immediately apparent, that no art or office provides what is beneficial for itself—but as we said long ago it provides and enjoins what is beneficial to its subject, considering the advantage of that, the weaker, and not the advantage of the stronger? That was why, friend Thrasymachus, I was just now saying that no one of his own will chooses to hold rule and office and take other people's troubles in hand to straighten them out, but everybody 347 expects pay for that, because he who is to exercise the art rightly never does what is best for himself or enjoins it when he gives commands according to the art, but what is best for the subject. That is the reason, it seems, why pay must be provided for those who are to consent to rule, either in the form of money or honor or a penalty if they refuse.

What do you mean by that, Socrates? said Glaucon. The two wages I recognize, but the penalty you speak of and described as a form of wage I don't understand.

Then, said I, you don't understand the wages of the best men for the sake of which the finest spirits hold office and rule when they b consent to do so. Don't you know that to be covetous of honor and covetous of money is said to be and is a reproach?

I do, he said.

Well, then, said I, that is why the good are not willing to rule ei-

ther for the sake of money or of honor. They do not wish to collect pay openly for their service of rule and be styled hirelings, nor to take it by stealth from their office and be called thieves, nor yet for the sake of honor, for they are not covetous of honor. So there must be imposed some compulsion and penalty to constrain them to rule if they are to consent to hold office. That is perhaps why to seek office oneself and not await compulsion is thought disgraceful. But the chief penalty is to be governed by someone worse if a man will not himself hold office and rule. It is from fear of this, as it appears to me, that the better sort hold office when they do, and then they go to it not in the expectation of enjoyment nor as to a good thing, but as to a necessary evil and because they are unable to turn it over to better men than themselves or to their like. For we may venture to say that, if there should be a city of good men only, immunity from office holding would be as eagerly contended for as office is now, and there it would be made plain that in very truth the true ruler does not naturally seek his own advantage but that of the ruled, so that every man of understanding would rather choose to be benefited by another than to be bothered with benefiting him. This point then I by no means concede to Thrasymachus, that justice is the advantage of the superior. But that we will reserve for another occasion. A far weightier matter seems to me Thrasymachus' present statement, his assertion that the life of the unjust man is better than that of the just. Which now do you choose, Glaucon? And which seems to you to be the truer statement?

That the life of the just man is more profitable, I say, he replied.

Did you hear, said I, all the goods that Thrasymachus just now enumerated for the life of the unjust man? 348

I heard, he said, but I am not convinced.

Do you wish us then to try to persuade him, supposing we can find a way, that what he says is not true?

Of course I wish it, he said.

If then we oppose him in a set speech enumerating in turn the advantages of being just and he replies and we rejoin, we shall have to count up and measure the goods listed in the respective speeches and we shall forthwith be in need of judges to decide between us. But if, as in the preceding discussion, we come to terms with one another as to what we admit in the inquiry, we shall be ourselves both judges and pleaders.

Quite so, he said.

Which method do you like better? said I.

This one, he said.

Come then, Thrasymachus, I said, go back to the beginning and answer us. You affirm that perfect and complete injustice is more profitable than justice that is complete.

I affirm it, he said, and have told you my reasons.

Tell me then how you would express yourself on this point about them. You call one of them, I presume, a virtue and the other a vice?

Of course.

Justice the virtue and injustice the vice?

It is likely, you innocent, when I say that injustice pays and justice doesn't pay.

But what then, pray?

The opposite, he replied.

What! Justice vice?

No, but a most noble simplicity or goodness of heart.

d Then do you call injustice badness of heart?

No, but goodness of judgment.

Do you also, Thrasymachus, regard the unjust as intelligent and good?

Yes, if they are capable of complete injustice, he said, and are able to subject to themselves cities and tribes of men. But you probably suppose that I mean those who take purses. There is profit to be sure even in that sort of thing, he said, if it goes undetected. But such things are not worth taking into the account, but only what I just described.

e I am not unaware of your meaning in that, I said, but this is what surprised me, that you should range injustice under the head of virtue and wisdom, and justice in the opposite class.

Well, I do so class them, he said.

That, said I, is a stiffer proposition, my friend, and if you are going as far as that it is hard to know what to answer. For if your position were that injustice is profitable yet you conceded it to be vicious and disgraceful as some other disputants do, there would be a chance for an argument on conventional principles. But, as it is, you obviously  
349 are going to affirm that it is honorable and strong and you will attach to it all the other qualities that we were assigning to the just, since you don't shrink from putting it in the category of virtue and wisdom.

You are a most veritable prophet, he replied.

Well, said I, I mustn't flinch from following out the logic of the inquiry, so long as I conceive you to be saying what you think. For now, Thrasymachus, I absolutely believe that you are not 'mocking' us but telling us your real opinions about the truth.

What difference does it make to you, he said, whether I believe it or not? Why don't you test the argument?

b No difference, said I, but here is something I want you to tell me in addition to what you have said. Do you think the just man would want to overreach or exceed another just man?

By no means, he said. Otherwise he would not be the delightful simpleton that he is.

And would he exceed or overreach or go beyond the just action?

Not that either, he replied.

But how would he treat the unjust man—would he deem it proper and just to outdo, overreach, or go beyond him or would he not?

He would, he said, but he wouldn't be able to.

That is not my question, I said, but whether it is not the fact that the just man does not claim or wish to outdo the just man but only the unjust?

That is the case, he replied.

How about the unjust then? Does he claim to overreach and outdo the just man and the just action?

Of course, he said, since he claims to overreach and get the better of everything.

Then the unjust man will overreach and outdo also both the unjust man and the unjust action, and all his endeavor will be to get the most in everything for himself.

That is so.

Let us put it in this way, I said. The just man does not seek to take advantage of his like but of his unlike, but the unjust man of both.

Admirably put, he said.

But the unjust man is intelligent and good and the just man neither.

That, too, is right, he said.

Is it not also true, I said, that the unjust man is like the intelligent and good and the just man is not?

Of course, he said, being such he will be like to such and the other not.

Excellent. Then each is such as that to which he is like.

What else do you suppose? he said.

Very well, Thrasymachus, but do you recognize that one man is a musician and another unmusical?

I do.

Which is the intelligent and which the unintelligent?

The musician, I presume, is the intelligent and the unmusical the unintelligent.

And is he not good in the things in which he is intelligent and bad in the things in which he is unintelligent?

Yes.

And the same of the physician?

The same.

Do you think then, my friend, that any musician in the tuning of a lyre would want to overreach another musician in the tightening and relaxing of the strings or would claim and think fit to exceed or outdo him?

I do not.

But would he the unmusical man?

Of necessity, he said.

350 And how about the medical man? In prescribing food and drink would he want to outdo the medical man or the medical procedure?

Surely not.

But he would the unmedical man?

Yes.

Consider then with regard to all forms of knowledge and ignorance whether you think that anyone who knows would choose to do or say other or more than what another who knows would do or say, and not rather exactly what his like would do in the same action.

Why, perhaps it must be so, he said, in such cases.

But what of the ignorant man—of him who does not know?

b Would he not overreach or outdo equally the knower and the ignorant?

It may be.

But the one who knows is wise?

I'll say so.

And the wise is good?

I'll say so.

Then he who is good and wise will not wish to overreach his like but his unlike and opposite.

It seems so, he said.

But the bad man and the ignoramus will overreach both like and unlike?

So it appears.

And does not our unjust man, Thrasymachus, overreach both unlike and like? Did you not say that?

I did, he replied.

c But the just man will not overreach his like but only his unlike?

Yes.

Then the just man is like the wise and good, and the unjust is like the bad and the ignoramus.

It seems likely.

But furthermore we agreed that each is such as that to which he is like.

Yes, we did.

Then the just man has turned out on our hands to be good and wise and the unjust man bad and ignorant.

d Thrasymachus made all these admissions not as I now lightly narrate them, but with much balking and reluctance and prodigious sweating, it being summer, and it was then I beheld what I had never seen before—Thrasymachus blushing. But when we did reach our conclusion that justice is virtue and wisdom and injustice vice and ignorance, Good, said I, let this be taken as established. But we were also affirming that injustice is a strong and potent thing. Don't you remember, Thrasymachus?

I remember, he said, but I don't agree with what you are now

ying either and I have an answer to it, but if I were to attempt to  
ite it, I know very well that you would say that I was delivering a  
range. Either then allow me to speak at such length as I desire, or, e  
you prefer to ask questions, go on questioning and I, as we do for  
d wives telling their tales, will say, 'Very good,' and will nod assent  
d dissent.

No, no, said I, not counter to your own belief.

Yes, to please you, he said, since you don't allow me freedom of  
eech. And yet what more do you want?

Nothing, indeed, said I, but if this is what you propose to do, do it,  
d I will ask the questions.

Ask on, then.

This, then, is the question I ask, the same as before, so that our  
quiry may proceed in sequence. What is the nature of injustice as 351  
mpared with justice? For the statement made, I believe, was that  
justice is a more potent and stronger thing than justice. But now, I  
id, if justice is wisdom and virtue, it will easily, I take it, be shown  
be also a stronger thing than injustice, since injustice is ignorance  
no one could now fail to recognize that—but what I want is not  
ite so simple as that. I wish, Thrasymachus, to consider it in some  
ch fashion as this. A city, you would say, may be unjust and try to b  
islave other cities unjustly, have them enslaved and hold many of  
em in subjection.

Certainly, he said, and this is what the best state will chiefly do,  
e state whose injustice is most complete.

I understand, I said, that this was your view. But the point that I  
n considering is this, whether the city that thus shows itself superior  
another will have this power without justice or whether she must  
'necessity combine it with justice.

If, he replied, what you were just now saying holds good, that jus- c  
ce is wisdom, with justice; if it is as I said, with injustice.

Admirable, Thrasymachus, I said. You not only nod assent and  
issent, but give excellent answers.

I am trying to please you, he replied.

Very kind of you. But please me in one thing more and tell me  
his. Do you think that a city, an army, or bandits, or thieves, or any  
ther group that attempted any action in common, could accomplish  
nything if they wronged one another?

Certainly not, said he. d

But if they didn't, wouldn't they be more likely to?

Assuredly.

For factions, Thrasymachus, are the outcome of injustice, and ha-  
reds and internecine conflicts, but justice brings oneness of mind and  
ve. Is it not so?

So be it, he replied, not to differ from you.

That is good of you, my friend, but tell me this. If it is the

business of injustice to engender hatred wherever it is found, will it not, when it springs up either among free men or slaves, cause them to hate and be at strife with one another, and make them incapable of effective action in common?

By all means.

Suppose, then, it springs up between two, will they not be at outs with and hate each other and be enemies both to one another and to the just?

They will, he said.

And then will you tell me that if injustice arises in one it will lose its force and function or will it nonetheless keep it?

Have it that it keeps it, he said.

And is it not apparent that its force is such that wherever it is found in city, family, camp, or in anything else, it first renders the thing incapable of co-operation with itself owing to faction and difference, and secondly an enemy to itself and to its opposite in every case, the just? Isn't that so?

By all means.

Then in the individual too, I presume, its presence will operate all these effects which it is its nature to produce. It will in the first place make him incapable of accomplishing anything because of inner faction and lack of self-agreement, and then an enemy to himself and to the just. Is it not so?

Yes.

But, my friend, the gods too are just.

Have it that they are, he said.

So to the gods also, it seems, the unjust man will be hateful, but the just man dear.

Revel in your discourse, he said, without fear, for I shall not oppose you, so as not to offend your partisans here.

Fill up the measure of my feast, then, and complete it for me, I said, by continuing to answer as you have been doing. Now that the just appear to be wiser and better and more capable of action and the unjust incapable of any common action, and that if we ever say that any men who are unjust have vigorously combined to put something over, our statement is not altogether true, for they would not have kept their hands from one another if they had been thoroughly unjust, but it is obvious that there was in them some justice which prevented them from wronging at the same time one another too as well as those whom they attacked. And by dint of this they accomplished whatever they did and set out to do injustice only half corrupted by injustice, since utter rascals completely unjust are completely incapable of effective action—all this I understand to be the truth, and not what you originally laid down. But whether it is also true that the just have a better life than the unjust and are happier, which is the question we

terward proposed for examination, is what we now have to consider. appears even now that they are, I think, from what has already been id. But all the same we must examine it more carefully. For it is no dinary matter that we are discussing, but the right conduct of life.

Proceed with your inquiry, he said.

I proceed, said I. Tell me then—would you say that a horse has a e cific work or function?

I would.

Would you be willing to define the work of a horse or of anything e to be that which one can do only with it or best with it?

I don't understand, he replied.

Well, take it this way. Is there anything else with which you can : except the eyes?

Certainly not.

Again, could you hear with anything but ears?

By no means.

Would you not rightly say that these are the functions of these gans?

By all means.

Once more, you could use a dirk to trim vine branches and a knife 353 d many other instruments.

Certainly.

But nothing so well. I take it, as a pruning knife fashioned for s purpose.

That is true.

Must we not then assume this to be the work or function of that?

We must.

You will now, then, I fancy, better apprehend the meaning of my :stion when I asked whether that is not the work of a thing which it y or it better than anything else can perform.

Well, he said, I do understand, and agree that the work of any- b ng is that.

Very good, said I. Do you not also think that there is a specific tue or excellence of everything for which a specific work or function appointed? Let us return to the same examples. The eyes we say ve a function?

They have.

Is there also a virtue of the eyes?

There is.

And was there not a function of the ears?

Yes.

And so also a virtue?

Also a virtue.

And what of all other things? Is the case not the same?

The same.

c Take note now. Could the eyes possibly fulfill their function well if they lacked their own proper excellence and had in its stead the defect?

How could they? he said. For I presume you meant blindness instead of vision.

Whatever, said I, the excellence may be. For I have not yet come to that question, but am only asking whether whatever operates will not do its own work well by its own virtue and badly by its own defect.

That much, he said, you may safely affirm to be true.

Then the ears, too, if deprived of their own virtue will do their work ill?

Assuredly.

d And do we then apply the same principle to all things?

I think so.

Then next consider this. The soul, has it a work which you couldn't accomplish with anything else in the world, as for example, management, rule, deliberation, and the like? Is there anything else than soul to which you could rightly assign these and say that they were its peculiar work?

Nothing else.

And again life? Shall we say that too is the function of the soul?

Most certainly, he said.

And do we not also say that there is an excellence or virtue of the soul?

We do.

e Will the soul ever accomplish its own work well if deprived of its own virtue, or is this impossible?

It is impossible.

Of necessity, then, a bad soul will govern and manage things badly while the good soul will in all these things do well.

Of necessity.

And did we not agree that the excellence or virtue of soul is justice and its defect injustice?

Yes, we did.

The just soul and the just man then will live well and the unjust ill?

So it appears, he said, by your reasoning.

354 But furthermore, he who lives well is blessed and happy, and he who does not the contrary.

Of course.

Then the just is happy and the unjust miserable.

So be it, he said.

But it surely does not pay to be miserable, but to be happy.

Of course not.

Never, then, most worshipful Thrasymachus, can injustice be more profitable than justice.

Let this complete your entertainment, Socrates, at the festival of Bendis.

A feast furnished by you, Thrasymachus, I said, now that you have become gentle with me and are no longer angry. I have not dined well, however—by my own fault, not yours. But just as gluttons b snatch at every dish that is handed along and taste it before they have properly enjoyed the preceding, so I, methinks, before finding the first object of our inquiry—what justice is—let go of that and set out to consider something about it, namely whether it is vice and ignorance or wisdom and virtue. And again, when later the view was sprung upon us that injustice is more profitable than justice I could not refrain from turning to that from the other topic. So that for me the present outcome of the discussion is that I know nothing. For if I don't know what the just is, I shall hardly know whether it is a virtue or not, and whether its possessor is or is not happy.

## BOOK II

When I had said this I supposed that I was done with the subject, but 357 it all turned out to be only a prelude. For Glaucon, who is always an intrepid, enterprising spirit in everything, would not on this occasion acquiesce in Thrasymachus' abandonment of his case, but said, Socrates, is it your desire to seem to have persuaded us or really to persuade b us that it is without exception better to be just than unjust?

Really, I said, if the choice rested with me.

Well, then, you are not doing what you wish. For tell me, do you agree that there is a kind of good which we would choose to possess, not from desire for its aftereffects, but welcoming it for its own sake? As, for example, joy and such pleasures as are harmless and nothing results from them afterward save to have and to hold the enjoyment. ]

I recognize that kind, said I.

And again a kind that we love both for its own sake and for its c consequences, such as understanding, sight, and health? For these I presume we welcome for both reasons. ]

Yes, I said.

And can you discern a third form of good under which fall exercise and being healed when sick and the art of healing and the making of money generally? For of them we would say that they are laborious and painful yet beneficial, and for their own sake we would not accept them, but only for the rewards and other benefits that accrue from a them. ]

Why yes, I said, I must admit this third class also. But what of it?

In which of these classes do you place justice? he said.

In my opinion, I said, it belongs in the fairest class, that which a 358 man who is to be happy must love both for its own sake and for the results.

Yet the multitude, he said, do not think so, but that it belongs to the toilsome class of things that must be practiced for the sake of rewards and repute due to opinion but that in itself is to be shunned as an affliction.

I am aware, said I, that that is the general opinion and Thrasy-machus has for some time been disparaging it as such and praising injustice. But I, it seems, am somewhat slow to learn.

- b Come now, he said, hear what I too have to say and see if you agree with me. For Thrasy-machus seems to me to have given up to you too soon, as if he were a serpent that you had charmed, but I am not yet satisfied with the proof that has been offered about justice and injustice. For what I desire is to hear what each of them is and what potency and effect each has in and of itself dwelling in the soul, but to dismiss their rewards and consequences. This, then, is what I propose
- c to do, with your concurrence. I will renew the argument of Thrasy-machus and will first state what men say is the nature and origin of justice, secondly, that all who practice it do so reluctantly, regarding it as something necessary and not as a good, and thirdly, that they have plausible grounds for thus acting, since forsooth the life of the unjust man is far better than that of the just man—as they say, though I, Socrates, don't believe it. Yet I am disconcerted when my ears are dinned by the arguments of Thrasy-machus and innumerable
- d others. But the case for justice, to prove that it is better than injustice, I have never yet heard stated by any as I desire to hear it. What I desire is to hear an encomium on justice in and by itself. And I think I am most likely to get that from you. For which reason I will lay myself out in praise of the life of injustice, and in so speaking will give you an example of the manner in which I desire to hear from you in turn the dispraise of injustice and the praise of justice. Consider whether my proposal pleases you.

Nothing could please me more, said I, for on what subject would a man of sense rather delight to hold and hear discourse again and again?

- e That is excellent, he said, and now listen to what I said would be the first topic—the nature and origin of justice.

By nature, they say, to commit injustice is a good and to suffer it is an evil, but that the excess of evil in being wronged is greater than the excess of good in doing wrong, so that when men do wrong and are

359 wronged by one another and taste of both, those who lack the power to avoid the one and take the other determine that it is for their profit to make a compact with one another neither to commit nor to suffer injustice, and that this is the beginning of legislation and of covenants between men, and that they name the commandment of the law the lawful and the just, and that this is the genesis and essential nature of justice—a compromise between the best, which is to do wrong with impunity, and the worst, which is to be wronged and be impotent

to get one's revenge.] Justice, they tell us, being midway between the two, is accepted and approved, not as a real good, but as a thing honored in the lack of vigor to do injustice, since anyone who had the power to do it and was in reality 'a man' would never make a compact with anybody neither to wrong nor to be wronged, for he would be mad. The nature, then, of justice is this and such as this, Socrates, and such are the conditions in which it originates, according to the theory.

But as for the second point, that those who practice it do so unwillingly and from want of power to commit injustice, we shall be most likely to apprehend that if we entertain some such supposition as this in thought—if we grant to both the just and the unjust license and power to do whatever they please, and then accompany them in imagination and see whither desire will conduct them. We should then catch the just man in the very act of resorting to the same conduct as the unjust man because of the self-advantage which every creature by its nature pursues as a good, while by the convention of law it is forcibly diverted to paying honor to 'equality.' The license that I mean would be most nearly such as would result from supposing them to have the power which men say once came to the ancestor of Gyges the Lydian. They relate that he was a shepherd in the service of the ruler at that time of Lydia, and that after a great deluge of rain and an earthquake the ground opened and a chasm appeared in the place where he was pasturing, and they say that he saw and wondered and went down into the chasm. And the story goes that he beheld other marvels there and a hollow bronze horse with little doors, and that he peeped in and saw a corpse within, as it seemed, of more than mortal stature, and that there was nothing else but a gold ring on its hand, which he took off, and so went forth. And when the shepherds held their customary assembly to make their monthly report to the king about the flocks, he also attended, wearing the ring. So as he sat there it chanced that he turned the collet of the ring toward himself, toward the inner part of his hand, and when this took place they say that he became invisible to those who sat by him and they spoke of him as absent, and that he was amazed, and again fumbling with the ring turned the collet outward and so became visible. On noting this he experimented with the ring to see if it possessed this virtue, and he found the result to be that when he turned the collet inward he became invisible, and when outward visible, and becoming aware of this, he immediately managed things so that he became one of the messengers who went up to the king, and on coming there he seduced the king's wife and with her aid set upon the king and slew him and possessed his kingdom.

If now there should be two such rings, and the just man should put on one and the unjust the other, no one could be found, it would seem, of such adamant temper as to persevere in justice and

endure to refrain his hands from the possessions of others and not touch them, though he might with impunity take what he wished even  
 c from the market place, and enter into houses and lie with whom he pleased, and slay and loose from bonds whomsoever he would, and in all other things conduct himself among mankind as the equal of a god.) And in so acting he would do no differently from the other man, but both would pursue the same course. And yet this is a great proof, one might argue, that no one is just of his own will but only from constraint, in the belief that justice is not his personal good, inasmuch as every man, when he supposes himself to have the power to do wrong, does wrong. For that there is far more profit for him personally  
 d in injustice than in justice is what every man believes, and believes truly, as the proponent of this theory will maintain. For if anyone who had got such a license within his grasp should refuse to do any wrong or lay his hands on others' possessions, he would be regarded as most pitiable and a great fool by all who took note of it, though they would praise him before one another's faces, deceiving one another because of their fear of suffering injustice.) So much for this point.

e But to come now to the decision between our two kinds of life, if we separate the most completely just and the most completely unjust man, we shall be able to decide rightly, but if not, not. How, then, is this separation to be made? Thus. We must subtract nothing of his injustice from the unjust man or of his justice from the just, but assume the perfection of each in his own mode of conduct. In the first place, the unjust man must act as clever craftsmen do. A first-rate  
 361 pilot or physician, for example, feels the difference between impossibilities and possibilities in his art and attempts the one and lets the others go, and then, too, if he does happen to trip, he is equal to correcting his error. Similarly, the unjust man who attempts injustice rightly must be supposed to escape detection if he is to be altogether unjust, and we must regard the man who is caught as a bungler. For the height of injustice is to seem just without being so. To the perfectly unjust man, then, we must assign perfect injustice and withhold nothing of it, but we must allow him, while committing the  
 b greatest wrongs, to have secured for himself the greatest reputation for justice, and if he does happen to trip, we must concede to him the power to correct his mistakes by his ability to speak persuasively if any of his misdeeds come to light, and when force is needed, to employ force by reason of his manly spirit and vigor and his provision of friends and money. And when we have set up an unjust man of this character, our theory must set the just man at his side—a simple and noble man, who, in the phrase of Aeschylus, does not wish to seem but to be good. Then we must deprive him of the seeming. For if he is going  
 c to be thought just he will have honors and gifts because of that esteem. We cannot be sure in that case whether he is just for justice's sake or for the sake of the gifts and the honors. So we must strip him

bare of everything but justice and make his state the opposite of his imagined counterpart. Though doing no wrong he must have the repute of the greatest injustice, so that he may be put to the test as regards justice through not softening because of ill repute and the consequences thereof. But let him hold on his course unchangeable even unto death, seeming all his life to be unjust though being just, so that, both men attaining to the limit, the one of injustice, the other of justice, we may pass judgment which of the two is the happier.

Bless me, my dear Glaucon, said I. How strenuously you polish off each of your two men for the competition for the prize as if it were a statue!

To the best of my ability, he replied, and if such is the nature of the two, it becomes an easy matter, I fancy, to unfold the tale of the sort of life that awaits each. We must tell it, then, and even if my language is somewhat rude and brutal, you must not suppose, Socrates, that it is I who speak thus, but those who commend injustice above justice. What they will say is this, that such being his disposition the just man will have to endure the lash, the rack, chains, the branding iron in his eyes, and finally, after every extremity of suffering, he will be crucified, and so will learn his lesson that not to be but to seem just is what we ought to desire. And the saying of Aeschylus was, it seems, far more correctly applicable to the unjust man. For it is literally true, they will say, that the unjust man, as pursuing what 362  
clings closely to reality, to truth, and not regulating his life by opinion, desires not to seem but to be unjust,

Exploiting the deep furrows of his wit

From which there grows the fruit of counsels shrewd,<sup>3</sup>

b

first office and rule in the state because of his reputation for justice, then a wife from any family he chooses, and the giving of his children in marriage to whomsoever he pleases, dealings and partnerships with whom he will, and in all these transactions advantage and profit for himself because he has no squeamishness about committing injustice. And so they say that if he enters into lawsuits, public or private, he wins and gets the better of his opponents, and, getting the better, is rich and benefits his friends and harms his enemies, and he performs sacrifices and dedicates votive offerings to the gods adequately and magnificently, and he serves and pays court to men whom he favors and to the gods far better than the just man, so that he may reasonably expect the favor of heaven also to fall rather to him than to the just. So much better they say, Socrates, is the life that is prepared for the unjust man from gods and men than that which awaits the just.

When Glaucon had thus spoken, I had a mind to make some d

<sup>3</sup> Septem 592 sq.

reply thereto, but his brother Adimantus said, You surely don't suppose, Socrates, that the statement of the case is complete?

Why, what else? I said.

The very most essential point, said he, has not been mentioned.

Then, said I, the proverb has it, 'Let a brother help a man'—and so, if Glaucon omits any word or deed, do you come to his aid. Though for my part what he has already said is quite enough to overthrow me and incapacitate me for coming to the rescue of justice.

- e Nonsense, he said, but listen to this further point. We must set forth the reasoning and the language of the opposite party, of those who commend justice and dispraise injustice, if what I conceive to be Glaucon's meaning is to be made more clear. Fathers, when they address exhortations to their sons, and all those who have others in  
363 their charge, urge the necessity of being just, not by praising justice itself, but the good repute with mankind that accrues from it, the object that they hold before us being that by seeming to be just the man may get from the reputation office and alliances and all the good things that Glaucon just now enumerated as coming to the unjust man from his good name. But those people draw out still further this topic of reputation. For, throwing in good standing with the gods, they have no lack of blessings to describe, which they affirm the gods give  
b to pious men, even as the worthy Hesiod and Homer declare—the one that the gods make the oaks bear for the just

Acorns on topmost branches and swarms of bees on their mid-trunks,

and he tells how the

Flocks of the fleece-bearing sheep are laden and weighted with soft wool,<sup>4</sup>

and of many other blessings akin to these, and similarly the other poet,

Even as when a good king, who rules in the fear of the high gods,  
Upholds justice and right, and the black earth yields him her  
foison,

- c Barley and wheat, and his trees are laden and weighted with fair fruits,

Increase comes to his flocks and the ocean is teeming with fishes.<sup>5</sup>

- And Musaeus and his son have a more excellent song than these of the blessings that the gods bestow on the righteous. For they conduct them to the house of Hades in their tale and arrange a symposium of the saints, where, reclined on couches and crowned with wreaths,  
a they entertain the time henceforth with wine, as if the fairest meed of virtue were an everlasting drunk. And others extend still further

<sup>4</sup> *Works and Days* 232 sq.

<sup>5</sup> *Odyssey* 19.109 sq.

the rewards of virtue from the gods. For they say that the children's children of the pious and oath-keeping man and his race thereafter never fail. Such and suchlike are their praises of justice. But the impious and the unjust they bury in mud in the house of Hades and compel them to fetch water in a sieve, and, while they still live, they bring them into evil repute, and all the sufferings that Glaucon enumerated as befalling just men who are thought to be unjust, these they recite about the unjust, but they have nothing else to say. Such is the praise and the censure of the just and of the unjust. e

Consider further, Socrates, another kind of language about justice and injustice employed by both laymen and poets. All with one accord reiterate that soberness and righteousness are fair and honorable, to be sure, but unpleasant and laborious, while licentiousness and injustice are pleasant and easy to win and are only in opinion and by convention disgraceful. They say that injustice pays better than justice, for the most part, and they do not scruple to felicitate bad men who are rich or have other kinds of power and to do them honor in public and private, and to dishonor and disregard those who are in any way weak or poor, even while admitting that they are better men than the others. But the strangest of all these speeches are the things they say about the gods and virtue—how it is that the gods themselves assign to many good men misfortunes and an evil life, but to their opposites a contrary lot, and begging priests and soothsayers go to rich men's doors and make them believe that they by means of sacrifices and incantations have accumulated a treasure of power from the gods that can expiate and cure with pleasurable festivals any misdeed of a man or his ancestors, and that if a man wishes to harm an enemy, at slight cost he will be enabled to injure just and unjust alike, since they are masters of spells and enchantments that constrain the gods to serve their end. And for all these sayings they cite the poets as witnesses, with regard to the ease and plentifulness of vice, quoting, 364

Evildoing in plenty a man shall find for the seeking.  
Smooth is the way, and it lies near at hand and is easy to enter,  
But on the pathway of virtue the gods put sweat from the first d  
step.<sup>6</sup>

and a certain long and uphill road. And others cite Homer as a witness to the beguiling of gods by men, since he too said,

The gods themselves are moved by prayers,  
And men by sacrifice and soothing vows,  
And incense and libation turn their wills e  
Praying, whene'er they have sinned and made transgression.<sup>7</sup>

And they produce a bushel of books of Musaeus and Orpheus, the offspring of the Moon and of the Muses, as they affirm, and these books

<sup>6</sup> Hesiod, *Works and Days* 287 sq.

<sup>7</sup> *Iliad* 9.497 sq.

they use in their ritual, and make not only ordinary men but states believe that there really are remissions of sins and purifications for deeds of injustice, by means of sacrifice and pleasant sport for the living, and that there are also special rites for the defunct, which  
 365 they call functions, that deliver us from evils in that other world, while terrible things await those who have neglected to sacrifice.

What, Socrates, do we suppose is the effect of all such sayings about the esteem in which men and gods hold virtue and vice upon the souls that hear them, the souls of young men who are quick-witted and capable of flitting, as it were, from one expression of opinion to another and inferring from them all the character and the path  
 b whereby a man would lead the best life? Such a youth would most likely put to himself the question Pindar asks, 'Is it by justice or by crooked deceit that I the higher tower shall scale and so live my life out in fenced and guarded security?' The consequences of my being just are, unless I likewise seem so, not assets, they say, but liabilities, labor, and total loss, but if I am unjust and have procured myself a reputation for justice, a godlike life is promised. Then since it is 'the  
 c seeming,' as the wise men show me, that 'masters the reality' and is lord of happiness, to this I must devote myself without reserve. For a front and a show I must draw about myself a shadow outline of virtue, but trail behind me the fox of the most sage Archilochus,  
 d shift and bent on gain. Nay, 'tis objected, it is not easy for a wrongdoer always to lie hid. Neither is any other big thing facile, we shall reply. But all the same if we expect to be happy, we must pursue the path to which the footprints of our arguments point. For with a view to lying hid we will organize societies and political clubs, and there are teachers of cajolery who impart the arts of the popular assembly and the courtroom, so that, partly by persuasion, partly by force, we shall contrive to overreach with impunity. But against the gods, it may be said, neither secrecy nor force can avail. Well, if there are no gods, or they do not concern themselves with the doings of men, neither need we concern ourselves with eluding their observation. If  
 e they do exist and pay heed, we know and hear of them only from such discourses and from the poets who have described their pedigrees. But these same authorities tell us that the gods are capable of being persuaded and swerved from their course by 'sacrifice and soothing vows' and dedications. We must believe them in both or neither. And if we are to believe them, the thing to do is to commit injustice and offer sacrifice from the fruits of our wrongdoing. For if we  
 366 are just, we shall, it is true, be unscathed by the gods, but we shall be putting away from us the profits of injustice, but if we are unjust, we shall win those profits, and, by the importunity of our prayers, when we transgress and sin we shall persuade them and escape scot free. Yes, it will be objected, but we shall be brought to judgment in the world below for our unjust deeds here, we or our children's children.

Nay, my dear sir, our calculating friend will say, here again the rites for the dead have much efficacy, and the absolving divinities, as the greatest cities declare, and the sons of gods, who became the poets b and prophets of the gods, and who reveal that this is the truth.

On what further ground, then, could we prefer justice to supreme injustice? If we combine this with a counterfeit decorum, we shall prosper to our heart's desire, with gods and men, in life and death, as the words of the multitude and of men of the highest authority declare. In consequence, then, of all that has been said, what possibility is there, Socrates, that any man who has the power of any resources of c mind, money, body, or family should consent to honor justice and not rather laugh when he hears her praised? In sooth, if anyone is able to show the falsity of these arguments, and has come to know with sufficient assurance that justice is best, he feels much indulgence for the unjust, and is not angry with them, but is aware that except a man by inborn divinity of his nature disdains injustice, or, having d won to knowledge, refrains from it, no one else is willingly just, but that it is from lack of manly spirit or from old age or some other weakness that men dispraise injustice, lacking the power to practice it. The fact is patent. For no sooner does such a one come into the power than he works injustice to the extent of his ability.

And the sole cause of all this is the fact that was the starting point of this entire plea of my friend here and of myself to you, Socrates, pointing out how strange it is that of all you self-styled advocates of justice from the heroes of old whose discourses survive to the e men of the present day, not one has ever censured injustice or commended justice otherwise than in respect of the repute, the honors, and the gifts that accrue from each. But what each one of them is in itself, by its own inherent force, when it is within the soul of the possessor and escapes the eyes of both gods and men, no one has ever adequately set forth in poetry or prose—the proof that the one is the greatest of all evils that the soul contains within itself, while justice is 367 the greatest good. For if you had all spoken in this way from the beginning and from our youth up had sought to convince us, we should not now be guarding against one another's injustice, but each would be his own best guardian, for fear lest by working injustice he should dwell in communion with the greatest of evils.

This, Socrates, and perhaps even more than this, Thrasymachus and haply another might say in pleas for and against justice and injustice, inverting their true potencies, as I believe, grossly. But I—for I have no reason to hide anything from you—am laying myself out to the utmost on the theory, because I wish to hear its refutation from b you. Do not merely show us by argument that justice is superior to injustice, but make clear to us what each in and of itself does to its possessor, whereby the one is evil and the other good. But do away with the repute of both, as Glaucon urged. For, unless you take away from

either the true repute and attach to each the false, we shall say that it is not justice that you are praising but the semblance, nor injustice that you censure, but the seeming, and that you really are exhorting  
 c us to be unjust but conceal it, and that you are at one with Thrasymachus in the opinion that justice is the other man's good, the advantage of the stronger, and that injustice is advantageous and profitable to oneself but disadvantageous to the inferior. Since, then, you have admitted that justice belongs to the class of those highest goods which are desirable both for their consequences and still more  
 d for their own sake, as sight, hearing, intelligence, yes and health too, and all other goods that are productive by their very nature and not by opinion, this is what I would have you praise about justice—the benefit which it and the harm which injustice inherently works upon its possessor. But the rewards and the honors that depend on opinion, leave to others to praise. For while I would listen to others who thus commended justice and disparaged injustice, bestowing their praise and their blame on the reputation and the rewards of either, I could  
 e not accept that sort of thing from you unless you say I must, because you have passed your entire life in the consideration of this very matter. Do not, then, I repeat, merely prove to us in argument the superiority of justice to injustice, but show us what it is that each inherently does to its possessor—whether he does or does not escape the eyes of gods and men—whereby the one is good and the other evil.

While I had always admired the genius of Glaucon and Adimantus, I was especially pleased by their words on this occasion, and  
 368 said, It was excellently spoken of you, sons of the man we know, in the beginning of the elegy which the admirer of Glaucon wrote when you distinguished yourselves in the battle of Megara—‘Sons of Ariston, whose race from a glorious sire is godlike.’ This, my friends, I think, was well said. For there must indeed be a touch of the godlike in your disposition if you are not convinced that injustice is preferable to justice though you can plead its case in such fashion. And I believe  
 b that you are really not convinced. I infer this from your general character, since from your words alone I should have distrusted you. But the more I trust you the more I am at a loss what to make of the matter. I do not know how I can come to the rescue. For I doubt my ability for the reason that you have not accepted the arguments whereby I thought I proved against Thrasymachus that justice is better than injustice. Nor yet again do I know how I can refuse to come to the rescue. For I fear lest it be actually impious to stand  
 c idly by when justice is reviled and be fainthearted and not defend her so long as one has breath and can utter his voice. The best thing, then, is to aid her as best I can.

Glaucon, then, and the rest besought me by all means to come to the rescue and not to drop the argument but to pursue to the end the investigation as to the nature of each and the truth about their re-

spective advantages. I said then as I thought, The inquiry we are undertaking is no easy one but calls for keen vision, as it seems to me. So, <sup>d</sup> since we are not clever persons, I think we should employ the method of search that we should use if we, with not very keen vision, were bidden to read small letters from a distance, and then someone had observed that these same letters exist elsewhere larger and on a larger surface. We should have accounted it a godsend, I fancy, to be allowed to read those letters first, and then examine the smaller, if they are the same.

Quite so, said Adimantus, but what analogy to this do you detect in the inquiry about justice?

I will tell you, I said. There is a justice of one man, we say, and, I suppose, also of an entire city?

Assuredly, said he.

Is not the city larger than the man?

It is larger, he said.

Then, perhaps, there would be more justice in the larger object, and more easy to apprehend. If it please you, then, let us first look for its quality in states, and then only examine it also in the individual, <sup>369</sup> looking for the likeness of the greater in the form of the less.

I think that is a good suggestion, he said.

If, then, said I, our argument should observe the origin of a state, we should see also the origin of justice and injustice in it?

It may be, said he.

And if this is done, we may expect to find more easily what we are seeking?

Much more.

Shall we try it, then, and go through with it? I fancy it is no slight task. Reflect, then.

We have reflected, said Adimantus. Proceed and don't refuse.

The origin of the city, then, said I, in my opinion, is to be found in the fact that we do not severally suffice for our own needs, but each of us lacks many things. Do you think any other principle establishes the state?

No other, said he.

As a result of this, then, one man calling in another for one service and another for another, we, being in need of many things, gather many into one place of abode as associates and helpers, and to this dwelling together we give the name city or state, do we not?

By all means.

And between one man and another there is an interchange of giving, if it so happens, and taking, because each supposes this to be better for himself.

Certainly.

Come, then, let us create a city from the beginning, in our theory. Its real creator, as it appears, will be our needs.

Obviously.

- d Now the first and chief of our needs is the provision of food for existence and life.

Assuredly.

The second is housing and the third is raiment and that sort of thing.

That is so.

Tell me, then, said I, how our city will suffice for the provision of all these things. Will there not be a farmer for one, and a builder, and then again a weaver? And shall we add thereto a cobbler and some other purveyor for the needs of the body?

Certainly.

The indispensable minimum of a city, then, would consist of four or five men.

- e Apparently.

What of this, then? Shall each of these contribute his work for the common use of all? I mean, shall the farmer, who is one, provide food for four and spend fourfold time and toil on the production of food and share it with the others, or shall he take no thought for them  
370 and provide a fourth portion of the food for himself alone in a quarter of the time and employ the other three-quarters, the one in the provision of a house, the other of a garment, the other of shoes, and not have the bother of associating with other people, but, himself for himself, mind his own affairs?

And Adimantus said, But, perhaps, Socrates, the former way is easier.

- It would not, by Zeus, be at all strange, said I, for now that you have mentioned it, it occurs to me myself that, to begin with, our several natures are not all alike but different. One man is naturally fitted  
b for one task, and another for another. Don't you think so?

I do.

Again, would one man do better working at many tasks or one at one?

One at one, he said.

And, furthermore, this, I fancy, is obvious—that if one lets slip the right season, the favorable moment in any task, the work is spoiled.

Obvious.

- That, I take it, is because the business will not wait upon the leisure of the workman, but the workman must attend to it as his  
c main affair, and not as a bywork.

He must indeed.

The result, then, is that more things are produced, and better and more easily when one man performs one task according to his nature, at the right moment, and at leisure from other occupations.

By all means.

Then, Adimantus, we need more than four citizens for the provision of the things we have mentioned. For the farmer, it appears, will not make his own plow if it is to be a good one, nor his hoe, nor his other agricultural implements, nor will the builder, who also needs a many, and similarly the weaver and cobbler.

True.

Carpenters, then, and smiths and many similar craftsmen, associating themselves with our hamlet, will enlarge it considerably.

Certainly.

Yet it still wouldn't be very large even if we should add to them neatherds and shepherds and other herders, so that the farmers might have cattle for plowing, and the builders oxen to use with the farmers for transportation, and the weavers and cobblers hides and fleeces for their use.

It wouldn't be a small city, either, if it had all these.

But further, said I, it is practically impossible to establish the city in a region where it will not need imports.

It is.

There will be a further need, then, of those who will bring in from some other city what it requires.

There will.

And again, if our servitor goes forth empty-handed, not taking 371 with him any of the things needed by those from whom they procure what they themselves require, he will come back with empty hands, will he not?

I think so.

Then their home production must not merely suffice for themselves but in quality and quantity meet the needs of those of whom they have need.

It must.

So our city will require more farmers and other craftsmen.

Yes, more.

And also of other ministrants who are to export and import the merchandise. These are traders, are they not?

Yes.

We shall also need traders, then.

Assuredly.

And if the trading is carried on by sea, we shall need quite a number of others who are expert in maritime business.

Quite a number.

But again, within the city itself how will they share with one another the products of their labor? This was the very purpose of our association and establishment of a state.

Obviously, he said, by buying and selling.

A market place, then, and money as a token for the purpose of exchange will be the result of this.

By all means.

- c If, then, the farmer or any other craftsman taking his products to the market place does not arrive at the same time with those who desire to exchange with him, is he to sit idle in the market place and lose time from his own work?

- By no means, he said, but there are men who see this need and appoint themselves for this service—in well-conducted cities they are generally those who are weakest in body and those who are useless  
a for any other task. They must wait there in the agora and exchange money for goods with those who wish to sell, and goods for money with as many as desire to buy.

This need, then, said I, creates the class of shopkeepers in our city. Or is not 'shopkeepers' the name we give to those who, planted in the agora, serve us in buying and selling, while we call those who roam from city to city merchants?

Certainly.

- e And there are, furthermore, I believe, other servitors who in the things of the mind are not altogether worthy of our fellowship, but whose strength of body is sufficient for toil; so they, selling the use of this strength and calling the price wages, are designated, I believe, 'wage earners,' are they not?

Certainly.

Wage earners, then, it seems, are the complement that helps to fill up the state.

I think so.

Has our city, then, Adimantus, reached its full growth, and is it complete?

Perhaps.

Where, then, can justice and injustice be found in it? And along with which of the constituents that we have considered do they come into the state?

- I cannot conceive, Socrates, he said, unless it be in some need  
372 that those very constituents have of one another.

Perhaps that is a good suggestion, said I. We must examine it and not hold back.

- First of all, then, let us consider what will be the manner of life of men thus provided. Will they not make bread and wine and garments and shoes? And they will build themselves houses and carry on their work in summer for the most part unclad and unshod and in  
b winter clothed and shod sufficiently. And for their nourishment they will provide meal from their barley and flour from their wheat, and kneading and cooking these they will serve noble cakes and loaves on some arrangement of reeds or clean leaves. And, reclined on rustic beds strewn with bryony and myrtle, they will feast with their children, drinking of their wine thereto, garlanded and singing hymns to  
c the gods in pleasant fellowship, not begetting offspring beyond their means lest they fall into poverty or war.

Here Glaucon broke in, No relishes apparently, he said, for the men you describe as feasting.

True, said I, I forgot that they will also have relishes—salt, of course, and olives and cheese, and onions and greens, the sort of things they boil in the country, they will boil up together. But for dessert we will serve them figs and chick-peas and beans, and they will toast myrtle berries and acorns before the fire, washing them down with moderate potations. And so, living in peace and health, they will probably die in old age and hand on a like life to their offspring. d

And he said, If you were founding a city of pigs, Socrates, what other fodder than this would you provide?

Why, what would you have, Glaucon? said I.

What is customary, he replied. They must recline on couches, I presume, if they are not to be uncomfortable, and dine from tables and have dishes and sweetmeats such as are now in use. e

Good, said I. I understand. It is not merely the origin of a city, it seems, that we are considering but the origin of a luxurious city. Perhaps that isn't such a bad suggestion, either. For by observation of such a city it may be we could discern the origin of justice and injustice in states. The true state I believe to be the one we have described—the healthy state, as it were. But if it is your pleasure that we contemplate also a fevered state, there is nothing to hinder. For there are some, it appears, who will not be contented with this sort of fare or with this way of life, but couches will have to be added thereto 373 and tables and other furniture, yes, and relishes and myrrh and incense and girls and cakes—all sorts of all of them. And the requirements we first mentioned, houses and garments and shoes, will no longer be confined to necessities, but we must set painting to work and embroidery, and procure gold and ivory and similar adornments, must we not?

Yes, he said. b

Then shall we not have to enlarge the city again? For that healthy state is no longer sufficient, but we must proceed to swell out its bulk and fill it up with a multitude of things that exceed the requirements of necessity in states, as, for example, the entire class of huntsmen, and the imitators, many of them occupied with figures and colors and many with music—the poets and their assistants, rhapsodists, actors, chorus dancers, contractors—and the manufacturers of all kinds of articles, especially those that have to do with women's adornment. And so we shall also want more servitors. Don't c you think that we shall need tutors, nurses wet and dry, beauty-shop ladies, barbers, and yet again cooks and chefs? And we shall have need, further, of swineherds; there were none of these creatures in our former city, for we had no need of them, but in this city there will be this further need. And we shall also require other cattle in great numbers if they are to be eaten, shall we not?

Yes.

Doctors, too, are something whose services we shall be much more likely to require if we live thus than as before?

Much.

And the territory, I presume, that was then sufficient to feed the then population, from being adequate will become too small. Is that so or not?

It is.

Then we shall have to cut out a cantle of our neighbor's land if we are to have enough for pasture and plowing, and they in turn of ours if they too abandon themselves to the unlimited acquisition of wealth, disregarding the limit set by our necessary wants.

Inevitably, Socrates.

We shall go to war as the next step, Glaucon—or what will happen?

What you say, he said.

And we are not yet to speak, said I, of any evil or good effect of war, but only to affirm that we have further discovered the origin of war, namely, from those things from which the greatest disasters, public and private, come to states when they come.

Certainly.

Then, my friend, we must still further enlarge our city by no small increment, but by a whole army, that will march forth and fight it out with assailants in defense of all our wealth and the luxuries we have just described.

How so? he said. Are the citizens themselves not sufficient for that?

Not if you, said I, and we all were right in the admission we made when we were molding our city. We surely agreed, if you remember, that it is impossible for one man to do the work of many arts well.

True, he said.

Well, then, said I, don't you think that the business of fighting is an art and a profession?

It is indeed, he said.

Should our concern be greater, then, for the cobbler's art than for the art of war?

By no means.

Can we suppose, then, that while we were at pains to prevent the cobbler from attempting to be at the same time a farmer, a weaver, or a builder instead of just a cobbler, to the end that we might have the cobbler's business well done, and similarly assigned to each and every one man one occupation, for which he was fit and naturally adapted and at which he was to work all his days, at leisure from other pursuits and not letting slip the right moments for doing the work well, and that yet we are in doubt whether the right accomplishment of the business of war is not of supreme moment? Is it so easy

that a man who is cultivating the soil will be at the same time a soldier and one who is practicing cobbling or any other trade, though no man in the world could make himself a competent expert at draughts or the dice who did not practice that and nothing else from childhood but treated it as an occasional business? And are we to believe that a man who takes in hand a shield or any other instrument of war springs up on that very day a competent combatant in heavy armor or in any other form of warfare—though no other tool will make a man be an artist or an athlete by his taking it in hand, nor will it be of any service to those who have neither acquired the science of it nor sufficiently practiced themselves in its use?

Great indeed, he said, would be the value of tools in that case!

Then, said I, in the same degree that the task of our guardians is the greatest of all, it would require more leisure than any other business and the greatest science and training.

I think so, said he.

Does it not also require a nature adapted to that very pursuit?

Of course.

It becomes our task, then, it seems, if we are able, to select which and what kind of natures are suited for the guardianship of a state.

Yes, ours.

Upon my word, said I, it is no light task that we have taken upon ourselves. But we must not faint so far as our strength allows.

No, we mustn't.

Do you think, said I, that there is any difference between the nature of a well-bred hound for this watchdog's work and that of a wellborn lad?

What point have you in mind?

I mean that each of them must be keen of perception, quick in pursuit of what it has apprehended, and strong too if it has to fight it out with its captive.

Why, yes, said he, there is need of all these qualities.

And it must, further, be brave if it is to fight well.

Of course.

And will a creature be ready to be brave that is not high-spirited, whether horse or dog or anything else? Have you never observed what an irresistible and invincible thing is spirit, the presence of which makes every soul in the face of everything fearless and unconquerable?

I have.

The physical qualities of the guardian, then, are obvious.

Yes.

And also those of his soul, namely that he must be of high spirit.

Yes, this too.

How then, Glaucon, said I, will they escape being savage to one another and to the other citizens if this is to be their nature?

Not easily, by Zeus, said he.

- c And yet we must have them gentle to their friends and harsh to their enemies; otherwise they will not await their destruction at the hands of others, but will be first themselves in bringing it about.

True, he said.

What, then, are we to do? said I. [Where shall we discover a disposition that is at once gentle and great-spirited? For there appears to be an opposition between the spirited type and the gentle nature.]

There does.

[But yet if one lacks either of these qualities, a good guardian he never can be.] But these requirements resemble impossibilities, and so the result is that a good guardian is impossible.

It seems likely, he said.

And I was at a standstill, and after reconsidering what we had been saying, I said, We deserve to be at a loss, my friend, for we have lost sight of the comparison that we set before ourselves.

What do you mean?

We failed to note that there are after all such natures as we thought impossible, endowed with these opposite qualities.

Where?

[It may be observed in other animals, but especially in that which we likened to the guardian. You surely have observed in well-bred hounds that their natural disposition is to be most gentle to their familiars and those whom they recognize, but the contrary to those whom they do not know.]

I am aware of that.

The thing is possible, then, said I, and it is not an unnatural requirement that we are looking for in our guardian.

It seems not.

And does it seem to you that our guardian-to-be will also need, in addition to the being high-spirited, the further quality of having the love of wisdom in his nature?

How so? he said. I don't apprehend your meaning.

- 76 This too, said I, is something that you will discover in dogs and which is worth our wonder in the creature.

What?

That the sight of an unknown person angers him before he has suffered any injury, but an acquaintance he will fawn upon though he has never received any kindness from him. Have you never marveled at that?

I never paid any attention to the matter before now, but that he acts in some such way is obvious.

[But surely that is an exquisite trait of his nature and one that shows a true love of wisdom.]

In what respect, pray?

In respect, said I, that he distinguishes a friendly from a hostile

aspect by nothing save his apprehension of the one and his failure to recognize the other. How, I ask you, can the love of learning be denied to a creature whose criterion of the friendly and the alien is intelligence and ignorance?

It certainly cannot, he said.

But you will admit, said I, that the love of learning and the love of wisdom are the same?

The same, he said.

Then may we not confidently lay it down, in the case of man too, that if he is to be in some sort gentle to friends and familiars he must be by nature a lover of wisdom and of learning?

Let us so assume, he replied.

The love of wisdom, then, and high spirit and quickness and strength will be combined for us in the nature of him who is to be a good and true guardian of the state.

By all means, he said.

Such, then, I said, would be the basis of his character. But the rearing of these men and their education, how shall we manage that? And will the consideration of this topic advance us in any way toward discerning what is the object of our entire inquiry—the origin of justice and injustice in a state—our aim must be to omit nothing of a sufficient discussion, and yet not to draw it out to tiresome length?

And Glaucon's brother replied, Certainly, I expect that this inquiry will bring us nearer to that end.

Certainly, then, my dear Adimantus, said I, we must not abandon it even if it prove to be rather long.

No, we must not.

Come, then, just as if we were telling stories or fables and had ample leisure, let us educate these men in our discourse.

So we must.

What, then, is our education? Or is it hard to find a better than that which long time has discovered—which is, I suppose, gymnastics for the body, and for the soul, music?

It is.

And shall we not begin education in music earlier than in gymnastics?

Of course.

And under music you include tales, do you not?

I do.

And tales are of two species, the one true and the other false?

Yes.

And education must make use of both, but first of the false?

I don't understand your meaning.

Don't you understand, I said, that we begin by telling children fables, and the fable is, taken as a whole, false, but there is truth in it also? And we make use of fable with children before gymnastics.

That is so.

That, then, is what I meant by saying that we must take up music before gymnastics.

You were right, he said.

Do you not know, then, that the beginning in every task is the chief thing, especially for any creature that is young and tender? For it is then that it is best molded and takes the impression that one wishes to stamp upon it.

Quite so.

Shall we, then, thus lightly suffer our children to listen to any chance stories fashioned by any chance teachers and so to take into their minds opinions for the most part contrary to those that we shall think it desirable for them to hold when they are grown up?

By no manner of means will we allow it.

[We must begin, then, it seems, by a censorship over our story-makers, and what they do well we must pass and what not, reject. And the stories on the accepted list we will induce nurses and mothers to tell to the children and so shape their souls by these stories far rather than their bodies by their hands. But most of the stories they now tell we must reject.

What sort of stories? he said.

[The example of the greater stories, I said, will show us the lesser also. For surely the pattern must be the same, and the greater and the less must have a like tendency. Don't you think so?

I do, he said, but I don't apprehend which you mean by the greater, either.

Those, I said, that Hesiod and Homer and the other poets related to us. These, methinks, composed false stories which they told and still tell to mankind.]

Of what sort? he said. And with what in them do you find fault?

With that, I said, which one ought first and chiefly to blame, especially if the lie is not a pretty one.

What is that?

When anyone images badly in his speech the true nature of gods and heroes, like a painter whose portraits bear no resemblance to his models.

It is certainly right to condemn things like that, he said, but just what do we mean and what particular things?

There is, first of all, I said, the greatest lie about the things of greatest concernment, which was no pretty invention of him who told how Uranus did what Hesiod says he did to Cronus, and how Cronus in turn took his revenge, and then there are the doings and sufferings of Cronus at the hands of his son. Even if they were true I should not think that they ought to be thus lightly told to thoughtless young persons. But the best way would be to bury them in silence, and if there were some necessity for relating them, only a very small audience

should be admitted under pledge of secrecy and after sacrificing, not a pig, but some huge and unprocurable victim, to the end that as few as possible should have heard these tales.

Why, yes, said he, such stories are hard sayings.

Yes, and they are not to be told. Adimantus, in our city, nor is it to be said in the hearing of a young man that in doing the utmost wrong he would do nothing to surprise anybody, nor again in punishing his father's wrongdoings to the limit, but would only be following the example of the first and greatest of the gods.

No, by heaven, said he, I do not myself think that they are fit to be told.

Neither must we admit at all, said I, that gods war with gods and plot against one another and contend—for it is not true either—if we wish our future guardians to deem nothing more shameful than lightly to fall out with one another. Still less must we make battles of gods and giants the subject for them of stories and embroideries, and other enmities many and manifold of gods and heroes toward their kith and kin. But if there is any likelihood of our persuading them that no citizen ever quarreled with his fellow citizen and that the very idea of it is an impiety, that is the sort of thing that ought rather to be said by their elders, men and women, to children from the beginning and as they grow older, and we must compel the poets to keep close to this in their compositions. But Hera's fetherings by her son and the hurling out of heaven of Hephaestus by his father when he was trying to save his mother from a beating, and the battles of the gods in Homer's verse are things that we must not admit into our city either wrought in allegory or without allegory. For the young are not able to distinguish what is and what is not allegory, but whatever opinions are taken into the mind at that age are wont to prove indelible and unalterable. For which reason, maybe, we should do our utmost that the first stories that they hear should be so composed as to bring the fairest lessons of virtue to their ears.

Yes, that is reasonable, he said, but if again someone should ask us to be specific and say what these compositions may be and what are the tales, what could we name?

And I replied, Adimantus, we are not poets, you and I at present, but founders of a state. And to founders it pertains to know the patterns on which poets must compose their fables and from which their poems must not be allowed to deviate, but the founders are not required themselves to compose fables.

Right, he said, but this very thing—the patterns or norms of right speech about the gods—what would they be?

Something like this, I said. The true quality of God we must always surely attribute to him whether we compose in epic, melic, or tragic verse.

We must.

- b And is not God of course good in reality and always to be spoken of as such?

Certainly.

But further, no good thing is harmful, is it?

I think not.

Can what is not harmful harm?

By no means.

Can that which does not harm do any evil?

Not that either.

But that which does no evil would not be cause of any evil either?

How could it?

Once more, is the good beneficent?

Yes.

It is the cause, then, of welfare?

Yes.

Then the good is not the cause of all things, but of things that are well it is the cause—of things that are ill it is blameless.

- c Entirely so, he said.

Neither, then, could God, said I, since he is good, be, as the multitude say, the cause of all things, but for mankind he is the cause of few things, but of many things not the cause. For good things are far fewer with us than evil, and for the good we must assume no other cause than God, but the cause of evil we must look for in other things and not in God.

What you say seems to me most true, he replied.

- a Then, said I, we must not accept from Homer or any other poet the folly of such error as this about the gods, when he says,

Two urns stand on the floor of the palace of Zeus and are filled with  
Dooms he allots, one of blessings, the other of gifts that are evil.<sup>8</sup>

And to whomsoever Zeus gives of both commingled

Now upon evil he chances and now again good is his portion.

But the man for whom he does not blend the lots, but to whom he gives unmixed evil—

Hunger devouring drives him, a wanderer over the wide world.

Nor will we tolerate the saying that

- e Zeus is dispenser alike of good and of evil to mortals.

But as to the violation of the oaths and the truce by Pandarus, if anyone affirms it to have been brought about by the action of Athena and Zeus, we will not approve, nor that the strife and contention of

<sup>8</sup> *Iliad* 24.527 sq.

the gods were the doing of Themis and Zeus, nor again must we permit our youth to hear what Aeschylus says.

A god implants the guilty cause in men  
When he would utterly destroy a house.

380

But if any poets compose a 'Sorrows of Niobe,' the poem that contains these iambics, or a tale of the Pelopidae or of Troy, or anything else of the kind, we must either forbid them to say that these woes are the work of God, or they must devise some such interpretation as we now require, and must declare that what God did was righteous and good, and they were benefited by their chastisement. But that they were miserable who paid the penalty, and that the doer of this was God, is a thing that the poet must not be suffered to say. If on the other hand he should say that for needing chastisement the wicked were miserable and that in paying the penalty they were benefited by God, that we must allow. But as to saying that God, who is good, becomes the cause of evil to anyone, we must contend in every way that neither should anyone assert this in his own city if it is to be well governed, nor anyone hear it, neither younger nor older, neither telling a story in meter or without meter, for neither would the saying of such things, if they are said, be holy, nor would they be profitable to us or concordant with themselves.

I cast my vote with yours for this law, he said, and am well pleased with it.

This, then, said I, will be one of the laws and patterns concerning the gods to which speakers and poets will be required to conform, that God is not the cause of all things, but only of the good.

And an entirely satisfactory one, he said.

And what of this, the second? Do you think that God is a wizard and capable of manifesting himself by design, now in one aspect, now in another, at one time himself changing and altering his shape in many transformations and at another deceiving us and causing us to believe such things about him, or that he is simple and less likely than anything else to depart from his own form?

I cannot say offhand, he replied.

But what of this? If anything went out from its own form, would it not be displaced and changed, either by itself or by something else?

Necessarily.

Is it not true that to be altered and moved by something else happens least to things that are in the best condition, as, for example, a body by food and drink and toil, and plants by the heat of the sun and winds and similar influences—is it not true that the healthiest and strongest is least altered?

Certainly.

And is it not the soul that is bravest and most intelligent that would be least disturbed and altered by any external affection?

381

Yes.

And, again, it is surely true of all composite implements, edifices, and habiliments, by parity of reasoning, that those which are well made and in good condition are least liable to be changed by time and other influences.

That is so.

It is universally true, then, that that which is in the best state by nature or art or both admits least alteration by something else.

So it seems.

But God, surely, and everything that belongs to God, is in every way in the best possible state.

Of course.

From this point of view, then, it would be least of all likely that there would be many forms in God.

Least indeed.

But would he transform and alter himself?

Obviously, he said, if he is altered.

Then does he change himself for the better and to something fairer, or for the worse and to something uglier than himself?

It must necessarily, said he, be for the worse if he is changed. For we surely will not say that God is deficient in either beauty or excellence.

Most rightly spoken, said I. And if that were his condition, do you think, Adimantus, that any one god or man would of his own will worsen himself in any way?

Impossible, he replied.

It is impossible then, said I, even for a god to wish to alter himself, but, as it appears, each of them, being the fairest and best possible, abides forever simply in his own form.

An absolutely necessary conclusion to my thinking.

No poet then, I said, my good friend, must be allowed to tell us that 'The gods, in the likeness of strangers, many disguises assume as they visit the cities of mortals.'<sup>9</sup> Nor must anyone tell falsehoods about Proteus and Thetis, nor in any tragedy or in other poems bring in Hera disguised as a priestess collecting alms 'for the life-giving sons of Inachus, the Argive stream.'<sup>10</sup> And many similar falsehoods they must not tell. Nor again must mothers under the influence of such poets terrify their children with harmful tales, how there are certain gods whose apparitions haunt the night in the likeness of many strangers from all manner of lands, lest while they speak evil of the gods they at the same time make cowards of the children.

They must not, he said.

But, said I, may we suppose that while the gods themselves are

<sup>9</sup> *Odyssey* 17.485 sq.

<sup>10</sup> Aeschylus, *Xanthians*, fr. 159.

incapable of change they cause us to fancy that they appear in many shapes deceiving and practicing magic upon us?

Perhaps, said he.

Consider, said I. Would a god wish to deceive, or lie, by presenting in either word or action what is only appearance?

I don't know, said he.

382

Don't you know, said I, that the veritable lie, if the expression is permissible, is a thing that all gods and men abhor?

What do you mean? he said.

This, said I, that falsehood in the most vital part of themselves, and about their most vital concerns, is something that no one willingly accepts, but it is there above all that everyone fears it.

I don't understand yet either.

That is because you suspect me of some grand meaning, I said, <sup>b</sup> but what I mean is, that deception in the soul about realities, to have been deceived and to be blindly ignorant and to have and hold the falsehood there, is what all men would least of all accept, and it is in that case that they loathe it most of all.

Quite so, he said.

But surely it would be most wholly right, as I was just now saying, to describe this as in very truth falsehood—ignorance namely in the *soul* of the man deceived. For the falsehood in *words* is a copy of the affection in the soul, an afferrising image of it and not an altogether unmixed falsehood. Is not that so? <sup>c</sup>

By all means.

Essential falsehood, then, is hated not only by gods but by men. I agree.

But what of the falsehood in words—when and for whom is it serviceable so as not to merit abhorrence? Will it not be against enemies? And when any of those whom we call friends owing to madness or folly attempts to do some wrong, does it not then become useful to avert the evil—as a medicine? And also in the fables of which we were just now speaking, owing to our ignorance of the truth about antiquity, we liken the false to the true as far as we may and so make it edifying.

We most certainly do, he said.

Tell me, then, on which of these grounds falsehood would be serviceable to God. Would he because of his ignorance of antiquity make false likenesses of it?

An absurd supposition, that, he said.

Then there is no lying poet in God.

I think not.

Well then, would it be through fear of his enemies that he would lie?

Far from it.

e

Would it be because of the folly or madness of his friends?

Nay, no fool or madman is a friend of God.

Then there is no motive for God to deceive.

None.

So from every point of view the divine and the divinity are free from falsehood.

By all means.

Then God is altogether simple and true in deed and word, and neither changes himself nor deceives others by visions or words or the sending of signs in waking or in dreams.

383 I myself think so, he said, when I hear you say it.

You concur then, I said, in this as our second norm or canon for speech and poetry about the gods—that neither are they wizards in shape shifting nor do they mislead us by falsehoods in words or deed?

I concur.

Then, though there are many other things that we praise in Homer, this we will not applaud, the sending of the dream by Zeus to Agamemnon, nor shall we approve of Aeschylus when his Thetis avers  
b that Apollo, singing at her wedding, 'foretold the happy fortunes of her issue,'

Their days prolonged, from pain and sickness free,  
And rounding out the tale of heaven's blessings,  
Raised the proud paean, making glad my heart.  
And I believed that Phoebus' mouth divine,  
Filled with the breath of prophecy, could not lie.  
But he himself, the singer, himself who sat  
At meat with us, himself who promised all,  
Is now himself the slayer of my son.

c When anyone says that sort of thing about the gods, we shall be wroth with him, we will refuse him a chorus. Neither will we allow teachers to use him for the education of the young if our guardians are to be god-fearing men and godlike in so far as that is possible for humanity.

By all means, he said, I accept these norms and would use them as canons and laws.

### BOOK III

386 Concerning the gods then, said I, this is the sort of thing that we must allow or not allow them to hear from childhood up, if they are to honor the gods and their fathers and mothers, and not to hold their friendship with one another in light esteem.

That was our view and I believe it right.

(What then of this? If they are to be brave, must we not extend our prescription to include also the sayings that will make them least

likely to fear death? Or do you suppose that anyone could ever become  
brave who had that dread in his heart?

No indeed, I do not, he replied.

And again, if he believes in the reality of the underworld and its  
terrors, do you think that any man will be fearless of death and in  
battle will prefer death to defeat and slavery?

By no means.

Then it seems we must exercise supervision also, in the matter of  
such tales as these, over those who undertake to supply them and re-  
quest them not to dispraise in this indiscriminating fashion the life  
in Hades but rather praise it, since what they now tell us is neither  
true nor edifying to men who are destined to be warriors.

Yes, we must, he said.

Then, said I, beginning with this verse we will expunge every-  
thing of the same kind,

Liefer were I in the fields up above to be serf to another  
Tiller of some poor plot which yields him a scanty subsistence,  
Than to be ruler and king over all the dead who have perished,<sup>11</sup>

and this,

Lest unto men and immortals the homes of the dead be uncovered  
Horrible, noisome, dank, that the gods too hold in abhorrence,<sup>12</sup>

and,

Ah me! So it is true that e'en in the dwellings of Hades  
Spirit there is and wraith, but within there is no understanding,<sup>13</sup>

and this [of Tiresias],

Sole to have wisdom and wit, but the others are shadowy phantoms,<sup>14</sup>

and,

Forth from his limbs unwilling his spirit flitted to Hades,  
Wailing its doom and its lustihood lost and the May of its manhood,<sup>15</sup>

and,

Under the earth like a vapor vanished the gibbering soul,<sup>16</sup>

and,

Even as bats in the hollow of some mysterious grotto  
Fly with a flittermouse shriek when one of them falls from the  
cluster,  
Whereby they hold to the rock and are clinging the one to the other,  
Flitted their gibbering ghosts.<sup>17</sup>

<sup>11</sup> *Odyssey* 11.489 sq.

<sup>12</sup> *Iliad* 20.64.

<sup>13</sup> *Iliad* 23.103.

<sup>14</sup> *Odyssey* 10.495.

<sup>17</sup> *Odyssey* 24.6 sq.

<sup>15</sup> *Iliad* 16.856.

<sup>16</sup> *Iliad* 23.100.

- b We will beg Homer and the other poets not to be angry if we cancel those and all similar passages, not that they are not poetic and pleasing to most hearers, but because the more poetic they are the less are they suited to the ears of boys and men who are destined to be free and to be more afraid of slavery than of death.

By all means.

- Then we must further taboo in these matters the entire vocabulary of terror and fear, Cocytus named of lamentation loud, abhorred  
c Styx, the flood of deadly hate, the people of the infernal pit and of the charnel house, and all other terms of this type, whose very names send a shudder through all the hearers every year. And they may be excellent for other purposes, but we are in fear for our guardians lest the habit of such thrills make them more sensitive and soft than we would have them.

And we are right in so fearing.

We must remove those things then?

Yes.

And the opposite type to them is what we must require in speech and in verse?

Obviously.

- d And shall we also do away with the wailings and lamentations of men of repute?

That necessarily follows, he said, from the other.

Consider, said I, whether we shall be right in thus getting rid of them or not. What we affirm is that a good man will not think that for a good man, whose friend he also is, death is a terrible thing.

Yes, we say that.

Then it would not be for his friend's sake as if he had suffered something dreadful that he would make lament.

Certainly not.

- But we also say this, that such a one is most of all men sufficient unto himself for a good life and is distinguished from other men in  
e having least need of anybody else.

True, he replied.

Least of all then to him is it a terrible thing to lose son or brother or his wealth or anything of the sort.

Least of all.

Then he makes the least lament and bears it most moderately when any such misfortune overtakes him.

Certainly.

- Then we should be right in doing away with the lamentations of men of note and in attributing them to women, and not to the most  
388 worthy of them either, and to inferior men, in order that those whom we say we are breeding for the guardianship of the land may disdain to act like these.

We should be right, said he.

Again then we shall request Homer and the other poets not to portray Achilles, the son of a goddess, as, 'lying now on his side, and then again on his back, and again on his face,'<sup>18</sup> and then rising up and 'drifting distraught on the shore of the waste unharvested ocean,'<sup>19</sup> nor as clutching with both hands the sooty dust and strewing it over his head, nor as weeping and lamenting in the measure and manner attributed to him by the poet, nor yet Priam, near kinsman of the gods, making supplication and rolling in the dung, 'calling aloud unto each, by name to each man appealing.'<sup>20</sup> And yet more than this shall we beg of them at least not to describe the gods as lamenting and crying, 'Ah, woe is me, woeful mother who bore to my sorrow the bravest,'<sup>21</sup> and if they will so picture the gods, at least not to have the effrontery to present so unlikely a likeness of the supreme god as to make him say,

Out on it, dear to my heart is the man whose pursuit around Troy town

I must behold with my eyes while my spirit is grieving within me,<sup>22</sup>

and,

Ah, woe is me! Of all men to me is Sarpedon the dearest,  
Fated to fall by the hands of Patroclus, Menoetius' offspring.<sup>23</sup>

For if, dear Adimantus, our young men should seriously incline to listen to such tales and not laugh at them as unworthy utterances, still less likely would any man be to think such conduct unworthy of himself and to rebuke himself if it occurred to him to do or say anything of that kind, but without shame or restraint full many a dirge for trifles would he chant and many a lament.

You say most truly, he replied.

But that must not be, as our reasoning but now showed us, in which we must put our trust until someone convinces us with a better reason.

No, it must not be.

Again, they must not be prone to laughter. For ordinarily when one abandons himself to violent laughter his condition provokes a violent reaction

I think so, he said.

Then if anyone represents men of worth as overpowered by laughter we must not accept it, much less if gods.

Much indeed, he replied.

Then we must not accept from Homer such sayings as these either about the gods.

<sup>18</sup> *Iliad* 24.10 sq.

<sup>19</sup> *Iliad* 24.12 sq.

<sup>20</sup> *Iliad* 22.414 sq.

<sup>21</sup> *Iliad* 18.54.

<sup>22</sup> *Iliad* 22.168.

<sup>23</sup> *Iliad* 16.433 sq.

Quenchless then was the laughter that rose from the blessed immortals

When they beheld Hephaestus officiously puffing and panting.<sup>24</sup>

We must not accept them on your view.

- If it pleases you to call it mine, he said. At any rate we must not  
b accept them.

~~But further we~~ must surely prize truth most highly. For if we were right in what we were just saying and falsehood is in very deed useless to gods, but to men useful as a remedy or form of medicine, it is obvious that such a thing must be assigned to physicians, and laymen should have nothing to do with it.

Obviously, he replied.

- The rulers then of the city may, if anybody, fitly lie on account of enemies or citizens for the benefit of the state; no others may have  
c anything to do with it. But for a layman to lie to rulers of that kind we shall affirm to be as great a sin, nay a greater, than it is for a patient not to tell his physician or an athlete his trainer the truth about his bodily condition, or for a man to deceive the pilot about the ship and the sailors as to the real condition of himself or a fellow sailor, and how they fare.

Most true, he replied.

- If then the ruler catches anybody else in the city lying, any of the craftsmen, 'whether a prophet or healer of sickness or joiner of timbers,'<sup>25</sup> he will chastise him for introducing a practice as subversive and destructive of a state as it is of a ship.

He will, he said, if deed follows upon word.

Again, will our lads not need the virtue of self-control?

Of course.

- And for the multitude are not the main points of self-control  
e these—to be obedient to their rulers and themselves to be rulers over the bodily appetites and pleasures of food, drink, and the rest?

I think so.

Then, I take it, we will think well said such sayings as that of Homer's Diomedes,

Friend, sit down and be silent and hark to the word of my bidding,<sup>26</sup>  
and what follows,

Breathing high spirit the Greeks marched silently fearing their captains,<sup>27</sup>

and all similar passages.

Yes, well said.

But what of this sort of thing,

<sup>24</sup> *Iliad* 1.599.

<sup>25</sup> *Odyssey* 17.383 sq.

<sup>26</sup> *Iliad* 4.412.

<sup>27</sup> *Iliad* 3.8 and 4.431.

Heavy with wine, with the eyes of a dog and the heart of a fleet deer,<sup>28</sup>

and the lines that follow? Are these well—and other impertinences in 390  
prose or verse of private citizens to their rulers?

They are not well.

They certainly are not suitable for youth to hear for the inculcation of self-control. But if from another point of view they yield some pleasure we must not be surprised, or what is your view of it?

This, he said.

Again, to represent the wisest man as saying that this seems to him the fairest thing in the world,

When the bounteous tables are standing b  
Laden with bread and with meat and the cupbearer ladles the sweet  
wine

Out of the mixer and bears it and empties it into the beakers,<sup>29</sup>

do you think the hearing of that sort of thing will conduce to a young man's temperance or self-control? Or this?

Hunger is the most piteous death that a mortal may suffer.<sup>30</sup>

Or to hear how Zeus lightly forgot all the designs which he devised, awake while the other gods and men slept, because of the excitement of his passions, and was so overcome by the sight of Hera that he is not c  
even willing to go to their chamber, but wants to lie with her there on the ground and says that he is possessed by a fiercer desire than when they first consorted with one another, 'deceiving their dear parents'?<sup>31</sup> Nor will it profit them to hear of Hephaestus' fettering of Ares and Aphrodite for a like motive.

No, by Zeus, he said, I don't think it will.

But any words or deeds of endurance in the face of all odds attributed to famous men are suitable for our youth to see represented and to hear, such as,

He smote his breast and chided thus his heart,  
Endure, my heart, for worse hast thou endured.<sup>32</sup>

By all means, he said.

It is certain that we cannot allow our men to be accepters of e  
bribes or greedy for gain.

By no means.

Then they must not chant, 'Gifts move the gods and gifts persuade dread kings.' Nor should we approve Achilles' attendant Phoenix as speaking fairly when he counseled him if he received gifts for it to defend the Achaeans, but without gifts not to lay aside his

<sup>28</sup> *Iliad* 1.225.

<sup>30</sup> *Odyssey* 12.342.

<sup>29</sup> *Odyssey* 9.8 sq.

<sup>31</sup> *Iliad* 14.294 sq.

<sup>32</sup> *Odyssey* 20.17 sq.

wrath. Nor shall we think it proper nor admit that Achilles himself was so greedy as to accept gifts from Agamemnon and again to give up a dead body after receiving payment but otherwise to refuse.

391 It is not right, he said, to commend such conduct.

But, for Homer's sake, said I, I hesitate to say that it is positively impious to affirm such things of Achilles and to believe them when told by others, or again to believe that he said to Apollo,

Me thou hast balked, far-darter, the most pernicious of all gods,  
Mightily would I requite thee if only my hands had the power,<sup>33</sup>

b and how he was disobedient to the river, who was a god, and was ready to fight with him, and again that he said of the locks of his hair, consecrated to the other river, Spercheus,

This let me give to take with him my hair to the hero, Patroclus,<sup>34</sup>

who was a dead body. And that he did so we must not believe. And again the trailings of Hector's body round the grave of Patroclus and the slaughter of the living captives upon his pyre, all these we will  
c affirm to be lies, nor will we suffer our youth to believe that Achilles, the son of a goddess and of Peleus, the most chaste of men, grandson of Zeus, and himself bred under the care of the most sage Chiron, was of so perturbed a spirit as to be affected with two contradictory maladies, the greed that becomes no free man and at the same time overweening arrogance toward gods and men.

You are right, he said.

Neither, then, said I, must we believe this, or suffer it to be said, that Theseus, the son of Poseidon, and Pirithous, the son of Zeus, at-  
d tempted such dreadful rapes, nor that any other child of a god or hero would have brought himself to accomplish the terrible and impious deeds that they now falsely relate of them. But we must constrain the poets either to deny that these are their deeds or that they are the children of gods, but not to make both statements or attempt to persuade our youth that the gods are the begetters of evil, and that heroes are no better than men. For, as we were saying, such utter-  
e ances are both impious and false. For we proved, I take it, that for evil to arise from gods is an impossibility.

Certainly.

And they are furthermore harmful to those that hear them. For every man will be very lenient with his own misdeeds if he is convinced that such are and were the actions of

The near-sown seed of gods,  
Close kin to Zeus, for whom on Ida's top  
Ancestral altars flame to highest heaven,  
Nor in their lifeblood fails the fire divine.<sup>35</sup>

<sup>33</sup> *Iliad* 22.15.

<sup>34</sup> *Iliad* 23.151.

<sup>35</sup> Aeschylus, *Niobe*, fr. 146.

For which cause we must put down such fables, lest they breed in our youth great laxity in turpitude.

392

Most assuredly.

What type of discourse remains for our definition of our prescriptions and proscriptions? We have declared the right way of speaking about gods and daemons and heroes and that other world?

We have.

Speech, then, about men would be the remainder.

Obviously.

It is impossible for us, my friend, to place this here.

Why?

Because I presume we are going to say that so it is that both poets and writers of prose speak wrongly about men in matters of greatest moment, saying that there are many examples of men who, though unjust, are happy, and of just men who are wretched, and that there is profit in injustice if it be concealed, and that justice is the other man's good and your own loss, and I presume that we shall forbid them to say this sort of thing and command them to sing and fable the opposite. Don't you think so?

Nay, I well know it, he said.

Then, if you admit that I am right, I will say that you have conceded the original point of our inquiry?

Rightly apprehended, he said.

Then, as regards men, that speech must be of this kind, that is a point that we will agree upon when we have discovered the nature of justice and the proof that it is profitable to its possessor whether he does or does not appear to be just.

Most true, he replied.

So this concludes the topic of tales. That of diction, I take it, is to be considered next. So we shall have completely examined both the matter and the manner of speech.

And Adimantus said, I don't understand what you mean by this.

Well, said I, we must have you understand. Perhaps you will be more likely to apprehend it thus. Is not everything that is said by fabulists or poets a narration of past, present, or future things?

What else could it be? he said.

Do not they proceed either by pure narration or by a narrative that is effected through imitation, or by both?

This too, he said, I still need to have made plainer.

I seem to be a ridiculous and obscure teacher, I said. So, like men who are unable to express themselves I won't try to speak in wholes and universals but will separate off a particular part and by the example of that try to show you my meaning. Tell me, do you know the first lines of the *Iliad* in which the poet says that Chryses implored Agamemnon to release his daughter, and that the king was angry

393 and that Chryses, failing of his request, imprecated curses on the Achaeans in his prayers to the god?

You know then that as far as these verses,

And prayed unto all the Achaeans,  
Chiefly to Atreus's sons, twin leaders who marshaled the people,<sup>36</sup>

b the poet himself is the speaker and does not even attempt to suggest to us that anyone but himself is speaking. But what follows he delivers as if he were himself Chryses and tries as far as may be to make us feel that not Homer is the speaker, but the priest, an old man. And in this manner he has carried on nearly all the rest of his narration about affairs in Ilium, all that happened in Ithaca, and the entire *Odyssey*.

Quite so, he said.

Now, it is narration, is it not, both when he presents the several speeches and the matter between the speeches?

Of course.

c But when he delivers a speech as if he were someone else, shall we not say that he then assimilates thereby his own diction as far as possible to that of the person whom he announces as about to speak?

We shall, obviously.

And is not likening oneself to another in speech or bodily bearing an imitation of him to whom one likens oneself?

Surely.

In such case then, it appears, he and the other poets effect their narration through imitation.

Certainly.

d But if the poet should conceal himself nowhere, then his entire poetizing and narration would have been accomplished without imitation. And lest you may say again that you don't understand, I will explain to you how this would be done. If Homer, after telling us that Chryses came with the ransom of his daughter and as a suppliant of the Achaeans but chiefly of the kings, had gone on speaking not as if made or being Chryses but still as Homer, you are aware that it would not be imitation but narration, pure and simple. It would have been somewhat in this wise. I will state it without meter for I am not a poet. The priest came and prayed that to them the gods should  
e grant to take Troy and come safely home, but that they should accept the ransom and release his daughter, out of reverence for the god, and when he had thus spoken the others were of reverent mind and approved, but Agamemnon was angry and bade him depart and not come again lest the scepter and the fillets of the god should not avail him. And ere his daughter should be released, he said, she would grow old in Argos with himself, and he ordered him to be off and not

vex him if he wished to get home safe. And the old man on hearing 394 this was frightened and departed in silence, and having gone apart from the camp he prayed at length to Apollo, invoking the appellations of the god, and reminding him of and asking requital for any of his gifts that had found favor whether in the building of temples or the sacrifice of victims. In return for these things he prayed that the Achaeans should suffer for his tears by the god's shafts.

It is in this way, my dear fellow, I said, that without imitation b simple narration results.

I understand, he said.

Understand then, said I, that the opposite of this arises when one removes the words of the poet between and leaves the alternation of speeches.

This too I understand, he said. It is what happens in tragedy.

You have conceived me most rightly, I said, and now I think I can make plain to you what I was unable to before, that there is one kind of poetry and tale-telling which works wholly through imitation, c as you remarked, tragedy and comedy, and another which employs the recital of the poet himself, best exemplified, I presume, in the dithyramb, and there is again that which employs both, in epic poetry and in many other places, if you apprehend me.

I understand now, he said, what you then meant.

Recall then also the preceding statement that we were done with the 'what' of speech and still had to consider the 'how.'

I remember.

What I meant then was just this, that we must reach a decision d whether we are to suffer our poets to narrate as imitators or in part as imitators and in part not, and what sort of things in each case, or not allow them to imitate at all.

I divine, he said, that you are considering whether we shall admit tragedy and comedy into our city or not.

Perhaps, said I, and perhaps even more than that. For I certainly do not yet know myself, but whithersoever the wind, as it were, of the argument blows, there lies our course.

Well said, he replied.

This then, Adimantus, is the point we must keep in view. Do we e wish our guardians to be good mimics or not? Or is this also a consequence of what we said before, that each one could practice well only one pursuit and not many, but if he attempted the latter, dabbling in many things, he would fail of distinction in all?

Of course it is.

And does not the same rule hold for imitation, that the same man is not able to imitate many things well as he can one?

No, he is not.

Still less, then, will he be able to combine the practice of any 395 worthy pursuit with the imitation of many things and the quality of

a mimic, since, unless I mistake, the same men cannot practice well at once even the two forms of imitation that appear most nearly akin, as the writing of tragedy and comedy. Did you not just now call these two imitations?

I did, and you are right in saying that the same men are not able to succeed in both.

Nor yet to be at once good rhapsodists and actors?

True.

But neither can the same men be actors for tragedies and comedies—and all these are imitations, are they not?

Yes, imitations.

And to still smaller coinage than this, in my opinion, Adimantus, proceeds the fractioning of human faculty, so as to be incapable of imitating many things or of doing the things themselves of which the imitations are likenesses.

Most true, he replied.

If, then, we are to maintain our original principle, that our guardians, released from all other crafts, are to be expert craftsmen of civic liberty, and pursue nothing else that does not conduce to this, it would not be fitting for these to do nor yet to imitate anything else. But if they imitate they should from childhood up imitate what is appropriate to them—men, that is, who are brave, sober, pious, free, and all things of that kind—but things unbecoming the free man they should neither do nor be clever at imitating, nor yet any other shameful thing, lest from the imitation they imbibe the reality. Or have you not observed that imitations, if continued from youth far into life, settle down into habits and second nature in the body, the speech, and the thought?

Yes, indeed, said he.

We will not then allow our charges, whom we expect to prove good men, being men, to play the parts of women and imitate a woman young or old wrangling with her husband, defying heaven, loudly boasting, fortunate in her own conceit, or involved in misfortune and possessed by grief and lamentation—still less a woman that is sick, in love, or in labor.

Most certainly not, he replied.

Nor may they imitate slaves, female and male, doing the offices of slaves.

No, not that either.

Nor yet, as it seems, bad men who are cowards and who do the opposite of the things we just now spoke of, reviling and lampooning one another, speaking foul words in their cups or when sober and in other ways sinning against themselves and others in word and deed after the fashion of such men. And I take it they must not form the habit of likening themselves to madmen either in words nor yet in

deeds. For while knowledge they must have both of mad and bad men and women, they must do and imitate nothing of this kind.

Most true, he said.

What of this? I said. Are they to imitate smiths and other craftsmen or the rowers of triremes and those who call the time to them b or other things connected therewith?

How could they, he said, since it will be forbidden them even to pay any attention to such things?

Well, then, neighing horses and lowing bulls, and the noise of rivers and the roar of the sea and the thunder and everything of that kind—will they imitate these?

Nay, they have been forbidden, he said, to be mad or liken themselves to madmen.

If, then, I understand your meaning, said I, there is a form of diction and narrative in which the really good and true man would c narrate anything that he had to say, and another form unlike this to which the man of the opposite birth and breeding would cleave and in which he would tell his story.

What are these forms? he said.

A man of the right sort, I think, when he comes in the course of his narrative to some word or act of a good man will be willing to impersonate the other in reporting it, and will feel no shame at that kind of mimicry, by preference imitating the good man when a he acts steadfastly and sensibly, and less and more reluctantly when he is upset by sickness or love or drunkenness or any other mishap. But when he comes to someone unworthy of himself, he will not wish to liken himself in earnest to one who is inferior, except in the few cases where he is doing something good, but will be embarrassed both because he is unpracticed in the mimicry of such characters, and also because he shrinks in distaste from molding and fitting himself e to the types of baser things. His mind disdains them, unless it be for jest.

Naturally, he said.

Then the narrative that he will employ will be of the kind that we just now illustrated by the verses of Homer, and his diction will be one that partakes of both, of imitation and simple narration, but there will be a small portion of imitation in a long discourse—or is there nothing in what I say?

Yes, indeed, he said, that is the type and pattern of such a 397 speaker.

Then, said I, the other kind of speaker, the more debased he is the less will he shrink from imitating anything and everything. He will think nothing unworthy of himself, so that he will attempt, seriously and in the presence of many, to imitate all things, including those we just now mentioned—claps of thunder, and the noise of wind and

hail and axes and pulleys, and the notes of trumpets and flutes and Panpipes, and the sounds of all instruments, and the cries of dogs, sheep, and birds—and so his style will depend wholly on imitation in voice and gesture, or will contain but a little of pure narration.

That too follows of necessity, he said.

These, then, said I, were the two types of diction of which I was speaking.

There are those two, he replied.

Now does not one of the two involve slight variations, and if we assign a suitable pitch and rhythm to the diction, is not the result that the right speaker speaks almost on the same note and in one cadence—for the changes are slight—and similarly in a rhythm of nearly the same kind?

Quite so.

But what of the other type? Does it not require the opposite, every kind of pitch and all rhythms, if it too is to have appropriate expression, since it involves manifold forms of variation?

Emphatically so.

And do all poets and speakers hit upon one type or the other of diction or some blend which they combine of both?

They must, he said.

What, then, said I, are we to do? Shall we admit all of these into the city, or one of the unmixed types, or the mixed type?

If my vote prevails, he said, the unmixed imitator of the good.

Nay, but the mixed type also is pleasing, Adimantus, and far most pleasing to boys and their tutors and the great mob is the opposite of your choice.

Most pleasing it is.

But perhaps, said I, you would affirm it to be ill suited to our polity, because there is no twofold or manifold man among us, since every man does one thing.

It is not suited.

And is this not the reason why such a city is the only one in which we shall find the cobbler a cobbler and not a pilot in addition to his cobbling, and the farmer a farmer and not a judge added to his farming, and the soldier a soldier and not a money-maker in addition to his soldiery, and so of all the rest?

True, he said.

If a man, then, it seems, who was capable by his cunning of assuming every kind of shape and imitating all things should arrive in our city, bringing with himself the poems which he wished to exhibit, we should fall down and worship him as a holy and wondrous and delightful creature, but should say to him that there is no man of that kind among us in our city, nor is it lawful for such a man to arise among us, and we should send him away to another city, after pouring

myrrh down over his head and crowning him with fillets of wool, but we ourselves, for our souls' good, should continue to employ the more austere and less delightful poet and tale-teller, who would imitate the diction of the good man and would tell his tale in the patterns which we prescribed in the beginning, when we set out to educate our soldiers. ?

We certainly should do that if it rested with us.

And now, my friend, said I, we may say that we have completely finished the part of music that concerns speeches and tales. For we have set forth what is to be said and how it is to be said.

I think so too, he replied.

After this, then, said I, comes the manner of song and tunes?

Obviously.

And having gone thus far, could not everybody discover what we must say of their character in order to conform to what has already been said?

I am afraid that 'everybody' does not include me, laughed Glaucon. I cannot sufficiently divine offhand what we ought to say, though I have a suspicion.

You certainly, I presume, said I, have a sufficient understanding of this—that the song is composed of three things, the words, the tune, and the rhythm?

Yes, said he, that much.

And so far as it is words, it surely in no manner differs from words not sung in the requirement of conformity to the patterns and manner that we have prescribed?

True, he said.

And again, the music and the rhythm must follow the speech.

Of course.

But we said we did not require dirges and lamentations in words.

We do not.

What, then, are the dirgelike modes of music? Tell me, for you are a musician.

The mixed Lydian, he said, and the tense or higher Lydian, and similar modes.

These, then, said I, we must do away with. For they are useless even to women who are to make the best of themselves, let alone to men.

Assuredly.

But again, drunkenness is a thing most unbefitting guardians, and so is softness and sloth.

Yes.

What, then, are the soft and convivial modes?

There are certain Ionian and also Lydian modes that are called lax.

399

Will you make any use of them for warriors?

None at all, he said, but it would seem that you have left the Dorian and the Phrygian.

- I don't know the musical modes, I said, but leave us that mode that would fittingly imitate the utterances and the accents of a brave man who is engaged in warfare or in any enforced business, and who,  
 b when he has failed, either meeting wounds or death or having fallen into some other mishap, in all these conditions confronts fortune with steadfast endurance and repels her strokes. And another for such a man engaged in works of peace, not enforced but voluntary, either trying to persuade somebody of something and imploring him—whether it be a god, through prayer, or a man, by teaching and admonition—or contrariwise yielding himself to another who is petitioning or teaching him or trying to change his opinions, and in consequence faring according to his wish, and not bearing himself arrogantly, but in all this acting modestly and moderately and acquiescing in the  
 c outcome. Leave us these two modes—the enforced and the voluntary—that will best imitate the utterances of men failing or succeeding, the temperate, the brave—leave us these.

Well, said he, you are asking me to leave none other than those I just spoke of.

Then, said I, we shall not need in our songs and airs instruments of many strings or whose compass includes all the harmonies.

Not in my opinion, said he.

- Then we shall not maintain makers of triangles and harps and all  
 d other many-stringed and polyharmonic instruments.

Apparently not.

Well, will you admit to the city flute makers and flute players? Or is not the flute the most 'many-stringed' of instruments and do not the panharmonics themselves imitate it?

Clearly, he said.

You have left, said I, the lyre and the cithara. These are useful in the city, and in the fields the shepherds would have a little piccolo to pipe on.

So our argument indicates, he said.

- e We are not innovating, my friend, in preferring Apollo and the instruments of Apollo to Marsyas and his instruments.

No, by heaven! he said. I think not.

And by the dog, said I, we have all unawares purged the city which a little while ago we said was luxurious.

In that we show our good sense, he said.

- Come then, let us complete the purification. For upon harmonies would follow the consideration of rhythms; we must not pursue complexity nor great variety in the basic movements, but must observe what are the rhythms of a life that is orderly and brave, and  
 400 after observing them require the foot and the air to conform to that

kind of man's speech and not the speech to the foot and the tune. What those rhythms would be, it is for you to tell us as you did the musical modes.

Nay, in faith, he said, I cannot tell. For that there are some three forms from which the feet are combined, just as there are four in the notes of the voice whence come all harmonies, is a thing that I have observed and could tell. But which are imitations of which sort of life, I am unable to say.

Well, said I, on this point we will take counsel with Damon, too, <sup>b</sup> as to which are the feet appropriate to illiberality, and insolence or madness or other evils, and what rhythms we must leave for their opposites. And I believe I have heard him obscurely speaking of a foot that he called the *enoplios*, a composite foot, and a dactyl and a heroic foot, which he arranged, I know not how, to be equal up and down in the interchange of long and short, and unless I am mistaken he used the term iambic, and there was another foot that he called the trochaic, and he added the quantities long and short. And in some of <sup>c</sup> these, I believe, he censured and commended the tempo of the foot no less than the rhythm itself, or else some combination of the two, I can't say. But, as I said, let this matter be postponed for Damon's consideration. For to determine the truth of these would require no little discourse. Do you think otherwise?

No, by heaven, I do not.

But this you are able to determine—that seemliness and unseemliness are attendant upon the good rhythm and the bad.

Of course.

And, further, that good rhythm and bad rhythm accompany, the <sup>d</sup> one fair diction, assimilating itself thereto, and the other the opposite, and so of the apt and the unapt, if, as we were just now saying, the rhythm and harmony follow the words and not the words these.

They certainly must follow the speech, he said.

And what of the manner of the diction, and the speech? said I. Do they not follow and conform to the disposition of the soul?

Of course.

And all the rest to the diction?

Yes.

Good speech, then, good accord, and good grace, and good rhythm wait upon a good disposition, not that weakness of head which we <sup>e</sup> euphemistically style goodness of heart, but the truly good and fair disposition of the character and the mind.

By all means, he said.

And must not our youth pursue these everywhere if they are to do what it is truly theirs to do?

They must indeed.

(And there is surely much of these qualities in painting and in <sup>401</sup> all similar craftsmanship—weaving is full of them and embroidery

and architecture and likewise the manufacture of household furnishings and thereto the natural bodies of animals and plants as well. For in all these there is grace or gracelessness. And gracelessness and evil rhythm and disharmony are akin to evil speaking and the evil temper, but the opposites are the symbols and the kin of the opposites, the sober and good disposition.)

Entirely so, he said.

- b Is it, then, only the poets that we must supervise and compel to embody in their poems the semblance of the good character or else not write poetry among us, or must we keep watch over the other craftsmen, and forbid them to represent the evil disposition, the licentious, the illiberal, the graceless, either in the likeness of living creatures or in buildings or in any other product of their art, on penalty, if unable to obey, of being forbidden to practice their art among us, that our guardians may not be bred among symbols of evil, as it were in a pasture of poisonous herbs, lest grazing freely and cropping from many such day by day they little by little and all unawares accumulate and build up a huge mass of evil in their own souls. But we must look for those craftsmen who by the happy gift of nature are capable of following the trail of true beauty and grace, that our young men, dwelling as it were in a salubrious region, may receive benefit from all things about them, whence the influence that emanates from works of beauty may waft itself to eye or ear like a breeze that brings from  
c wholesome places health, and so from earliest childhood insensibly guide them to likeness, to friendship, to harmony with beautiful reason.

Yes, he said, that would be far the best education for them.

- (And is it not for this reason, Glaucon, said I, that education in music is most sovereign, because more than anything else rhythm and harmony find their way to the inmost soul and take strongest hold  
e upon it, bringing with them and imparting grace, if one is rightly trained, and otherwise the contrary? And further, because omissions and the failure of beauty in things badly made or grown would be most quickly perceived by one who was properly educated in music, and so, feeling distaste rightly, he would praise beautiful things and take delight in them and receive them into his soul to foster its growth and become himself beautiful and good. The ugly he would rightly disapprove of and hate while still young and yet unable to apprehend the reason, but when reason came the man thus nurtured would be the first to give her welcome, for by this affinity he would know her.)

I certainly think, he said, that such is the cause of education in music.

It is, then, said I, as it was when we learned our letters and felt that we knew them sufficiently only when the separate letters did not elude us, appearing as few elements in all the combinations that

convey them, and when we did not disregard them in small things or b great and think it unnecessary to recognize them, but were eager to distinguish them everywhere, in the belief that we should never be literate and letter-perfect till we could do this.

True.

And is it not also true that if there are any likenesses of letters reflected in water or mirrors, we shall never know them until we know the originals, but such knowledge belongs to the same art and discipline?

By all means.

Then, by heaven, am I not right in saying that by the same token we shall never be true musicians, either—neither we nor the guard- c ians that we have undertaken to educate—until we are able to recognize the forms of soberness, courage, liberality, and high-mindedness, and all their kindred and their opposites, too, in all the combinations that contain and convey them, and to apprehend them and their images wherever found, disregarding them neither in trifles nor in great things, but believing the knowledge of them to belong to the same art and discipline?

The conclusion is inevitable, he said.

Then, said I, when there is a coincidence of a beautiful disposi- d tion in the soul and corresponding and harmonious beauties of the same type in the bodily form—is not this the fairest spectacle for one who is capable of its contemplation?

Far the fairest.

And surely the fairest is the most lovable.

Of course.

The true musician, then, would love by preference persons of this sort, but if there were disharmony he would not love this.

No, he said, not if there was a defect in the soul, but if it were in the body he would bear with it and still be willing to bestow his love. e

I understand, I said, that you have or have had favorites of this sort and I grant your distinction. But tell me this—can there be any communion between soberness and extravagant pleasure?

How could there be, he said, since such pleasure puts a man beside himself no less than pain?

Or between it and virtue generally?

By no means.

But is there between pleasure and insolence and license?

Most assuredly.

Do you know of greater or keener pleasure than that associated with Aphrodite?

I don't, he said, nor yet of any more insane.

But is not the right love a sober and harmonious love of the orderly and the beautiful?

It is indeed, said he.

Then nothing of madness, nothing akin to license, must be allowed to come nigh the right love?

No.

- b Then this kind of pleasure may not come nigh, nor may lover and beloved who rightly love and are loved have anything to do with it?

No, by heaven, Socrates, he said, it must not come nigh them.

- c Thus, then, as it seems, you will lay down the law in the city that we are founding, that the lover may kiss and pass the time with and touch the beloved as a father would a son, for honorable ends, if he persuade him. But otherwise he must so associate with the objects of his care that there should never be any suspicion of anything further, on penalty of being stigmatized for want of taste and true musical culture.

Even so, he said.

Do you not agree, then, that our discourse on music has come to an end? It has certainly made a fitting end, for surely the end and consummation of culture is the love of the beautiful.

I concur, he said.

After music our youth are to be educated by gymnastics?

Certainly.

- d In this too they must be carefully trained from boyhood through life, and the way of it is this, I believe, but consider it yourself too. For I, for my part, do not believe that a sound body by its excellence makes the soul good, but on the contrary that a good soul by its virtue renders the body the best that is possible. What is your opinion?

I think so too.

- e Then if we should sufficiently train the mind and turn over to it the minutiae of the care of the body, and content ourselves with merely indicating the norms or patterns, not to make a long story of it, we should be acting rightly?

By all means.

From intoxication we said that they must abstain. For a guardian is surely the last person in the world to whom it is allowable to get drunk and not know where on earth he is.

Yes, he said, it would be absurd that a guardian should need a guard.

What next about their food? These men are athletes in the greatest of contests, are they not?

Yes.

- 404 Is, then, the bodily habit of the athletes we see about us suitable for such?

Perhaps.

Nay, said I, that is a drowsy habit and precarious for health. Don't you observe that they sleep away their lives, and that if they de-

part ever so little from their prescribed regimen these athletes are liable to great and violent diseases?

I do.

Then, said I, we need some more ingenious form of training for our athletes of war, since these must be as it were sleepless hounds, and have the keenest possible perceptions of sight and hearing, and in their campaigns undergo many changes in their drinking water, b their food, and in exposure to the heat of the sun and to storms, without disturbance of their health.

I think so.

Would not, then, the best gymnastics be akin to the music that we were just now describing?

What do you mean?

It would be a simple and flexible gymnastic training, and especially so in the training for war.

In what way?

One could learn that, said I, even from Homer. For you are aware that in the banqueting of the heroes on campaign he does not feast them on fish, though they are at the seaside on the Hellespont, nor on c boiled meat, but only on roast, which is what soldiers could most easily procure. For everywhere, one may say, it is of easier provision to use the bare fire than to convey pots and pans along.

Indeed it is.

Neither, as I believe, does Homer ever make mention of sweetmeats. Is not that something which all men in training understand—that if one is to keep his body in good condition he must abstain from such things altogether?

They are right, he said, in that they know it and do abstain.

Then, my friend, if you think this is the right way, you apparently do not approve of a Syracusan table and the Sicilian variety of dishes. d

I think not.

You would frown, then, on a little Corinthian maid as the *chère amie* e of men who were to keep themselves fit?

Most certainly.

And also on the seeming delights of Attic pastry?

Inevitably.

In general, I take it, if we likened that kind of food and regimen to music and song expressed in the panharmonic mode and in every e variety of rhythm it would be a fair comparison.

Quite so.

And there variety engendered licentiousness, did it not, but here disease, while simplicity in music begets sobriety in the souls, and in gymnastic training it begets health in bodies?

Most true, he said.

And when licentiousness and disease multiply in a city, are not 405 many courts of law and dispensaries opened? And the arts of chicane

- and medicine give themselves airs when even free men in great numbers take them very seriously.

How can they help it? he said.

- Will you be able to find a surer proof of an evil and shameful state of education in a city than the necessity of first-rate physicians and judges, not only for the base and mechanical, but for those who claim to have been bred in the fashion of free men? Do you not think
- b it disgraceful and a notable mark of bad breeding to have to make use of a justice imported from others, who thus become your masters and judges, from lack of such qualities in yourself?

The most shameful thing in the world.

- Is it? said I. Or is this still more shameful—when a man not only wears out the better part of his days in the courts of law as defendant or accuser, but from the lack of all true sense of values is led to plume himself on this very thing, as being a smart fellow to ‘put over’ an un-
- c just act and cunningly to try every dodge and practice, every evasion, and wriggle out of every hold in defeating justice, and that too for trifles and worthless things, because he does not know how much nobler and better it is to arrange his life so as to have no need of a nodding juryman?

That is, said he, still more shameful than the other.

- And to require medicine, said I, not merely for wounds or the incidence of some seasonal maladies, but, because of sloth and such a
- d regimen as we described, to fill one’s body up with winds and humors like a marsh and compel the ingenious sons of Asclepius to invent for diseases such names as fluxes and flatulences—don’t you think that disgraceful?

Those surely are, he said, newfangled and monstrous strange names of diseases.

- There was nothing of the kind, I fancy, said I, in the days of Asclepius. I infer this from the fact that at Troy his sons did not
- e find fault with the damsel who gave to the wounded Eurypylus to drink a posset of Pramnian wine plentifully sprinkled with barley and
- 406 gratings of cheese, inflammatory ingredients of a surety, nor did they censure Patroclus, who was in charge of the case.

It was indeed, said he, a strange potion for a man in that condition.

- Not so strange, said I, if you reflect that the former Asclepiads made no use of our modern coddling medication of diseases before the time of Herodicus. But Herodicus was a trainer and became a
- b valetudinarian, and blended gymnastics and medicine, for the torment first and chiefly of himself and then of many successors.

How so? he said.

By lingering out his death, said I. For living in perpetual observance of his malady, which was incurable, he was not able to effect a

cure, but lived through his days unfit for the business of life, suffering the tortures of the damned if he departed a whit from his fixed regimen. And struggling against death, by reason of his science he won the prize of a doting old age.

A noble prize indeed for his science, he said.

The appropriate one, said I, for a man who did not know that it was not from ignorance or inacquaintance with this type of medicine that Asclepius did not discover it to his descendants, but because he knew that for all well-governed peoples there is a work assigned to each man in the city which he must perform, and no one has leisure to be sick and doctor himself all his days. And this we absurdly enough perceive in the case of a craftsman, but don't see in the case of the rich and so-called fortunate.

How so? he said.

A carpenter, said I, when he is sick expects his physician to give him a drug which will operate as an emetic on the disease, or to get rid of it by purging or the use of cautery or the knife. But if anyone prescribes for him a long course of treatment with swathings about the head and their accompaniments, he hastily says that he has no leisure to be sick, and that such a life of preoccupation with his illness and neglect of the work that lies before him isn't worth living. And thereupon he bids farewell to that kind of physician, enters upon his customary way of life, regains his health, and lives attending to his affairs—or, if his body is not equal to the strain, he dies and is freed from all his troubles.

For such a man, he said, that appears to be the right use of medicine.

And is not the reason, I said, that he had a task and that life wasn't worth acceptance on condition of not doing his work?

Obviously, he said.

But the rich man, we say, has no such appointed task, the necessity of abstaining from which renders life intolerable.

I haven't heard of any.

Why, haven't you heard that saying of Phocylides, that after a man has 'made his pile' he ought to practice virtue?

Before, too, I fancy, he said.

Let us not quarrel with him on that point, I said, but inform ourselves whether this virtue is something for the rich man to practice, and life is intolerable if he does not, or whether we are to suppose that while valetudinarianism is a hindrance to single-minded attention to carpentry and the other arts, it is no obstacle to the fulfillment of Phocylides' exhortation.

Yes, indeed, he said, this excessive care for the body that goes beyond simple gymnastics is about the greatest of all obstacles.

For it is troublesome in household affairs and military service

and sedentary offices in the city. And, chief of all, it puts difficulties in the way of any kind of instruction, thinking, or private meditation—  
 c forever imagining headaches and dizziness and attributing their origin to philosophy. So that wherever this kind of virtue is practiced and tested it is in every way a hindrance. For it makes the man always fancy himself sick and never cease from anguishing about his body.

Naturally, he said.

Then shall we not say that it was because Asclepius knew this, that for those who were by nature and course of life sound of body but had some localized disease, that for such, I say, and for this habit he  
 d revealed the art of medicine, and, driving out their disease by drugs and surgery, prescribed for them their customary regimen in order not to interfere with their civic duties, but that, when bodies were diseased inwardly and throughout, he did not attempt by diet and by gradual evacuations and infusions to prolong a wretched existence for the man and have him beget in all likelihood similar wretched offspring? But if a man was incapable of living in the established round and order  
 e of life, he did not think it worth while to treat him, since such a fellow is of no use either to himself or to the state.

A most politic Asclepius you're telling us of, he said.

Obviously, said I, that was his character. And his sons too, don't  
 408 you see that at Troy they proved themselves good fighting men and practiced medicine as I described it? Don't you remember that in the case of Menelaus too, from the wound that Pandarus inflicted 'they sucked the blood, and soothing simples sprinkled'?<sup>37</sup> But what he was to eat or drink thereafter they no more prescribed than for Eurypylus, taking it for granted that the remedies sufficed to heal men who before their wounds were healthy and temperate in diet even if they did happen  
 b for the nonce to drink a posset. But they thought that the life of a man constitutionally sickly and intemperate was of no use to himself or others, and that the art of medicine should not be for such nor should they be given treatment even if they were richer than Midas.

Very ingenious fellows, he said, you make out these sons of Asclepius to be.

'Tis fitting, said I, and yet in disregard of our principles the tragedians and Pindar affirm that Asclepius, though he was the son of Apollo, was bribed by gold to heal a man already at the point of death,  
 c and that for this cause he was struck by the lightning. But we in accordance with the aforesaid principles refuse to believe both statements. If he was the son of a god he was not avaricious, we will insist, and if he was greedy of gain he was not the son of a god.

That much, said he, is most certainly true. But what have you to say to this, Socrates? Must we not have good physicians in our city? And they would be the most likely to be good who had treated the

<sup>37</sup> *Iliad* 4.218.

greatest number of healthy and diseased men, and so good judges a would be those who had associated with all sorts and conditions of men.

Most assuredly I want them good, I said, but do you know whom I regard as such?

I'll know if you tell, he said.

Well, I will try, said I. You, however, have put unlike cases in one question.

How so? said he.

Physicians, it is true, I said, would prove most skilled if, from childhood up, in addition to learning the principles of the art they had familiarized themselves with the greatest possible number of the most sickly bodies, and if they themselves had suffered all diseases and were not of very healthy constitution. For you see they do not treat the e body by the body. If they did, it would not be allowable for their bodies to be or to have been in evil condition. But they treat the body with the mind—and it is not competent for a mind that is or has been evil to treat anything well.

Right, he said.

But a judge, mark you, my friend, rules soul with soul and it is 409 not allowable for a soul to have been bred from youth up among evil souls and to have grown familiar with them, and itself to have run the gauntlet of every kind of wrongdoing and injustice so as quickly to infer from itself the misdeeds of others as it might diseases in the body, but it must have been inexperienced in evil natures and uncontaminated by them while young, if it is to be truly fair and good and judge soundly of justice. For which cause the better sort seem to be simple-minded in youth and are easily deceived by the wicked, since they do b not have within themselves patterns answering to the affections of the bad.

That is indeed their experience, he said.

Therefore it is, said I, that the good judge must not be a youth but an old man, a late learner of the nature of injustice, one who has not become aware of it as a property in his own soul, but one who has through the long years trained himself to understand it as an alien thing in alien souls, and to discern how great an evil it is by the instrument of mere knowledge and not by experience of his own. c

That at any rate, he said, appears to be the noblest kind of judge.

And what is more, a good one, I said, which was the gist of your question. For he who has a good soul is good. But that cunning fellow quick to suspect evil, and who has himself done many unjust acts and who thinks himself a smart trickster, when he associates with his like does appear to be clever, being on his guard and fixing his eyes on the patterns within himself. But when the time comes for him to mingle with the good and his elders, then on the contrary he appears stupid. He is unseasonably distrustful and he cannot recognize d

a sound character because he has no such pattern in himself. But since he more often meets with the bad than the good, he seems to himself and to others to be rather wise than foolish.

That is quite true, he said.

Well then, said I, such a one must not be our ideal of the good and wise judge but the former. For while badness could never come to know both virtue and itself, native virtue through education will at last acquire the science of both itself and badness. This one, then, e as I think, is the man who proves to be wise and not the bad man.

And I concur, he said.

Then will you not establish by law in your city such an art of medicine as we have described in conjunction with this kind of justice? And these arts will care for the bodies and souls of such of your 410 citizens as are truly wellborn, but those who are not, such as are defective in body, they will suffer to die, and those who are evil-natured and incurable in soul they will themselves put to death.

This certainly, he said, has been shown to be the best thing for the sufferers themselves and for the state.

And so your youths, said I, employing that simple music which we said engendered sobriety will, it is clear, guard themselves against falling into the need of the justice of the courtroom.

Yes, he said.

b And will not our musician, pursuing the same trail in his use of gymnastics, if he please, get to have no need of medicine save when indispensable?

I think so.

And even the exercises and toils of gymnastics he will undertake with a view to the spirited part of his nature to arouse that rather than for mere strength, unlike ordinary athletes, who treat diet and exercise only as a means to muscle.

Nothing could be truer, he said.

c Then may we not say, Glaucon, said I, that those who established an education in music and gymnastics had not the purpose in view that some attribute to them in so instituting, namely to treat the body by one and the soul by the other?

But what? he said.

It seems likely, I said, that they ordained both chiefly for the soul's sake.

How so?

Have you not observed, said I, the effect on the disposition of the mind itself of lifelong devotion to gymnastics with total neglect of music? Or the disposition of those of the opposite habit?

In what respect do you mean? he said.

d In respect of savagery and hardness or, on the other hand, of softness and gentleness?

I have observed, he said, that the devotees of unmitigated gym-

nastics turn out more brutal than they should be and those of music softer than is good for them.

And surely, said I, this savagery is a quality derived from the high-spirited element in our nature, which, if rightly trained, becomes brave, but if overstrained, would naturally become hard and harsh.

I think so, he said.

And again, is not the gentleness a quality which the philosophical nature would yield? This if relaxed too far would be softer than is desirable but if rightly trained gentle and orderly?

That is so.

But our requirement, we say, is that the guardians should possess both natures.

It is.

And must they not be harmoniously adjusted to one another?

Of course.

And the soul of the man thus attuned is sober and brave?

411

Certainly.

And that of the ill-adjusted is cowardly and rude?

It surely is.

Now when a man abandons himself to music, to play upon him and pour into his soul as it were through the funnel of his ears those sweet, soft, and dirgelike airs of which we were just now speaking, and gives his entire time to the warblings and blandishments of song, the first result is that the principle of high spirit, if he had it, is softened like iron and is made useful instead of useless and brittle. But when he continues the practice without remission and is spellbound, the effect begins to be that he melts and liquefies till he completely dissolves away his spirit, cuts out as it were the very sinews of his soul and makes of himself a 'feeble warrior.'<sup>38</sup>

Assuredly, he said.

And if, said I, he has to begin with a spiritless nature he reaches this result quickly, but if a high-spirited, by weakening the spirit he makes it unstable, quickly irritated by slight stimuli, and as quickly quelled. The outcome is that such men are choleric and irascible instead of high-spirited, and are peevish and discontented.

c

Precisely so.

On the other hand, if a man toils hard at gymnastics and eats right lustily and holds no truck with music and philosophy, does he not at first get very fit and full of pride and high spirit and become more brave and bold than he was?

He does indeed.

But what if he does nothing but this and has no contact with the Muse in any way? Is not the result that even if there was some principle of the love of knowledge in his soul, since it tastes of no instruc-

<sup>38</sup> *Iliad* 17.588.

tion nor of any inquiry and does not participate in any discussion or any other form of culture, it becomes feeble, deaf, and blind, because it is not aroused or fed nor are its perceptions purified and quickened?

That is so, he said.

And so such a man, I take it, becomes a misologist and a stranger to the Muses. He no longer makes any use of persuasion by speech but achieves all his ends like a beast by violence and savagery, and in his brute ignorance and ineptitude lives a life of disharmony and gracelessness.

That is entirely true, he said.

For these two, then, it seems there are two arts which I would say some god gave to mankind, music and gymnastics for the service of the high-spirited principle and the love of knowledge in them—not for the soul and the body except incidentally, but for the harmonious  
412 adjustment of these two principles by the proper degree of tension and relaxation of each.

Yes, so it appears, he said.

Then he who best blends gymnastics with music and applies them most suitably to the soul is the man whom we should most rightly pronounce to be the most perfect and harmonious musician, far rather than the one who brings the strings into unison with one another.

That seems likely, Socrates, he said.

And shall we not also need in our city, Glaucon, a permanent overseer of this kind if its constitution is to be preserved?

b We most certainly shall.

Such would be the outlines of their education and breeding. For why should one recite the list of the dances of such citizens, their hunts and chases with hounds, their athletic contests and races? It is pretty plain that they must conform to these principles and there is no longer any difficulty in discovering them.

There is, it may be, no difficulty, he said.

Very well, said I. What, then, have we next to determine? Is it not which ones among them shall be the rulers and the ruled?

c Certainly.

That the rulers must be the elder and the ruled the younger is obvious.

It is.

And that the rulers must be their best?

This too.

And do not the best of the farmers prove the best farmers?

Yes.

And in this case, since we want them to be the best of the guardians, must they not be the best guardians, the most regardful of the state?

Yes.

They must then to begin with be intelligent in such matters and capable, and furthermore careful of the interests of the state?

That is so.

But one would be most likely to be careful of that which he loved. Necessarily.

And again, one would be most likely to love that whose interests he supposed to coincide with his own, and thought that when it prospered he too would prosper and if not, the contrary.

So it is, he said.

Then we must pick out from the other guardians such men as to our observation appear most inclined through the entire course of their lives to be zealous to do what they think for the interest of the state, and who would be least likely to consent to do the opposite.

That would be a suitable choice, he said.

I think, then, we shall have to observe them at every period of life, to see if they are conservators and guardians of this conviction in their minds and never by sorcery nor by force can be brought to expel from their souls unawares this conviction that they must do what is best for the state.

What do you mean by the 'expelling'? he said.

I will tell you, said I. It seems to me that the exit of a belief from the mind is either voluntary or involuntary. Voluntary is the departure of the false belief from one who learns better, involuntary that of every true belief.

The voluntary, he said, I understand, but I need instruction about the involuntary.

How now, said I, don't you agree with me in thinking that men are unwillingly deprived of good things but willingly of evil? Or is it not an evil to be deceived in respect of the truth and a good to possess truth? And don't you think that to opine the things that are is to possess the truth?

Why, yes, said he, you are right, and I agree that men are unwillingly deprived of true opinions.

And doesn't this happen to them by theft, by the spells of sorcery, or by force?

I don't understand now either, he said.

I must be talking in high tragic style, I said. By those who have their opinions stolen from them I mean those who are overpersuaded and those who forget, because in the one case time, in the other argument strips them unawares of their beliefs. Now I presume you understand, do you not?

Yes.

Well then, by those who are constrained or forced I mean those whom some pain or suffering compels to change their minds.

That too I understand and you are right.

- c And the victims of sorcery I am sure you too would say are they who alter their opinions under the spell of pleasure or terrified by some fear.

Yes, he said, everything that deceives appears to cast a spell upon the mind.

- Well then, as I was just saying, we must look for those who are the best guardians of the indwelling conviction that what they have to do is what they at any time believe to be best for the state. Then we must observe them from childhood up and propose for them tasks in which one would be most likely to forget this principle or be deceived, and he whose memory is sure and who cannot be beguiled we must  
d accept and the other kind we must cross off from our list. Is not that so?

Yes.

And again we must subject them to toils and pains and competitions in which we have to watch for the same traits.

Right, he said.

- Then, said I, must we not institute a third kind of competitive test with regard to sorcery and observe them in that? Just as men conduct colts to noises and uproar to see if they are liable to take fright,  
e so we must bring these lads while young into fears and again pass them into pleasures, testing them much more carefully than men do gold in the fire, to see if the man remains immune to such witchcraft and preserves his composure throughout, a good guardian of himself and the culture which he has received, maintaining the true rhythm and harmony of his being in all those conditions, and the character that would make him most useful to himself and to the state. And he who as boy, lad, and man endures the test and issues from it un-  
414 spoiled we must establish as ruler over our city and its guardian, and bestow rewards upon him in life, and in death the allotment of the supreme honors of burial rites and other memorials. But the man of the other type we must reject. Such, said I, appears to me, Glaucon, the general notion of our selection and appointment of rulers and guardians as sketched in outline, but not drawn out in detail.

I too, he said, think much the same.

- Then would it not truly be most proper to designate these as  
b guardians in the full sense of the word, watchers against foemen without and friends within, so that the latter shall not wish and the former shall not be able to work harm, but to name those youths whom we were calling guardians just now helpers and aids for the decrees of the rulers?

I think so, he replied.

- How, then, said I, might we contrive one of those opportune falsehoods of which we were just now speaking, so as by one noble lie to  
c persuade if possible the rulers themselves, but failing that the rest of the city?

What kind of a fiction do you mean? said he.

Nothing unprecedented, said I, but a sort of Phoenician tale, something that has happened ere now in many parts of the world, as the poets aver and have induced men to believe, but that has not happened and perhaps would not be likely to happen in our day and demanding no little persuasion to make it believable.

You act like one who shrinks from telling his thought, he said.

You will think that I have right good reason for shrinking when I have told, I said.

Say on, said he, and don't be afraid.

Very well, I will. And yet I hardly know how to find the audacity <sup>a</sup> or the words to speak and undertake to persuade first the rulers themselves and the soldiers and then the rest of the city that in good sooth all our training and educating of them were things that they imagined and that happened to them as it were in a dream, but that in reality at that time they were down within the earth being molded and fostered themselves while their weapons and the rest of their equipment were being fashioned. And when they were quite finished the earth as <sup>e</sup> being their mother delivered them, and now as if their land were their mother and their nurse they ought to take thought for her and defend her against any attack and regard the other citizens as their brothers and children of the selfsame earth.

It is not for nothing, he said, that you were so bashful about coming out with your lie.

It was quite natural that I should be, I said, but all the same hear <sup>415</sup> the rest of the story. While all of you in the city are brothers, we will say in our tale, yet God in fashioning those of you who are fitted to hold rule mingled gold in their generation, for which reason they are the most precious—but in the helpers silver, and iron and brass in the farmers and other craftsmen. And as you are all akin, though for the <sup>b</sup> most part you will breed after your kinds, it may sometimes happen that a golden father would beget a silver son and that a golden offspring would come from a silver sire and that the rest would in like manner be born of one another. So that the first and chief injunction that the god lays upon the rulers is that of nothing else are they to be such careful guardians and so intently observant as of the intermixture of these metals in the souls of their offspring, and if sons are born to them with an infusion of brass or iron they shall by no means <sup>c</sup> give way to pity in their treatment of them, but shall assign to each the status due to his nature and thrust them out among the artisans or the farmers. And again, if from these there are born sons with unexpected gold or silver in their composition they shall honor such and bid them go up higher, some to the office of guardian, some to the assistantship, alleging that there is an oracle that the state shall then be overthrown when the man of iron or brass is its guardian. Do you see any way of getting them to believe this tale?

d No, not these themselves, he said, but I do their sons and successors and the rest of mankind who come after.

Well, said I, even that would have a good effect in making them more inclined to care for the state and one another. For I think I apprehend your meaning. And this shall fall out as tradition guides. But let us arm these sons of earth and conduct them under the leadership of their rulers. And when they have arrived they must look out for the fairest site in the city for their encampment, a position from which  
e they could best hold down rebellion against the laws from within and repel aggression from without as of a wolf against the fold. And after they have encamped and sacrificed to the proper gods they must make their lairs, must they not?

Yes, he said.

And these must be of a character to keep out the cold in winter and be sufficient in summer?

Of course. For I presume you are speaking of their houses.

Yes, said I, the houses of soldiers, not of money-makers.

416 What distinction do you intend by that? he said.

I will try to tell you, I said. It is surely the most monstrous and shameful thing in the world for shepherds to breed the dogs who are to help them with their flocks in such wise and of such a nature that from indiscipline or hunger or some other evil condition the dogs themselves shall attack the sheep and injure them and be likened to wolves instead of dogs.

A terrible thing, indeed, he said.

b Must we not then guard by every means in our power against our helpers' treating the citizens in any such way and, because they are the stronger, converting themselves from benign assistants into savage masters?

We must, he said.

And would they not have been provided with the chief safeguard if their education has really been a good one?

But it surely has, he said.

c That, said I, dear Glaucon, we may not properly affirm, but what we were just now saying we may, that they must have the right education, whatever it is, if they are to have what will do most to make them gentle to one another and to their charges.

That is right, he said.

In addition, moreover, to such an education a thoughtful man would affirm that their houses and the possessions provided for them ought to be such as not to interfere with the best performance of their  
d own work as guardians and not to incite them to wrong the other citizens.

He will rightly affirm that.

Consider then, said I, whether, if that is to be their character, their habitations and ways of life must not be something after this

wish to, or make presents to their mistresses, or spend money in other directions according to their desires like the men who are thought to be happy. These and many similar counts of the indictment you are omitting.

Well, said he, assume these counts too.

b What then will be our apology you ask?

Yes.

By following the same path I think we shall find what to reply. For we shall say that while it would not surprise us if these men thus living prove to be the most happy, yet the object on which we fixed our eyes in the establishment of our state was not the exceptional happiness of any one class but the greatest possible happiness of the city as a whole. For we thought that in a state so constituted we should be most likely to discover justice as we should injustice in the worst-governed state, and that when we had made these out we could pass

c judgment on the issue of our long inquiry. Our first task then, we take it, is to mold the model of a happy state—we are not isolating a small class in it and postulating their happiness, but that of the city as a whole. But the opposite type of state we will consider presently. It is as if we were coloring a statue and someone approached and censured us, saying that we did not apply the most beautiful pigments to the most beautiful parts of the image, since the eyes, which are the most beautiful part, have not been painted with purple but with black. We

d should think it a reasonable justification to reply, Don't expect us, quaint friend, to paint the eyes so fine that they will not be like eyes at all, nor the other parts, but observe whether by assigning what is proper to each we render the whole beautiful. And so in the present case you must not require us to attach to the guardians a happiness that will make them anything but guardians. For in like manner we

e could clothe the farmers in robes of state and deck them with gold and bid them cultivate the soil at their pleasure, and we could make the potters recline on couches from left to right before the fire drinking toasts and feasting with their wheel alongside to potter with when they are so disposed, and we can make all the others happy in the same fashion, so that thus the entire city may be happy. But urge us

421 not to this, since, if we yield, the farmer will not be a farmer nor the potter a potter, nor will any other of the types that constitute a state keep its form. However, for the others it matters less. For cobblers who deteriorate and are spoiled and pretend to be the workmen that they are not are no great danger to a state. But guardians of laws and of the city who are not what they pretend to be, but only seem, destroy utterly, I would have you note, the entire state, and on the other hand, they alone are decisive of its good government and happiness. If then we are forming true guardians and keepers of our liberties, men least

b likely to harm the commonwealth, but the proponent of the other ideal is thinking of farmers and 'happy' feasters as it were in a festival

and not in a civic community, he would have something else in mind than a state. Consider, then, whether our aim in establishing the guardians is the greatest possible happiness among them or whether that is something we must look to see develop in the city as a whole, but these helpers and guardians are to be constrained and persuaded c to do what will make them the best craftsmen in their own work, and similarly all the rest. And so, as the entire city develops and is ordered well, each class is to be left to the share of happiness that its nature comports.

Well, he said, I think you are right.

And will you then, I said, also think me reasonable in another point akin to this?

What pray?

Consider whether these are the causes that corrupt other crafts- d men too so as positively to spoil them.

What causes?

Wealth and poverty, said I.

How so?

Thus! Do you think a potter who grew rich would any longer be willing to give his mind to his craft?

By no means, said he.

But will he become more idle and negligent than he was?

Far more.

Then he becomes a worse potter?

Far worse too.

And yet again, if from poverty he is unable to provide himself with tools and other requirements of his art, the work that he turns out will be worse, and he will also make inferior workmen of his sons e or any others whom he teaches.

Of course.

From both causes, then, poverty and wealth, the products of the arts deteriorate, and so do the artisans?

So it appears.

Here, then, is a second group of things, it seems, that our guardians must guard against and do all in their power to keep from slipping into the city without their knowledge.

What are they?

Wealth and poverty, said I, since the one brings luxury, idleness, 422 and innovation, and the other illiberality and the evil of bad workmanship in addition to innovation.

Assuredly, he said. Yet here is a point for your consideration, Socrates—how our city, possessing no wealth, will be able to wage war, especially if compelled to fight a large and wealthy state.

Obviously, said I, it would be rather difficult to fight one such, but easier to fight two.

What did you mean by that? he said.

Tell me first, I said, whether, if they have to fight, they will not be fighting as athletes of war against men of wealth?

Yes, that is true, he said.

Answer me then, Adimantus. Do you not think that one boxer perfectly trained in the art could easily fight two fat rich men who knew nothing of it?

Not at the same time perhaps, said he.

Not even, said I, if he were allowed to retreat and then turn and strike the one who came up first, and if he repeated the procedure many times under a burning and stifling sun? Would not such a fighter down even a number of such opponents?

Doubtless, he said, it wouldn't be surprising if he did.

Well, don't you think that the rich have more of the skill and practice of boxing than of the art of war?

I do, he said.

It will be easy, then, for our athletes in all probability to fight with double and triple their number.

I shall have to concede the point, he said, for I believe you are right.

Well then, if they send an embassy to the other city and say what is in fact true, 'We make no use of gold and silver nor is it lawful for us, but it is for you; do then join us in the war and keep the spoils of the enemy'—do you suppose any who heard such a proposal would choose to fight against hard and wiry hounds rather than with the aid of the hounds against fat and tender sheep?

I think not. Yet consider whether the accumulation of all the wealth of other cities in one does not involve danger for the state that has no wealth.

What happy innocence, said I, to suppose that you can properly use the name city of any other than the one we are constructing.

Why, what should we say? he said.

A greater predication, said I, must be applied to the others. For they are each one of them many cities, not a city, as it goes in the game. There are two at the least at enmity with one another, the city of the rich and the city of the poor, and in each of these there are many. If you deal with them as one you will altogether miss the mark, but if you treat them as a multiplicity by offering to the one faction the property, the power, the very persons of the other, you will continue always to have few enemies and many allies. And so long as your city is governed soberly in the order just laid down, it will be the greatest of cities. I do not mean greatest in repute, but in reality, even though it have only a thousand defenders. For a city of this size that is really one you will not easily discover either among Greeks or barbarians—but of those that seem so you will find many and many times the size of this. Or do you think otherwise?

No, indeed I don't, said he.

Would not this, then, be the best rule and measure for our governors of the proper size of the city and of the territory that they should mark off for a city of that size and seek no more?

What is the measure?

I think, said I, that they should let it grow so long as in its growth it consents to remain a unity, but no further.

Excellent, he said.

Then is not this still another injunction that we should lay upon our guardians, to keep guard in every way that the city shall not be too small, nor great only in seeming, but that it shall be a sufficient city and one?

That behest will perhaps be an easy one for them, he said.

And still easier, haply, I said, is this that we mentioned before when we said that if a degenerate offspring was born to the guardians he must be sent away to the other classes, and likewise if a superior to the others he must be enrolled among the guardians, and the purport of all this was that the other citizens too must be sent to the task for which their natures were fitted, one man to one work, in order that each of them fulfilling his own function may be not many men, but one, and so the entire city may come to be not a multiplicity but a unity.

Why yes, he said, this is even more trifling than that.

These are not, my good Adimantus, as one might suppose, numerous and difficult injunctions that we are imposing upon them, but they are all easy, provided they guard, as the saying is, the one great thing—or instead of great let us call it sufficient.

What is that? he said.

Their education and nurture, I replied. For if a right education makes of them reasonable men they will easily discover everything of this kind—and other principles that we now pass over, as that the possession of wives and marriage, and the procreation of children and all that sort of thing should be made as far as possible the proverbial goods of friends that are common.

Yes, that would be the best way, he said.

And, moreover, said I, the state, if it once starts well, proceeds as it were in a cycle of growth. I mean that a sound nurture and education if kept up create good natures in the state, and sound natures in turn receiving an education of this sort develop into better men than their predecessors both for other purposes and for the production of offspring, as among animals also.

It is probable, he said.

To put it briefly, then, said I, it is to this that the overseers of our state must cleave and be watchful against its insensible corruption. They must throughout be watchful against innovations in music and gymnastics counter to the established order, and to the best of their power guard against them, fearing when anyone says that that song is

most regarded among men 'which hovers newest on the singer's lips,'<sup>89</sup>  
 c lest haply it be supposed that the poet means not new songs but a new way of song and is commending this. But we must not praise that sort of thing nor conceive it to be the poet's meaning. For a change to a new type of music is something to beware of as a hazard of all our fortunes. For the modes of music are never disturbed without unsettling of the most fundamental political and social conventions, as Damon affirms and as I am convinced.

Set me too down in the number of the convinced, said Adimantus.

d It is here, then, I said, in music, as it seems, that our guardians must build their guardhouse and post of watch.

It is certain, he said, that this is the kind of lawlessness that easily insinuates itself unobserved.

Yes, said I, because it is supposed to be only a form of play and to work no harm.

Nor does it work any, he said, except that by gradual infiltration it softly overflows upon the characters and pursuits of men and from these issues forth grown greater to attack their business dealings, and from these relations it proceeds against the laws and the constitution  
 e with wanton license, Socrates, till finally it overthrows all things public and private.

Well, said I, are these things so?

I think so, he said.

Then, as we were saying in the beginning, our youth must join in a more law-abiding play, since, if play grows lawless and the children  
 425 likewise, it is impossible that they should grow up to be men of serious temper and lawful spirit.

Of course, he said.

And so we may reason that when children in their earliest play are imbued with the spirit of law and order through their music, the opposite of the former supposition happens—this spirit waits upon them in all things and fosters their growth, and restores and sets up again whatever was overthrown in the other type of state.

True indeed, he said.

Then such men rediscover for themselves those seemingly trifling conventions which their predecessors abolished altogether.

Of what sort?

b Such things as the becoming silence of the young in the presence of their elders, the giving place to them and rising up before them, and dutiful service of parents, and the cut of the hair and the garments and the fashion of the footgear, and in general the deportment of the body and everything of the kind. Don't you think so?

I do.

Yet to enact them into laws would, I think, be silly. For such laws are not obeyed nor would they last, being enacted only in words and on paper.

How could they?

At any rate, Adimantus, I said, the direction of the education from whence one starts is likely to determine the quality of what follows. Does not like ever summon like?

Surely.

And the final outcome, I presume, we would say is one complete and vigorous product of good or the reverse.

Of course, said he.

For my part, then, I said, for these reasons I would not go on to try to legislate on such matters.

With good reason, said he.

But what, in heaven's name, said I, about business matters, the deals that men make with one another in the agora—and, if you please, contracts with workmen and actions for foul language and assault, the filing of declarations, the impaneling of juries, the payment and exaction of any dues that may be needful in markets or harbors and in general market, police, or harbor regulations and the like—can we bring ourselves to legislate about these?

Nay, 'twould not be fitting, he said, to dictate to good and honorable men. For most of the enactments that are needed about these things they will easily, I presume, discover.

Yes, my friend, provided God grants them the preservation of the principles of law that we have already discussed.

Failing that, said he, they will pass their lives multiplying such petty laws and amending them in the expectation of attaining what is best.

You mean, said I, that the life of such citizens will resemble that of men who are sick, yet from intemperance are unwilling to abandon their unwholesome regimen.

By all means.

And truly, said I, these latter go on in a most charming fashion. For with all their doctoring they accomplish nothing except to complicate and augment their maladies. And they are always hoping that someone will recommend a panacea that will restore their health.

A perfect description, he said, of the state of such invalids.

And isn't this a charming trait in them, that they hate most in all the world him who tells them the truth, that until a man stops drinking and gorging and wenching and idling, neither drugs nor cautery nor the knife, no, nor spells nor periapts nor anything of that kind will be of any avail?

Not altogether charming, he said, for there is no grace or charm in being angry with him who speaks well.

You do not seem to be an admirer of such people, said I.

No, by heaven, I am not.

Neither then, if an entire city, as we were just now saying, acts in this way, will it have your approval, or don't you think that the way of such invalids is precisely that of those cities which being badly governed forewarn their citizens not to meddle with the general constitution of the state, denouncing death to whosoever attempts that—while  
 c whoever most agreeably serves them governed as they are and who curries favor with them by fawning upon them and anticipating their desires and by his cleverness in gratifying them, him they will account the good man, the man wise in worthwhile things, the man they will delight to honor?

Yes, he said, I think their conduct is identical, and I don't approve it in the very least.

d And what again of those who are willing and eager to serve such states? Don't you admire their valiance and lighthearted irresponsibility?

I do, he said, except those who are actually deluded and suppose themselves to be in truth statesmen because they are praised by the many.

What do you mean? Can't you make allowances for the men? Do you think it possible for a man who does not know how to measure when a multitude of others equally ignorant assure him that he is  
 e four cubits tall not to suppose this to be the fact about himself?

Why no, he said, I don't think that.

Then don't be harsh with them. For surely such fellows are the most charming spectacle in the world when they enact and amend such laws as we just now described and are perpetually expecting to find a way of putting an end to frauds in business and in the other matters of which I was speaking because they can't see that they are in very truth trying to cut off a Hydra's head.

427 Indeed, he said, that is exactly what they are doing.

I, then, said I, should not have supposed that the true lawgiver ought to work out matters of that kind in the laws and the constitution of either an ill-governed or a well-governed state—in the one because they are useless and accomplish nothing, in the other because some of them anybody could discover and others will result spontaneously from the pursuits already described.

b What part of legislation, then, he said, is still left for us?

And I replied, For us nothing, but for the Apollo of Delphi, the chief, the fairest, and the first of enactments.

What are they? he said.

The founding of temples, and sacrifices, and other forms of worship of gods, daemons, and heroes, and likewise the burial of the dead and the services we must render to the dwellers in the world beyond to keep them gracious. For of such matters we neither know anything  
 c nor in the founding of our city if we are wise shall we entrust them to

any other or make use of any other interpreter than the god of our fathers. For this god surely is in such matters for all mankind the interpreter of the religion of their fathers who from his seat in the middle and at the very navel of the earth delivers his interpretation.

Excellently said, he replied, and that is what we must do.

At last, then, son of Ariston, said I, your city may be considered as established. The next thing is to procure a sufficient light somewhere and to look yourself, and call in the aid of your brother and of Polemarchus and the rest, if we may in any wise discover where justice and injustice should be in it, wherein they differ from one another, and which of the two he must have who is to be happy, alike whether his condition is known or not known to all gods and men.

Nonsense, said Glaucon, you promised that you would carry on the search yourself, admitting that it would be impious for you not to come to the aid of justice by every means in your power.

A true reminder, I said, and I must do so, but you also must lend a hand.

Well, he said, we will.

I expect then, said I, that we shall find it in this way. I think our city, if it has been rightly founded, is good in the full sense of the word.

Necessarily, he said.

Clearly, then, it will be wise, brave, sober, and just.\*

Clearly.

Then if we find any of these qualities in it, the remainder will be that which we have not found?

Surely.

428

Take the case of any four other things. If we were looking for any one of them in anything and recognized the object of our search first, that would have been enough for us, but if we had recognized the other three first, that in itself would have made known to us the thing we were seeking. For plainly there was nothing left for it to be but the remainder.

Right, he said.

And so, since these are four, we must conduct the search in the same way.

Clearly.

And, moreover, the first thing that I think I clearly see therein is the wisdom, and there is something odd about that, it appears.

b

What? said he.

Wise in very deed I think the city that we have described is, for it is well counseled, is it not?

Yes.

And surely this very thing, good counsel, is a form of wisdom. For it is not by ignorance but by knowledge that men counsel well.

Obviously.

But there are many and manifold knowledges or sciences in the city.

Of course.

Is it then owing to the science of her carpenters that a city is to be called wise and well advised?

By no means for that, but rather mistress of the arts of building.

Then a city is not to be styled wise because of the deliberations of the science of wooden utensils for their best production?

No, I grant you.

Is it, then, because of that of brass implements or any other of that kind?

None whatsoever, he said.

Nor yet because of the science of the production of crops from the soil, but the name it takes from that is agricultural.

I think so.

Then, said I, is there any science in the city just founded by us residing in any of its citizens which does not take counsel about some particular thing in the city but about the city as a whole and the betterment of its relations with itself and other states?

Why, yes, there is.

What is it, said I, and in whom is it found?

It is the science of guardianship or government and it is to be found in those rulers to whom we just now gave the name of guardians in the full sense of the word.

And what term then do you apply to the city because of this knowledge?

Well-advised, he said, and truly wise.

Which class, then, said I, do you suppose will be the more numerous in our city, the smiths or these true guardians?

The smiths, by far, he said.

And would not these rulers be the smallest of all the groups of those who possess special knowledge and receive distinctive appellations?

By far.

Then it is by virtue of its smallest class and minutest part of itself, and the wisdom that resides therein, in the part which takes the lead and rules, that a city established on principles of nature would be wise as a whole. And as it appears these are by nature the fewest, the class to which it pertains to partake of the knowledge which alone of all forms of knowledge deserves the name of wisdom.

Most true, he said.

This one of our four, then, we have, I know not how, discovered, the thing itself and its place in the state.

I certainly think, said he, that it has been discovered sufficiently.

But again there is no difficulty in seeing bravery itself and the part of the city in which it resides for which the city is called brave.

How so?

Who, said I, in calling a city cowardly or brave would fix his eyes b  
on any other part of it than that which defends it and wages war in its  
behalf?

No one at all, he said.

For the reason, I take it, said I, that the cowardice or the bravery of the other inhabitants does not determine for it the one quality or the other.

It does not.

Bravery too, then, belongs to a city by virtue of a part of itself owing to its possession in that part of a quality that under all conditions will preserve the conviction that things to be feared are precisely those c  
which and such as the lawgiver inculcated in their education. Is not that what you call bravery?

I don't altogether understand what you said, he replied, but say it again.

A kind of conservation, I said, is what I mean by bravery.

What sort of a conservation?

The conservation of the conviction which the law has created by education about fearful things—what and what sort of things are to be feared. And by the phrase 'under all conditions' I mean that the brave man preserves it both in pain and pleasures and in desires and fears and does not expel it from his soul. And I may illustrate it by a d  
similitude if you please.

I do.

You are aware that dyers when they wish to dye wool so as to hold the purple hue begin by selecting from the many colors there be the one nature of the white and then give it a careful preparatory treatment so that it will take the hue in the best way, and after the treatment, then and then only, dip it in the dye. And things that are dyed by this process become fast-colored and washing either with or e  
without lyes cannot take away the sheen of their hues. But otherwise you know what happens to them, whether anyone dips other colors or even these without the preparatory treatment.

I know, he said, that they present a ridiculous and washed-out appearance.

By this analogy, then, said I, you must conceive what we too to the best of our ability were doing when we selected our soldiers and educated them in music and exercises of the body. The sole aim of our 430  
contrivance was that they should be convinced and receive our laws like a dye as it were, so that their belief and faith might be fast-colored about both the things that are to be feared and all other things because of the fitness of their nature and nurture, and that so their dyes might not be washed out by those lyes that have such dread power to scour our faiths away, pleasure more potent than any detergent or abstergent to accomplish this, and pain and fear, and desire b

more sure than any lye. This power in the soul, then, this unfailing conservation of right and lawful belief about things to be and not to be feared is what I call and would assume to be courage, unless you have something different to say.

No, nothing, said he, for I presume that you consider mere right opinion about the same matters not produced by education, that which may manifest itself in a beast or a slave, to have little or nothing to do with law and that you would call it by another name than courage.

c That is most true, said I.

Well then, he said, I accept this as bravery.

Do so, said I, and you will be right, with the reservation that it is the courage of a citizen. Some other time, if it please you, we will discuss it more fully. At present we were not seeking this but justice, and for the purpose of that inquiry I believe we have done enough.

You are quite right, he said.

d Two things still remain, said I, to make out in our city, soberness and the object of the whole inquiry, justice.

Quite so.

If there were only some way to discover justice so that we need not further concern ourselves about soberness.

Well, I, for my part, he said, neither know of any such way nor would I wish justice to be discovered first if that means that we are not to go on to the consideration of soberness. But if you desire to please me, consider this before that.

e It would certainly be very wrong of me not to desire it, said I.

Go on with the inquiry then, he said.

I must go on, I replied, and viewed from here it bears more likeness to a kind of concord and harmony than the other virtues did.

How so?

Soberness is a kind of beautiful order and a continence of certain pleasures and appetites, as they say, using the phrase 'master of himself' I know not how, and there are other similar expressions that as it were point us to the same trail. Is that not so?

Most certainly.

Now the phrase 'master of himself' is an absurdity, is it not? For  
431 he who is master of himself would also be subject to himself, and he who is subject to himself would be master. For the same person is spoken of in all these expressions.

Of course.

But, said I, the intended meaning of this way of speaking appears to me to be that the soul of a man within him has a better part and a worse part, and the expression self-mastery means the control of the worse by the naturally better part. It is, at any rate, a term of praise. But when, because of bad breeding or some association, the better part, which is the smaller, is dominated by the multitude of the worse,

I think that our speech censures this as a reproach, and calls the man b  
in this plight unself-controlled and licentious.

That seems likely, he said.

Turn your eyes now upon our new city, said I, and you will find  
one of these conditions existent in it. For you will say that it is justly  
spoken of as master of itself if that in which the superior rules the in-  
ferior is to be called sober and self-mastered.

I do turn my eyes upon it, he said, and it is as you say.

And again, the mob of motley appetites and pleasures and pains  
one would find chiefly in children and women and slaves and in the c  
base rabble of those who are free men in name.

By all means.

But the simple and moderate appetites which with the aid of rea-  
son and right opinion are guided by consideration you will find in few  
and those the best born and best educated.

True, he said.

And do you not find this too in your city and a domination there  
of the desires in the multitude and the rabble by the desires and the  
wisdom that dwell in the minority of the better sort? d

I do, he said.

If, then, there is any city that deserves to be described as master  
of its pleasures and desires and self-mastered, this one merits that  
designation.

Most assuredly, he said.

And is it not also to be called sober in all these respects?

Indeed it is, he said.

And yet again, if there is any city in which the rulers and the  
ruled are of one mind as to who ought to rule, that condition will be e  
found in this. Don't you think so?

I most emphatically do, he said.

In which class of the citizens, then, will you say that the virtue of  
sobriety has its seat when this is their condition? In the rulers or in  
the ruled?

In both, I suppose, he said.

Do you see then, said I, that our intuition was not a bad one just  
now that discerned a likeness between sobriety and a kind of har-  
mony?

Why so?

Because its operation is unlike that of courage and wisdom, which  
residing in separate parts respectively made the city, the one wise and  
the other brave. That is not the way of sobriety, but it extends liter- 432  
ally through the entire gamut throughout, bringing about the unison  
in the same chant of the strongest, the weakest, and the intermediate,  
whether in wisdom or, if you please, in strength, or for that matter in  
numbers, wealth, or any similar criterion. So that we should be quite  
right in affirming this unanimity to be sobriety, the concord of the

naturally superior and inferior as to which ought to rule in both the state and the individual.

b I entirely concur, he said.

Very well, said I, we have made out these three forms in our city to the best of our present judgment. What can be the remaining form that would give the city still another virtue? For it is obvious that the remainder is justice.

Obvious.

c Now then, Glaucon, is the time for us like huntsmen to surround the covert and keep close watch that justice may not slip through and get away from us and vanish from our sight. It plainly must be somewhere hereabout. Keep your eyes open then and do your best to descry it. You may see it before I do and point it out to me.

Would that I could, he said, but I think rather that if you find in me one who can follow you and discern what you point out to him you will be making a very fair use of me.

Pray for success then, said I, and follow along with me.

That I will do, only lead on, he said.

And truly, said I, it appears to be an inaccessible place, lying in deep shadows.

It certainly is a dark covert, not easy to beat up.

d But all the same, on we must go.

Yes, on.

And I caught view and gave a halloo and said, Glaucon, I think we have found its trail and I don't believe it will get away from us.

I am glad to hear that, said he.

Truly, said I, we were slackers indeed.

How so?

e Why, all the time, bless your heart, the thing apparently was tumbling about our feet from the start and yet we couldn't see it, but were most ludicrous, like people who sometimes hunt for what they hold in their hands. So we did not turn our eyes upon it, but looked off into the distance, which was perhaps the reason it escaped us.

What do you mean? he said.

This, I replied, that it seems to me that though we were speaking of it and hearing about it all the time we did not understand ourselves or realize that we were speaking of it in a sense.

That is a tedious prologue, he said, for an eager listener.

433 Listen then, said I, and learn if there is anything in what I say. For what we laid down in the beginning as a universal requirement when we were founding our city, this I think, or some form of this, is justice. And what we did lay down, and often said, if you recall, was that each one man must perform one social service in the state for which his nature was best adapted.

Yes, we said that.

And again, that to do one's own business and not to be a busy-body is justice is a saying that we have heard from many and have very often repeated ourselves. b

We have.

This, then, I said, my friend, if taken in a certain sense appears to be justice, this principle of doing one's own business. Do you know whence I infer this?

No, but tell me, he said.

I think that this is the remaining virtue in the state after our consideration of soberness, courage, and intelligence, a quality which made it possible for them all to grow up in the body politic and which when they have sprung up preserves them as long as it is present. And I hardly need to remind you that we said that justice would be the residue after we had found the other three. c

That is an unavoidable conclusion, he said.

But moreover, said I, if we were required to decide what it is whose indwelling presence will contribute most to making our city good, it would be a difficult decision whether it was the unanimity of rulers and ruled or the conservation in the minds of the soldiers of the convictions produced by law as to what things are or are not to be feared, or the watchful intelligence that resides in the guardians, or whether this is the chief cause of its goodness, the principle embodied in child, woman, slave, free, artisan, ruler, and ruled, that each performed his one task as one man and was not a versatile busybody. d

Hard to decide indeed, he said.

A thing, then, that in its contribution to the excellence of a state vies with and rivals its wisdom, its soberness, its bravery, is this principle of everyone in it doing his own task.

It is indeed, he said.

And is not justice the name you would have to give to the principle that rivals these as conducting to the virtue of a state? e

By all means.

Consider it in this wise too, if so you will be convinced. Will you not assign the conduct of lawsuits in your state to the rulers?

Of course.

Will not this be the chief aim of their decisions, that no one shall have what belongs to others or be deprived of his own?

Nothing else but this.

On the assumption that this is just?

Yes.

From this point of view too, then, the having and doing of one's own and what belongs to oneself would admittedly be justice. 434

That is so.

Consider now whether you agree with me. A carpenter undertaking to do the work of a cobbler or a cobbler of a carpenter or their

interchange of one another's tools or honors or even the attempt of the same man to do both—the confounding of all other functions would not, think you, greatly injure a state, would it?

Not much, he said.

But when, I fancy, one who is by nature an artisan or some kind  
b of money-maker tempted and incited by wealth or command of votes or bodily strength or some similar advantage tries to enter into the class of the soldiers or one of the soldiers into the class of counselors and guardians, for which he is not fitted, and these interchange their tools and their honors or when the same man undertakes all these functions at once, then, I take it, you too believe that this kind of substitution and meddlesomeness is the ruin of a state.

By all means.

The interference with one another's business, then, of three existent classes, and the substitution of the one for the other, is the  
c greatest injury to a state and would most rightly be designated as the thing which chiefly works it harm.

Precisely so.

And the thing that works the greatest harm to one's own state, will you not pronounce to be injustice?

Of course.

This, then, is injustice. Again, let us put it in this way. The proper functioning of the money-makers, the helpers, and the guardians, each doing his own work in the state, being the reverse of that just described, would be justice and would render the city just.

d I think the case is thus and no otherwise, said he.

Let us not yet affirm it quite fixedly, I said, but if this form, when applied to the individual man, is accepted there also as a definition of justice, we will then concede the point—for what else will there be to say? But if not, then we will look for something else. But now let us work out the inquiry in which we supposed that, if we found some  
e larger thing that contained justice and viewed it there, we should more easily discover its nature in the individual man. And we agreed that this larger thing is the city, and so we constructed the best city in our power, well knowing that in the good city it would of course be found. What, then, we thought we saw there we must refer back to the individual and, if it is confirmed, all will be well. But if something different manifests itself in the individual, we will return again  
435 to the state and test it there and it may be that, by examining them side by side and rubbing them against one another, as it were from the fire sticks we may cause the spark of justice to flash forth, and when it is thus revealed confirm it in our own minds.

Well, he said, that seems a sound method and that is what we must do.

Then, said I, if you call a thing by the same name whether it is

big or little, is it unlike in the way in which it is called the same or like?

Like, he said.

Then a just man too will not differ at all from a just city in respect of the very form of justice, but will be like it.

Yes, like.

But now the city was thought to be just because three natural kinds existing in it performed each its own function, and again it was sober, brave, and wise because of certain other affections and habits of these three kinds.

True, he said.

Then, my friend, we shall thus expect the individual also to have these same forms in his soul, and by reason of identical affections of these with those in the city to receive properly the same appellations.

Inevitable, he said.

Goodness gracious, said I, here is another trifling inquiry into which we have plunged, the question whether the soul really contains these three forms in itself or not.

It does not seem to me at all trifling, he said, for perhaps, Socrates, the saying is true that 'fine things are difficult.'

Apparently, said I, and let me tell you, Glaucon, that in my opinion we shall never apprehend this matter accurately from such methods as we are now employing in discussion. For there is another longer and harder way that conducts to this. Yet we may perhaps discuss it on the level of our previous statements and inquiries.

May we not acquiesce in that? he said. I for my part should be quite satisfied with that for the present.

And I surely should be more than satisfied, I replied.

Don't you weary then, he said, but go on with the inquiry.

Is it not, then, said I, impossible for us to avoid admitting this much, that the same forms and qualities are to be found in each one of us that are in the state? They could not get there from any other source. It would be absurd to suppose that the element of high spirit was not derived in states from the private citizens who are reputed to have this quality, as the populations of the Thracian and Scythian lands and generally of northern regions, or the quality of love of knowledge, which would chiefly be attributed to the region where we dwell, or the love of money which we might say is not least likely to be found in Phoenicians and the population of Egypt.

One certainly might, he replied.

This is the fact then, said I, and there is no difficulty in recognizing it.

Certainly not.

But the matter begins to be difficult when you ask whether we do all these things with the same thing or whether there are three things

and we do one thing with one and one with another—learn with one part of ourselves, feel anger with another, and with yet a third desire the pleasures of nutrition and generation and their kind, or whether  
 b it is with the entire soul that we function in each case when we once begin. That is what is really hard to determine properly.

I think so too, he said.

Let us then attempt to define the boundary and decide whether they are identical with one another in this way.

How?

It is obvious that the same thing will never do or suffer opposites in the same respect in relation to the same thing and at the same time. So that if ever we find these contradictions in the functions of the  
 c mind we shall know that it was not the same thing functioning but a plurality.

Very well.

Consider, then, what I am saying.

Say on, he replied.

Is it possible for the same thing at the same time in the same respect to be at rest and in motion?

By no means.

Let us have our understanding still more precise, lest as we proceed we become involved in dispute. If anyone should say of a man standing still but moving his hands and head that the same man is at the same time at rest and in motion we should not, I take it, regard  
 d that as the right way of expressing it, but rather that a part of him is at rest and a part in motion. Is not that so?

It is.

Then if the disputant should carry the jest still further with the subtlety that tops at any rate stand still as a whole at the same time that they are in motion when with the peg fixed in one point they revolve, and that the same is true of any other case of circular motion about the same spot—we should reject the statement on the ground  
 e that the repose and the movement in such cases were not in relation to the same parts of the objects. But we would say that there was a straight line and a circumference in them and that in respect of the straight line they are standing still since they do not incline to either side, but in respect of the circumference they move in a circle, but that when as they revolve they incline the perpendicular to right or left or forward or back, then they are in no wise at rest.

And that would be right, he said.

No such remarks then will disconcert us or any whit the more make us believe that it is ever possible for the same thing at the same  
 437 time in the same respect and the same relation to suffer, be, or do opposites.

They will not me, I am sure, said he.

All the same, said I, that we may not be forced to examine at tedious length the entire list of such contentions and convince ourselves that they are false, let us proceed on the hypothesis that this is so, with the understanding that, if it ever appear otherwise, everything that results from the assumption shall be invalidated.

That is what we must do, he said.

Will you not then, said I, set down as opposed to one another assent and dissent, and the endeavor after a thing to the rejection of it, and embracing to repelling—do not these and all things like these belong to the class of opposite actions or passions, it will make no difference which?

None, said he, but they are opposites.

What then, said I, of thirst and hunger and the appetites generally, and again consenting and willing—would you not put them all somewhere in the classes just described? Will you not say, for example, that the soul of one who desires either strives for that which he desires or draws toward its embrace what it wishes to accrue to it, or again, in so far as it wills that anything be presented to it, nods assent to itself thereon as if someone put the question, striving toward its attainment?

I would say so, he said.

But what of not-willing and not-consenting nor yet desiring? Shall we not put these under the soul's rejection and repulsion from itself and generally into the opposite class from all the former?

Of course.

This being so, shall we say that the desires constitute a class and that the most conspicuous members of that class are what we call thirst and hunger?

We shall, said he.

Is not the one desire of drink, the other of food?

Yes.

Then in so far as it is thirst, would it be of anything more than that of which we say it is a desire in the soul? I mean is thirst thirst for hot drink or cold or much or little or in a word for a draught of any particular quality, or is it the fact that if heat is attached to the thirst it would further render the desire—a desire of cold, and if cold of hot? But if owing to the presence of muchness the thirst is much it would render it a thirst for much and if little for little. But mere thirst will never be desire of anything else than that of which it is its nature to be, mere drink, and so hunger of food.

That is so, he said. Each desire in itself is of that thing only of which it is its nature to be. The epithets belong to the quality—such or such.

Let no one then, said I, disconcert us when off our guard with the objection that everybody desires not drink but good drink and not

food but good food, because, the argument will run, all men desire good, and so, if thirst is desire, it would be of good drink or of good whatsoever it is, and so similarly of other desires.

Why, he said, there perhaps would seem to be something in that objection.

But I need hardly remind you, said I, that of relative terms those  
b that are somehow qualified are related to a qualified correlate, those that are severally just themselves to a correlate that is just itself.

I don't understand, he said.

Don't you understand, said I, that the greater is such as to be greater than something?

Certainly.

Is it not than the less?

Yes.

But the much greater than the much less. Is that not so?

Yes.

And may we add the onetime greater than the onetime less and that which will be greater than that which will be less?

Surely.

c And similarly of the more toward the fewer, and the double toward the half and of all like cases, and again of the heavier toward the lighter, the swifter toward the slower, and yet again of the hot toward the cold and all cases of that kind—does not the same hold?

By all means.

But what of the sciences? Is not the way of it the same? Science, which is just that, is of knowledge which is just that, or is of whatsoever we must assume the correlate of science to be. But a particular science of a particular kind is of some particular thing of a particular  
d kind. I mean something like this. As there was a science of making a house it differed from other sciences so as to be named architecture.

Certainly.

Was not this by reason of its being of a certain kind such as no other of all the rest?

Yes.

And was it not because it was of something of a certain kind that it itself became a certain kind of science? And similarly of the other arts and sciences?

That is so.

This then, said I, if haply you now understand, is what you must say I then meant, by the statement that of all things that are such as to be of something, those that are just themselves only are of things just themselves only, but things of a certain kind are of things of a  
e kind. And I don't at all mean that they are of the same kind as the things of which they are, so that we are to suppose that the science of health and disease is a healthy and diseased science and that of evil and good, evil and good. I only mean that as science became the

science not of just the thing of which science is but of some particular kind of thing, namely, of health and disease, the result was that it itself became some kind of science and this caused it to be no longer called simply science but, with the addition of the particular kind, medical science.

I understand, he said, and agree that it is so.

To return to thirst, then, said I, will you not class it with the 439 things that are of something and say that it is what it is in relation to something—and it is, I presume, thirst?

I will, said he, namely of drink.

Then if the drink is of a certain kind, so is the thirst, but thirst that is just thirst is neither of much nor little nor good nor bad, nor in a word of any kind, but just thirst is naturally of just drink only.

By all means.

The soul of the thirsty then, in so far as it thirsts, wishes nothing else than to drink, and yearns for this and its impulse is toward this. b

Obviously.

Then if anything draws it back when thirsty it must be something different in it from that which thirsts and drives it like a beast to drink. For it cannot be, we say, that the same thing with the same part of itself at the same time acts in opposite ways about the same thing.

We must admit that it does not.

So I fancy it is not well said of the archer that his hands at the same time thrust away the bow and draw it nigh, but we should rather say that there is one hand that puts it away and another that draws it to.

By all means, he said. c

Are we to say, then, that some men sometimes though thirsty refuse to drink?

We are indeed, he said, many and often.

What then, said I, should one affirm about them? Is it not that there is a something in the soul that bids them drink and a something that forbids, a different something that masters that which bids?

I think so.

And is it not the fact that that which inhibits such actions arises when it arises from the calculations of reason, but the impulses which d draw and drag come through affections and diseases?

Apparently.

Not unreasonably, said I, shall we claim that they are two and different from one another, naming that in the soul whereby it reckons and reasons the rational, and that with which it loves, hungers, thirsts, and feels the flutter and titillation of other desires, the irrational and appetitive—companion of various repletions and pleasures.

It would not be unreasonable but quite natural, he said, for us to e think this.

These two forms, then, let us assume to have been marked off as actually existing in the soul. But now the *thumos*, or principle of high spirit, that with which we feel anger, is it a third, or would it be identical in nature with one of these?

Perhaps, he said, with one of these, the appetitive.

But, I said, I once heard a story which I believe, that Leontius the son of Aglaion, on his way up from the Piraeus under the outer side of the northern wall, becoming aware of dead bodies that lay at the place of public execution at the same time felt a desire to see them and a repugnance and aversion, and that for a time he resisted and veiled  
440 his head, but overpowered in despite of all by his desire, with wide staring eyes he rushed up to the corpses and cried, There, ye wretches, take your fill of the fine spectacle!

I too, he said, have heard the story.

Yet, surely, this anecdote, I said, signifies that the principle of anger sometimes fights against desires as an alien thing against an alien.

Yes, it does, he said.

And do we not, said I, on many other occasions observe when his  
b desires constrain a man contrary to his reason that he reviles himself and is angry with that within which masters him, and that as it were in a faction of two parties the high spirit of such a man becomes the ally of his reason? But its making common cause with the desires against the reason when reason whispers low, Thou must not—that, I think, is a kind of thing you would not affirm ever to have perceived in yourself, nor, I fancy, in anybody else either.

No, by heaven, he said.

c Again, when a man thinks himself to be in the wrong, is it not true that the nobler he is the less is he capable of anger though suffering hunger and cold and whatsoever else at the hands of him whom he believes to be acting justly therein, and as I say his spirit refuses to be aroused against such a one?

True, he said.

But what when a man believes himself to be wronged? Does not his spirit in that case seethe and grow fierce—and also because of his suffering hunger, cold, and the like—and make itself the ally of what  
d he judges just? And in noble souls it endures and wins the victory and will not let go until either it achieves its purpose, or death ends all, or, as a dog is called back by a shepherd, it is called back by the reason within and calmed.

Your similitude is perfect, he said, and it confirms our former statements that the helpers are as it were dogs subject to the rulers who are as it were the shepherds of the city.

You apprehend my meaning excellently, said I. But do you also take note of this?

e Of what?

That what we now think about the spirited element is just the opposite of our recent surmise. For then we supposed it to be a part of the appetitive, but now, far from that, we say that, in the factions of the soul, it much rather marshals itself on the side of the reason.

By all means, he said.

Is it then distinct from this too, or is it a form of the rational, so that there are not three but two kinds in the soul, the rational and the appetitive? Or just as in the city there were three existing kinds that composed its structure, the money-makers, the helpers, the counselors, so also in the soul does there exist a third kind, this principle of high spirit, which is the helper of reason by nature unless it is corrupted by evil nurture? 441

We have to assume it as a third, he said.

Yes, said I, provided it shall have been shown to be something different from the rational, as it has been shown to be other than the appetitive.

That is not hard to be shown, he said, for that much one can see in children, that they are from their very birth chock-full of rage and high spirit, but as for reason, some of them, to my thinking, never participate in it, and the majority quite late. b

Yes, by heaven, excellently said, I replied, and further, one could see in animals that what you say is true. And to these instances we may add the testimony of Homer quoted above, 'He smote his breast and chided thus his heart.' <sup>40</sup> For there Homer has clearly represented that in us which has reflected about the better and the worse as rebuking that which feels unreasoning anger as if it were a distinct and different thing. c

You are entirely right, he said.

Through these waters, then, said I, we have with difficulty made our way and we are fairly agreed that the same kinds equal in number are to be found in the state and in the soul of each one of us.

That is so.

Then does not the necessity of our former postulate immediately follow, that as and whereby the state was wise, so and thereby is the individual wise?

Surely.

And so whereby and as the individual is brave, thereby and so is the state brave, and that both should have all the other constituents of virtue in the same way? d

Necessarily.

Just too, then, Glaucon, I presume we shall say a man is in the same way in which a city was just.

That too is quite inevitable.

But we surely cannot have forgotten this, that the state was just

by reason of each of the three classes found in it fulfilling its own function.

I don't think we have forgotten, he said.

We must remember, then, that each of us also in whom the several parts within him perform each their own task—he will be a just man and one who minds his own affair.

We must indeed remember, he said.

Does it not belong to the rational part to rule, being wise and exercising forethought in behalf of the entire soul, and to the principle of high spirit to be subject to this and its ally?

Assuredly.

Then is it not, as we said, the blending of music and gymnastics that will render them concordant, intensifying and fostering the one with fair words and teachings and relaxing and soothing and making gentle the other by harmony and rhythm?

Quite so, said he.

And these two, thus reared and having learned and been educated to do their own work in the true sense of the phrase, will preside over the appetitive part which is the mass of the soul in each of us and the most insatiate by nature of wealth. They will keep watch upon it, lest, by being filled and infected with the so-called pleasures associated with the body and so waxing big and strong, it may not keep to its own work but may undertake to enslave and rule over the classes which it is not fitting that it should, and so overturn the entire life of all.

By all means, he said.

Would not these two, then, best keep guard against enemies from without also in behalf of the entire soul and body, the one taking counsel, the other giving battle, attending upon the ruler, and by its courage executing the ruler's designs?

That is so.

Brave, too, then, I take it, we call each individual by virtue of this part in him, when, namely, his high spirit preserves in the midst of pains and pleasures the rule handed down by the reason as to what is or is not to be feared.

Right, he said.

But wise by that small part that ruled in him and handed down these commands, by its possession in turn within it of the knowledge of what is beneficial for each and for the whole, the community composed of the three.

By all means.

And again, was he not sober by reason of the friendship and concord of these same parts, when, namely, the ruling principle and its two subjects are at one in the belief that the reason ought to rule, and do not raise faction against it?

The virtue of soberness certainly, said he, is nothing else than this, whether in a city or an individual.

But surely, now, a man is just by that which and in the way we have so often described.

That is altogether necessary.

Well then, said I, has our idea of justice in any way lost the edge of its contour so as to look like anything else than precisely what it showed itself to be in the state?

I think not, he said.

We might, I said, completely confirm your reply and our own conviction thus, if anything in our minds still disputes our definition —by applying commonplace and vulgar tests to it.

What are these?

For example, if an answer were demanded to the question concerning that city and the man whose birth and breeding was in harmony with it, whether we believe that such a man, entrusted with a deposit of gold or silver, would withhold it and embezzle it, who do you suppose would think that he would be more likely so to act than men of a different kind? 443

No one would, he said.

And would not he be far removed from sacrilege and theft and betrayal of comrades in private life or of the state in public?

He would.

And, moreover, he would not be in any way faithless either in the keeping of his oaths or in other agreements.

How could he?

Adultery, surely, and neglect of parents and of the due service of the gods would pertain to anyone rather than to such a man.

To anyone indeed, he said.

And is not the cause of this to be found in the fact that each of the principles within him does its own work in the matter of ruling and being ruled?

Yes, that and nothing else.

Do you still, then, look for justice to be anything else than this potency which provides men and cities of this sort?

No, by heaven, he said, I do not.

Finished, then, is our dream and perfected—the surmise we spoke of, that, by some providence, at the very beginning of our foundation of the state, we chanced to hit upon the original principle and a sort of type of justice.

Most assuredly.

It really was, it seems, Glaucon, which is why it helps, a sort of adumbration of justice, this principle that it is right for the cobbler by nature to cobble and occupy himself with nothing else, and the carpenter to practice carpentry, and similarly all others.

Clearly.

- a But the truth of the matter was, as it seems, that justice is indeed something of this kind, yet not in regard to the doing of one's own business externally, but with regard to that which is within and in the true sense concerns one's self, and the things of one's self. It means that a man must not suffer the principles in his soul to do each the work of some other and interfere and meddle with one another, but that he should dispose well of what in the true sense of the word is properly his own, and having first attained to self-mastery and beautiful order within himself, and having harmonized these three principles, the notes or intervals of three terms quite literally the lowest, the highest, and the mean, and all others there may be between them, and having linked and bound all three together and made of himself a unit, one man instead of many, self-controlled and in unison, he should then and then only turn to practice if he find aught to do either in the getting of wealth or the tending of the body or it may be in political action or private business—in all such doings believing and naming the just and honorable action to be that which preserves and helps to produce this condition of soul, and wisdom the science that presides over such conduct, and believing and naming  
e the unjust action to be that which ever tends to overthrow this spiritual constitution, and brutish ignorance to be the opinion that in turn presides over this.

What you say is entirely true, Socrates.

Well, said I, if we should affirm that we had found the just man and state and what justice really is in them, I think we should not be much mistaken.

No indeed, we should not, he said.

Shall we affirm it, then?

Let us so affirm.

So be it, then, said I. Next after this, I take it, we must consider injustice.

Obviously.

- b Must not this be a kind of civil war of these three principles, their meddlesomeness and interference with one another's functions, and the revolt of one part against the whole of the soul that it may hold therein a rule which does not belong to it, since its nature is such that it befits it to serve as a slave to the ruling principle? Something of this sort, I fancy, is what we shall say, and that the confusion of these principles and their straying from their proper course is injustice and licentiousness and cowardice and brutish ignorance and, in general, all turpitude.

Precisely this, he replied.

- c Then, said I, to act unjustly and be unjust and in turn to act justly—the meaning of all these terms becomes at once plain and clear, since injustice and justice are so.

How so?

Because, said I, these are in the soul what the healthful and the diseaseful are in the body; there is no difference.

In what respect? he said.

Healthful things surely engender health and diseaseful disease.

Yes.

Then does not doing just acts engender justice and unjust in- a justice?

Of necessity.

But to produce health is to establish the elements in a body in the natural relation of dominating and being dominated by one another, while to cause disease is to bring it about that one rules or is ruled by the other contrary to nature.

Yes, that is so.

And is it not likewise the production of justice in the soul to establish its principles in the natural relation of controlling and being controlled by one another, while injustice is to cause the one to rule or be ruled by the other contrary to nature?

Exactly so, he said.

Virtue, then, as it seems, would be a kind of health and beauty e and good condition of the soul, and vice would be disease, ugliness, and weakness.

It is so.

Then is it not also true that beautiful and honorable pursuits tend to the winning of virtue and the ugly to vice?

Of necessity.

And now at last, it seems, it remains for us to consider whether it 445 is profitable to do justice and practice honorable pursuits and be just, whether one is known to be such or not, or whether injustice profits, and to be unjust, if only a man escape punishment and is not bettered by chastisement.

Nay, Socrates, he said, I think that from this point on our inquiry becomes an absurdity—if, while life is admittedly intolerable with a ruined constitution of body even though accompanied by all the food and drink and wealth and power in the world, we are yet to be asked to suppose that, when the very nature and constitution of that whereby we live is disordered and corrupted, life is going to be worth b living, if a man can only do as he pleases, and pleases to do anything save that which will rid him of evil and injustice and make him possessed of justice and virtue—now that the two have been shown to be as we have described them.

Yes, it is absurd, said I, but nevertheless, now that we have won to this height, we must not grow weary in endeavoring to discover with the utmost possible clearness that these things are so.

That is the last thing in the world we must do, he said.

Come up here then, said I, that you may see how many are the c

kinds of evil, I mean those that it is worth while to observe and distinguish.

I am with you, he said. Only do you say on.

And truly, said I, now that we have come to this height of argument I seem to see as from a point of outlook that there is one form of excellence, and that the forms of evil are infinite, yet that there are some four among them that it is worth while to take note of.

What do you mean? he said.

As many as are the varieties of political constitutions that constitute specific types, so many, it seems likely, are the characters of soul.

How many, pray?

a There are five kinds of constitutions, said I, and five kinds of soul.

Tell me what they are, he said.

I tell you, said I, that one way of government would be the constitution that we have just expounded, but the names that might be applied to it are two. If one man of surpassing merit rose among the rulers, it would be denominated royalty; if more than one, aristocracy.

True, he said.

Well, then, I said, this is one of the forms I have in mind. For e neither would a number of such men, nor one if he arose among them, alter to any extent worth mentioning the laws of our city—if he preserved the breeding and the education that we have described.

It is not likely, he said.

## BOOK V

449 To such a city, then, or constitution I apply the terms good and right—and to the corresponding kind of man—but the others I describe as bad and mistaken, if this one is right, in respect both to the administration of states and to the formation of the character of the individual soul, they falling under four forms of badness.

What are these? he said.

b And I was going on to enumerate them in what seemed to me the order of their evolution from one another, when Polemarchus—he sat at some little distance from Adimantus—stretched forth his hand, and, taking hold of his garment from above by the shoulder, drew the other toward him and, leaning forward himself, spoke a few words in his ear, of which we overheard nothing else save only this. Shall we let him off, then, he said, or what shall we do?

By no means, said Adimantus, now raising his voice.

What, pray, said I, is it that you are not letting off?

You, said he.

c And for what special reason, pray? said I.

We think you are a slacker, he said, and are trying to cheat us out of a whole division, and that not the least, of the argument to avoid the trouble of expounding it, and expect to 'get away with it' by observing thus lightly that, of course, in respect to women and children it is obvious to everybody that the possessions of friends will be in common.

Well, isn't that right, Adimantus? I said.

Yes, said he, but this word 'right,' like other things, requires defining as to the way and manner of such a community. There might be many ways. Don't, then, pass over the one that you have in mind. For we have long been lying in wait for you, expecting that you would say something both of the procreation of children and their bringing-up, and would explain the whole matter of the community of women and children of which you speak. We think that the right or wrong management of this makes a great difference, all the difference in the world, in the constitution of a state; so now, since you are beginning on another constitution before sufficiently defining this, we are firmly resolved, as you overheard, not to let you go till you have expounded all this as fully as you did the rest. 450

Set me down, too, said Glaucon, as voting this ticket.

Surely, said Thrasymachus, you may consider it a joint resolution of us all, Socrates.

What a thing you have done, said I, in thus challenging me! What a huge debate you have started afresh, as it were, about this polity, in the supposed completion of which I was rejoicing, being only too glad to have it accepted as I then set it forth! You don't realize what a swarm of arguments you are stirring up by this demand, which I foresaw and evaded to save us no end of trouble.

Well, said Thrasymachus, do you suppose this company has come here to prospect for gold and not to listen to discussions?

Yes, I said, in measure.

Nay, Socrates, said Glaucon, the measure of listening to such discussions is the whole of life for reasonable men. So don't consider us, and do not you yourself grow weary in explaining to us what we ask for, your views as to how this communion of wives and children among our guardians will be managed, and also about the rearing of the children while still young in the interval between birth and formal schooling which is thought to be the most difficult part of education. Try, then, to tell us what must be the manner of it.

It is not an easy thing to expound, my dear fellow, said I, for even more than the provisions that precede it, it raises many doubts. For one might doubt whether what is proposed is possible and, even conceding the possibility, one might still be skeptical whether it is best. For which reason one, as it were, shrinks from touching on the matter lest the theory be regarded as nothing but a 'wish-thought,' my dear friend.

Do not shrink, he said, for your hearers will not be inconsiderate nor distrustful nor hostile.

And I said, My good fellow, is that remark intended to encourage me?

It is, he said.

Well then, said I, it has just the contrary effect. For, if I were confident that I was speaking with knowledge, it would be an excellent  
e encouragement. (For there are both safety and boldness in speaking the truth with knowledge about our greatest and dearest concerns to those who are both wise and dear. But to speak when one doubts him-  
451 self and is seeking while he talks, as I am doing, is a fearful and slippery venture. The fear is not of being laughed at, for that is childish, but, lest, missing the truth, I fall down and drag my friends with me in matters where it most imports not to stumble. So I salute Nemesis, Glaucon, in what I am about to say. For, indeed, I believe that involuntary homicide is a lesser fault than to mislead opinion about the honorable, the good, and the just. This is a risk that it is better  
b to run with enemies than with friends, so that your encouragement is none.

And Glaucon, with a laugh, said, Nay, Socrates, if any false note in the argument does us any harm, we release you as in a homicide case, and warrant you pure of hand and no deceiver of us. So speak on with confidence.

Well, said I, he who is released in that case is counted pure as the law bids, and, presumably, if there, here too.

Speak on, then, he said, for all this objection.

We must return then, said I, and say now what perhaps ought to  
c have been said in due sequence there. But maybe this way is right, that after the completion of the male drama we should in turn go through with the female, especially since you are so urgent.

For men, then, born and bred as we described, there is in my opinion no other right possession and use of children and women than that which accords with the start we gave them. Our endeavor, I believe, was to establish these men in our discourse as the guardians of a flock?

Yes.

d Let us preserve the analogy, then, and assign them a generation and breeding answering to it, and see if it suits us or not.

In what way? he said.

In this. Do we expect the females of watchdogs to join in guarding what the males guard and to hunt with them and share all their pursuits or do we expect the females to stay indoors as being incapacitated by the bearing and the breeding of the whelps while the males toil and have all the care of the flock?

e They have all things in common, he replied, except that we treat the females as weaker and the males as stronger.

Is it possible, then, said I, to employ any creature for the same ends as another if you do not assign it the same nurture and education?

It is not possible.

If, then, we are to use the women for the same things as the men, we must also teach them the same things.

452

Yes.

Now music together with gymnastics was the training we gave the men.

Yes.

Then we must assign these two arts to the women also and the offices of war and employ them in the same way.

It would seem likely from what you say, he replied.

Perhaps, then, said I, the contrast with present custom would make much in our proposals look ridiculous if our words are to be realized in fact.

Yes, indeed, he said.

What then, said I, is the funniest thing you note in them? Is it not obviously the women exercising unclad in the palaestra together with the men, not only the young, but even the older, like old men in gymnasiums, when, though wrinkled and unpleasant to look at, they still persist in exercising?

Yes, on my word, he replied, it would seem ridiculous under present conditions.

Then, said I, since we have set out to speak our minds, we must not fear all the gibes with which the wits would greet so great a revolution, and the sort of things they would say about gymnastics and culture, and most of all about the bearing of arms and the bestriding of horses.

You're right, he said.

But since we have begun we must go forward to the rough part of our law, after begging these fellows not to mind their own business but to be serious, and reminding them that it is not long since the Greeks thought it disgraceful and ridiculous, as most of the barbarians do now, for men to be seen naked. And when the practice of athletics began, first with the Cretans and then with the Lacedaemonians, it was open to the wits of that time to make fun of these practices, don't you think so?

I do.

But when, I take it, experience showed that it is better to strip than to veil all things of this sort, then the laughter of the eyes faded away before that which reason revealed to be best, and this made it plain that he talks idly who deems anything else ridiculous but evil, and who tries to raise a laugh by looking to any other pattern of absurdity than that of folly and wrong or sets up any other standard of the beautiful as a mark for his seriousness than the good.

Most assuredly, said he.

453 Then is not the first thing that we have to agree upon with regard to these proposals whether they are possible or not? And we must throw open the debate to anyone who wishes either in jest or in earnest to raise the question whether female human nature is capable of sharing with the male all tasks or none at all, or some but not others, and under which of these heads this business of war falls. Would not this be that best beginning which would naturally and proverbially lead to the best end?

Far the best, he said.

Shall we then conduct the debate with ourselves in behalf of those others so that the case of the other side may not be taken defenseless and go by default?

b Nothing hinders, he said.

Shall we say then in their behalf, There is no need, Socrates and Glaucon, of others disputing against you, for you yourselves at the beginning of the foundation of your city agreed that each one ought to mind as his own business the one thing for which he was fitted by nature? We did so agree, I think, certainly! Can it be denied then that there is by nature a great difference between men and women?

c Surely there is. Is it not fitting, then, that a different function should be appointed for each corresponding to this difference of nature? Certainly. How, then, can you deny that you are mistaken and in contradiction with yourselves when you turn around and affirm that the men and the women ought to do the same thing, though their natures are so far apart? Can you surprise me with an answer to that question?

Not easily on this sudden challenge, he replied, but I will and do beg you to lend your voice to the plea in our behalf, whatever it may be.

d These and many similar difficulties, Glaucon, said I, I foresaw and feared, and so shrank from touching on the law concerning the getting and breeding of women and children.

It does not seem an easy thing, by heaven, he said, no, by heaven.

No, it is not, said I, but the fact is that whether one tumbles into a little diving pool or plump into the great sea he swims all the same.

By all means.

Then we, too, must swim and try to escape out of the sea of argument in the hope that either some dolphin will take us on its back or some other desperate rescue.

e So it seems, he said.

Come then, consider, said I, if we can find a way out. We did agree that different natures should have differing pursuits and that the natures of men and women differ. And yet now we affirm that these differing natures should have the same pursuits. That is the indictment?

It is.

What a grand thing, Glaucon, said I, is the power of the art of contradiction! 454

Why so?

Because, said I, many appear to me to fall into it even against their wills, and to suppose that they are not wrangling but arguing, owing to their inability to apply the proper divisions and distinctions to the subject under consideration. They pursue purely verbal oppositions, practicing eristic, not dialectic on one another.

Yes, this does happen to many, he said, but does this observation apply to us too at present?

Absolutely, said I. At any rate I am afraid that we are unawares slipping into contentiousness.

In what way?

The principle that natures not the same ought not to share in the same pursuits we are following up most manfully and eristically in the literal and verbal sense, but we did not delay to consider at all what particular kind of diversity and identity of nature we had in mind and with reference to what we were trying to define it when we assigned different pursuits to different natures and the same to the same.

No, we didn't consider that, he said.

Wherefore, by the same token, I said, we might ask ourselves whether the natures of bald and long-haired men are the same and not, rather, the contrary. And, after agreeing that they were opposed, we might, if the bald cobbled, forbid the long-haired to do so, or vice versa.

That would be ridiculous, he said.

Would it be so, said I, for any other reason than that we did not then posit likeness and difference of nature in any and every sense, but were paying heed solely to the kind of diversity and homogeneity that was pertinent to the pursuits themselves? We meant, for example, that a man and a woman who have a physician's mind have the same nature. Don't you think so? d

I do.

But that a man physician and a man carpenter have different natures?

Certainly, I suppose.

Similarly, then, said I, if it appears that the male and the female sex have distinct qualifications for any arts or pursuits, we shall affirm that they ought to be assigned respectively to each. But if it appears that they differ only in just this respect that the female bears and the male begets, we shall say that no proof has yet been produced that the woman differs from the man for our purposes, but we shall continue to think that our guardians and their wives ought to follow the same pursuits. e

And rightly, said he.

Then, is it not the next thing to bid our opponent tell us precisely  
455 for what art or pursuit concerned with the conduct of a state the woman's nature differs from the man's?

That would be at any rate fair.

Perhaps, then, someone else, too, might say what you were saying a while ago, that it is not easy to find a satisfactory answer on a sudden, but that with time for reflection there is no difficulty.

He might say that.

Shall we, then, beg the raiser of such objections to follow us, if  
b we may perhaps prove able to make it plain to him that there is no pursuit connected with the administration of a state that is peculiar to woman?

By all means.

Come then, we shall say to him, answer our question. Was this the basis of your distinction between the man naturally gifted for anything and the one not so gifted—that the one learned easily, the other with difficulty, that the one with slight instruction could discover much for himself in the matter studied, but the other, after much instruction and drill, could not even remember what he had learned, and that the bodily faculties of the one adequately served his mind, while, for the other, the body was a hindrance? Were there  
c any other points than these by which you distinguish the well-endowed man in every subject and the poorly endowed?

No one, said he, will be able to name any others.

Do you know, then, of anything practiced by mankind in which the masculine sex does not surpass the female on all these points? Must we make a long story of it by alleging weaving and the watching of pancakes and the boiling pot, whereon the sex plumes itself  
d and wherein its defeat will expose it to most laughter?

You are right, he said, that the one sex is far surpassed by the other in everything, one may say. Many women, it is true, are better than many men in many things, but broadly speaking, it is as you say.

Then there is no pursuit of the administrators of a state that belongs to a woman because she is a woman or to a man because he is a man. But the natural capacities are distributed alike among both creatures,  
e and women naturally share in all pursuits and men in all—yet for all the woman is weaker than the man.

Assuredly.

Shall we, then, assign them all to men and nothing to women?  
How could we?

We shall rather, I take it, say that one woman has the nature of a physician and another not, and one is by nature musical, and another unmusical?

Surely.

Can we, then, deny that one woman is naturally athletic and 456  
warlike and another unwarlike and averse to gymnastics?

I think not.

And again, one a lover, another a hater, of wisdom? And one  
high-spirited, and the other lacking spirit?

That also is true.

Then it is likewise true that one woman has the qualities of a  
guardian and another not. Were not these the natural qualities of the  
men also whom we selected for guardians?

They were.

The women and the men, then, have the same nature in respect  
to the guardianship of the state, save in so far as the one is weaker, the  
other stronger.

Apparently.

Women of this kind, then, must be selected to cohabit with men b  
of this kind and to serve with them as guardians since they are ca-  
pable of it and akin by nature.

By all means.

And to the same natures must we not assign the same pursuits?  
The same.

We come round, then, to our previous statement, and agree that it  
does not run counter to nature to assign music and gymnastics to the  
wives of the guardians.

By all means.

Our legislation, then, was not impracticable or utopian, since the c  
law we proposed accorded with nature. Rather, the other way of doing  
things, prevalent today, proves, as it seems, unnatural.

Apparently.

The object of our inquiry was the possibility and the desirability  
of what we were proposing?

It was.

That it is possible has been admitted.

Yes.

The next point to be agreed upon is that it is the best way.

Obviously.

For the production of a female guardian, then, our education  
will not be one thing for men and another for women, especially since  
the nature which we hand over to it is the same. d

There will be no difference.

How are you minded, now, in this matter?

In what?

In the matter of supposing some men to be better and some  
worse, or do you think them all alike?

By no means.

In the city, then, that we are founding, which do you think will

prove the better men, the guardians receiving the education which we have described or the cobblers educated by the art of cobbling?

An absurd question, he said.

e I understand, said I, and are not these the best of all the citizens? By far.

And will not these women be the best of all the women?

They, too, by far.

Is there anything better for a state than the generation in it of the best possible women and men?

There is not.

457 And this, music and gymnastics applied as we described will effect.

Surely.

Then the institution we proposed is not only possible but the best for the state.

That is so.

The women of the guardians, then, must strip, since they will be clothed with virtue as a garment, and must take their part with the men in war and the other duties of civic guardianship and have no other occupation. But in these very duties lighter tasks must be assigned to the women than to the men because of their weakness as a class. But the man who ridicules unclad women, exercising because it is best that they should, 'plucks the unripe fruit' of laughter and does not know, it appears, the end of his laughter nor what he would be at. For the fairest thing that is said or ever will be said is this, that the helpful is fair and the harmful foul.

Assuredly.

c In this matter, then, of the regulation of women, we may say that we have surmounted one of the waves of our paradox and have not been quite swept away by it in ordaining that our guardians and female guardians must have all pursuits in common, but that in some sort the argument concurs with itself in the assurance that what it proposes is both possible and beneficial.

It is no slight wave that you are thus escaping.

You will not think it a great one, I said, when you have seen the one that follows.

Say on then and show me, said he.

This, said I, and all that precedes has for its sequel, in my opinion, the following law.

What?

d That these women shall all be common to all these men, and that none shall cohabit with any privately, and that the children shall be common, and that no parent shall know its own offspring nor any child its parent.

This is a far bigger paradox than the other, and provokes more distrust as to its possibility and its utility.

I presume, said I, that there would be no debate about its utility, no denial that the community of women and children would be the greatest good, supposing it possible. But I take it that its possibility or the contrary would be the chief topic of contention.

Both, he said, would be right sharply debated. e

You mean, said I, that I have to meet a coalition of arguments. But I expected to escape from one of them, and that if you agreed that the thing was beneficial, it would remain for me to speak only of its feasibility.

You have not escaped detection, he said, in your attempted flight, but you must render an account of both.

I must pay the penalty, I said, yet do me this much grace. Permit me to take a holiday, just as men of lazy minds are wont to feast 458 themselves on their own thoughts when they walk alone. Such persons, without waiting to discover how their desires may be realized, dismiss that topic to save themselves the labor of deliberating about possibilities and impossibilities, assume their wish fulfilled, and proceed to work out the details in imagination, and take pleasure in portraying what they will do when it is realized, thus making still more idle a mind that is idle without that. I too now succumb to this b weakness and desire to postpone and examine later the question of feasibility, but will at present assume that, and will, with your permission, inquire how the rulers will work out the details in practice, and try to show that nothing could be more beneficial to the state and its guardians than the effective operation of our plan. This is what I would try to consider first together with you, and thereafter the other topic, if you allow it.

I do allow it, he said. Proceed with the inquiry.

I think, then, said I, that the rulers, if they are to deserve that name, and their helpers likewise, will, the one, be willing to accept c orders, and the other, to give them, in some things obeying our laws, and imitating them in others which we leave to their discretion.

Presumably.

You, then, the lawgiver, I said, have picked these men and similarly will select to give over to them women as nearly as possible of the same nature. And they, having houses and meals in common, and no private possessions of that kind, will dwell together, and d being commingled in gymnastics and in all their life and education, will be conducted by innate necessity to sexual union. Is not what I say a necessary consequence?

Not by the necessities of geometry, he said, but by those of love, which are perhaps keener and more potent than the other to persuade and constrain the multitude.

They are, indeed, I said. But next, Glaucon, disorder and promiscuity in these unions or in anything else they do would be an unhallowed thing in a happy state and the rulers will not suffer it. e

It would not be right, he said.

Obviously, then, we must arrange marriages, sacramental so far as may be. And the most sacred marriages would be those that were most beneficial.

By all means.

459 How, then, would the greatest benefit result? Tell me this, Glaucon. I see that you have in your house hunting dogs and a number of pedigreed cocks. Have you ever considered something about their unions and procreations?

What? he said.

In the first place, I said, among these themselves, although they are a select breed, do not some prove better than the rest?

They do.

Do you then breed from all indiscriminately, or are you careful to breed from the best?

From the best.

b And, again, do you breed from the youngest or the oldest, or, so far as may be, from those in their prime?

From those in their prime.

And if they are not thus bred, you expect, do you not, that your birds' breed and hounds will greatly degenerate?

I do, he said.

And what of horses and other animals? I said. Is it otherwise with them?

It would be strange if it were, said he.

Gracious, said I, dear friend, how imperative, then, is our need of the highest skill in our rulers, if the principle holds also for mankind.

c Well, it does, he said, but what of it?

This, said I, that they will have to employ many of those drugs of which we were speaking. We thought that an inferior physician sufficed for bodies that do not need drugs but yield to diet and regimen. But when it is necessary to prescribe drugs we know that a more enterprising and venturesome physician is required.

True, but what is the pertinency?

d This, said I. It seems likely that our rulers will have to make considerable use of falsehood and deception for the benefit of their subjects. We said, I believe, that the use of that sort of thing was in the category of medicine.

And that was right, he said.

In our marriages, then, and the procreation of children, it seems there will be no slight need of this kind of 'right.'

How so?

It follows from our former admissions, I said, that the best men must cohabit with the best women in as many cases as possible and the worst with the worst in the fewest, and that the offspring of the

one must be reared and that of the other not, if the flock is to be as perfect as possible. And the way in which all this is brought to pass must be unknown to any but the rulers, if, again, the herd of guardians is to be as free as possible from dissension.

Most true, he said.

We shall, then, have to ordain certain festivals and sacrifices, in which we shall bring together the brides and the bridegrooms, and our poets must compose hymns suitable to the marriages that then take place. But the number of the marriages we will leave to the discretion of the rulers, that they may keep the number of the citizens as nearly as may be the same, taking into account wars and diseases and all such considerations, and that, so far as possible, our city may not grow too great or too small.

Right, he said.

Certain ingenious lots, then, I suppose, must be devised so that the inferior man at each conjugation may blame chance and not the rulers.

Yes, indeed, he said.

And on the young men, surely, who excel in war and other pursuits we must bestow honors and prizes, and, in particular, the opportunity of more frequent intercourse with the women, which will at the same time be a plausible pretext for having them beget as many of the children as possible.

Right.

And the children thus born will be taken over by the officials appointed for this, men or women or both, since, I take it, the official posts too are common to women and men.

Yes.

The offspring of the good, I suppose, they will take to the pen or crèche, to certain nurses who live apart in a quarter of the city, but the offspring of the inferior, and any of those of the other sort who are born defective, they will properly dispose of in secret, so that no one will know what has become of them.

That is the condition, he said, of preserving the purity of the guardians' breed.

They will also supervise the nursing of the children, conducting the mothers to the pen when their breasts are full, but employing every device to prevent anyone from recognizing her own infant. And they will provide others who have milk if the mothers are insufficient. But they will take care that the mothers themselves shall not suckle too long, and the trouble of wakeful nights and similar burdens they will devolve upon the nurses, wet and dry.

You are making maternity a soft job for the women of the guardians.

It ought to be, said I, but let us pursue our design. We said that the offspring should come from parents in their prime.

True.

- e Do you agree that the period of the prime may be fairly estimated at twenty years for a woman and thirty for a man?

How do you reckon it? he said.

The women, I said, beginning at the age of twenty, shall bear for the state to the age of forty, and the man shall beget for the state from the time he passes his prime in swiftness in running to the age of fifty-five.

- 461 That is, he said, the maturity and prime for both of body and mind.

- Then, if anyone older or younger than the prescribed age meddles with procreation for the state, we shall say that his error is an impiety and an injustice, since he is begetting for the city a child whose birth, if it escapes discovery, will not be attended by the sacrifices and the prayers which the priests and priestesses and the entire city prefer at the ceremonial marriages, that ever better offspring may spring from good sires and from fathers helpful to the state sons more  
b helpful still. But this child will be born in darkness and conceived in foul incontinence.

Right, he said.

And the same rule will apply, I said, if any of those still within the age of procreation goes in to a woman of that age with whom the ruler has not paired him. We shall say that he is imposing on the state a baseborn, uncertified, and unhallowed child.

Most rightly, he said.

- But when, I take it, the men and the women have passed the age of lawful procreation, we shall leave the men free to form such relations with whomsoever they please, except daughter and mother and  
c their direct descendants and ascendants, and likewise the women, save with son and father, and so on, first admonishing them preferably not even to bring to light anything whatever thus conceived, but if they are unable to prevent a birth to dispose of it on the understanding that we cannot rear such an offspring.

- d All that sounds reasonable, he said, but how are they to distinguish one another's fathers and daughters, and the other degrees of kin that you have just mentioned?

- They won't, said I, except that a man will call all male offspring born in the tenth and in the seventh month after he became a bridegroom his sons, and all female, daughters, and they will call him father. And, similarly, he will call their offspring his grandchildren and they will call his group grandfathers and grandmothers. And all children born in the period in which their fathers and mothers were procreating will regard one another as brothers and sisters. This  
e will suffice for the prohibitions of intercourse of which we just now spoke. But the law will allow brothers and sisters to cohabit if the lot so falls out and the Delphic oracle approves.

Quite right, said he.

This, then, Glaucon, is the manner of the community of wives and children among the guardians. That it is consistent with the rest of our polity and by far the best way is the next point that we must get confirmed by the argument. Is not that so?

It is, indeed, he said.

462

Is not the logical first step toward such an agreement to ask ourselves what we could name as the greatest good for the constitution of a state and the proper aim of a lawgiver in his legislation, and what would be the greatest evil, and then to consider whether the proposals we have just set forth fit into the footprints of the good and do not suit those of the evil?

By all means, he said.

Do we know of any greater evil for a state than the thing that distracts it and makes it many instead of one, or a greater good than that which binds it together and makes it one?

We do not.

Is not, then, the community of pleasure and pain the tie that binds, when, so far as may be, all the citizens rejoice and grieve alike at the same births and deaths?

By all means, he said.

But the individualization of these feelings is a dissolvent, when some grieve exceedingly and others rejoice at the same happenings to the city and its inhabitants?

c

Of course.

And the chief cause of this is when the citizens do not utter in unison such words as 'mine' and 'not mine,' and similarly with regard to the word 'alien'?

Precisely so.

That city, then, is best ordered in which the greatest number use the expression 'mine' and 'not mine' of the same things in the same way.

Much the best.

And the city whose state is most like that of an individual man. For example, if the finger of one of us is wounded, the entire community of bodily connections stretching to the soul for 'integration' with the dominant part is made aware, and all of it feels the pain as a whole, though it is a part that suffers, and that is how we come to say that the man has a pain in his finger. And for any other member of the man the same statement holds, alike for a part that labors in pain or is eased by pleasure.

The same, he said, and, to return to your question, the best-governed state most nearly resembles such an organism.

That is the kind of a state, then, I presume, that, when anyone of the citizens suffers aught of good or evil, will be most likely to speak of the part that suffers as its own and will share the pleasure or the pain as a whole.

Inevitably, he said, if it is well governed.

It is time, I said, to return to our city and observe whether it, rather than any other, embodies the qualities agreed upon in our argument.

We must, he said.

463 Well, then, there are to be found in other cities rulers and the people as in our city, are there not?

There are.

Will not all these address one another as fellow citizens?

Of course.

But in addition to citizens, what do the people in other states call their rulers?

In most cities, masters, in democratic cities, just this—rulers.

But what of the people in our city. In addition to citizens, what do they call their rulers?

b Savors and helpers, he said.

And what term do these apply to the people?

Payers of their wage and supporters.

And how do the rulers in other states denominate the populace?

Slaves, he said.

And how do the rulers describe one another?

Corulers, he said.

And ours?

Coguardians.

Can you tell me whether any of the rulers in other states would speak of some of their corulers as 'belonging' and others as outsiders?

Yes, many would.

c And such a one thinks and speaks of the one that 'belongs' as his own, doesn't he, and of the outsider as not his own?

That is so.

But what of your guardians? Could any of them think or speak of his coguardian as an outsider?

By no means, he said, for no matter whom he meets, he will feel that he is meeting a brother, a sister, a father, a mother, a son, a daughter, or the offspring or forebears of these.

d Excellent, said I, but tell me this further. Will it be merely the names of this kinship that you have prescribed for them or must all their actions conform to the names in all customary observance toward fathers and in awe and care and obedience for parents, if they look for the favor of either gods or men, since any other behavior would be neither just nor pious? Shall these be the unanimous oracular voices that they hear from all the people, or shall some other kind of teaching beset the ears of your children from their birth, both concerning what is due to those who are pointed out as their fathers and to their other kin?

e These, he said, for it would be absurd for them merely to pronounce with their lips the names of kinship without the deeds.

Then, in this city more than in any other, when one citizen fares well or ill, men will pronounce in unison the word of which we spoke, It is *mine* that does well, or, It is *mine* that does ill.

That is most true, he said.

And did we not say that this conviction and way of speech brings with it a community in pleasures and pains? 464

And rightly, too.

Then these citizens, above all others, will have one and the same thing in common which they will name *mine*, and by virtue of this communion they will have their pleasures and pains in common.

Quite so.

And is not the cause of this, besides the general constitution of the state, the community of wives and children among the guardians?

It will certainly be the chief cause, he said.

But we further agreed that this unity is the greatest blessing for a state, and we compared a well-governed state to the human body in its relation to the pleasure and pain of its parts.

And we were right in so agreeing.

Then it is the greatest blessing for a state of which the community of women and children among the helpers has been shown to be the cause.

Quite so, he said.

And this is consistent with what we said before. For we said, I believe, that these helpers must not possess houses of their own or land or any other property, but that they should receive from the other citizens for their support the wage of their guardianship and all spend it in common. That was the condition of their being true guardians.

Right, he said.

Is it not true, then, as I am trying to say, that those former and these present prescriptions tend to make them still more truly guardians and prevent them from distracting the city by referring *mine* not to the same but to different things, one man dragging off to his own house anything he is able to acquire apart from the rest, and another doing the same to his own separate house, and having women and children apart, thus introducing into the state the pleasures and pains of individuals? They should all rather, we said, share one conviction about their own, tend to one goal, and so far as practicable have one experience of pleasure and pain.

By all means, he said.

Then will not lawsuits and accusations against one another vanish, one may say, from among them, because they have nothing in private possession but their bodies, but all else in common? So that we can count on their being free from the dissensions that arise among men from the possession of property, children, and kin.

They will necessarily be quit of these, he said.

And again, there could not rightly arise among them any lawsuit for assault or bodily injury. For as between agefellows we shall say that self-defense is honorable and just, thereby compelling them to keep their bodies in condition.

Right, he said.

- 465 And there will be the further advantage in such a law that an angry man, satisfying his anger in such wise, would be less likely to carry the quarrel to further extremes.

Assuredly.

As for an older man, he will always have the charge of ruling and chastising the younger.

Obviously.

- Again, it is plain that the young man, except by command of the rulers, will probably not do violence to an elder or strike him, or, I take it, dishonor him in any other way. There being the two competent guardians to prevent that, fear and awe, awe restraining him from  
b laying hands on one who may be his parent, and fear in that the others will rush to the aid of the sufferer, some as sons, some as brothers, some as fathers.

That is the way it works out, he said.

Then in all cases the laws will leave these men to dwell in peace together.

Great peace.

And if these are free from dissensions among themselves, there is no fear that the rest of the city will ever start faction against them or with one another.

No, there is not.

- But I hesitate, so unseemly are they, even to mention the pettiest  
c troubles of which they would be rid, the flatterings of the rich, the embarrassments and pains of the poor in the bringing-up of their children and the procuring of money for the necessities of life for their households, the borrowings, the repudiations, all the devices with which they acquire what they deposit with wives and servitors to husband, and all the indignities that they endure in such matters, which are obvious and ignoble and not deserving of mention.

- d Even a blind man can see these, he said.

From all these, then, they will be finally free, and they will live a happier life than that men count most happy, the life of the victors at Olympia.

How so?

- The things for which those are felicitated are a small part of what is secured for these. Their victory is fairer and their public support more complete. For the prize of victory that they win is the salvation of the entire state, the fillet that binds their brows is the public  
e support of themselves and their children—they receive honor from the city while they live and when they die a worthy burial.

A fair guerdon, indeed, he said.

Do you recall, said I, that in the preceding argument the objection of somebody or other rebuked us for not making our guardians 466 happy, since, though it was in their power to have everything of the citizens, they had nothing, and we, I believe, replied that this was a consideration to which we would return if occasion offered, but that at present we were making our guardians guardians and the city as a whole as happy as possible, and that we were not modeling our ideal of happiness with reference to any one class?

I do remember, he said.

Well then, since now the life of our helpers has been shown to be far fairer and better than that of the victors at Olympia, need we compare it with the life of cobblers and other craftsmen and farmers? b

I think not, he said.

But further, we may fairly repeat what I was saying then also, that if the guardian shall strive for a kind of happiness that will unmake him as a guardian and shall not be content with the way of life that is so moderate and secure and, as we affirm, the best, but if some senseless and childish opinion about happiness shall beset him and impel him to use his power to appropriate everything in the city for himself, then he will find out that Hesiod was indeed wise, who said c that the half was in some sort more than the whole.

If he accepts my counsel, he said, he will abide in this way of life.

You accept, then, as we have described it, this partnership of the women with our men in the matter of education and children and the guardianship of the other citizens, and you admit that both within the city and when they go forth to war they ought to keep guard together and hunt together as it were like hounds, and have all things in d every way, so far as possible, in common, and that so doing they will do what is for the best and nothing that is contrary to female human nature in comparison with male or to their natural fellowship with one another.

I do admit it, he said.

Then, I said, is not the thing that it remains to determine this, whether, namely, it is possible for such a community to be brought about among men as it is in the other animals, and in what way it is possible?

You have anticipated, he said, the point I was about to raise.

For as for their wars, I said, the manner in which they will conduct them is too obvious for discussion. e

How so? said he.

It is obvious that they will march out together, and, what is more, will conduct their children to war when they are sturdy, in order that, like the children of other craftsmen, they may observe the processes of which they must be masters in their maturity, and in addition to looking on they must assist and minister in all the business

467 of war and serve their fathers and mothers. Or have you never noticed the practice in the arts, how for example the sons of potters look on as helpers a long time before they put their hands to the clay?

They do, indeed.

Should these then be more concerned than our guardians to train the children by observation and experience of what is to be their proper business?

That would be ridiculous, he said.

b But, further, when it comes to fighting, every creature will do better in the presence of its offspring?

That is so, but the risk, Socrates, is not slight, in the event of disasters such as may happen in war, that, losing their children as well as themselves, they make it impossible for the remnant of the state to recover.

What you say is true, I replied, but, in the first place, is it your idea that the one thing for which we must provide is the avoidance of all danger?

By no means.

c And, if they must incur danger, should it not be for something in which success will make them better?

Clearly.

Do you think it makes a slight difference and not worth some risk whether men who are to be warriors do or do not observe war as boys?

No, it makes a great difference for the purpose of which you speak.

Starting, then, from this assumption that we are to make the boys spectators of war, we must further contrive security for them and all will be well, will it not?

Yes.

d To begin with, then, said I, will not the fathers be, humanly speaking, not ignorant of war and shrewd judges of which campaigns are hazardous and which not?

Presumably, he said.

They will take the boys with them to the one and avoid the others? Rightly.

And for officers, I presume, said I, they will put in charge of them not those who are good for nothing else but men who by age and experience are qualified to serve at once as leaders and as caretakers of children.

Yes, that would be the proper way.

Still, we may object, it is the unexpected that happens to many in many cases.

Yes, indeed.

To provide against such chances, then, we must wing the chil-

dren from the start so that if need arises they may fly away and escape.

What do you mean? he said.

e

We must mount them when very young, said I, and first have them taught to ride, and then conduct them to the scene of war, not on mettlesome war steeds, but on the swiftest and gentlest horses possible, for thus they will have the best view of their own future business and also, if need arises, will most securely escape to safety in the train of elder guides.

I think you are right, he said.

But now what of the conduct of war? What should be the attitude of the soldiers to one another and the enemy? Am I right in my notions or not? 468

Tell me what notions, he said.

Any one of them who deserts his post, or flings away his weapons, or is guilty of any similar act of cowardice, should be reduced to the artisan or farmer class, should he not?

By all means.

And anyone who is taken alive by the enemy we will make a present of to his captors, shall we not, to deal with their catch as they please?

Quite so.

b

And don't you agree that the one who wins the prize of valor and distinguishes himself shall first be crowned by his fellows in the campaign, by the lads and boys each in turn?

I do.

And be greeted with the right hand?

That, too.

But I presume you wouldn't go as far as this?

What?

That he should kiss and be kissed by everyone?

c

By all means, he said, and I add to the law the provision that during that campaign none whom he wishes to kiss be allowed to refuse, so that if one is in love with anyone, male or female, he may be the more eager to win the prize.

Excellent, said I, and we have already said that the opportunity of marriage will be more readily provided for the good man, and that he will be more frequently selected than the others for participation in that sort of thing, in order that as many children as possible may be born from such stock.

We have, he replied.

But, furthermore, we may cite Homer too for the justice of honoring in such ways the valiant among our youth. For Homer says that Ajax, who had distinguished himself in the war, was honored with the long chine, assuming that the most fitting meed for a brave man in d

the prime of his youth is that from which both honor and strength will accrue to him.

Most rightly, he said.

We will then, said I, take Homer as our guide in this at least. We, too, at sacrifices and on other like occasions, will reward the good so far as they have proved themselves good with hymns and the other  
e privileges of which we have just spoken, and also with 'seats of honor and meat and full cups,'<sup>41</sup> so as to combine physical training with honor for the good, both men and women.

Nothing could be better, he said.

Very well, and of those who die on campaign, if anyone's death has been especially glorious, shall we not, to begin with, affirm that he belongs to the golden race?

By all means.

And shall we not believe Hesiod who tells us that when men of this race die, so it is that they become

469 Hallowed spirits dwelling on earth, averters of evil,  
Guardians watchful and good of articulate-speaking mortals? <sup>42</sup>

We certainly shall believe him.

We will inquire of Apollo, then, how and with what distinction we are to bury men of more than human, of divine, qualities, and deal with them according to his response.

How can we do otherwise?

And ever after we will bestow on their graves the tendance and  
b worship paid to spirits divine. And we will practice the same observance when any who have been adjudged exceptionally good in the ordinary course of life die of old age or otherwise?

That will surely be right, he said.

But again, how will our soldiers conduct themselves toward enemies?

In what respect?

First, in the matter of making slaves of the defeated, do you think it right for Greeks to reduce Greek cities to slavery, or rather that, so far as they are able, they should not suffer any other city to  
c do so, but should accustom Greeks to spare Greeks, foreseeing the danger of enslavement by the barbarians?

Sparing them is wholly and altogether the better, said he.

They are not, then, themselves to own Greek slaves, either, and they should advise the other Greeks not to?

By all means, he said. At any rate in that way they would be more likely to turn against the barbarians and keep their hands from one another.

And how about stripping the dead after victory of anything except

<sup>41</sup> *Iliad* 8.162.

<sup>42</sup> *Works and Days* 121 sq.

their weapons—is that well? Does it not furnish a pretext to cowards not to advance on the living foe, as if they were doing something a needful when poking about the dead? Has not this snatching at the spoils ere now destroyed many an army?

Yes, indeed.

And don't you think it illiberal and greedy to plunder a corpse, and is it not the mark of a womanish and petty spirit to deem the body of the dead an enemy when the real foeman has flown away and left behind only the instrument with which he fought? Do you see any difference between such conduct and that of the dogs who snarl at the stones that hit them but don't touch the thrower?

Not the slightest.

We must abandon, then, the plundering of corpses and the refusal to permit their burial.

By heaven, we certainly must, he said.

And again, we will not take weapons to the temples for dedicatory offerings, especially the weapons of Greeks, if we are at all concerned to preserve friendly relations with the other Greeks. Rather we shall fear that there is pollution in bringing such offerings to the temples from our kind unless in a case where the god bids otherwise.

Most rightly, he said.

And in the matter of devastating the land of Greeks and burning their houses, how will your soldiers deal with their enemies? I would gladly hear your opinion of that.

In my view, said I, they ought to do neither, but confine themselves to taking away the annual harvest. Shall I tell you why?

Do.

In my opinion, just as we have the two terms, war and faction, so there are also two things, distinguished by two differentiae. The two things I mean are the friendly and kindred on the one hand and the alien and foreign on the other. Now the term employed for the hostility of the friendly is faction, and for that of the alien is war.

What you say is in nothing beside the mark, he replied.

Consider, then, if this goes to the mark. I affirm that the Hellenic race is friendly to itself and akin, and foreign and alien to the barbarian.

Rightly, he said.

We shall then say that Greeks fight and wage war with barbarians, and barbarians with Greeks, and are enemies by nature, and that war is the fit name for this enmity and hatred. Greeks, however, we shall say, are still by nature the friends of Greeks when they act in this way, but that Greece is sick in that case and divided by faction, and faction is the name we must give to that enmity.

I will allow you that habit of speech, he said.

Then observe, said I, that when anything of this sort occurs in faction, as the word is now used, and a state is divided against itself,

if either party devastates the land and burns the houses of the other such factional strife is thought to be an accursed thing and neither party to be true patriots. Otherwise, they would never have endured thus to outrage their nurse and mother. But the moderate and reasonable thing is thought to be that the victors shall take away the crops of the vanquished, but that their temper shall be that of men who expect to be reconciled and not always to wage war.

That way of feeling, he said, is far less savage than the other. Well, then, said I, is not the city that you are founding to be a Greek city?

It must be, he said.

Will they then not be good and gentle?

Indeed they will.

And won't they be philhellenes, lovers of Greeks, and will they not regard all Greece as their own and not renounce their part in the holy places common to all Greeks?

Most certainly.

Will they not then regard any difference with Greeks who are their own people as a form of faction and refuse even to speak of it as war?

Most certainly.

471 And they will conduct their quarrels always looking forward to a reconciliation?

By all means.

They will correct them, then, for their own good, not chastising them with a view to their enslavement or their destruction, but acting as correctors, not as enemies.

They will, he said.

b They will not, being Greeks, ravage Greek territory nor burn habitations, and they will not admit that in any city all the population are their enemies, men, women, and children, but will say that only a few at any time are their foes, those, namely, who are to blame for the quarrel. And on all these considerations they will not be willing to lay waste the soil, since the majority are their friends, nor to destroy the houses, but will carry the conflict only to the point of compelling the guilty to do justice by the pressure of the suffering of the innocent.

I, he said, agree that our citizens ought to deal with their Greek opponents on this wise, while treating barbarians as Greeks now treat Greeks.

c Shall we lay down this law also, then, for our guardians, that they are not to lay waste the land or burn the houses?

Let us so decree, he said, and assume that this and our preceding prescriptions are right. But I fear, Socrates, that, if you are allowed to go on in this fashion, you will never get to speak of the matter you put aside in order to say all this, namely, the possibility of such a

polity coming into existence, and the way in which it could be brought to pass. I too am ready to admit that if it could be realized everything would be lovely for the state that had it, and I will add what you passed by, that they would also be most successful in war because they would be least likely to desert one another, knowing and addressing each other by the names of brothers, fathers, sons. And if the females should also join in their campaigns, whether in the ranks or marshaled behind to intimidate the enemy, or as reserves in case of need, I recognize that all this too would make them irresistible. And at home, also, I observe all the benefits that you omit to mention. But, taking it for granted that I concede these and countless other advantages, consequent on the realization of this polity, don't labor that point further, but let us at once proceed to try to convince ourselves of just this, that it is possible and how it is possible, dismissing everything else.

This is a sudden assault, indeed, said I, that you have made on my theory, without any regard for my natural hesitation. Perhaps you don't realize that when I have hardly escaped the first two waves, you are now rolling up against me the 'great third wave' of paradox, the worst of all. When you have seen and heard that, you will be very ready to be lenient, recognizing that I had good reason after all for shrinking and fearing to enter upon the discussion of so paradoxical a notion.

The more such excuses you offer, he said, the less you will be released by us from telling in what way the realization of this polity is possible. Speak on, then, and do not put us off.

The first thing to recall, then, I said, is that it was the inquiry into the nature of justice and injustice that brought us to this pass.

Yes, but what of it? he said.

Oh, nothing, I replied, only this. If we do discover what justice is, are we to demand that the just man shall differ from it in no respect, but shall conform in every way to the ideal? Or will it suffice us if he approximate to it as nearly as possible and partake of it more than others?

That will content us, he said.

A pattern, then, said I, was what we wanted when we were inquiring into the nature of ideal justice and asking what would be the character of the perfectly just man, supposing him to exist, and, likewise, in regard to injustice and the completely unjust man. We wished to fix our eyes upon them as types and models, so that whatever we discerned in them of happiness or the reverse would necessarily apply to ourselves in the sense that whosoever is likest them will have the allotment most like to theirs. Our purpose was not to demonstrate the possibility of the realization of these ideals.

In that, he said, you speak truly.

Do you think, then, that he would be any the less a good painter,

who, after portraying a pattern of the ideally beautiful man and omitting no touch required for the perfection of the picture, should not be able to prove that it is actually possible for such a man to exist?

Not I, by Zeus, he said.

Then were not we, as we say, trying to create in words the pattern of a good state?

e Certainly.

Do you think, then, that our words are any the less well spoken if we find ourselves unable to prove that it is possible for a state to be governed in accordance with our words?

Of course not, he said.

That, then, said I, is the truth of the matter. But if, to please you, we must do our best to show how most probably and in what respect these things would be most nearly realized, again, with a view to such a demonstration, grant me the same point.

What?

473 Is it possible for anything to be realized in deed as it is spoken in word, or is it the nature of things that action should partake of exact truth less than speech, even if some deny it? Do you admit it or not?

I do, he said.

Then don't insist, said I, that I must exhibit as realized in action precisely what we expounded in words. But if we can discover how a state might be constituted most nearly answering to our description, you must say that we have discovered that possibility of realization which you demanded. Will you not be content if you get this? I for my part would.

And I too, he said.

Next, it seems, we must try to discover and point out what it is that is now badly managed in our cities, and that prevents them from being so governed, and what is the smallest change that would bring a state to this manner of government, preferably a change in one thing, if not, then in two, and, failing that, the fewest possible in number and the slightest in potency.

c By all means, he said.

There is one change, then, said I, which I think that we can show would bring about the desired transformation. It is not a slight or an easy thing but it is possible.

What is that? said he.

I am on the very verge, said I, of what we likened to the greatest wave of paradox. But say it I will, even if, to keep the figure, it is likely to wash us away on billows of laughter and scorn. Listen.

I am all attention, he said.

a Unless, said I, either philosophers become kings in our states or those whom we now call our kings and rulers take to the pursuit of philosophy seriously and adequately, and there is a conjunction of these two things, political power and philosophical intelligence, while

the motley horde of the natures who at present pursue either apart from the other are compulsorily excluded, there can be no cessation of troubles, dear Glaucon, for our states, nor, I fancy, for the human race either. Nor, until this happens, will this constitution which we have been expounding in theory ever be put into practice within the limits of possibility and see the light of the sun. But this is the thing that has made me so long shrink from speaking out, because I saw that it would be a very paradoxical saying. For it is not easy to see that there is no other way of happiness either for private or public life.

Whereupon he said, Socrates, after hurling at us such an utterance and statement as that, you must expect to be attacked by a great multitude of our men of light and leading, who forthwith will, so to speak, cast off their garments and strip and, snatching the first 474 weapon that comes to hand, rush at you with might and main, prepared to do dreadful deeds. And if you don't find words to defend yourself against them, and escape their assault, then to be scorned and flouted will in very truth be the penalty you will have to pay.

And isn't it you, said I, that have brought this upon me and are to blame?

And a good thing, too, said he, but I won't let you down, and will defend you with what I can. I can do so with my good will and my encouragement, and perhaps I might answer your questions more suitably than another. So, with such an aid to back you, try to make it plain to the doubters that the truth is as you say. b

I must try, I replied, since you proffer so strong an alliance. I think it requisite, then, if we are to escape the assailants you speak of, that we should define for them whom we mean by the philosophers, who we dare to say ought to be our rulers. When these are clearly discriminated it will be possible to defend ourselves by showing that to them by their very nature belong the study of philosophy and political leadership, while it befits the other sort to let philosophy alone and to follow their leader. c

It is high time, he said, to produce your definition.

Come, then, follow me on this line, if we may in some fashion or other explain our meaning.

Proceed, he said.

Must I remind you, then, said I, or do you remember, that when we affirm that a man is a lover of something, it must be apparent that he is fond of all of it? It will not do to say that some of it he likes and some does not.

I think you will have to remind me, he said, for I don't apprehend at all. d

That reply, Glaucon, said I, befitted another rather than you. It does not become a lover to forget that all adolescents in some sort sting and stir the amorous lover of youth and appear to him deserving of his attention and desirable. Is not that your 'reaction' to the

fair? One, because his nose is tiptilted, you will praise as piquant, the beak of another you pronounce right royal, the intermediate type you  
 e say strikes the harmonious mean, the swarthy are of manly aspect, the white are children of the gods divinely fair, and as for honey-hued, do you suppose the very word is anything but the euphemistic invention of some lover who can feel no distaste for sallowness when it accompanies the blooming time of youth? And, in short, there is  
 475 no pretext you do not allege and there is nothing you shrink from saying to justify you in not rejecting any who are in the bloom of their prime.

If it is your pleasure, he said, to take me as your example of this trait in lovers, I admit it for the sake of the argument.

Again, said I, do you not observe the same thing in the lovers of wine? They welcome every wine on any pretext.

They do, indeed.

And so I take it you have observed that men who are covetous of honor, if they can't get themselves elected generals, are captains of  
 b a company. And if they can't be honored by great men and dignitaries, are satisfied with honor from little men and nobodies. But honor they desire and must have.

Yes, indeed.

Admit, then, or reject my proposition. When we say a man is keen about something, shall we say that he has an appetite for the whole class or that he desires only a part and a part not?

The whole, he said.

Then the lover of wisdom, too, we shall affirm, desires all wisdom, not a part and a part not.

Certainly.

The student, then, who is finical about his studies, especially  
 c when he is young and cannot yet know by reason what is useful and what is not, we shall say is not a lover of learning or a lover of wisdom, just as we say that one who is dainty about his food is not really hungry, has not an appetite for food, and is not a lover of food, but a poor feeder.

We shall rightly say so.

But the one who feels no distaste in sampling every study, and who attacks his task of learning gladly and cannot get enough of it, him we shall justly pronounce the lover of wisdom, the philosopher, shall we not?

d To which Glaucon replied, You will then be giving the name to a numerous and strange band, for all the lovers of spectacles are what they are, I fancy, by virtue of their delight in learning something. And those who always want to hear some new thing are a very queer lot to be reckoned among philosophers. You couldn't induce them to attend a serious debate or any such entertainment, but as if they had farmed out their ears to listen to every chorus in the land, they

run about to all the Dionysiac festivals, never missing one, either in the towns or in the country villages. Are we to designate all these, then, and similar folk and all the practitioners of the minor arts as philosophers?

Not at all, I said, but they do bear a certain likeness to philosophers.

Whom do you mean, then, by the true philosophers?

Those for whom the truth is the spectacle of which they are enamored, said I.

Right again, said he, but in what sense do you mean it?

It would be by no means easy to explain it to another, I said, but I think that you will grant me this.

What?

That since the fair and honorable is the opposite of the base and ugly, they are two.

Of course.

476

And since they are two, each is one.

That also.

And in respect of the just and the unjust, the good and the bad, and all the ideas or forms, the same statement holds, that in itself each is one, but that by virtue of their communion with actions and bodies and with one another they present themselves everywhere, each as a multiplicity of aspects.

Right, he said.

This, then, said I, is my division. I set apart and distinguish those of whom you were just speaking, the lovers of spectacles and the arts, and men of action, and separate from them again those with whom our argument is concerned and who alone deserve the appellation of philosophers or lovers of wisdom.

What do you mean? he said.

The lovers of sounds and sights, I said, delight in beautiful tones and colors and shapes and in everything that art fashions out of these, but their thought is incapable of apprehending and taking delight in the nature of the beautiful in itself.

Why, yes, he said, that is so.

And on the other hand, will not those be few who would be able to approach beauty itself and contemplate it in and by itself?

They would, indeed.

c

He, then, who believes in beautiful things, but neither believes in beauty itself nor is able to follow when someone tries to guide him to the knowledge of it—do you think that his life is a dream or a waking? Just consider. Is not the dream state, whether the man is asleep or awake, just this—the mistaking of resemblance for identity?

I should certainly call that dreaming, he said.

Well, then, take the opposite case, the man whose thought recognizes a beauty in itself, and is able to distinguish that self-beautiful

d

and the things that participate in it, and neither supposes the participants to be it nor it the participants—is his life, in your opinion, a waking or a dream state?

He is very much awake, he replied.

Could we not rightly, then, call the mental state of the one as knowing, knowledge, and that of the other as opining, opinion?

Assuredly.

Suppose, now, he who we say opines but does not know should be angry and challenge our statement as not true—can we find any way of soothing him and gently winning him over, without telling him too plainly that he is not in his right mind?

We must try, he said.

Come, then, consider what we are to say to him, or would you have us question him in this fashion—premising that if he knows anything, nobody grudges it him, but we should be very glad to see him knowing something—but tell us this, Does he who knows know something or nothing? Do you reply in his behalf.

I will reply, he said, that he knows something.

Is it something that is or is not?

477 That is. How could that which is not be known?

We are sufficiently assured of this, then, even if we should examine it from every point of view, that that which entirely *is* is entirely knowable, and that which in no way *is* is in every way unknowable?

Most sufficiently.

Good. If a thing, then, is so conditioned as both to be and not to be, would it not lie between that which absolutely and unqualifiedly is and that which in no way is?

Between.

Then since knowledge pertains to that which is and ignorance of necessity to that which is not, for that which lies between we must seek for something between nescience and science, if such a thing there be.

By all means.

Is there a thing which we call opinion?

Surely.

Is it a different faculty from science or the same?

A different.

Then opinion is set over one thing and science over another, each by virtue of its own distinctive power or faculty.

That is so.

May we say, then, that science is naturally related to that which is, to know that and how that which is is? But rather, before we proceed, I think we must draw the following distinctions.

What ones?

c Shall we say that faculties, powers, abilities are a class of entities

by virtue of which we and all other things are able to do what we or they are able to do? I mean that sight and hearing, for example, are faculties, if so be that you understand the class or type that I am trying to describe.

I understand, he said.

Hear, then, my notion about them. In a faculty I cannot see any color or shape or similar mark such as those on which in many other cases I fix my eyes in discriminating in my thought one thing from another. But in the case of a faculty I look to one thing only—that to which it is related and what it effects, and it is in this way that I come to call each one of them a faculty, and that which is related to the same thing and accomplishes the same thing I call the same faculty, and that to another I call other. How about you, what is your practice?

The same, he said.

To return, then, my friend, said I, to science or true knowledge, do you say that it is a faculty and a power, or in what class do you put it?

Into this, he said, the most potent of all faculties.

And opinion—shall we assign it to some other class than faculty?

By no means, he said, for that by which we are able to opine is nothing else than the faculty of opinion.

But not long ago you agreed that science and opinion are not identical.

How could any rational man affirm the identity of the infallible with the fallible?

Excellent, said I, and we are plainly agreed that opinion is a different thing from scientific knowledge.

Yes, different.

Each of them, then, since it has a different power, is related to a different object.

Of necessity.

Science, I presume, to that which is, to know the condition of that which is?

Yes.

But opinion, we say, opines.

Yes.

Does it opine the same thing that science knows, and will the knowable and the opinable be identical, or is that impossible?

Impossible by our admissions, he said. If different faculties are naturally related to different objects and both opinion and science are faculties, but each different from the other, as we say—these admissions do not leave place for the identity of the knowable and the opinable.

Then, if that which is a knowable, something other than that which is would be the opinable.

Something else.

Does it opine that which is not, or is it impossible even to opine that which is not? Reflect. Does not he who opines bring his opinion to bear upon something or shall we reverse ourselves and say that it is possible to opine, yet opine nothing?

That is impossible.

Then he who opines opines some one thing?

Yes.

But surely that which is not could not be designated as some one thing, but most rightly as nothing at all.

Yes.

To that which is not we of necessity assigned nescience, and to that which is, knowledge.

Rightly, he said.

Then neither that which is nor that which is not is the object of opinion.

It seems not.

Then opinion would be neither nescience nor knowledge.

So it seems.

Is it then a faculty outside of these, exceeding either knowledge in lucidity or ignorance in obscurity?

It is neither.

But do you deem opinion something darker than knowledge but brighter than ignorance?

Much so, he said.

And does it lie within the boundaries of the two?

Yes.

Then opinion would be between the two.

Most assuredly.

Were we not saying a little while ago that if anything should turn up such that it both is and is not, that sort of thing would lie between that which purely and absolutely is and that which wholly is not, and that the faculty correlated with it would be neither science nor nescience, but that which should appear to hold a place correspondingly between nescience and science.

Right.

And now there has turned up between these two the thing that we call opinion.

There has.

It would remain, then, as it seems, for us to discover that which partakes of both, of *to be* and *not to be*, and that could not be rightly designated either in its exclusive purity, so that, if it shall be discovered, we may justly pronounce it to be the opinable, thus assigning extremes to extremes and the intermediate to the intermediate. Is not that so?

It is.

This much premised, let him tell me, I will say, let him answer 479 me, that good fellow who does not think there is a beautiful in itself or any idea of beauty in itself always remaining the same and unchanged, but who does believe in many beautiful things—the lover of spectacles, I mean, who cannot endure to hear anybody say that the beautiful is one and the just one, and so of other things—and this will be our question. My good fellow, is there any one of these many fair and honorable things that will not sometimes appear ugly and base? And of the just things, that will not seem unjust? And of the pious things, that will not seem impious?

No, it is inevitable, he said, that they would appear to be both b beautiful in a way and ugly, and so with all the other things you asked about.

And again, do the many double things appear any the less halves than doubles?

None the less.

And likewise of the great and the small things, the light and the heavy things—will they admit these predicates any more than their opposites?

No, he said, each of them will always hold of, partake of, both.

Then is each of these multiples rather than it is *not* that which a affirms it to be?

They are like those jesters who palter with us in a double sense c at banquets, he replied, and resemble the children's riddle about the eunuch and his hitting of the bat—with what and as it sat on what they signify that he struck it. For these things too equivocate, and it is impossible to conceive firmly any one of them to be or not to be or both or neither.

Do you know what to do with them, then? said I. And can you find a better place to put them than that midway between existence or essence and the *not to be*? For we shall surely not discover a darker region than not-being that they should still more not be, nor a brighter than being that they should still more be. d

Most true, he said.

We would seem to have found, then, that the many conventions of the many about the fair and honorable and other things are tumbled about in the mid-region between that which is not and that which is in the true and absolute sense.

We have so found it.

But we agreed in advance that if anything of that sort should be discovered, it must be denominated opinable, not knowable, the wanderer between being caught by the faculty that is betwixt and between.

We did.

We shall affirm, then, that those who view many beautiful things e but do not see the beautiful itself and are unable to follow another's

guidance to it, and many just things, but not justice itself, and so in all cases—we shall say that such men have opinions about all things, but know nothing of the things they opine.

Of necessity.

And, on the other hand, what of those who contemplate the very things themselves in each case, ever remaining the same and unchanged—shall we not say that they know and do not merely opine?

That, too, necessarily follows.

Shall we not also say that the one welcomes to his thought and loves the things subject to knowledge and the other those to opinion?

480 Do we not remember that we said that those loved and regarded tones and beautiful colors and the like, but they could not endure the notion of the reality of the beautiful itself?

We do remember.

Shall we then offend their ears if we call them *doxophilists* rather than philosophers and will they be very angry if we so speak?

Not if they heed my counsel, he said, for to be angry with truth is not lawful.

Then to those who in each and every kind welcome the true being, lovers of wisdom and not lovers of opinion is the name we must give.

By all means.

## BOOK VI

484 So now, Glaucon, I said, our argument after winding a long and weary way has at last made clear to us who are the philosophers or lovers of wisdom and who are not.

Yes, he said, a shorter way is perhaps not feasible.

Apparently not, I said. I, at any rate, think that the matter would have been made still plainer if we had had nothing but this to speak of, and if there were not so many things left which our purpose

b of discerning the difference between the just and the unjust life requires us to discuss.

What, then, he said, comes next?

What else, said I, but the next in order? Since the philosophers are those who are capable of apprehending that which is eternal and unchanging, while those who are incapable of this, but lose themselves and wander amid the multiplicities of multifarious things, are not philosophers, which of the two kinds ought to be the leaders in a state?

What, then, he said, would be a fair statement of the matter?

Whichever, I said, appear competent to guard the laws and pursue  
c suits of society, these we should establish as guardians.

Right, he said.

Is this, then, said I, clear, whether the guardian who is to keep watch over anything ought to be blind or keen of sight?

Of course it is clear, he said.

Do you think, then, that there is any appreciable difference between the blind and those who are veritably deprived of the knowledge of the veritable being of things, those who have no vivid pattern in their souls and so cannot, as painters look to their models, fix their eyes on the absolute truth, and always with reference to that ideal and in the exactest possible contemplation of it establish in this world also the laws of the beautiful, the just, and the good, when that is needful, or guard and preserve those that are established?

No, by heaven, he said, there is not much difference.

Shall we, then, appoint these blind souls as our guardians, rather than those who have learned to know the ideal reality of things and who do not fall short of the others in experience and are not second to them in any part of virtue?

It would be strange indeed, he said, to choose others than the philosophers, provided they were not deficient in those other respects, for this very knowledge of the ideal would perhaps be the greatest of superiorities.

Then what we have to say is how it would be possible for the same persons to have both qualifications, is it not? 485

Quite so.

Then, as we were saying at the beginning of this discussion, the first thing to understand is the nature that they must have from birth, and I think that if we sufficiently agree on this we shall also agree that the combination of qualities that we seek belongs to the same persons, and that we need no others for guardians of states than these.

How so?

We must accept as agreed this trait of the philosophical nature, that it is ever enamored of the kind of knowledge which reveals to them something of that essence which is eternal, and is not wandering between the two poles of generation and decay.

Let us take that as agreed.

And, further, said I, that their desire is for the whole of it and that they do not willingly renounce a small or a great, a more precious or a less honored, part of it. That was the point of our former illustration drawn from lovers and men covetous of honor.

You are right, he said.

Consider, then, next whether the men who are to meet our requirements must not have this further quality in their natures. c

What quality?

The spirit of truthfulness, reluctance to admit falsehood in any form, the hatred of it and the love of truth.

occasionally hear you argue thus feel in this way. They think that owing to their inexperience in the game of question and answer they are at every question led astray a little bit by the argument, and when these bits are accumulated at the conclusion of the discussion mighty is their fall, and the apparent contradiction of what they at first said, and that just as by expert draughts players the unskilled are finally shut in and cannot make a move, so they are finally blocked and have their mouths stopped by this other game of draughts played not with counters but with words; yet the truth is not affected by that outcome. I say this with reference to the present case, for in this instance one might say that he is unable in words to contend against you at each question, but that when it comes to facts he sees that of those who turn to philosophy, not merely touching upon it to complete their education and dropping it while still young, but lingering too long in the study of it, the majority become cranks, not to say rascals, and those accounted the finest spirits among them are still rendered useless to society by the pursuit which you commend.

And I, on hearing this, said, Do you think that they are mistaken in saying so?

I don't know, said he, but I would gladly hear your opinion.

You may hear, then, that I think that what they say is true.

How, then, he replied, can it be right to say that our cities will never be freed from their evils until the philosophers, whom we admit to be useless to them, become their rulers?

Your question, I said, requires an answer expressed in a comparison or parable.

And you, he said, of course, are not accustomed to speak in comparisons!

So, said I, you are making fun of me after driving me into such an impasse of argument. But, all the same, hear my comparison so that you may still better see how I strain after imagery. For so cruel is the condition of the better sort in relation to the state that there is no single thing like it in nature. But to find a likeness for it and a defense for them one must bring together many things in such a combination as painters mix when they portray goat stags and similar creatures. Conceive this sort of thing happening either on many ships or on one. Picture a shipmaster in height and strength surpassing all others on the ship, but who is slightly deaf and of similarly impaired vision, and whose knowledge of navigation is on a par with his sight and hearing. Conceive the sailors to be wrangling with one another for control of the helm, each claiming that it is his right to steer though he has never learned the art and cannot point out his teacher or any time when he studied it. And what is more, they affirm that it cannot be taught at all, but they are ready to make mincemeat of anyone who says that it can be taught, and meanwhile they are always clustered about the shipmaster importuning him and sticking

at nothing to induce him to turn over the helm to them. And sometimes, if they fail and others get his ear, they put the others to death or cast them out from the ship, and then, after binding and stupefying the worthy shipmaster with mandragora or intoxication or otherwise, they take command of the ship, consume its stores and, drinking and feasting, make such a voyage of it as is to be expected from such, and as if that were not enough, they praise and celebrate as a navigator, a pilot, a master of shipcraft, the man who is most cunning to lend a hand in persuading or constraining the shipmaster to let them rule, while the man who lacks this craft they censure as useless. They have no suspicion that the true pilot must give his attention to the time of the year, the seasons, the sky, the winds, the stars, and all that pertains to his art if he is to be a true ruler of a ship, and that he does not believe that there is any art or science of seizing the helm with or without the consent of others, or any possibility of mastering this alleged art and the practice of it at the same time with the science of navigation. With such goings on aboard ship do you not think that the real pilot would in very deed be called a stargazer, an idle babbler, a useless fellow, by the sailors in ships managed after this fashion? d  
e  
489

Quite so, said Adimantus.

You take my meaning, I presume, and do not require us to put the comparison to the proof and show that the condition we have described is the exact counterpart of the relation of the state to the true philosophers.

It is indeed, he said.

To begin with, then, teach this parable to the man who is surprised that philosophers are not honored in our cities, and try to convince him that it would be far more surprising if they were honored. b

I will teach him, he said.

And say to him further, You are right in affirming that the finest spirits among the philosophers are of no service to the multitude. But bid him blame for this uselessness, not the finer spirits, but those who do not know how to make use of them. For it is not the natural course of things that the pilot should beg the sailors to be ruled by him or that wise men should go to the doors of the rich. The author of that epigram was a liar. But the true nature of things is that whether the sick man be rich or poor he must needs go to the door of the physician, and everyone who needs to be governed to the door of the man who knows how to govern, not that the ruler should implore his natural subjects to let themselves be ruled, if he is really good for anything. But you will make no mistake in likening our present political rulers to the sort of sailors we were just describing, and those whom these call useless and stargazing ideologists to the true pilots. c

Just so, he said.

Hence, and under these conditions, we cannot expect that the noblest pursuit should be highly esteemed by those whose way of life

a is quite the contrary. But far the greatest and chief disparagement of philosophy is brought upon it by the pretenders to that way of life, those whom you had in mind when you affirmed that the accuser of philosophy says that the majority of her followers are rascals and the better sort useless, while I admitted that what you said was true. Is not that so?

Yes.

Have we not, then, explained the cause of the uselessness of the better sort?

We have.

e Shall we next set forth the inevitableness of the degeneracy of the majority, and try to show if we can that philosophy is not to be blamed for this either?

By all means.

Let us begin, then, what we have to say and hear by recalling the starting point of our description of the nature which he who is to  
490 be a scholar and gentleman must have from birth. The leader of the choir for him, if you recollect, was truth. *That* he was to seek always and altogether, on pain of being an impostor without part or lot in true philosophy.

Yes, that was said.

Is not this one point quite contrary to the prevailing opinion about him?

It is indeed, he said.

b Will it not be a fair plea in his defense to say that it was the nature of the real lover of knowledge to strive emulously for true being and that he would not linger over the many particulars that are opined to be real, but would hold on his way, and the edge of his passion would not be blunted nor would his desire fail till he came into touch with the nature of each thing in itself by that part of his soul to which it belongs to lay hold on that kind of reality—the part akin to it, namely—and through that approaching it, and consorting with reality really, he would beget intelligence and truth, attain to knowledge, and truly live and grow, and so find surcease from his travail of soul, but not before?

No plea could be fairer.

Well, then, will such a man love falsehood, or, quite the contrary, hate it?

c Hate it, he said.

When truth led the way, no choir of evils, we, I fancy, would say, could ever follow in its train.

How could it?

But rather a sound and just character, which is accompanied by temperance.

Right, he said.

What need, then, of repeating from the beginning our proof of the

necessary order of the choir that attends on the philosophical nature? You surely remember that we found pertaining to such a nature courage, grandeur of soul, aptness to learn, memory. And when you interposed the objection that though everybody will be compelled to admit our statements, yet, if we abandoned mere words and fixed our eyes on the persons to whom the words referred, everyone would say that he actually saw some of them to be useless and most of them base <sup>d</sup> with all baseness—it was in our search for the cause of this ill repute that we came to the present question. Why is it that the majority are bad? And, for the sake of this, we took up again the nature of the true philosophers and defined what it must necessarily be?

That is so, he said. <sup>e</sup>

We have, then, I said, to contemplate the causes of the corruption of this nature in the majority, while a small part escapes, even those whom men call not bad but useless. And after that in turn we are to <sup>491</sup> observe those who imitate this nature and usurp its pursuits, and see what types of souls they are that thus entering upon a way of life which is too high for them and exceeds their powers, by the many discords and disharmonies of their conduct everywhere and among all men, bring upon philosophy the repute of which you speak.

Of what corruptions are you speaking?

I will try, I said, to explain them to you if I can. I think everyone will grant us this point, that a nature such as we just now postulated for the perfect philosopher is a rare growth among men and is found <sup>b</sup> in only a few. Don't you think so?

Most emphatically.

Observe, then, the number and magnitude of the things that operate to destroy these few.

What are they?

The most surprising fact of all is that each of the gifts of nature which we praise tends to corrupt the soul of its possessor and divert it from philosophy. I am speaking of bravery, sobriety, and the entire list.

That does sound like a paradox, said he.

Furthermore, said I, all the so-called goods corrupt and divert, <sup>c</sup> beauty and wealth and strength of body and powerful family connections in the city and all things akin to them—you get my general meaning?

I do, he said, and I would gladly hear a more precise statement of it.

Well, said I, grasp it rightly as a general proposition and the matter will be clear and the preceding statement will not seem to you so strange.

How do you bid me proceed? he said.

We know it to be universally true of every seed and growth, <sup>d</sup> whether vegetable or animal, that the more vigorous it is the more it

falls short of its proper perfection when deprived of the food, the season, the place that suits it. For evil is more opposed to the good than to the not-good.

Of course.

So it is, I take it, natural that the best nature should fare worse than the inferior under conditions of nurture unsuited to it.

It is.

- e Then, said I, Adimantus, shall we not similarly affirm that the best endowed souls become worse than the others under a bad education? Or do you suppose that great crimes and unmixed wickedness spring from a slight nature and not from a vigorous one corrupted by its nurture, while a weak nature will never be the cause of anything great, either for good or evil?

No, he said, that is the case.

- 492 Then the nature which we assumed in the philosopher, if it receives the proper teaching, must needs grow and attain to consummate excellence, but, if it be sown and planted and grown in the wrong environment, the outcome will be quite the contrary unless some god comes to the rescue. Or are you too one of the multitude who believe that there are young men who are corrupted by the Sophists, and that there are Sophists in private life who corrupt to any extent worth mentioning, and that it is not rather the very men who  
b talk in this strain who are the chief Sophists and educate most effectively and mold to their own heart's desire young and old, men and women?

When? said he.

- Why, when, I said, the multitude are seated together in assemblies or in courtrooms or theaters or camps or any other public gathering of a crowd, and with loud uproar censure some of the things that are said and done and approve others, both in excess, with full-  
c throated clamor and clapping of hands, and thereto the rocks and the region round about re-echoing redouble the din of the censure and the praise. In such case how do you think the young man's heart, as the saying is, is moved within him? What private teaching do you think will hold out and not rather be swept away by the torrent of censure and applause, and borne off on its current, so that he will affirm the same things that they do to be honorable and base, and will do as they do, and be even such as they?

- d That is quite inevitable, Socrates, he said.

And, moreover, I said, we have not yet mentioned the chief necessity and compulsion.

What is it? said he.

That which these 'educators' and Sophists impose by action when their words fail to convince. Don't you know that they chastise the recalcitrant with loss of civic rights and fines and death?

They most emphatically do, he said.

What other Sophist, then, or what private teaching do you think will prevail in opposition to these?

None, I fancy, said he. e

No, said I, the very attempt is the height of folly. For there is not, never has been, and never will be a divergent type of character and virtue created by an education running counter to theirs—humanly speaking, I mean, my friend. For the divine, as the proverb says, all rules fail. And you may be sure that, if anything is saved and turns out well in the present condition of society and government, in saying that the providence of God preserves it you will not be speaking ill. 493

Neither do I think otherwise, he said.

Then, said I, think this also in addition.

What?

Each of these private teachers who work for pay, whom the politicians call Sophists and regard as their rivals, inculcates nothing else than these opinions of the multitude which they opine when they are assembled and calls this knowledge wisdom. It is as if a man were acquiring the knowledge of the humors and desires of a great strong beast which he had in his keeping, how it is to be approached and touched, and when and by what things it is made most savage or gentle, yes, and the several sounds it is wont to utter on the occasion of each, and again what sounds uttered by another make it tame or fierce, and after mastering this knowledge by living with the creature and by lapse of time should call it wisdom, and should construct thereof a system and art and turn to the teaching of it, knowing nothing in reality about which of these opinions and desires is honorable or base, good or evil, just or unjust, but should apply all these terms to the judgments of the great beast, calling the things that pleased it good, and the things that vexed it bad, having no other account to render of them, but should call what is necessary just and honorable, never having observed how great is the real difference between the necessary and the good, and being incapable of explaining it to another. Do you not think, by heaven, that such a one would be a strange educator?

I do, he said.

Do you suppose that there is any difference between such a one and the man who thinks that it is wisdom to have learned to know the moods and the pleasures of the motley multitude in their assembly, whether about painting or music or, for that matter, politics? For if a man associates with these and offers and exhibits to them his poetry or any other product of his craft or any political service, and grants the mob authority over himself more than is unavoidable, the proverbial necessity of Diomedes will compel him to give the public what it likes, but that what it likes is really good and honorable, have you ever heard an attempted proof of this that is not simply ridiculous?

No, he said, and I fancy I never shall hear it either. e

Bearing all this in mind, recall our former question. Can the multitude possibly tolerate or believe in the reality of the beautiful in itself as opposed to the multiplicity of beautiful things, or can they  
 494 believe in anything conceived in its essence as opposed to the many particulars?

Not in the least, he said.

Philosophy, then, the love of wisdom, is impossible for the multitude.

Impossible.

It is inevitable, then, that those who philosophize should be censured by them.

Inevitable.

And so likewise by those laymen who, associating with the mob, desire to curry favor with it.

Obviously.

From this point of view do you see any salvation that will suffer  
 b the born philosopher to abide in the pursuit and persevere to the end? Consider it in the light of what we said before. We agreed that quickness in learning, memory, courage, and magnificence were the traits of this nature.

Yes.

Then even as a boy among boys such a one will take the lead in all things, especially if the nature of his body matches the soul.

How could he fail to do so? he said.

His kinsmen and fellow citizens, then, will desire, I presume, to make use of him when he is older for their own affairs.

Of course.

c Then they will fawn upon him with petitions and honors, anticipating and flattering the power that will be his.

That certainly is the usual way.

How, then, do you think such a youth will behave in such conditions, especially if it happen that he belongs to a great city and is rich and wellborn therein, and thereto handsome and tall? Will his soul not be filled with unbounded ambitious hopes, and will he not think himself capable of managing the affairs of both Greeks and barbari-  
 d ans, and thereupon exalt himself, haughty of mien and stuffed with empty pride and void of sense?

He surely will, he said.

And if to a man in this state of mind someone gently comes and tells him what is the truth, that he has no sense and sorely needs it, and that the only way to get it is to work like a slave to win it, do you think it will be easy for him to lend an ear to the quiet voice in the midst of and in spite of these evil surroundings?

Far from it, said he.

e And even supposing, said I, that owing to a fortunate disposition and his affinity for the words of admonition one such youth appre-

hends something and is moved and drawn toward philosophy, what do we suppose will be the conduct of those who think that they are losing his service and fellowship? Is there any word or deed that they will stick at to keep him from being persuaded and to incapacitate anyone who attempts it, both by private intrigue and public prosecution in the court?

That is inevitable, he said.

495

Is there any possibility of such a one continuing to philosophize?

None at all, he said.

Do you see, then, said I, that we were not wrong in saying that the very qualities that make up the philosophical nature do, in fact, become, when the environment and nurture are bad, in some sort the cause of its backsliding, and so do the so-called goods—riches and all such instrumentalities?

No, he replied, it was rightly said.

Such, my good friend, and so great as regards the noblest pursuit, b is the destruction and corruption of the most excellent nature, which is rare enough in any case, as we affirm. And it is from men of this type that those spring who do the greatest harm to communities and individuals, and the greatest good when the stream chances to be turned into that channel, but a small nature never does anything great to a man or a city.

Most true, said he.

Those, then, to whom she properly belongs, thus falling away and leaving philosophy forlorn and unwed, themselves live an unreal and c alien life, while other unworthy wooers rush in and defile her as an orphan bereft of her kin, and attach to her such reproaches as you say her revilers taunt her with, declaring that some of her consorts are of no account and the many accountable for many evils.

Why, yes, he replied, that is what they do say.

And plausibly, said I, for other manikins, observing that the place is unoccupied and full of fine terms and pretensions, just as men escape from prison to take sanctuary in temples, so these gentlemen joy- d ously bound away from the mechanical arts to philosophy, those that are most cunning in their little craft. For in comparison with the other arts the prestige of philosophy even in her present low estate retains a superior dignity, and this is the ambition and aspiration of that multitude of pretenders unfit by nature, whose souls are bowed and muti- e lated by their vulgar occupations even as their bodies are marred by their arts and crafts. Is not that inevitable?

Quite so, he said.

Is not the picture which they present, I said, precisely that of a little bald-headed tinker who has made money and just been freed from bonds and had a bath and is wearing a new garment and has got himself up like a bridegroom and is about to marry his master's daughter who has fallen into poverty and abandonment?

496 There is no difference at all, he said.

Of what sort will probably be the offspring of such parents? Will they not be bastard and base?

Inevitably.

And so when men unfit for culture approach philosophy and consort with her unworthily, what sort of ideas and opinions shall we say they beget? Will they not produce what may in very deed be fairly called sophisms, and nothing that is genuine or that partakes of true intelligence?

Quite so, he said.

There is a very small remnant, then, Adimantus, I said, of those  
 b who consort worthily with philosophy, some wellborn and well-bred nature, it may be, held in check by exile, and so in the absence of corrupters remaining true to philosophy, as its quality bids, or it may happen that a great soul born in a little town scorns and disregards its parochial affairs, and a small group perhaps might by natural affinity be drawn to it from other arts which they justly disdain, and the bridle of our companion Theages also might operate as a restraint. For in  
 c the case of Theages all other conditions were at hand for his backsliding from philosophy, but his sickly habit of body keeping him out of politics holds him back. My own case, the divine sign, is hardly worth mentioning—for I suppose it has happened to few or none before me. And those who have been of this little company and have tasted the sweetness and blessedness of this possession and who have also come to understand the madness of the multitude sufficiently and have seen that there is nothing, if I may say so, sound or right in any present politics, and that there is no ally with whose aid the champion  
 d of justice could escape destruction, but that he would be as a man who has fallen among wild beasts, unwilling to share their misdeeds and unable to hold out singly against the savagery of all, and that he would thus, before he could in any way benefit his friends or the state, come to an untimely end without doing any good to himself or others—for all these reasons I say the philosopher remains quiet, minds his own affair, and, as it were, standing aside under shelter of a wall in a storm and blast of dust and sleet and seeing others filled full of lawlessness, is content if in any way he may keep himself free from iniquity and unholy deeds through this life and take his departure with  
 e fair hope, serene and well content when the end comes.

Well, he said, that is no very slight thing to have achieved before taking his departure.

497 He would not have accomplished any very great thing either, I replied, if it were not his fortune to live in a state adapted to his nature. In such a state only will he himself rather attain his full stature and together with his own preserve the commonweal. The causes and the injustice of the calumnation of philosophy, I think, have been fairly set forth, unless you have something to add.

No, he said, I have nothing further to offer on that point. But

which of our present governments do you think is suitable for philosophy?

None whatever, I said, but the very ground of my complaint is that no polity of today is worthy of the philosophical nature. This is just the cause of its perversion and alteration; as a foreign seed sown in an alien soil is wont to be overcome and die out into the native growth, so this kind does not preserve its own quality but falls away and degenerates into an alien type. But if ever it finds the best polity as it itself is the best, then will it be apparent that this was in truth divine and all the others human in their natures and practices. Obviously then you are next going to ask what is this best form of government.

Wrong, he said. I was going to ask not that but whether it is this one that we have described in our establishment of a state or another.

In other respects it is this one, said I, but there is one special further point that we mentioned even then, namely, that there would always have to be resident in such a state an element having the same conception of its constitution that you the lawgiver had in framing its laws.

That was said, he replied.

But it was not sufficiently explained, I said, from fear of those objections on your part which have shown that the demonstration of it is long and difficult. And apart from that the remainder of the exposition is by no means easy.

Just what do you mean?

The manner in which a state that occupies itself with philosophy can escape destruction. For all great things are precarious and, as the proverb truly says, 'fine things are hard.'

All the same, he said, our exposition must be completed by making this plain.

It will be no lack of will, I said, but if anything, a lack of ability, that would prevent that. But you shall observe for yourself my zeal. And note again how zealously and recklessly I am prepared to say that the state ought to take up this pursuit in just the reverse of our present fashion.

In what way?

At present, said I, those who do take it up are youths, just out of boyhood, who in the interval before they engage in business and money-making approach the most difficult part of it, and then drop it —and these are regarded forsooth as the best exemplars of philosophy. By the most difficult part I mean discussion. In later life they think they have done much if, when invited, they deign to listen to the philosophical discussions of others. That sort of thing they think should be bywork. And toward old age, with few exceptions, their light is quenched more completely than the sun of Heraclitus, inasmuch as it is never rekindled.

And what should they do? he said.

Just the reverse. While they are lads and boys they should occupy themselves with an education and a culture suitable to youth, and while their bodies are growing to manhood take right good care of them, thus securing a basis and a support for the intellectual life. But with the advance of age, when the soul begins to attain its maturity, c they should make its exercises more severe, and when the bodily strength declines and they are past the age of political and military service, then at last they should be given free range of the pasture and do nothing but philosophize, except incidentally, if they are to live happily, and, when the end has come, crown the life they have lived with a consonant destiny in that other world.

You really seem to be very much in earnest, Socrates, he said. Yet I think most of your hearers are even more earnest in their opposition and will not be in the least convinced, beginning with Thrasymachus.

Do not try to breed a quarrel between me and Thrasymachus, who d have just become friends and were not enemies before either. For we will spare no effort until we either convince him and the rest or achieve something that will profit them when they come to that life in which they will be born again and meet with such discussions as these.

A brief time your forecast contemplates, he said.

Nay, nothing at all, I replied, as compared with eternity. However, the unwillingness of the multitude to believe what you say is nothing surprising. For of the thing here spoken they have never beheld a token, but only the forced and artificial chiming of word and e phrase, not spontaneous and accidental as has happened here. But the figure of a man 'equilibrated' and 'assimilated' to virtue's self perfectly, so far as may be, in word and deed, and holding rule in a city of like 499 quality, that is a thing they have never seen in one case or in many. Do you think they have?

By no means.

Neither, my dear fellow, have they ever seriously inclined to hearken to fair and free discussions whose sole endeavor was to search out the truth at any cost for knowledge's sake, and which dwell apart and salute from afar all the subtleties and cavils that lead to nought but opinion and strife in courtroom and in private talk.

They have not, he said.

b For this cause and foreseeing this, we then despite our fears declared under compulsion of the truth that neither city nor polity nor man either will ever be perfected until some chance compels this uncorrupted remnant of philosophers, who now bear the stigma of uselessness, to take charge of the state whether they wish it or not, and constrains the citizens to obey them, or else until by some divine in- c spiration a genuine passion for true philosophy takes possession either of the sons of the men now in power and sovereignty or of them-

selves. To affirm that either or both of these things cannot possibly come to pass is, I say, quite unreasonable. Only in that case could we be justly ridiculed as uttering things as futile as daydreams are. Is not that so?

It is.

If, then, the best philosophical natures have ever been constrained to take charge of the state in infinite time past, or now are in some barbaric region far beyond our ken, or shall hereafter be, we are prepared to maintain our contention that the constitution we have described has been, is, or will be realized when this philosophical Muse has taken control of the state. It is not a thing impossible to happen, nor are we speaking of impossibilities. That it is difficult we too admit.

I also think so, he said.

But the multitude—are you going to say?—does not think so, said I.

That may be, he said.

My dear fellow, said I, do not thus absolutely condemn the multitude. They will surely be of another mind if in no spirit of contention but soothingly and endeavoring to do away with the dispraise of learning you point out to them whom you mean by philosophers, and define as we recently did their nature and their pursuits so that the people may not suppose you to mean those of whom they are thinking. Or even if they do look at them in that way, are you still going to deny that they will change their opinion and answer differently? Or do you think that anyone is ungentle to the gentle or grudging to the ungrudging if he himself is ungrudging and mild? I will anticipate you and reply that I think that only in some few and not in the mass of mankind is so ungentle or harsh a temper to be found.

And I, you may be assured, he said, concur.

And do you not also concur in this very point that the blame for this harsh attitude of the many toward philosophy falls on that riotous crew who have burst in where they do not belong, wrangling with one another, filled with spite, and always talking about persons, a thing least befitting philosophy?

Least of all, indeed, he said.

For surely, Adimantus, the man whose mind is truly fixed on eternal realities has no leisure to turn his eyes downward upon the petty affairs of men, and so engaging in strife with them to be filled with envy and hate, but he fixes his gaze upon the things of the eternal and unchanging order, and seeing that they neither wrong nor are wronged by one another, but all abide in harmony as reason bids, he will endeavor to imitate them and, as far as may be, to fashion himself in their likeness and assimilate himself to them. Or do you think it possible not to imitate the things to which anyone attaches himself with admiration?

Impossible, he said.

- d Then the lover of wisdom associating with the divine order will himself become orderly and divine in the measure permitted to man. But calumny is plentiful everywhere.

Yes, truly.

If, then, I said, some compulsion is laid upon him to practice stamping on the plastic matter of human nature in public and private the patterns that he visions there, and not merely to mold and fashion himself, do you think he will prove a poor craftsman of sobriety and justice and all forms of ordinary civic virtue?

By no means, he said.

- e But if the multitude become aware that what we are saying of the philosopher is true, will they still be harsh with philosophers, and will they distrust our statement that no city could ever be blessed unless its lineaments were traced by artists who used the heavenly model?

- 501 They will not be harsh, he said, if they perceive that. But tell me, what is the manner of that sketch you have in mind?

They will take the city and the characters of men, as they might a tablet, and first wipe it clean—no easy task. But at any rate you know that this would be their first point of difference from ordinary reformers, that they would refuse to take in hand either individual or state or to legislate before they either received a clean slate or themselves made it clean.

And they would be right, he said.

And thereafter, do you not think that they would sketch the figure of the constitution?

- b Surely.

And then, I take it, in the course of the work they would glance frequently in either direction, at justice, beauty, sobriety and the like as they are in the nature of things, and alternately at that which they were trying to reproduce in mankind, mingling and blending from various pursuits that hue of the flesh, so to speak, deriving their judgment from that likeness of humanity which Homer too called, when it appeared in men, the image and likeness of God.

Right, he said.

- c And they would erase one touch or stroke and paint it another until in the measure of the possible they had made the characters of men pleasing and dear to God as may be.

That at any rate would be the fairest painting

Are we then making any impression on those who you said were advancing to attack us with might and main? Can we convince them that such a political artist of character and such a painter exists as the one we then were praising when our proposal to entrust the state to him angered them, and are they now in a gentler mood when they hear what we are now saying?

Much gentler, he said, if they are reasonable.

How *can* they controvert it? Will they deny that the lovers of wisdom are lovers of reality and truth?

That would be monstrous, he said.

Or that their nature as we have portrayed it is akin to the highest and best?

Not that either.

Well, then, can they deny that such a nature bred in the pursuits that befit it will be perfectly good and philosophical so far as that can be said of anyone? Or will they rather say it of those whom we have excluded?

Surely not.

Will they, then, any longer be fierce with us when we declare that, until the philosophical class wins control, there will be no surcease of trouble for city or citizens nor will the polity which we fable in words be brought to pass in deed?

They will perhaps be less so, he said.

Instead of less so, may we not say that they have been altogether tamed and convinced, so that for very shame, if for no other reason, they may assent?

Certainly, said he.

Let us assume, then, said I, that they are won over to this view. Will anyone contend that there is no chance that the offspring of kings and rulers should be born with the philosophical nature?

Not one, he said.

And can anyone prove that if so born they must necessarily be corrupted? The difficulty of their salvation we too concede, but that in all the course of time not one of all could be saved, will anyone maintain that?

How could he?

But surely, said I, the occurrence of one such is enough, if he has a state which obeys him, to realize all that now seems so incredible.

Yes, one is enough, he said.

For if such a ruler, I said, ordains the laws and institutions that we have described it is surely not impossible that the citizens should be content to carry them out.

By no means.

Would it, then, be at all strange or impossible for others to come to the opinion to which we have come?

I think not, said he.

And further that these things are best, if possible, has already, I take it, been sufficiently shown.

Yes, sufficiently.

Our present opinion, then, about this legislation is that our plan would be best if it could be realized and that this realization is difficult yet not impossible.

That is the conclusion, he said.

This difficulty disposed of, we have next to speak of what remains, in what way, namely, and as a result of what studies and pursuits, these preservers of the constitution will form a part of our state, and at what ages they will severally take up each study.

Yes, we have to speak of that, he said.

I gained nothing, I said, by my cunning in omitting heretofore the distasteful topic of the possession of women and procreation of children and the appointment of rulers—because I knew that the absolutely true and right way would provoke censure and is difficult of realization—for now I am nonetheless compelled to discuss them. The matter of the women and children has been disposed of, but the education of the rulers has to be examined again, I may say, from the starting point. We were saying, if you recollect, that they must approve themselves lovers of the state when tested in pleasures and pains, and make it apparent that they do not abandon this fixed faith under stress of labors or fears or any other vicissitude, and that anyone who could not keep that faith must be rejected, while he who always issued from the test pure and intact, like gold tried in the fire, is to be established as ruler and to receive honors in life and after death and prizes as well. Something of this sort we said while the argument slipped by with veiled face in fear of starting our present debate.

Most true, he said. I remember.

We shrank, my friend, I said, from uttering the audacities which have now been hazarded. But now let us find courage for the definitive pronouncement that as the most perfect guardians we must establish philosophers.

Yes, assume it to have been said, said he.

Note, then, that they will naturally be few, for the different components of the nature which we said their education presupposed rarely consent to grow in one, but for the most part these qualities are found apart.

What do you mean? he said.

Facility in learning, memory, sagacity, quickness of apprehension, and their accompaniments, and youthful spirit and magnificence in soul are qualities, you know, that are rarely combined in human nature with a disposition to live orderly, quiet, and stable lives, but such men, by reason of their quickness, are driven about just as chance directs, and all steadfastness is gone out of them.

You speak truly, he said.

And on the other hand, the steadfast and stable temperaments, whom one could rather trust in use, and who in war are not easily moved and aroused to fear, are apt to act in the same way when confronted with studies. They are not easily aroused, learn with difficulty, as if benumbed, and are filled with sleep and yawning when an intellectual task is set them.

It is so, he said.

But we affirmed that a man must partake of both temperaments in due and fair combination or else participate in neither the highest education nor in honors nor in rule.

And rightly, he said.

Do you not think, then, that such a blend will be a rare thing?

Of course.

They must, then, be tested in the toils and fears and pleasures of which we then spoke, and we have also now to speak of a point we then passed by, that we must exercise them in many studies, watching them to see whether their nature is capable of enduring the greatest and most difficult studies or whether it will faint and flinch as men flinch in the trials and contests of the body. 504

That is certainly the right way of looking at it, he said. But what do you understand by the greatest studies?

You remember, I presume, said I, that after distinguishing three kinds in the soul, we established definitions of justice, sobriety, bravery, and wisdom severally.

If I did not remember, he said, I should not deserve to hear the rest.

Do you also remember what was said before this? b

What?

We were saying, I believe, that for the most perfect discernment of these things another longer way was requisite which would make them plain to one who took it, but that it was possible to add proofs on a par with the preceding discussion. And you said that that was sufficient, and it was on this understanding that what we then said was said, falling short of ultimate precision as it appeared to me, but if it contented you it is for you to say.

Well, he said, it was measurably satisfactory to me, and apparently to the rest of the company.

Nay, my friend, said I, a measure of such things that in the least degree falls short of reality proves no measure at all. For nothing that is imperfect is the measure of anything, though some people sometimes think that they have already done enough and that there is no need of further inquiry. c

Yes, indeed, he said, many experience this because of their sloth.

An experience, said I, that least of all befits the guardians of a state and of its laws.

That seems likely, he said.

Then, said I, such a one must go around the longer way and must labor no less in studies than in the exercises of the body, or else, as we were just saying, he will never come to the end of the greatest study and that which most properly belongs to him. d

Why, are not these things the greatest? said he. But is there still something greater than justice and the other virtues we described?

There is not only something greater, I said, but of these very things we need not merely to contemplate an outline as now, but we must omit nothing of their most exact elaboration. Or would it not be absurd to strain every nerve to attain to the utmost precision and clarity of knowledge about other things of trifling moment and not to demand the greatest precision for the greatest matters?

It would indeed, he said, but do you suppose that anyone will let you go without asking what is the greatest study and with what you think it is concerned?

By no means, said I, but do you ask the question. You certainly have heard it often, but now you either do not apprehend or again you are minded to make trouble for me by attacking the argument. I suspect it is rather the latter. For you have often heard that the greatest thing to learn is the idea of good by reference to which just things and all the rest become useful and beneficial. And now I am almost sure you know that this is what I am going to speak of and to say further that we have no adequate knowledge of it. And if we do not know it, then, even if without the knowledge of this we should know all other things never so well, you are aware that it would avail us nothing, just as no possession either is of any avail without the possession of the good. Or do you think there is any profit in possessing everything except that which is good, or in understanding all things else apart from the good while understanding and knowing nothing that is fair and good?

No, by Zeus, I do not, he said.

But, furthermore, you know this too, that the multitude believe pleasure to be the good, and the finer spirits intelligence or knowledge. Certainly.

And you are also aware, my friend, that those who hold this latter view are not able to point out what knowledge it is but are finally compelled to say that it is the knowledge of the good.

Most absurdly, he said.

Is it *not* absurd, said I, if while taunting us with our ignorance of good they turn about and talk to us as if we knew it? For they say it is the knowledge of the good, as if we understood their meaning when they utter the word 'good.'

Most true, he said.

Well, are those who define the good as pleasure infected with any less confusion of thought than the others? Or are not they in like manner compelled to admit that there are bad pleasures?

Most assuredly.

The outcome is, I take it, that they are admitting the same things to be both good and bad, are they not?

Certainly.

Then is it not apparent that there are many and violent disputes about it?

Of course.

And again, is it not apparent that while in the case of the just and the honorable many would prefer the semblance without the reality in action, possession, and opinion, yet when it comes to the good nobody is content with the possession of the appearance but all men seek the reality, and the semblance satisfies nobody here?

Quite so, he said.

That, then, which every soul pursues and for its sake does all that it does, with an intuition of its reality, but yet baffled and unable to apprehend its nature adequately, or to attain to any stable belief about it as about other things, and for that reason failing of any possible benefit from other things—in a matter of this quality and moment, can we, I ask you, allow a like blindness and obscurity in those best citizens to whose hands we are to entrust all things?

Least of all, he said.

I fancy, at any rate, said I, that the just and the honorable, if their relation and reference to the good is not known, will not have secured a guardian of much worth in the man thus ignorant, and my surmise is that no one will understand them adequately before he knows this.

You surmise well, he said.

Then our constitution will have its perfect and definitive organization only when such a guardian, who knows these things, oversees it.

Necessarily, he said. But you yourself, Socrates, do you think that knowledge is the good or pleasure or something else and different?

What a man it is, said I. You made it very plain long ago that you would not be satisfied with what others think about it.

Why, it does not seem right to me either, Socrates, he said, to be ready to state the opinions of others but not one's own when one has occupied himself with the matter so long.

But then, said I, do you think it right to speak as having knowledge about things one does not know?

By no means, he said, as having knowledge, but one ought to be willing to tell as his opinion what he opines.

Nay, said I, have you not observed that opinions divorced from knowledge are ugly things? The best of them are blind. Or do you think that those who hold some true opinion without intelligence differ appreciably from blind men who go the right way?

They do not differ at all, he said.

Is it, then, ugly things that you prefer to contemplate, things blind and crooked, when you might hear from others what is luminous and fair?

Nay, in heaven's name, Socrates, said Glaucon, do not draw back, as it were, at the very goal. For it will content us if you explain the good even as you set forth the nature of justice, sobriety, and the other virtues.

It will right well content me, my dear fellow, I said, but I fear

that my powers may fail and that in my eagerness I may cut a sorry figure and become a laughingstock. Nay, my beloved, let us dismiss  
 e for the time being the nature of the good in itself, for to attain to my present surmise of that seems a pitch above the impulse that wings my flight today. But of what seems to be the offspring of the good and most nearly made in its likeness I am willing to speak if you too wish it, and otherwise to let the matter drop.

Well, speak on, he said, for you will duly pay me the tale of the parent another time.

507 I could wish, I said, that I were able to make and you to receive the payment and not merely as now the interest. But at any rate receive this interest and the offspring of the good. Have a care, however, lest I deceive you unintentionally with a false reckoning of the interest.

We will do our best, he said, to be on our guard. Only speak on.

b Yes, I said, after first coming to an understanding with you and reminding you of what has been said here before and often on other occasions.

What? said he.

We predicate 'to be' of many beautiful things and many good things, saying of them severally that they *are*, and so define them in our speech.

We do.

And again, we speak of a self-beautiful and of a good that is only and merely good, and so, in the case of all the things that we then posited as many, we turn about and posit each as a single idea or aspect, assuming it to be a unity and call it that which each really is.

It is so.

And the one class of things we say can be seen but not thought, while the ideas can be thought but not seen.

c By all means.

With which of the parts of ourselves, with which of our faculties, then, do we see visible things?

With sight, he said.

And do we not, I said, hear audibles with hearing, and perceive all sensibles with the other senses?

Surely.

Have you ever observed, said I, how much the greatest expenditure the creator of the senses has lavished on the faculty of seeing and being seen?

Why, no, I have not, he said.

d Well, look at it thus. Do hearing and voice stand in need of another medium so that the one may hear and the other be heard, in the absence of which third element the one will not hear and the other not be heard?

They need nothing, he said.

Neither, I fancy, said I, do many others, not to say that none require anything of the sort. Or do you know of any?

Not I, he said.

But do you not observe that vision and the visible do have this further need?

How?

Though vision may be in the eyes and its possessor may try to use it, and though color be present, yet without the presence of a third thing specifically and naturally adapted to this purpose, you are aware that vision will see nothing and the colors will remain invisible. e

What is this thing of which you speak? he said.

The thing, I said, that you call light.

You say truly, he replied.

The bond, then, that yokes together visibility and the faculty of sight is more precious by no slight form than that which unites the other pairs, if light is not without honor. 508

It surely is far from being so, he said.

Which one can you name of the divinities in heaven as the author and cause of this, whose light makes our vision see best and visible things to be seen?

Why, the one that you too and other people mean, he said, for your question evidently refers to the sun.

Is not this, then, the relation of vision to that divinity?

What?

Neither vision itself nor its vehicle, which we call the eye, is identical with the sun.

Why, no. b

But it is, I think, the most sunlike of all the instruments of sense.

By far the most.

And does it not receive the power which it possesses as an influx, as it were, dispensed from the sun?

Certainly.

Is it not also true that the sun is not vision, yet as being the cause thereof is beheld by vision itself?

That is so, he said.

This, then, you must understand that I meant by the offspring of the good which the good begot to stand in a proportion with itself. As the good is in the intelligible region to reason and the objects of reason, so is this in the visible world to vision and the objects of vision. c

How is that? he said. Explain further.

You are aware, I said, that when the eyes are no longer turned upon objects upon whose colors the light of day falls but that of the dim luminaries of night, their edge is blunted and they appear almost blind, as if pure vision did not dwell in them. d

Yes, indeed, he said.

But when, I take it, they are directed upon objects illumined by

the sun, they see clearly, and vision appears to reside in these same eyes.

Certainly.

Apply this comparison to the soul also in this way. When it is firmly fixed on the domain where truth and reality shine resplendent it apprehends and knows them and appears to possess reason, but when it inclines to that region which is mingled with darkness, the world of becoming and passing away, it opines only and its edge is blunted, and it shifts its opinions hither and thither, and again seems as if it lacked reason.

Yes, it does.

This reality, then, that gives their truth to the objects of knowledge and the power of knowing to the knower, you must say is the idea of good, and you must conceive it as being the cause of knowledge, and of truth in so far as known. Yet fair as they both are, knowledge and truth, in supposing it to be something fairer still than these you will think rightly of it. But as for knowledge and truth, even as in our illustration it is right to deem light and vision unlike, but never to think that they are the sun, so here it is right to consider these two their counterparts, as being like the good or boniform, but to think that either of them is the good is not right. Still higher honor belongs to the possession and habit of the good.

An inconceivable beauty you speak of, he said, if it is the source of knowledge and truth, and yet itself surpasses them in beauty. For you surely cannot mean that it is pleasure.

Hush, said I, but examine the similitude of it still further in this way.

How?

The sun, I presume you will say, not only furnishes to visibles the power of visibility but it also provides for their generation and growth and nurture though it is not itself generation.

Of course not.

In like manner, then, you are to say that the objects of knowledge not only receive from the presence of the good their being known, but their very existence and essence is derived to them from it, though the good itself is not essence but still transcends essence in dignity and surpassing power.

And Glaucon very ludicrously said, Heaven save us, hyperbole can no further go.

The fault is yours, I said, for compelling me to utter my thoughts about it.

And don't desist, he said, but at least expound the similitude of the sun, if there is anything that you are omitting.

Why, certainly, I said, I am omitting a great deal.

Well, don't omit the least bit, he said.

I fancy, I said, that I shall have to pass over much, but neverthe-

less so far as it is at present practicable I shall not willingly leave anything out.

Do not, he said.

Conceive then, said I, as we were saying, that there are these two entities, and that one of them is sovereign over the intelligible order and region and the other over the world of the eyeball, not to say the sky-ball, but let that pass. You surely apprehend the two types, the visible and the intelligible.

I do.

Represent them then, as it were, by a line divided into two unequal sections and cut each section again in the same ratio—the section, that is, of the visible and that of the intelligible order—and then as an expression of the ratio of their comparative clearness and obscurity you will have, as one of the sections of the visible world, images. By images I mean, first, shadows, and then reflections in water and on surfaces of dense, smooth, and bright texture, and everything of that kind, if you apprehend.

I do.

As the second section assume that of which this is a likeness or an image, that is, the animals about us and all plants and the whole class of objects made by man.

I so assume it, he said.

Would you be willing to say, said I, that the division in respect of reality and truth or the opposite is expressed by the proportion—as is the opinable to the knowable so is the likeness to that of which it is a likeness?

I certainly would.

Consider then again the way in which we are to make the division of the intelligible section.

In what way?

By the distinction that there is one section of it which the soul is compelled to investigate by treating as images the things imitated in the former division, and by means of assumptions from which it proceeds not up to a first principle but down to a conclusion, while there is another section in which it advances from its assumption to a beginning or principle that transcends assumption, and in which it makes no use of the images employed by the other section, relying on ideas only and progressing systematically through ideas.

I don't fully understand what you mean by this, he said.

Well, I will try again, said I, for you will better understand after this preamble. For I think you are aware that students of geometry and reckoning and such subjects first postulate the odd and the even and the various figures and three kinds of angles and other things akin to these in each branch of science, regard them as known, and, treating them as absolute assumptions, do not deign to render any further account of them to themselves or others, taking it for granted that

a they are obvious to everybody. They take their start from these, and pursuing the inquiry from this point on consistently, conclude with that for the investigation of which they set out.

Certainly, he said, I know that.

And do you not also know that they further make use of the visible forms and talk about them, though they are not thinking of them but of those things of which they are a likeness, pursuing their inquiry for the sake of the square as such and the diagonal as such, and not for the sake of the image of it which they draw? And so in all cases. The very things which they mold and draw, which have shadows and images of themselves in water, these things they treat in their turn as only images, but what they really seek is to get sight of those realities which can be seen only by the mind.

511 True, he said.

This then is the class that I described as intelligible, it is true, but with the reservation first that the soul is compelled to employ assumptions in the investigation of it, not proceeding to a first principle because of its inability to extricate itself from and rise above its assumptions, and second, that it uses as images or likenesses the very objects that are themselves copied and adumbrated by the class below them, and that in comparison with these latter are esteemed as clear and held in honor.

b I understand, said he, that you are speaking of what falls under geometry and the kindred arts.

Understand then, said I, that by the other section of the intelligible I mean that which the reason itself lays hold of by the power of dialectic, treating its assumptions not as absolute beginnings but literally as hypotheses, underpinnings, footings, and springboards so to speak, to enable it to rise to that which requires no assumption and is the starting point of all, and after attaining to that again taking hold of the first dependencies from it, so to proceed downward to the conclusion, making no use whatever of any object of sense but only of pure ideas moving on through ideas to ideas and ending with ideas.

c I understand, he said, not fully, for it is no slight task that you appear to have in mind, but I do understand that you mean to distinguish the aspect of reality and the intelligible, which is contemplated by the power of dialectic, as something truer and more exact than the object of the so-called arts and sciences whose assumptions are arbitrary starting points. And though it is true that those who contemplate d them are compelled to use their understanding and not their senses, yet because they do not go back to the beginning in the study of them but start from assumptions you do not think they possess true intelligence about them although the things themselves are intelligibles when apprehended in conjunction with a first principle. And I think you call the mental habit of geometers and their like mind or under-

standing and not reason because you regard understanding as something intermediate between opinion and reason.

Your interpretation is quite sufficient, I said. And now, answering to these four sections, assume these four affections occurring in the soul—intellection or reason for the highest, understanding for the second, belief for the third, and for the last, picture thinking or conjecture—and arrange them in a proportion, considering that they participate in clearness and precision in the same degree as their objects partake of truth and reality.

I understand, he said. I concur and arrange them as you bid.

## BOOK VII

Next, said I, compare our nature in respect of education and its lack to such an experience as this. Picture men dwelling in a sort of subterranean cavern with a long entrance open to the light on its entire width. Conceive them as having their legs and necks fettered from childhood, so that they remain in the same spot, able to look forward only, and prevented by the fetters from turning their heads. Picture further the light from a fire burning higher up and at a distance behind them, and between the fire and the prisoners and above them a road along which a low wall has been built, as the exhibitors of puppet shows have partitions before the men themselves, above which they show the puppets.

All that I see, he said.

See also, then, men carrying past the wall implements of all kinds that rise above the wall, and human images and shapes of animals as well, wrought in stone and wood and every material, some of these bearers presumably speaking and others silent.

A strange image you speak of, he said, and strange prisoners.

Like to us, I said. For, to begin with, tell me do you think that these men would have seen anything of themselves or of one another except the shadows cast from the fire on the wall of the cave that fronted them?

How could they, he said, if they were compelled to hold their heads unmoved through life?

And again, would not the same be true of the objects carried past them?

Surely.

If then they were able to talk to one another, do you not think that they would suppose that in naming the things that they saw they were naming the passing objects?

Necessarily.

And if their prison had an echo from the wall opposite them, when one of the passers-by uttered a sound, do you think that they

would suppose anything else than the passing shadow to be the speaker?

By Zeus, I do not, said he.

- c Then in every way such prisoners would deem reality to be nothing else than the shadows of the artificial objects.

Quite inevitably, he said.

- Consider, then, what would be the manner of the release and healing from these bonds and this folly if in the course of nature something of this sort should happen to them. When one was freed from his fetters and compelled to stand up suddenly and turn his head around and walk and to lift up his eyes to the light, and in doing all this felt pain and, because of the dazzle and glitter of the light, was unable to discern the objects whose shadows he formerly saw, what do you suppose would be his answer if someone told him that what he  
d had seen before was all a cheat and an illusion, but that now, being nearer to reality and turned toward more real things, he saw more truly? And if also one should point out to him each of the passing objects and constrain him by questions to say what it is, do you not think that he would be at a loss and that he would regard what he formerly saw as more real than the things now pointed out to him?

Far more real, he said.

- e And if he were compelled to look at the light itself, would not that pain his eyes, and would he not turn away and flee to those things which he is able to discern and regard them as in very deed more clear and exact than the objects pointed out?

It is so, he said.

- And if, said I, someone should drag him thence by force up the ascent which is rough and steep, and not let him go before he had drawn him out into the light of the sun, do you not think that he would find it painful to be so haled along, and would chafe at it, and  
516 when he came out into the light, that his eyes would be filled with its beams so that he would not be able to see even one of the things that we call real?

Why, no, not immediately, he said.

- Then there would be need of habituation, I take it, to enable him to see the things higher up. And at first he would most easily discern the shadows and, after that, the likenesses or reflections in water of men and other things, and later, the things themselves, and from these he would go on to contemplate the appearances in the heavens  
b and heaven itself, more easily by night, looking at the light of the stars and the moon, than by day the sun and the sun's light.

Of course.

And so, finally, I suppose, he would be able to look upon the sun itself and see its true nature, not by reflections in water or phantasms of it in an alien setting, but in and by itself in its own place.

Necessarily, he said.

And at this point he would infer and conclude that this it is that provides the seasons and the courses of the year and presides over all things in the visible region, and is in some sort the cause of all these things that they had seen. c

Obviously, he said, that would be the next step.

Well then, if he recalled to mind his first habitation and what passed for wisdom there, and his fellow bondsmen, do you not think that he would count himself happy in the change and pity them?

He would indeed.

And if there had been honors and commendations among them which they bestowed on one another and prizes for the man who is quickest to make out the shadows as they pass and best able to remember their customary precedences, sequences, and coexistences, and so most successful in guessing at what was to come, do you think he would be very keen about such rewards, and that he would envy and emulate those who were honored by these prisoners and lorded it among them, or that he would feel with Homer and greatly prefer while living on earth to be serf of another, a landless man, and endure anything rather than opine with them and live that life? d

Yes, he said, I think that he would choose to endure anything rather than such a life. e

And consider this also, said I. If such a one should go down again and take his old place would he not get his eyes full of darkness, thus suddenly coming out of the sunlight?

He would indeed.

Now if he should be required to contend with these perpetual prisoners in 'evaluating' these shadows while his vision was still dim and before his eyes were accustomed to the dark—and this time required for habituation would not be very short—would he not provoke laughter, and would it not be said of him that he had returned from his journey aloft with his eyes ruined and that it was not worth while even to attempt the ascent? And if it were possible to lay hands on and to kill the man who tried to release them and lead them up, would they not kill him? 517

They certainly would, he said.

This image then, dear Glaucon, we must apply as a whole to all that has been said, likening the region revealed through sight to the habitation of the prison, and the light of the fire in it to the power of the sun. And if you assume that the ascent and the contemplation of the things above is the soul's ascension to the intelligible region, you will not miss my surmise, since that is what you desire to hear. But Gods knows whether it is true. But, at any rate, my dream as it appears to me is that in the region of the known the last thing to be seen and hardly seen is the idea of good, and that when seen it must needs point us to the conclusion that this is indeed the cause for all things of all that is right and beautiful, giving birth in the visible world to c

light, and the author of light and itself in the intelligible world being the authentic source of truth and reason, and that anyone who is to act wisely in private or public must have caught sight of this.

I concur, he said, so far as I am able.

Come then, I said, and join me in this further thought, and do not be surprised that those who have attained to this height are not willing to occupy themselves with the affairs of men, but their souls ever  
 a feel the upward urge and the yearning for that sojourn above. For this, I take it, is likely if in this point too the likeness of our image holds.

Yes, it is likely.

And again, do you think it at all strange, said I, if a man returning from divine contemplations to the petty miseries of men cuts a sorry figure and appears most ridiculous, if, while still blinking through the gloom, and before he has become sufficiently accustomed to the environing darkness, he is compelled in courtrooms or elsewhere to contend about the shadows of justice or the images that cast the shadows and to wrangle in debate about the notions of these things in the  
 e minds of those who have never seen justice itself?

It would be by no means strange, he said.

518 But a sensible man, I said, would remember that there are two distinct disturbances of the eyes arising from two causes, according as the shift is from light to darkness or from darkness to light, and, believing that the same thing happens to the soul too, whenever he saw a soul perturbed and unable to discern something, he would not laugh unthinkingly, but would observe whether coming from a brighter life its vision was obscured by the unfamiliar darkness, or whether the passage from the deeper dark of ignorance into a more luminous world and the greater brightness had dazzled its vision. And so he  
 b would deem the one happy in its experience and way of life and pity the other, and if it pleased him to laugh at it, his laughter would be less laughable than that at the expense of the soul that had come down from the light above.

That is a very fair statement, he said.

Then, if this is true, our view of these matters must be this, that education is not in reality what some people proclaim it to be in their professions. What they aver is that they can put true knowledge into a  
 c soul that does not possess it, as if they were inserting vision into blind eyes.

They do indeed, he said.

But our present argument indicates, said I, that the true analogy for this indwelling power in the soul and the instrument whereby each of us apprehends is that of an eye that could not be converted to the light from the darkness except by turning the whole body. Even so this organ of knowledge must be turned around from the world of be-

coming together with the entire soul, like the scene-shifting periactus in the theater, until the soul is able to endure the contemplation of essence and the brightest region of being. And this, we say, is the good, do we not?

d

Yes.

Of this very thing, then, I said, there might be an art, an art of the speediest and most effective shifting or conversion of the soul, not an art of producing vision in it, but on the assumption that it possesses vision but does not rightly direct it and does not look where it should, an art of bringing this about.

Yes, that seems likely, he said.

Then the other so-called virtues of the soul do seem akin to those of the body. For it is true that where they do not pre-exist, they are afterward created by habit and practice. But the excellence of thought, it seems, is certainly of a more divine quality, a thing that never loses its potency, but, according to the direction of its conversion, becomes useful and beneficent, or, again, useless and harmful. Have you never observed in those who are popularly spoken of as bad, but smart men how keen is the vision of the little soul, how quick it is to discern the things that interest it, a proof that it is not a poor vision which it has, but one forcibly enlisted in the service of evil, so that the sharper its sight the more mischief it accomplishes?

519

I certainly have, he said.

Observe then, said I, that this part of such a soul, if it had been hammered from childhood, and had thus been struck free of the leaden weights, so to speak, of our birth and becoming, which attaching themselves to it by food and similar pleasures and gluttonies turn downward the vision of the soul—if, I say, freed from these, it had suffered a conversion toward the things that are real and true, that same faculty of the same men would have been most keen in its vision of the higher things, just as it is for the things toward which it is now turned.

b

It is likely, he said.

Well, then, said I, is not this also likely and a necessary consequence of what has been said, that neither could men who are uneducated and inexperienced in truth ever adequately preside over a state, nor could those who had been permitted to linger on to the end in the pursuit of culture—the one because they have no single aim and purpose in life to which all their actions, public and private, must be directed, and the others, because they will not voluntarily engage in action, believing that while still living they have been transported to the Islands of the Blessed?

c

True, he said.

It is the duty of us, the founders, then, said I, to compel the best natures to attain the knowledge which we pronounced the greatest,

d and to win to the vision of the good, to scale that ascent, and when they have reached the heights and taken an adequate view, we must not allow what is now permitted.

What is that?

That they should linger there, I said, and refuse to go down again among those bondsmen and share their labors and honors, whether they are of less or of greater worth.

Do you mean to say that we must do them this wrong, and compel them to live an inferior life when the better is in their power?

e You have again forgotten, my friend, said I, that the law is not concerned with the special happiness of any class in the state, but is trying to produce this condition in the city as a whole, harmonizing and adapting the citizens to one another by persuasion and compulsion, and requiring them to impart to one another any benefit which  
520 they are severally able to bestow upon the community, and that it itself creates such men in the state, not that it may allow each to take what course pleases him, but with a view to using them for the binding together of the commonwealth.

True, he said, I did forget it.

Observe, then, Glaucon, said I, that we shall not be wronging, either, the philosophers who arise among us, but that we can justify our action when we constrain them to take charge of the other citizens and be their guardians. For we will say to them that it is natural that men of similar quality who spring up in other cities should not  
b share in the labors there. For they grow up spontaneously from no volition of the government in the several states, and it is justice that the self-grown, indebted to none for its breeding, should not be zealous either to pay to anyone the price of its nurture. But you we have engendered for yourselves and the rest of the city to be, as it were, king bees and leaders in the hive. You have received a better and more complete education than the others, and you are more capable  
c of sharing both ways of life. Down you must go then, each in his turn, to the habitation of the others and accustom yourselves to the observation of the obscure things there. For once habituated you will discern them infinitely better than the dwellers there, and you will know what each of the 'idols' is and whereof it is a semblance, because you have seen the reality of the beautiful, the just and the good. So our city will be governed by us and you with waking minds, and not, as most cities now which are inhabited and ruled darkly as in a dream  
d by men who fight one another for shadows and wrangle for office as if that were a great good, when the truth is that the city in which those who are to rule are least eager to hold office must needs be best administered and most free from dissension, and the state that gets the contrary type of ruler will be the opposite of this.

By all means, he said.

Will our alumni, then, disobey us when we tell them this, and

will they refuse to share in the labors of state each in his turn while permitted to dwell most of the time with one another in that purer world?

Impossible, he said, for we shall be imposing just commands on men who are just. Yet they will assuredly approach office as an unavoidable necessity, and in the opposite temper from that of the present rulers in our cities.

For the fact is, dear friend, said I, if you can discover a better way of life than office holding for your future rulers, a well-governed city becomes a possibility. For only in such a state will those rule who are really rich, not in gold, but in the wealth that makes happiness—a good and wise life. But if, being beggars and starvelings from lack of goods of their own, they turn to affairs of state thinking that it is thence that they should grasp their own good, then it is impossible. For when office and rule become the prizes of contention, such a civil and internecine strife destroys the office seekers themselves and the city as well.

Most true, he said.

Can you name any other type or ideal of life that looks with scorn on political office except the life of true philosophers? I asked.

No, by Zeus, he said.

But what we require, I said, is that those who take office should not be lovers of rule. Otherwise there will be a contest with rival lovers.

Surely.

What others, then, will you compel to undertake the guardianship of the city than those who have most intelligence of the principles that are the means of good government and who possess distinctions of another kind and a life that is preferable to the political life?

No others, he said.

Would you, then, have us proceed to consider how such men may be produced in a state and how they may be led upward to the light even as some are fabled to have ascended from Hades to the gods?

Of course I would.

So this, it seems, would not be the whirling of the shell in the children's game, but a conversion and turning about of the soul from a day whose light is darkness to the veritable day—that ascension to reality of our parable which we will affirm to be true philosophy.

By all means.

Must we not, then, consider what studies have the power to effect this?

Of course.

What, then, Glaucon, would be the study that would draw the soul away from the world of becoming to the world of being? A thought strikes me while I speak. Did we not say that these men in youth must be athletes of war?

We did.

Then the study for which we are seeking must have this additional qualification.

What one?

That it be not useless to soldiers.

Why, yes, it must, he said, if that is possible.

But in our previous account they were educated in gymnastics and music.

They were, he said.

And gymnastics, I take it, is devoted to that which grows and perishes, for it presides over the growth and decay of the body.

Obviously.

522 Then this cannot be the study that we seek.

No.

Is it, then, music, so far as we have already described it?

Nay, that, he said, was the counterpart of gymnastics, if you remember. It educated the guardians through habits, imparting by the melody a certain harmony of spirit that is not science, and by the rhythm measure and grace, and also qualities akin to these in the words of tales that are fables and those that are more nearly true.

b But it included no study that tended to any such good as you are now seeking.

Your recollection is most exact, I said, for in fact it had nothing of the kind. But in heaven's name, Glaucon, what study could there be of that kind? For all the arts were in our opinion base and mechanical.

Surely, and yet what other study is left apart from music, gymnastics, and the arts?

Come, said I, if we are unable to discover anything outside of these, let us take something that applies to all alike.

What?

c Why, for example, this common thing that all arts and forms of thought and all sciences employ, and which is among the first things that everybody must learn.

What? he said.

This trifling matter, I said, of distinguishing one and two and three. I mean, in sum, number and calculation. Is it not true of them that every art and science must necessarily partake of them?

Indeed it is, he said.

The art of war too? said I.

Most necessarily, he said.

d Certainly, then, said I, Palamedes in the play is always making Agamemnon appear a most ridiculous general. Have you not noticed that he affirms that by the invention of number he marshaled the troops in the army at Troy in ranks and companies and enumerated

the ships and everything else as if before that they had not been counted, and Agamemnon apparently did not know how many feet he had if he couldn't count? And yet what sort of a general do you think he would be in that case?

A very queer one in my opinion, he said, if that was true.

Shall we not, then, I said, set down as a study requisite for a soldier the ability to reckon and number?

Most certainly, if he is to know anything whatever of the ordering of his troops—or rather if he is to be a man at all.

Do you observe then, said I, in this study what I do?

What?

It seems likely that it is one of those studies which we are seeking that naturally conduce to the awakening of thought, but that no one makes the right use of it, though it really does tend to draw the mind to essence and reality.

What do you mean? he said.

I will try, I said, to show you at least my opinion. Do you keep watch and observe the things I distinguish in my mind as being or not being conducive to our purpose, and either concur or dissent, in order that here too we may see more clearly whether my surmise is right.

Point them out, he said.

I do point them out, I said, if you can discern that some reports of our perceptions do not provoke thought to reconsideration because the judgment of them by sensation seems adequate, while others always invite the intellect to reflection because the sensation yields nothing that can be trusted.

You obviously mean distant appearances, he said, and shadow painting.

You have quite missed my meaning, said I.

What do you mean? he said.

The experiences that do not provoke thought are those that do not at the same time issue in a contradictory perception. Those that do have that effect I set down as provocatives, when the perception no more manifests one thing than its contrary, alike whether its impact comes from nearby or afar. An illustration will make my meaning plain. Here, we say, are three fingers, the little finger, the second, and the middle.

Quite so, he said.

Assume that I speak of them as seen near at hand. But this is the point that you are to consider.

What?

Each one of them appears to be equally a finger, and in this respect it makes no difference whether it is observed as intermediate or at either extreme, whether it is white or black, thick or thin, or of any other quality of this kind. For in none of these cases is the soul

of most men impelled to question the reason and to ask what in the world is a finger, since the faculty of sight never signifies to it at the same time that the finger is the opposite of a finger.

Why, no, it does not, he said.

Then, said I, it is to be expected that such a perception will not provoke or awaken reflection and thought.

e It is.

But now, what about the bigness and the smallness of these objects? Is our vision's view of them adequate, and does it make no difference to it whether one of them is situated outside or in the middle, and similarly of the relation of touch, to thickness and thinness, softness and hardness? And are not the other senses also defective in  
524 their reports of such things? Or is the operation of each of them as follows? In the first place, the sensation that is set over the hard is of necessity related also to the soft, and it reports to the soul that the same thing is both hard and soft to its perception.

It is so, he said.

Then, said I, is not this again a case where the soul must be at a loss as to what significance for it the sensation of hardness has, if the sense reports the same thing as also soft? And, similarly, as to what the sensation of light and heavy means by light and heavy, if it reports the heavy as light, and the light as heavy?

b Yes, indeed, he said, these communications to the soul are strange and invite reconsideration.

Naturally, then, said I, it is in such cases as these that the soul first summons to its aid the calculating reason and tries to consider whether each of the things reported to it is one or two.

Of course.

And if it appears to be two, each of the two is a distinct unit.

Yes.

If, then, each is one and both two, the very meaning of 'two' is that the soul will conceive them as distinct. For if they were not separable, it would not have been thinking of two, but of one.

Right.

c Sight too saw the great and the small, we say, not separated but confounded. Is not that so?

Yes.

And for the clarification of this, the intelligence is compelled to contemplate the great and small, not thus confounded but as distinct entities, in the opposite way from sensation.

True.

And is it not in some such experience as this that the question first occurs to us, What in the world, then, is the great and the small?

By all means.

And this is the origin of the designation *intelligible* for the one, and *visible* for the other.

Just so, he said.

d

This, then, is just what I was trying to explain a little while ago when I said that some things are provocative of thought and some are not, defining as provocative things that impinge upon the senses together with their opposites, while those that do not I said do not tend to awaken reflection.

Well, now I understand, he said, and agree.

To which class, then, do you think number and the one belong?

I cannot conceive, he said.

Well, reason it out from what has already been said. For, if unity is adequately seen by itself or apprehended by some other sensation, it would not tend to draw the mind to the apprehension of essence, as we were explaining in the case of the finger. But if some contra- e  
diction is always seen coincidentally with it, so that it no more appears to be one than the opposite, there would forthwith be need of something to judge between them, and it would compel the soul to be at a loss and to inquire, by arousing thought in itself, and to ask, whatever then is the one as such, and thus the study of unity will be one of the studies that guide and convert the soul to the contemplation 525  
of true being.

But surely, he said, the visual perception of it does especially involve this. For we see the same thing at once as one and as an indefinite plurality.

Then if this is true of the one, I said, the same holds of all number, does it not?

Of course.

But, further, reckoning and the science of arithmetic are wholly concerned with number.

They are, indeed.

And the qualities of number appear to lead to the apprehension b  
of truth.

Beyond anything, he said.

Then, as it seems, these would be among the studies that we are seeking. For a soldier must learn them in order to marshal his troops, and a philosopher because he must rise out of the region of generation and lay hold on essence or he can never become a true reckoner.

It is so, he said.

And our guardian is soldier and philosopher in one.

Of course.

It is befitting, then, Glaucon, that this branch of learning should be prescribed by our law and that we should induce those who are to share the highest functions of state to enter upon that study of calcu- c  
lation and take hold of it, not as amateurs, but to follow it up until they attain to the contemplation of the nature of number, by pure thought, not for the purpose of buying and selling, as if they were preparing to be merchants or hucksters, but for the uses of war and for

facilitating the conversion of the soul itself from the world of generation to essence and truth.

Excellently said, he replied.

And, further, I said, it occurs to me, now that the study of reckoning has been mentioned, that there is something fine in it, and that it is useful for our purpose in many ways, provided it is pursued for the sake of knowledge and not for huckstering.

In what respect? he said.

Why, in respect of the very point of which we were speaking, that it strongly directs the soul upward and compels it to discourse about pure numbers, never acquiescing if anyone proffers to it in the discussion numbers attached to visible and tangible bodies. For you are doubtless aware that experts in this study, if anyone attempts to cut up the 'one' in argument, laugh at him and refuse to allow it, but if *you* mince it up, *they* multiply, always on guard lest the one should appear to be not one but a multiplicity of parts.

Most true, he replied.

526 Suppose now, Glaucon, someone were to ask them, My good friends, what numbers are these you are talking about, in which the one is such as you postulate, each unity equal to every other without the slightest difference and admitting no division into parts? What do you think would be their answer?

This, I think—that they are speaking of units which can only be conceived by thought, and which it is not possible to deal with in any other way.

You see, then, my friend, said I, that this branch of study really seems to be indispensable for us, since it plainly compels the soul to employ pure thought with a view to truth itself.

It most emphatically does.

Again, have you ever noticed this, that natural reckoners are by nature quick in virtually all their studies? And the slow, if they are trained and drilled in this, even if no other benefit results, all improve and become quicker than they were?

It is so, he said.

c And, further, as I believe, studies that demand more toil in the learning and practice than this we shall not discover easily nor find many of them.

You will not, in fact.

Then, for all these reasons, we must not neglect this study, but must use it in the education of the best-endowed natures.

I agree, he said.

Assuming this one point to be established, I said, let us in the second place consider whether the study that comes next is suited to our purpose.

What is that? Do you mean geometry? he said.

Precisely that, said I.

So much of it, he said, as applies to the conduct of war is obviously suitable. For in dealing with encampments and the occupation of strong places and the bringing of troops into column and line and all the other formations of an army in actual battle and on the march, an officer who had studied geometry would be a very different person from what he would be if he had not.

But still, I said, for such purposes a slight modicum of geometry and calculation would suffice. What we have to consider is whether the greater and more advanced part of it tends to facilitate the apprehension of the idea of good. That tendency, we affirm, is to be found in all studies that force the soul to turn its vision round to the region where dwells the most blessed part of reality, which it is imperative that it should behold.

You are right, he said.

Then if it compels the soul to contemplate essence, it is suitable; if genesis, it is not.

So we affirm.

527

This at least, said I, will not be disputed by those who have even a slight acquaintance with geometry, that this science is in direct contradiction with the language employed in it by its adepts.

How so? he said.

Their language is most ludicrous, though they cannot help it, for they speak as if they were doing something and as if all their words were directed toward action. For all their talk is of squaring and applying and adding and the like, whereas in fact the real object of the entire study is pure knowledge.

That is absolutely true, he said.

b

And must we not agree on a further point?

What?

That it is the knowledge of that which always is, and not of a something which at some time comes into being and passes away.

That is readily admitted, he said, for geometry is the knowledge of the eternally existent.

Then, my good friend, it would tend to draw the soul to truth, and would be productive of a philosophical attitude of mind, directing upward the faculties that now wrongly are turned earthward.

Nothing is surer, he said.

Then nothing is surer, said I, than that we must require that the men of your fair city shall never neglect geometry, for even the by-products of such study are not slight.

What are they? said he.

What you mentioned, said I, its uses in war, and also we are aware that for the better reception of all studies there will be an immeasurable difference between the student who has been imbued with geometry and the one who has not.

Immense indeed, by Zeus, he said.

Shall we, then, lay this down as a second branch of study for our lads?

Let us do so, he said.

d Shall we set down astronomy as a third, or do you dissent?

I certainly agree, he said, for quickness of perception about the seasons and the courses of the months and the years is serviceable, not only to agriculture and navigation, but still more to the military art.

I am amused, said I, at your apparent fear lest the multitude may suppose you to be recommending useless studies. It is indeed no trifling task, but very difficult to realize that there is in every soul an organ or instrument of knowledge that is purified and kindled afresh by such studies when it has been destroyed and blinded by our ordinary pursuits, a faculty whose preservation outweighs ten thousand eyes, for by it only is reality beheld. Those who share this faith will think your words superlatively true. But those who have and have had no inkling of it will naturally think them all moonshine. For they can  
e see no other benefit from such pursuits worth mentioning. Decide, then, on the spot, to which party you address yourself. Or are you speaking to neither, but chiefly carrying on the discussion for your own sake, without however grudging any other who may be able to profit by it?

This is the alternative I choose, he said, that it is for my own sake chiefly that I speak and ask questions and reply.

Fall back a little, then, said I, for we just now did not rightly select the study that comes next after geometry.

What was our mistake? he said.

b After plane surfaces, said I, we went on to solids in revolution before studying them in themselves. The right way is next in order after the second dimension to take the third. This, I suppose, is the dimension of cubes and of everything that has depth.

Why, yes, it is, he said, but this subject, Socrates, does not appear to have been investigated yet.

There are two causes of that, said I. First, inasmuch as no city holds them in honor, these inquiries are languidly pursued owing to their difficulty. And secondly, the investigators need a director, who is indispensable for success and who, to begin with, is not easy to find, and then, if he could be found, as things are now, seekers in this field  
c would be too arrogant to submit to his guidance. But if the state as a whole should join in superintending these studies and honor them, these specialists would accept advice, and continuous and strenuous investigation would bring out the truth. Since even now, lightly esteemed as they are by the multitude and hampered by the ignorance of their students as to the true reasons for pursuing them, they nevertheless in the face of all these obstacles force their way by

their inherent charm and it would not surprise us if the truth about a them were made apparent.

It is true, he said, that they do possess an extraordinary attractiveness and charm. But explain more clearly what you were just speaking of. The investigation of plane surfaces, I presume, you took to be geometry?

Yes, said I.

And then, he said, at first you took astronomy next and then you drew back.

Yes, I said, for in my haste to be done I was making less speed. For, while the next thing in order is the study of the third dimension or solids, I passed it over because of our absurd neglect to investigate it, and mentioned next after geometry astronomy, which deals with the movements of solids.

That is right, he said.

Then, as our fourth study, said I, let us set down astronomy, assuming that this science, the discussion of which has been passed over, is available, provided, that is, that the state pursues it.

That is likely, said he, and instead of the vulgar utilitarian commendation of astronomy, for which you just now rebuked me, Socrates, I now will praise it on your principles. For it is obvious to everybody, I think that this study certainly compels the soul to look upward and leads it away from things here to those higher things. e

It may be obvious to everybody except me, said I, for I do not think so.

What do you think? he said.

As it is now handled by those who are trying to lead us up to philosophy, I think that it turns the soul's gaze very much downward.

What do you mean? he said.

You seem to me in your thought to put a most liberal interpretation on the 'study of higher things,' I said, for apparently if anyone with back-thrown head should learn something by staring at decorations on a ceiling, you would regard him as contemplating them with the higher reason and not with the eyes. Perhaps you are right and I am a simpleton. For I, for my part, am unable to suppose that any other study turns the soul's gaze upward than that which deals with being and the invisible. But if anyone tries to learn about the things of sense, whether gaping up or blinking down, I would never say that he really learns—for nothing of the kind admits of true knowledge—nor would I say that his soul looks up, but down, even though he study floating on his back on sea or land. b

A fair retort, he said. Your rebuke is deserved. But how, then, did you mean that astronomy ought to be taught contrary to the present fashion if it is to be learned in a way to conduce to our purpose?

Thus, said I. These sparks that paint the sky, since they are decorations on a visible surface, we must regard, to be sure, as the fairest  
 d and most exact of material things, but we must recognize that they fall far short of the truth, the movements, namely, of real speed and real slowness in true number and in all true figures both in relation to one another and as vehicles of the things they carry and contain. These can be apprehended only by reason and thought, but not by sight, or do you think otherwise?

By no means, he said.

Then, said I, we must use the blazonry of the heavens as patterns to aid in the study of those realities, just as one would do who  
 e chanced upon diagrams drawn with special care and elaboration by Daedalus or some other craftsman or painter. For anyone acquainted with geometry who saw such designs would admit the beauty of the workmanship, but would think it absurd to examine them seriously in the expectation of finding in them the absolute truth with regard to  
 530 equals or doubles or any other ratio.

How could it be otherwise than absurd? he said.

Do you not think, said I, that one who was an astronomer in very truth would feel in the same way when he turned his eyes upon the movements of the stars? He will be willing to concede that the artisan of heaven fashioned it and all that it contains in the best possible manner for such a fabric. But when it comes to the proportions of day and night, and of their relation to the month, and that of the month  
 b to the year, and of the other stars to these and one another, do you not suppose that he will regard as a very strange fellow the man who believes that these things go on forever without change or the least deviation—though they possess bodies and are visible objects—and that his unrelenting quest is the realities of these things?

I at least do think so, he said, now that I hear it from you.

It is by means of problems, then, said I, as in the study of  
 c geometry, that we will pursue astronomy too, and we will let be the things in the heavens, if we are to have a part in the true science of astronomy and so convert to right use from uselessness that natural indwelling intelligence of the soul.

You enjoin a task, he said, that will multiply the labor of our present study of astronomy many times.

And I fancy, I said, that our other injunctions will be of the same kind if we are of any use as lawgivers. However, what suitable studies have you to suggest?

Nothing, he said, thus offhand.

Yet, surely, said I, motion in general provides not one but many forms or species, according to my opinion. To enumerate them all  
 d will perhaps be the task of a wise man, but even to us two of them are apparent.

What are they?

In addition to astronomy, its counterpart, I replied.

What is that?

We may venture to suppose, I said, that as the eyes are framed for astronomy so the ears are framed for the movements of harmony, and these are in some sort kindred sciences, as the Pythagoreans affirm and we admit, do we not, Glaucon?

We do, he said.

Then, said I, since the task is so great, shall we not inquire of them what their opinion is and whether they have anything to add? And we in all this will be on the watch for what concerns us.

What is that?

To prevent our fosterlings from attempting to learn anything that does not conduce to the end we have in view, and does not always come out at what we said ought to be the goal of everything, as we were just now saying about astronomy. Or do you not know that they repeat the same procedure in the case of harmonies? They transfer it to hearing and measure audible concords and sounds against one another, expending much useless labor just as the astronomers do. 531

Yes, by heaven, he said, and most absurdly too. They talk of something they call minims and, laying their ears alongside, as if trying to catch a voice from next door, some affirm that they can hear a note between and that this is the least interval and the unit of measurement, while others insist that the strings now render identical sounds, both preferring their ears to their minds. b

You, said I, are speaking of the worthies who vex and torture the strings and rack them on the pegs, but—not to draw out the comparison with strokes of the plectrum and the musician's complaints of too responsive and too reluctant strings—I drop the figure, and tell you that I do not mean these people, but those others whom we just now said we would interrogate about harmony. Their method exactly corresponds to that of the astronomer, for the numbers they seek are those found in these heard concords, but they do not ascend to generalized problems and the consideration which numbers are inherently concordant and which not and why in each case. c

A superhuman task, he said.

Say, rather, useful, said I, for the investigation of the beautiful and the good, but if otherwise pursued, useless.

That is likely, he said.

And what is more, I said, I take it that if the investigation of all these studies goes far enough to bring out their community and kinship with one another, and to infer their affinities, then to busy ourselves with them contributes to our desired end, and the labor taken is not lost, but otherwise it is vain. d

I too so surmise, said he, but it is a huge task of which you speak, Socrates.

Are you talking about the prelude, I said, or what? Or do we not

know that all this is but the preamble of the law itself, the prelude of the strain that we have to apprehend? For you surely do not suppose that experts in these matters are reasoners and dialecticians?

e No, by Zeus, he said, except a very few whom I have met.

But have you ever supposed, I said, that men who could not render and exact an account of opinions in discussion would ever  
532 know anything of the things we say must be known?

No is surely the answer to that too.

This, then, at last, Glaucon, I said, is the very law which dialectic recites, the strain which it executes, of which, though it belongs to the intelligible, we may see an imitation in the progress of the faculty of vision, as we described its endeavor to look at living things themselves and the stars themselves and finally at the very sun. In like manner, when anyone by dialectic attempts through discourse of reason and apart from all perceptions of sense to find his way to the very essence of each thing and does not desist till he apprehends by  
b thought itself the nature of the good in itself, he arrives at the limit of the intelligible, as the other in our parable came to the goal of the visible.

By all means, he said.

What, then, will you not call this progress of thought dialectic? Surely.

And the release from bonds, I said, and the conversion from the shadows to the images that cast them and to the light and the ascent from the subterranean cavern to the world above, and there the persisting inability to look directly at animals and plants and the light  
c of the sun, but the ability to see the phantasms created by God in water and shadows of objects that are real and not merely, as before, the shadows of images cast through a light which, compared with the sun, is as unreal as they—all this procedure of the arts and sciences that we have described indicates their power to lead the best part of the soul up to the contemplation of what is best among realities, as in our parable the clearest organ in the body was turned to the contemplation of what is brightest in the corporeal and visible region.  
d

I accept this, he said, as the truth, and yet it appears to me very hard to accept, and again, from another point of view, hard to reject. Nevertheless, since we have not to hear it at this time only, but are to repeat it often hereafter, let us assume that these things are as now has been said, and proceed to the melody itself, and go through with it as we have gone through the prelude. Tell me, then, what is the nature  
e of this faculty of dialectic? Into what divisions does it fall? And what are its ways? For it is these, it seems, that would bring us to the place where we may, so to speak, rest on the road and then come to the end of our journeying.

533 You will not be able, dear Glaucon, to follow me further, though on my part there will be no lack of good will. And, if I could, I would

show you, no longer an image and symbol of my meaning, but the very truth, as it appears to me—though whether rightly or not I may not properly affirm. But that something like this is what we have to see, I must affirm. Is not that so?

Surely.

And may we not also declare that nothing less than the power of dialectic could reveal this, and that only to one experienced in the studies we have described, and that the thing is in no other wise possible?

That, too, he said, we may properly affirm.

This, at any rate, said I, no one will maintain in dispute against <sup>b</sup> us, that there is any other way of inquiry that attempts systematically and in all cases to determine what each thing really is. But all the other arts have for their object the opinions and desires of men or are wholly concerned with generation and composition or with the service and tendance of the things that grow and are put together, while the remnant which we said did in some sort lay hold on reality—geometry and the studies that accompany it—are, as we see, dreaming <sup>c</sup> about being, but the clear waking vision of it is impossible for them as long as they leave the assumptions which they employ undisturbed and cannot give any account of them. For where the starting point is something that the reasoner does not know, and the conclusion and all that intervenes is a tissue of things not really known, what possibility is there that assent in such cases can ever be converted into true knowledge or science?

None, said he.

Then, said I, is not dialectic the only process of inquiry that advances in this manner, doing away with hypotheses, up to the first principle itself in order to find confirmation there? And it is literally <sup>d</sup> true that when the eye of the soul is sunk in the barbaric slough of the Orphic myth, dialectic gently draws it forth and leads it up, employing as helpers and co operators in this conversion the studies and sciences which we enumerated, which we called sciences often from habit, though they really need some other designation, connoting more clearness than opinion and more obscurity than science. 'Understanding,' I believe, was the term we employed. But I presume we shall not dispute about the name when things of such moment lie before us for consideration.

No, indeed, he said.

Are you satisfied, then, said I, as before, to call the first division <sup>e</sup> science, the second understanding, the third belief, and the fourth conjecture or picture thought—and the last two collectively opinion, and the first two intellection, opinion dealing with generation, and intellection with essence, and this relation being expressed in the proportion: as essence is to generation, so is intellection to opinion, and <sup>534</sup> as intellection is to opinion, so is science to belief, and understanding

to image thinking or surmise? But the relation between their objective correlates and the division into two parts of each of these, the opinable, namely, and the intelligible, let us dismiss, Glaucon, lest it  
b involve us in discussion many times as long as the preceding.

Well, he said, I agree with you about the rest of it, so far as I am able to follow.

And do you not also give the name dialectician to the man who is able to exact an account of the essence of each thing? And will you not say that the one who is unable to do this, in so far as he is incapable of rendering an account to himself and others, does not possess full reason and intelligence about the matter?

How could I say that he does? he replied.

And is not this true of the good likewise—that the man who is unable to define in his discourse and distinguish and abstract from  
c all other things the aspect or idea of the good, and who cannot, as it were in battle, running the gauntlet of all tests, and striving to examine everything by essential reality and not by opinion, hold on his way through all this without tripping in his reasoning—the man who lacks this power, you will say, does not really know the good itself or any particular good, but if he apprehends any adumbration of it, his contact with it is by opinion, not by knowledge, and dreaming and  
d dozing through his present life, before he awakens here he will arrive at the house of Hades and fall asleep forever?

Yes, by Zeus, said he, all this I will stoutly affirm.

But, surely, said I, if you should ever nurture in fact your children whom you are now nurturing and educating in word, you would not suffer them, I presume, to hold rule in the state, and determine the greatest matters, being themselves as irrational as the lines so called in geometry.

Why, no, he said.

Then you will provide by law that they shall give special heed to the discipline that will enable them to ask and answer questions in the most scientific manner?

e I will so legislate, he said, in conjunction with you.

Do you agree, then, said I, that we have set dialectic above all other studies to be as it were the coping stone—and that no other higher kind of study could rightly be placed above it, but that our discussion of studies is now complete?

I do, he said.

535 The distribution, then, remains, said I, to whom we are to assign these studies and in what way.

Clearly, he said.

Do you remember, then, the kind of man we chose in our former selection of rulers?

Of course, he said.

In most respects, then, said I, you must suppose that we have to

choose those same natures. The most stable, the most brave and enterprising are to be preferred, and, so far as practicable, the most comely. But in addition we must now require that they not only be virile and vigorous in temper, but that they possess also the gifts of nature suitable to this type of education.

What qualities are you distinguishing?

They must have, my friend, to begin with, a certain keenness for study, and must not learn with difficulty. For souls are much more likely to flinch and faint in severe studies than in gymnastics, because the toil touches them more nearly, being peculiar to them and not shared with the body.

True, he said.

And we must demand a good memory and doggedness and industry in every sense of the word. Otherwise how do you suppose anyone will consent both to undergo all the toils of the body and to complete so great a course of study and discipline?

No one could, he said, unless most happily endowed.

Our present mistake, said I, and the disesteem that has in consequence fallen upon philosophy are, as I said before, caused by the unfitness of her associates and wooers. They should not have been bastards but true scions.

What do you mean? he said.

In the first place, I said, the aspirant to philosophy must not limp in his industry, in the one half of him loving, in the other shunning, toil. This happens when anyone is a lover of gymnastics and hunting and all the labors of the body, yet is not fond of learning or of listening or inquiring, but in all such matters hates work. And he too is lame whose industry is one-sided in the reverse way.

Most true, he said.

Likewise in respect of truth, I said, we shall regard as maimed in precisely the same way the soul that hates the voluntary lie and is troubled by it in its own self and greatly angered by it in others, but cheerfully accepts the involuntary falsehood and is not distressed when convicted of lack of knowledge, but wallows in the mud of ignorance as insensitively as a pig.

By all means, he said.

And with reference to sobriety, said I, and bravery and loftiness of soul and all the parts of virtue, we must especially be on our guard to distinguish the baseborn from the trueborn. For when the knowledge necessary to make such discriminations is lacking in individual or state, they unawares employ at random for any of these purposes the crippled and baseborn natures, as their friends or rulers.

It is so indeed, he said.

But we, I said, must be on our guard in all such cases, since, if we bring men sound of limb and mind to so great a study and so severe a training, justice herself will have no fault to find with us, and we

shall preserve the state and our polity. But, if we introduce into it the other sort, the outcome will be just the opposite, and we shall pour a still greater flood of ridicule upon philosophy.

That would indeed be shameful, he said.

Most certainly, said I, but here again I am making myself a little ridiculous.

In what way?

- c I forgot, said I, that we were jesting, and I spoke with too great intensity. For, while speaking, I turned my eyes upon philosophy, and when I saw how she is undeservedly reviled, I was revolted, and, as if in anger, spoke too earnestly to those who are in fault.

No, by Zeus, not too earnestly for me as a hearer.

- d But too much so for me as a speaker, I said. But this we must not forget, that in our former selection we chose old men, but in this one that will not do. For we must not take Solon's word for it that growing old a man is able to learn many things. He is less able to do that than to run a race. To the young belong all heavy and frequent labors.

Necessarily, he said.

Now, all this study of reckoning and geometry and all the preliminary studies that are indispensable preparation for dialectic must be presented to them while still young, not in the form of compulsory instruction.

Why so?

- e Because, said I, a free soul ought not to pursue any study slavishly, for while bodily labors performed under constraint do not harm the body, nothing that is learned under compulsion stays with the mind.

True, he said.

- 537 Do not, then, my friend, keep children to their studies by compulsion but by play. That will also better enable you to discern the natural capacities of each.

There is reason in that, he said.

And do you not remember, I said, that we also declared that we must conduct the children to war on horseback to be spectators, and wherever it may be safe, bring them to the front and give them a taste of blood as we do with whelps?

I do remember.

And those who as time goes on show the most facility in all these toils and studies and alarms are to be selected and enrolled on a list.

At what age? he said.

- b When they are released from their prescribed gymnastics. For that period, whether it be two or three years, incapacitates them for other occupations. For great fatigue and much sleep are the foes of study, and moreover one of our tests of them, and not the least, will be their behavior in their physical exercises.

Surely it is, he said.

After this period, I said, those who are given preference from the twenty-year class will receive greater honors than the others, and they will be required to gather the studies which they disconnectedly pursued as children in their former education into a comprehensive survey of their affinities with one another and with the nature of things.

That, at any rate, he said, is the only instruction that abides with those who receive it.

And it is also, said I, the chief test of the dialectic nature and its opposite. For he who can view things in their connection is a dialectician; he who cannot, is not.

I concur, he said.

With these qualities in mind, I said, it will be your task to make a selection of those who manifest them best from the group who are steadfast in their studies and in war and in all lawful requirements, and when they have passed the thirtieth year to promote them, by a second selection from those preferred in the first, to still greater honors, and to prove and test them by the power of dialectic to see which of them is able to disregard the eyes and other senses and go on to being itself in company with truth. And at this point, my friend, the greatest care is requisite.

How so? he said.

Do you not note, said I, how great is the harm caused by our present treatment of dialectic?

What is that? he said.

Its practitioners are infected with lawlessness.

They are indeed.
